The Prince of Wales's tour in India is a continued success. He had splendid sport in Nepaul.

Mr Cave's Report on Egyptian Finance is favourable. He says the resources of the country are sufficient.

Don Carlos has been forbidden to enter France. He has arrived in London and still maintains his right to the Throne of Spain.

Washington intelligence is to the effect that Mr Belknap has resigned on account of the disclosure of the sale of public posts. Congress has impeached him.

Washington, 3rd March, 1876.—G. G. Belknap, Secretary of War, resigned in consequence of the disclosure of sale of a public post, Congress impeaching him.

London, 1st March.—In the House of Lords, during the debate about the Perak Expedition, Lord Stanley of Alderley censured the operations and the cruelties used, and deprecated our interference in the affairs of the Straits. Lord Carnarvon defended the course pursued, and refuted the charges of cruelty. The motion for the papers to be produced was negatived.

In the House of Commons, Mr Goschen censured the Government for the loss of the *Vanguard*. Mr Ward Hunt defended them, and assumed the responsibility of not court-martialing Admiral Tarleton. A motion to produce the papers was agreed to.

Don Carlos has entered France, and the war in Spain may be considered practically over.

General Schenck remains in London as American Minister.

Shanghai, Feb. 28.—The Grosvenor party arrived at Suchan on the 26th January, and were met by the Yunnan escort.

London, Feb. 27.—Mr J. G. Austin, the Colonial Secretary, has been made a Companion of the Order of St. Michael and St. George.

M. Dufaure succeeds M. Buffet.

After two days' debate, the motion of Mr Whitbread censuring the Slave Trade Circular was negatived by 293 against 248. An amendment by Professor Fawcett to suspend the second reading was negatived by 290 against 245.

London, Feb. 19th.—Among the passengers saved from the sinking of the steamer *Strathclyde* are Captain and Mrs. Beckett, Mr. Pathedon (? Ritherdon), and Mr. Quintin.

Her Commander, Captain Eaton, is also saved.

The passengers supposed to be lost are Mr. Wells, Mr. and Mrs. W. Sussel, Mr. and Mrs. Fogerty, Major and Mrs. Loughmann, Captain and Mrs. Green, Lieutenant and Mrs. Groves, Mrs. Tubb, Mrs. Stuart, Mrs. Stockwell, Misses (? Messrs.) Forsyth, Horsford, Gilmore, Bowring and Young.

London, 17th Feb.—In the House of Commons this evening, a Bill, enabling the Queen to adopt an additional title was read for the first time. The name of the title has not yet been mentioned.

London, 17th February.—At a dinner in London yesterday, which was given by the Associated Chambers of Commerce, the Marquis of Salisbury, Secretary of State in the Indian Department, made a speech eulogistic of India. He adverted to the high position of India, stating that among the cherished interests of the country, the promotion of Industry and Commerce were matters of life and death. He also dwelt upon the change in public feeling during the last few months, and upon the desire manifested for some definite aim in our foreign policy. The foreign policy of England he said centres more and more on India, whose people have resolved not to run the risk of tampering with countries through which the open road to India mainly depends.

Constantinople, 16th Feb.—The Sultan has issued a decree ordering the adoption of the Austrian scheme of reforms in Turkey, and granting an amnesty to those of the insurgents in Bosnia and Herzegovina who would return to obedience to the Porte.

Madrid, 16th Feb.—The Cortes was opened yesterday by King Alphonso. Intelligence from the North states that the royal troops have routed the Carlists. The Alphonsists have since occupied Fergara.

London, 14th Feb.—In the House of Commons this evening, Lord Hamilton, replying to a question of Sir Patrick O'Brien, said that it was not intended to alter the currency of India on account of the depreciation in the value of silver.

It seems that the especial correspondents of the *Graphic* and *Illustrated News*, as well as Reuter's agent, are allowed to accompany the Prince's camp. A correspondent of the *Pioneer* gives the following particulars regarding the camp:—"It consists of about sixty tents; forty gentlemen (thirty belonging to the Prince's mess, and ten guests of Sir Henry Ramsay); seventy men (and the band) of the 3rd Goorkhas, under Captain Gregory; 25 sowars of the 11th Bengal Lancers, under Major Prinsep; 123 elephants 200 camels, and perhaps a thousand servants, coolies, and hangers-on of all sorts.

London, 11th February.—Sir Stafford Northcote, Chancellor of the Exchequer, replying to a question last night, stated that Mr. Cave's Mission to Egypt had not yet terminated.

London, 11th February.—The Government Merchant Shipping Bill was read last night for the first time. It defines the responsibility of ship-owners, and provides that seamen shall have civil remedy. Surveys are to be continued, deck cargoes to pay tonnage dues, and the load line clause in the temporary act is to be made permanent. Mr. Plimsoll partly dissented, but regarded the Bill as a good framework.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday 12ht March, 1876.

Passengers, Parcels, &c.	$6,844.38
Merchandise, &c.	$ 549.73
Total.	$7,394.11

Miles Open 18.

Corresponding week last year.

Passengers, Pacels, &c.	$7,277.28
Merchandise, &c.	$ 472.02

THE PRESS OF JAPAN.*

The Japanese Government is apparently trying an impracticable experiment. It professes to desire a free press conducted on the principle that "there is no compulsion, only you must," as regards certain rules of criticism. We learn by our latest exchanges that new clauses are to be added to the existing press laws prohibiting the use of "parable or figurative expression in political writing." In other words, direct comment being already forbidden, innuendo is in future to be similarly restricted. This of course means in plain language the abolition of any comment whatever which may be distasteful to those in power. With the principle thus enunciated we see (as regards Japan) no reason to quarrel. We have before this expressed our conviction—in which we are glad to see so high an authority as the *Japan Mail* concurs—that Japan is not yet ripe for a "free" press in the British or American meaning of that term. Neither France, Germany, Russia, or any other European power, which is infinitely superior to Japan in all that goes to make up a leading position in the Western family of nations, has yet reached that point, and we see no reason why the Japanese should be deemed superior in this respect. Our objection to their action lies in the fact that they do not honestly put the case to their countrymen and friends. If they say, "The people of Japan are as yet too unaccustomed to accurately weigh the relative importance of journalistic comment to be allowed to peruse articles which act upon half-educated minds with incendiary effect," we can sympathise with their position. The French Government and the German Government also (though as we think unnecessarily) virtually adopt this argument, which may be right or wrong but is at least tangible and comprehensible. But when a Government professes to accord freedom of discussion while virtually withholding it, we cannot but complain of its action. As a matter of fact the repressive measures now in force, or contemplated, will probably have a favourable effect (if any) on foreign intercourse. Patriotic Japanese have already given offence by their outspoken condemnation of the exterritoriality clauses in the treaties and the undoubted weight which attaches to foreign advice. In condemning the action of the native Government we are in no sense pleading on our own behalf. But, despite this, the principle involved is of far more importance than any slight gain to ourselves by the course pursued. If, as we believe, a free press—free, that is, to comment on home and foreign politics as it sees fit—is as yet a dangerous experiment, let its freedom be distinctly bounded. There is plenty of news to interest readers which might safely be left to editorial discretion; and for some years to come political articles might reasonably be subjected to a liberal but decisive censorship. The present arrangement is a source of never-ending prosecutions and tends to make martyrs of men who do not fail to see that they are suffering from the results of official rashness. We commend this view of the question to such able men as Sir Harry Parkes and the other diplomatic representatives in Japan. As matters are now being conducted, the Government is doing all it can to bring its intentions into disrepute without any corresponding advantage.—*(China Mail.)*

DARWIN'S INSECTIVOROUS AND CLIMBING PLANTS.†

The following *critique* of Mr. Darwin's last work is the first of two articles on the subject which have lately appeared in the New York *Nation*, and the second of which we must reserve for our next issue. We have seen nothing so good as these articles within the same space in any of the English papers. The *Quarterly Journal of Science* has one which is interesting inasmuch as it quotes so largely from the work itself. But as *résumés* of Mr. Darwin's observations and conclusions, the articles in *The Nation* deserve the prize. Of the interest of the subject it needless to say a single word.

"Minerals grow; vegetables grow and live: animals grow, live, and feel;" this is the well-worn, not to say out-worn, diagnosis of the three kingdoms by Linnæus. It must be said of it, that the agreement indicated in the first couplet is unreal, and that the distinction declared in the second is evanescent. Crystals do not grow at all in the sense that plants and animals grow. On the other hand, if a response to external impressions by special movements is evidence of feeling, vegetables share this endowment with animals, while, if conscious feeling is meant, vegetables share this endowment with animals, while, if conscious feeling is meant, this can be affirmed only of the higher animals. What appears to remain true is, that the difference is one of successive addition. That the increment in the organic world is of many steps; that in the long series no absolute lines separate, or have always separated, organisms which barely respond to impressions from those which more actively and variously respond, and even from those that consciously so respond—this, as we all know, in what the author of the works before us has undertaken to demonstrate. Without reference here either to that part of the series with which man is connected, and in some sense or other forms a part of, or to that lower *limbo* where the two organic kingdoms apparently merge—or whence, in evolutionary phrase, they have emerged—Mr. Darwin, in the present volumes, directs our attention to the behavior of the highest plants alone. He shows that some (and he might add that all) of them execute movements for their own advantage, and that some capture and digest living prey. When plants are seen to move and to devour, what faculties are left that are distinctively animal?

As to insectivorous or otherwise carnivorous plants, we have so recently here discussed this subject—before it attained to all this new popularity—that a brief account of Mr. Darwins's investigation may suffice.† It is full of interest as a physiological research, and is a model of its kind, as well for the simplicity and directness of the means employed as for the clearnesss with which the results are brought out—results which any one may verify now that the way to them is pointed out, and which, surprising as they are, lose half their wonder in the ease and sureness with which they seem to have been reached.

Rather more than half the volume is devoted to one subject, the roundleaved Sundew (*Drosera rotundifolia*), a rather common plant in the northern temperate zone. That flies stick fast to its leaves, being limed by the tenacious seeming dew drops which stud its upper face and margins, had long been noticed in Europe and in this country. We have heard hunters and explorers in our northern woods refer with satisfaction to the fate which in this way often befalls one of their plagues, the black fly of early summer. And it was known to some observant botanists in the last century, although forgotten or discredited in this, that an insect caught on the viscid glands it has happened to alight upon is soon fixed by many more—not merely in consequence of its struggles, but by the spontaneous incurvation of the stalks of surrounding and untouched glands; and even the body of the leaf had been observed to incurve or become cup-shaped so as partly to involve the captive insect.

Mr. Darwin's peculiar investigations not only confirm all this, but add greater wonders. They relate to the sensitiveness of these *tentacles*, as he prefers to call them, and the mode in which it is manifested; their power of absorption; their astonishing discernment of the presence of animal or other soluble azotized matter, even in quantities so minute as to rival the spectroscope—that most exquisite instrument of modern research—in delicacy; and, finally, they establish the fact of a true digestion, in all essential respects similar to that of the stomach of animals.

First as to sensitiveness and movement. Sensitiveness is manifested by movement or change of form in response to an external impression. The sensitiveness in the Sundew is all in the gland which surmounts the tentacle. To incite movement or other action, it is necessary that the gland itself should be reached. Anything laid on the surface of the viscid drop, the spherule of clear glairy liquid which it secretes, produces no effect unless it sinks through to the gland; or unless the substance is soluble and reaches it in solution, which, in the case of certain substances, has the same effect. But the glands themselves do not move, nor

* We shall easily be excused for publishing this extract in view of the local interest of the subject which it treats. As we have lately seen, the remarks of the China papers upon questions arising in this country, are dishonestly tampered with, and this, at the expense of the arguments of the writers.

† 'Insectivorous Plants. By Charles Darwin, M.A. F.R.S.' With Illustrations. London: John Murray. 1875. Pp. 462. New York: D. Appleton & Co.

'The Movements and Habits of Climbing Plants. By Charles Darwin, M.A. F.R.S., etc.' Second Edition revised, with Illustrations. London: John Murray. 1875. Pp. 208. New York: D. Appleton & Co.

† The *Nation*, Nos. 457, 458, 1874. It was in these somewhat light and desultory, but substantially serious, articles that some account of Mr. Darwin's observations upon the digestive powers of *Drosera* and *Dionæa* first appeared: in fact, their leading motive was to make sufficient reference to his then unpublished discoveries to guard against expected or possible claims to priority. Dr. Burdon-Sanderson's lecture, and the report in *Nature*, which first made them known in England, appeared later.

A mistake on our part in the reading of a somewhat ambiguous sentence in a letter, led to the remark, at the close of the first of those articles that the leaf trap of *Dionæa* had been paralyzed on one side in consequence of a dexterous puncture. What was communicated really related to *Drosera*.

does any neighboring portion of the tentacle. The outer and longer tentacles bend inward (toward the centre of the leaf) promptly when the gland is irritated or stimulated, sweeping through an arc of 180° or less, or more—the quickness and the extent of the inflection depending, in equally vigorous leaves, upon the amount of irritation or stimulation, and also upon its kind. A tentacle with a particle of raw meat on its gland sometimes visibly begins to bend in ten seconds, becomes strongly incurved in five minutes, and its tip reaches the centre of the leaf in half an hour; but this is a case of extreme rapidity. A particle of cinder, chalk, or sand will also incite the bending if actually brought in contact with the gland, not merely resting on the drop; but the inflection is then much less pronounced and more transient. Even a bit of thin human hair, only 1-8,000th of an inch in length, weighing only the 1-78,740th of a grain, and largely supported by the viscid secretion, suffices to induce movement; but, on the other hand, one or two momentary, although rude, touches with a hard object produce no effect, although a repeated touch or the slightest pressure, such as that of a gnat's foot, prolonged for a short time causes bending. The seat of the movement is wholly or nearly confined to a portion of the lower part of the tentacle, above the base, where no local irritation produces the slightest effect. The movement takes place only in response to some impression made upon its own gland at the distant extremity, or upon other glands far more remote. For if one of these members suffers irritation the others sympathize with it. Very noteworthy is the correlation between the central tentacles, upon which an insect is most likely to alight, and these external and larger ones, which in proportion to their distance from the centre take the larger share in the movement. The shorter central ones do not move at all when a bit of meat or a crushed fly or a particle of a salt of ammonia or the like is placed upon them; but they transmit their excitation across the leaf to the surrounding tentacles on all sides; and they, although absolutely untouched, as they successively receive the mysterious impulse, bend strongly inward, just as they do when their own glands are excited. Whenever a tentacle bends in obedience to an impulse from its own gland, the movement is always toward the centre of the leaf; and this also takes place, as we have seen, when an exciting object is lodged at the centre. But when the object is placed upon either half of the leaf, the impulse radiating from thence causes all the surrounding untouched tentacles to bend with precision toward the point of excitement, even the central tentacles, which are motionless when themselves charged, now responding to the call. The inflection which follows mechanical irritation or the presence of any inorganic or insoluble body is transient; that which follows the application of organic matter lasts longer, more or less, according to its nature and the amount; but sooner or later the tentacles resume their former position, their glands glisten anew with fresh secretion, and they are ready to act again.

As to how the impulse is originated and propagated, and how the movements are made, comparatively simple as the structure is, we know as little as we do of the nature of nervous impulse and muscular motion. But two things Mr. Darwin has well-nigh made out, both of them by means and observations so simple and direct as to command our confidence, although they are contrary to the prevalent teaching. First, the transmission is through the ordinary cellular tissue, and not through what are called the fibrous or vascular bundles. Second, the movement is a vital one, and is effected by contraction on the side towards which the bending takes place, rather than by turgescent tension of the opposite side. The tentacle is pulled over rather than pushed over. So far it accords with muscular action.

The operation of this fly-catching apparatus, in any case, is plain. If the insect alights upon the disc of the leaf, the viscid secretion holds it fast—at least an ordinary fly is unable to escape—its struggles only increase the number of glands involved and the amount of excitement; this is telegraphed to the surrounding and successively longer tentacles, which bend over in succession, so that within ten to thirty hours, if the leaf is active and the fly large enough, every one of the glands (on the average, nearly two hundred in number) will be found applied to the body of the insect. If the insect is small and the lodgment towerds one side, only the neighboring tentacles may take part in the capture. If two or three of the strong marginal tentacles are first encountered, their prompt inflection carries the intruder to the centre, and presses it down upon the glands which thickly pave the floor; these notify all the surrounding tentacles of the capture, that they may share the spoil, and the fate of that victim is even as of the first. A bit of meat or a crushed insect is treated in the same way.

This language implies that the animal matter is in some way or other discerned by the tentacles, and is appropriated. Formerly there was only a presumption of this, on the ground that such an organization could hardly be purposeless. Yet, while such expressions were natural if not unavoidable, they generally were used by those familiar with the facts in a half-serious, half-metaphorical sense. Thanks to Mr. Darwin's investigations they may now be used in simplicity and seriousness.

That the glands secret the glairy liquid of the drop is evident, not only from its nature, but from its persistence through a whole day's exposure to a summer sun, as also from its renewal after it has been removed, dried up, or absorbed. That they absorb as well as secrete, and that the whole tentacle may be profoundly affected thereby, are proved by the different effects, in kind and degree, which follow the application of different substances. Drops of rain-water, like single momentary touches of a solid body, produce no effect, as indeed they could be of no advantage; but a little carbonate of ammonia in the water, or an infusion of meat, not only causes inflection, but promptly manifests its action upon the content of the cells of which the tenacle is constructed. These cells are sufficiently transparent to be viewed under the microscope without dissection or other interference; and the change which takes place in the fluid contents of these cells when the gland above has been acted upon is often visible through a weak lens, or sometimes even by the naked eye, although higher powers are requied to discern what actually takes place. This change, which Mr. Darwin discovered, and turns to much account in his researches, he terms "aggregation of the protoplasm." When untouched and quiescent, the contents appear as a homogeneous purple fluid. When the gland is acted upon, minute purple particles appear, suspended in the now colorless or almost colorless fluid; and this change appears first in the cells next the gland, and then in those next beneath, travelling down the whole length of the tentacle. When the action is slight, this appearance does not last long; the particles of "aggregated protoplasm" redissolve, the process of redissolution travelling upwards from the base of the tentacle to the gland in a reverse direction to that of the aggregation. Whenever the action is more prolonged or intense, as when a bit of meat or crushed fly, or a fitting solution, is left upon the gland, the aggregation proceeds farther, so that the whole protoplasm of each cell condenses into one or two masses, or into a single mass which will often separate into two, which afterwards reunite; indeed they incessantly change their forms and positions, being never at rest, although their movements are rather slow. In appearance and movements they are very like amœbæ and the white corpuscles of the blood. Their motion, along with the streaming movement of rotation in the layer of white granular protoplasm that flows along the walls of the cell, under the high powers of the microscope "presents a wonderful scene of vital activity." This continues while the tentacle is inflected or the gland fed by animal matter, but vanishes by dissolution when the work is over and the tentacle straightens. That absorption takes place, and matter is conveyed from cell to cell, is well made out, especially by the experiments with carbonate of ammonia. Nevertheless, this "aggregation" is not dependent upon absorption, for it equally occurs from mechanical irritation of the gland, and always accompanies inflection, however caused, though it may take place without it. This is also apparent from the astonishingly minute quantity of certain substances which suffices to produce sensible inflection and aggregation—such, for instance, as the one-twenty-millionth or even the thirty-millionth of a grain of phosphate or nitrate of ammonia!

By varied experiments it was found that the nitrate of ammonia was more powerful than the carbonate, and the phosphate more powerful than the nitrate, this result being intelligible from the difference in the amount of nitrogen in the first two salts, and from the presence of phosphorus in the third. There is nothing surprising in the absorption of such extremely dilute solutions by a gland. As our author remarks: "All physiologists admit that the roots of plants absorb the salts of ammonia brought to them by the rain; and fourteen gallons of rain-water [*i.e.*, early rain-water] contain a grain of ammonia; therefore, only a little more than twice as much as in the weakest solution employed by me. The fact which appears truly wonderful is that the one twenty-millionth of a grain of the phosphate of ammonia, including less than one thirty-millionth of efficient matter [if the water of crystallization is deducted], when absorbed by a gland, should induce some change in it which leads to a motor impulse being transmitted down the whole length of the tentacle, causing its

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

basal part to bend, often through an angle of 180°." But odoriferous particles which act upon the nerves of animals must be infinitely smaller, and by these a dog a quarter of a mile to the leeward of a deer perceives his presence by some change in the olfactary nerves transmitted through them to the brain.

When Mr. Darwin obtained these results fourteen years ago, he could claim for *Drosera* a power and delicacy in the detection of minute quantities of a substance far beyond the resources of the most skilful chemist; but in a foot-note he admits that "now the spectroscope has altogether beaten *Drosera*; for, according to Bunsen and Kirchhoff, probably less than the 1-200,000,000th of a grain of sodium can be thus detected."

Finally, that this highly sensitive and active living organism absorbs, will not be doubted when it is proved to digest, that is, to dissolve otherwise insoluble animal matter by the aid of special secretions. That it does this is now past doubting. In the first place, when the glands are excited they pour forth an increased amount of the ropy secretion. This occurs directly when a bit of meat is laid upon the central glands; and the influence which they transmit to the long-stalked marginal glands causes them, while incurving their tentacles, to secrete more copiously long before they have themselves touched anything. The primary fluid, secreted without excitation, does not of itself digest. But the secretion under excitement changes in nature and becomes acid. So, according to Schiff, mechanical irritation excites the glands of the stomach to secrete an acid. In both this acid appears to be necessary to, but of itself insufficient for, digestion. The requisite solvent, a kind of ferment called *pepsin*, which acts only in the presence of the acid, is poured forth by the glands of the stomach only after they have absorbed certain soluble nutritive substances of the food; then this pepsin promptly dissolves muscle, fibrin, coagulated albumen, cartilage, and the like. Similarly it appears that *Drosera*-glands, after irritation by particles of glass, did not act upon little cubes of albumen. But when moistened with saliva, or replaced by bits of roastmeat or gelatine, or even cartilage, which supply some soluble *peptone*-matter to initiate the process, these substances are promptly acted upon, and dissolved or digested; whence it is inferred that the analogy with the stomach holds good throughout, and that a ferment similar to pepsin is poured out under the stimulus of some soluble animal matter. But the direct evidence of this is furnished only by the related carnivorous plant, *Drosera*, from which the secretions, poured out when digestion is about to begin, may be collected in quantity sufficient for chemical examination. In short the experiments show "that there is a remarkable accordance in the power of digestion between the gastric juice of animals, with its pepsine and hydrochloric acid, and the secretion of *Drosera*, with its ferment and acid belonging to the acetic series. We can therefore, hardly doubt that the ferment in both cases is closely similar, if not identically the same. That a plant and an animal should pour forth the same, or nearly the same, complex secretion, adapted for the same purpose of digestion, is a new and wonderful fact in physiology."

There are one or two other species of Sundew—one of them almost as common in Europe and North America as the ordinary round-leaved species—which act in the same way, except that, having their leaves longer in proportion to their breadth, their sides never curl inward, but they are much disposed to aid the action of their tentacles by incurving the tip of the leaf, as if to grasp the morsel. There are many others, with variously less efficient and less advantageously arranged insectivorous apparatus, which, in the language of the new science, may be either on the way to acquire something better, or of losing what they may have had, while now adapting themselves to a proper vegetable life. There is one member of the family (*Drosophyllum Lusitanicum*), an almost shrubby plant, which grows on dry and sunny hills in Portugal and Morocco—which the villagers call "the fly-catcher," and hang up in their cottages for the purpose—the glandular tentacles of which have wholly lost their powers of movement, if they ever had any, but which still secrete, digest, and absorb, being roused to great activity by the contact of any animal matter. A friend of ours once remarked that it was fearful to contemplate the amount of soul that could be called forth in a dog by the sight of a piece of meat. Equally wonderful is the avidity for animal food manifested by these vegetable tentacles, that can "only stand and wait" for it.

Only a brief chapter is devoted to *Dionæa* of North Carolina, the Venus' Fly-Trap, albeit, "from the rapidity and force of its movements, one of the most wonderful in the world." It is of the same family as the Sundew; but the action is transferred from tentacles on the leaf to the body of the leaf itself, which is transformed into a spring-trap, closing with a sudden movement over an alighted insect. No secretion is provided beforehand either for allurement or detention; but after the captive is secured, microscopic glands within the surface of the leaf pour out an abundant gastric juice to digest it. Mrs. Glass's classical directions in the cook-book, "first catch your hare," are implicitly followed.

Avoiding here all repetition or recapitulation of our former narrative, suffice it now to mention two interesting recent additions to our knowledge, for which we are indebted to Mr. Darwin. One is a research, the other an inspiration. It is mainly his investigations which have shown that the glairy liquid, which is poured upon and macerates the captured insect, accomplishes a true digestion; that, like the gastric juice of animals, it contains both a free acid and pepsin or its analogue, these two together dissolving albumen, meat, and the like. The other point relates to the significance of a peculiarity in the process of capture. When the trap suddenly encloses an insect which has betrayed its presence by touching one of the internal sensitive bristles, the closure is at first incomplete. For the sides approach in an arching way, surrounding a considerable cavity, and the marginal spine-like bristles merely intercross their tips, leaving intervening spaces through which one may look into the cavity beneath. A good idea may be had of it by bringing the two palms near together to represent the sides of the trap, and loosely interlocking the fingers to represent the marginal bristles or bars. After remaining some time in this position the closure is made complete by the margins coming into full contact, and the sides finally flattening down so as to press firmly upon the insect within; the secretion excited by contact is now poured out, and digestion begins. Why these two stages? Why should time be lost by this preliminary and incomplete closing? The query probably was never distinctly raised before, no one noticing anything here that needed explanation. Darwinian teleology, however, raises questions like this, and Mr. Darwin not only propounded the riddle but solved it. The object of the partial closing is to permit small insects to escape through the meshes, detaining only those plump enough to be worth the trouble of digesting. For naturally only one insect is caught at a time, and digestion is a slow business with Dionæas, as with anacondas, requiring ordinarily a fortnight. It is not worth while to undertake it with a gnat when larger game may be had. To test this happy conjecture, Mr. Canby was asked, on visiting the Dionæas in their native habitat, to collect early in the season a good series of leaves in the act of digesting naturally-caught insects. Upon opening them it was found that ten out of fourteen were engaged upon relatively large prey, and of the remaining four three had insects as large as ants, and one a rather small fly.

"There be land-rats and water-rats" in this carnivorous Sundew family. *Aldrovanda*, of the warmer parts of Europe and of India, is an aquatic plant, with bladdery leaves, which were supposed to be useful in rendering the herbage buoyant in water. But it has recently been found that the bladder is composed of two lobes, like the trap of its relative *Dionæa*, or the valves of a mussel-shell; that these open when the plant is in an active state, are provided with some sensitive bristles within, and when these are touched close with a quick movement. These water-traps are manifestly adapted for catching living creatures; and the few incomplete investigations that have already been made render it highly probable that they appropriate their prey for nourishment, whether by digestion or by mere absorption of decomposing animal matter, is uncertain. It is certainly most remarkable that this family of plants, wherever met with, and under the most diverse condition and modes of life, should always in some way or other be predaceous and carnivorous.

If it be not only surprising but somewhat confounding to our classifications that a whole group of plants should subsist partly by digesting animal matter and partly in the normal way of decomposing carbonic acid and producing the basis of animal matter, we have, as Mr. Darwin remarks, a counterpart anomaly in the animal kingdom. While some plants have stomachs, some animals have roots. "The rhizocephalous crustaceans do not feed like other animals by their mouths, for they are destitute of an alimentary canal, but they live by absorbing through root-like processes the juices of the animals on which they are parasitic."

DOUBLE ACROSTIC (No. 81).

(The World.)

In this new *rôle* the *World* has earn'd our thanks,
And saved from plunder many a British pocket
Which otherwise by swindling bonds or banks
Had been clean'd out for Peachum or for Locket.

I.

When old Sir Thopas tried poor 'roving Rob,'
I, Coke, and Bracton coach'd him for the job.

II.

One letter placed between us right
Will tell you plainly who's in sight.

III.

I dissipate the darkness dread
That gathers round the sufferer's bed.

IV.

I know I'm not original;
I am a copy, and that's all.

V.

I head the thistle's scroll of fame,
But no man well translates my name.

VI.

By Regillus' silver tide
I fought upon the Roman side.

VII.

To 'venge our injured queen we fought,
And died as valiant Britons ought.

VIII.

Had I been false as I was cross,
The tar had miss'd the albatross.

IX.

I'm often taken, often lost,
Much prized, and worth whate'er I cost.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—Our market has been quiet during the past week and prices continue much the same, though hardly so firm as on publication of our last issue. Arrivals have been heavy, but as at the same time deliveries against contracts forward have been made, there is not much pressure to sell. In *Yarns* 16/24 and 28/32 remain in favour. Small lots of *Shirtings* are moving at current rates. But the enquiry for *Velvets* is small and *T. Cloths* and Drill are neglected.

Grey Shirtings:—					White Shirtings:—			
7 lbs.	38½ yds.	39 in.	per pce.	$1.92½ to $2.20	60 to 64 reed 40 yds.	35 in.	nom. per pce.	2.10 to 2.30
8 lbs.	38½ yds.	44 in.	„	2.20 to 2.50	Turkey Reds 24 yds.	30 in.	2¼—3 lb. per lb.	0.75 to 1.02½
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„	2.22½ to 2.50	Black Velvets			8.50 to 9.25
9 lbs.	38½ „	44 in.	„	2.50 to 2.90	English Drills 15 lb.	40 yds,	30 in.	3.30 to 3.45
					Taffachelass	12 yds,	43 in. nom.	2.00

Yarns.—

No. 16 to 24	per picul	$30.75 to 34.25	No. 38 to 42	per picul	$41.00 to 45.00
No. 28 to 32	per picul	$34.00 to 39.50	Reverse Twist 16-24	„	$33.00 nom.

Woollens.—A better enquiry for *Mousselines de Laine* is observable since the beginning of the week, owing chiefly to the partial recovery in Exchange which has permitted sellers to grant some concession from the rates for which they had been holding. Military cloth of the requisite colours continues in demand by the War Department, and some considerable transactions in 8 lbs. Blankets, at from 42½ to 43 cents per lb. have also taken place. But in English woollens no business whatever can be reported, and rates therefore remain nominally unaltered.

Plain Orleans	40—42 yds.	32 in.	6.50 to 8.00	Figured Mousseline de Laine	30 yds.	30 in.	0.25 to 0.28
Figured Orleans	29—30 yds.	31 in.	4.75 to 5.25	Multicolored „	30 yds.	30 in.	0.35 to 0.40
Chimagoro	30 yds.	30 in.	5.25 to 5.75	Cloth, all wool plain or fancy	48 in.	to 52 in.	0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0.25 to 0.33	Presidents	54 in.	to 56 in.	0.60 to 0.70
Camlet Cords	29—30 yds.	32 in.	6.25 to 7.25	Pilots	54 in.	to 56 in.	0.40 to 0.45
Camlets Asstd.	56—58 yds.	31 in.	18.50 to 19.00	Union	54 in.	to 56 in.	0.40 to 0.65
Lastings, Japan	22—30 yds.	32 in.	13.00 to 14.50	Blankets, scarlet & green 7 to 8 lbs.		per lb.	0.40 to 0.41
Plain Mousseline de Laine	—30 yds.	30 in.	0.19 to 0.20				

Sugar.—The market for Formosa Sugar is quiet, rates being $3.50 to $3.55 for Takao bags. The sales reported amount to 15,500 piculs. Four vessels have arrived bringing about 29,000 piculs. Quotations for China Sugars are unchanged and we have to report a dull market.

Kerosene Oil.—In view of higher prices in New York—the result of an increasing demand and a diminished production—there are no sellers at the rates now quoted. Dealers supply their wants from the damaged cargo saved from the *Surprise*. The *Nettie Merryman* with 19,000 cases is supposed to be lost. She is now more than eight and a half months from the United States.

Sugar:—Formosa in bag	per picul	3.50 to 3.55	China No. 5 Kong-fun	per picul	4.00 to 4.60
in Basket	„	3.40 to 3.45	„ No. 6 E-pak	„	3.50 to 3.70
China No. 1 Ping fah	„	7.20 to 7.30	Swatow	„	2.40 to 2.60
„ No. 2 Ching-pak	„	6.30 to 6.70	Daitong	„	2.70 to 2.80
„ No. 3 Ke-pak	„	5.20 to 5.80	Japan Rice	„	
„ No. 4 Kook-fah	„	4.80 to 5.20	Kerosine Oil	per case	2.70

EXPORTS.

Silk.—Since the 10th instant arrivals are 140 bales, settlements about 175 bales of Hanks and 100 of Oshiu. Prices for Hanks remain firm at former quotations, medium No. 2½ being fully $435 to $445. We quote Oshiu, best, $530 to $550, good $500 to $520, Yonezawa and Hamatski from $430 to $460. Filatures (Kikai) 4th to 2nd order from $490 to $550.

According to official returns the total arrivals since the beginning of the season are (including 200 bales of old stock on 1st July last) 11,970 shipping bales, and total settlements 11,870, showing an unsold stock of 100 bales. However, a rough estimate of the actual stock left in the native town shows it to be 250 to 300 bales.

Tea.—There has been rather more business doing during the past week, and settlements are reported to the extent of some 1,500 piculs. Quotations, however shew no change and are:—

Common	$14.00 to 16.00	Fine	$31 to 34
Good Common	17.00 to 19.00	Finest	35 to 38
Medium	22.00 to 24.00	Choice	40 upwards.
Good Medium	26.00 to 29.00		

We may add that the better sorts are now almost unobtainable, and our quotations for these must be considered merely nominal.

EXCHANGE AND BULLION.

Exchange.—Sterling rates have remained pretty steady during the past week, with, however, but little doing.

Rates close as follows:—

Sterling—Bank 6 months' sight	3s. 11½d.	On Shanghai—Bank sight	72½
„ Bank Bills on demand	3s. 10¾d.	„ Private 10 days sight	73¼
„ Private 6 months' sight	3s. 11¼d.	On New York—Bank Bills on demand	92
On Paris—Bank 6 months' sight	4.90	„ 30 days sight Private	95
„ Private 6 ms. sight	5.00	On San Francisco—Bank Bills on demand	92½
On Hongkong—Bank sight	¼ per cent disct.	„ 30d. sight Private	95
„ Private 10 days' sight	⅜ „ „	Kinsatz	401
		Gold Yen	385

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 13.] YOKOHAMA, SATURDAY, MARCH, 25, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 19th instant, at H. B. M.'s Legation, Yedo, the wife of W. A. WOOLLEY, Esq., of a daughter.

MARRIAGE.

On the 23rd March, at the British Consulate, Yokohama, and afterwards at Christ Church, Captain JAMES DRUMMOND to CHRISTINA MARIA, eldest daughter of Captain J. W. EKSTRAND.

DEATH.

On the 19th instant, at No. 105, Bluff, HENRY JOHN HOOPER, aged 47 years.

Notes of the Week.

The text of the Treaty with Corea was published by the native newspapers yesterday under a Notification from the Prime Minister. A translation of it will be found elsewhere. It is chiefly remarkable for the extra-territoriality jurisdiction clause which it contains, and the insertion of which must be held to prove, beyond all possibility of question, that the Japanese acquiesce in the justice, indeed, in the *necessity* of provision of this nature in the intercourse between nations of different orders of civilization. In their aspirations towards a higher civilization they have our entire sympathy, our hopes and such poor endeavour to hold the lamp as it is in our power to afford. But if they, neighbours of the Coreans, kinsmen by race, worshippers at the same shrines, and deriving their laws and literature from the same source, think it necessary to insert such a clause in their treaty, how much more necessary is it for us western men, whose origin, faith, laws, customs, habits of thought and feeling differ so widely from theirs, to do so? This question is not one of sentiment and national pride alone. It is one of reason, fortitude and good sense. No one wishes to make the clause act harshly on the Japanese. We should hail the day on which it could be struck out. It will not remain an hour longer than is necessary. But it cannot yet be dispensed with. Unsatisfactory as matters now are, they would be intolerable in three months were it excised, and no one knows what might happen within twelve.

The opening of the Corean ports is unreasonably delayed, but the eastern nations take so small an account of time that men are quite satisfied to leave to their grandchildren what the Europeans like to be up and doing for themselves. The calm manner in which an oriental will sit down and twiddle his thumbs in the face of a century is something astonishing.

The representation of the drama, the "Ticket of Leave Man," which has been for some time past in rehearsal, took place at the Gaiety Theatre on Thursday evening last and justified the expectations which the care bestowed upon its preparation had raised. The theatre was well filled.

It is scarcely necessary to analyse the simple plot which the action of the drama discloses, and we shall assume its subject to be sufficiently well known to render repetition needless. It is an old story, told in hundreds of forms, of the easy fall of a simple nature into temptation, from vice to crime, of a reform which society is slow to accept and of the wrong which it is so prompt and earnest to avenge. In employing these materials the dramatist has shown the skill with which his familiarity with stage resources and traditions has stored him, but, it must also be admitted, but slender creative power. It would be difficult indeed to name a drama of equal popularity so deficient in originality in its *personnel*. The types are worn bare, it may be said, and are not over good of their kind. Nor is their staple matter very fresh. The author borrows with a freedom which seems to arrogate the right to follow Molière and "prendre son bien ou il le trouve," and lays the creator of Mrs. Gamp and her mythical friend under a very heavy obligation with most disarming openness. Even the omnipresent detective is a *deus ex machinâ* that has been pretty well worked from Balzac downwards, and begins now to pall somewhat upon the theatrical Philistine. But the "Ticket of Leave Man" is strong enough in incident to excuse these flavourless types and to hold the interest of an audience in virtue of its situations, and when adequately played there is no more telling drama on the stage.

The leading part of *Brierley* was allotted to Mr. Fredericks, whose impersonation showed an appreciative and discriminatory study of the effects of which the part is susceptible. To these on the whole he did much justice, though here and there a want of sincerity and intention betrayed a relaxation from his wonted care and lost him the opportunity of making the most of the situation. In the earliest scene he was perhaps at his best, and his portraiture of the convict, when denounced to his employer by his former betrayer, was not without merit, though lacking somewhat the enthusiasm of conscious virtue unfairly assailed. He was hardly judicious, too, in the use of his provincial twang, which disappeared by an occasional *lapsus linguæ*. But these are trifles which detract little from his excellent and spirited rendering of the luckless *Brierley*, and which we note in no disparaging humour. Mr. Latham's *Melter Moss* justly deserves all praise. Tranquil, easy and guarded, he showed both judgment and sobriety in his reading of a part which might well have tempted him to extravagance, using its resources with becoming moderation and skill. And as, so far as we know, this is but Mr. Latham's second appearance in public, we see much promise in this precocious manifestation. The *corps* has gained a valuable recruit, and we shall look forward to this gentleman's future appearances with interest. To the part of *Hawkshaw* Mr. Toddles brought a considerable stage experience, and may be complimented upon a vigorous and sensible presentation of the ubiquitous policeman, whose rollicking, drunken gaiety in the fourth act he gave with abundant spirit. We would, however, submit that a repressed intensity should mark the action of his self discovery at the close of this act; the disclosure would produce a more effective *coup de théâtre*. Mr. Fitz Thomas' *Downey*, while commend-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

able as a first appearance, was not altogether satisfactory. It wanted the freedom and ease of habitual audacity and was hardly villainous enough indeed. And if Mr. Fitz-Thomas *will* play the villain, he must take council of those who know how to impart the true Satanic cast to the features. Nothing can resemble this less than Mr. Fitz Thomas' habitual expression. Mr. Pirie made much of the unimportant *role* of the bill-broker and was fitly calm and precise, and as *Sam* Mr. Sprightly was as vivacious and naughty as the necessities of the play required. Mr. Coventry did every justice to the slight part of *Maltby*.

We have not left ourselves the space to enlarge as is fit upon the ladies. But *Mrs. Willoughby* in the hands of Mrs. Vernon was provokingly droll and deserved and elicited universal laughter. She was fitted with a rather weak copy of the inimitable Gamp and with such material even a less humorous performer could hardly have failed. Mrs. Vernon was fully equal to her reputation. Nor was the sad and serious part of *May Edwards* treated less successfully by Miss Herbert, who rendered with her usual sympathy and intelligence a character which made no slender demands upon her powers.

It would be as unjust as ungrateful to abstain from a few closing words to the unseen Coryphœus who has been willing to exchange his wonted tribute of applause for the scanty honours paid to the *impresario*. But the position is not the less creditable to him, and in the success which attended the representation of the "Ticket of Leave Man" on Thursday evening, the skill, intelligence and ardour of Mr. Spurgeon received their sincerest recognition at the hands of his numerous admirers.

We find that the humane activity of the American Missionaries in this country has anticipated the invention of Mr. Goble of letters for the blind. We have before us the 9th Chapter of St. John's Gospel in Romanized Japanese, the letters raised by stamping, and adapted by their angular form to appeal rapidly to the sense of touch. In Mr. Goble's raised letters, the curves of the Roman characters are preserved, (though he has added small marks to catch this sense) and experience proves that more angular forms are better adapted to the desired purpose. The number of blind people in this country is very large, and they are chiefly employed as shampovers. Ophthalmia and small-pox are the chief causes of the affliction. Will no one undertake the translation and transliteration of Robinson Crusoe, or some such delightful book, for these poor people? Three or four years would be well spent in such a task, (though a good scholar who was very industrious would finish it in two), and the labourer would deserve canonization as the Kobô Daishi of the blind.

Among other unpleasant consequences of the unexpected fall in the value of silver, has been the fact that the Exchange Tables, compiled many years since by Mr. Rutter, have been thereby rendered practically obsolete and useless to men of business. The want of a trustworthy series of calculations was sufficiently obvious to ensure attention, and Mr. A. Major has promptly supplied it in a supplement, the rates of which are calculated from three shillings and six pence to four shillings, at which latter the tables of Mr. Rutter are begun. The work, which is of the same form as Rutter's Tables, commends itself to all men of business.

Mr. Major has, by the bye, anticipated a glory which Rutter —or his shade, peace be to its uneasy manes—must sorely grudge him.

"On publishing the first edition of this book," writes Mr. Rutter in his introduction to the sixth edition, "I stated that "it had been the *amusement* of my leisure hours; and so, as "with each succeeding edition the work has grown upon me, "has the pleasure increased, till now, like Alexander who wept "that there were no more worlds to conquer, so could I weep "that I can find no more tables to make."

It would only spoil this to add to it.

From the "Japan Mail Daily Advertiser."

A notification has been issued by the Prime Minister to the effect that Japanese travelling by foreign steamers on the coast must be provided with passes for which a charge of 25 *sen* will be made, and which must be applied for personally. Persons travelling without these passes, which will be demanded on arrival at destination, will be arrested by the police. The measure is obviously one of protection to the Japanese line of steamers against the competition of the P. & O. Company. We shall present a translation in full in our next issue.

The *Akebono Shimbun* publishes a notification by the Prime Minister to captains and owners of Japanese mail steamers instructing them to keep an accurate list of the names, addresses and distinations of passengers travelling in their vessels. The object, it adds, is to obviate loss of time or inconvenience on the examination of the vessels by the proper authorities.

The *Choya Shimbun* notices the popularity of the *Sekkio Soroku*, a newspaper published under the auspices of the Buddhist priesthood. In order to satisfy the demand for copies, it has been found necessary to print two and even three editions.

A serious fire occurred yesterday at Kanda, Yedo, occasioning the destruction of a large number of houses.

A notification has been issued directing one battalion of the Imperial Body Guard to march towards Nikko on Wednesday next for the purpose of drill.

The *Choya Shimbun* gives the rumour that the Government intends to present from 30 to 50 *yen* to each of the families of the Satsuma troops that were killed or died during the late Formosa campaign, and about 30 *yen* to each of the wounded men.

The *Choya Shimbun* announces with much satisfaction that it has received an order from a certain *ken* for the supply of 400 copies. This, it adds, is the largest single subscription it has yet obtained and will prove a welcome set-off against the numerous fines which have of late been levied upon it.

We observe that Mr. E. M. Satow's dictionary of the Japanese spoken language is among Messrs. Trübner & Co.'s latest announcements and may be expected shortly to appear. The work has occupied the Author and his Japanese *collaborateur*, Ishibashi Masakata of the Foreign Office, for some years past.

The announcement that the Messageries Maritimes Company propose to remove their main eastern terminus from Shanghai to Yokohama on the completion of the Woosung tramway, must add seriously to the apprehension with which the Japanese view the competition of foreigners in their coasting trade. It is not improbable, we conceive, that the newly opened Inland Sea line of the P. & O. Company may foreshadow an important change in the case of this Company also.

Some further press prosecutions are noticed by the Japanese papers. From a *resumé* which has been given it would appear that more than twenty writers have already been lodged in gaol, while many other cases are at this moment pending.

Wednesday the 22nd inst., being the anniversary of the Emperor William's birthday was observed in the customary manner by the German members of the community.

The *Nichi Nichi* reports that the repairs to the Takashima Coal Mine have now been completely effected and that an output of 600 tons of coal daily is being accomplished.

The Mitsubishi Company has make a further appeal for public support in a largely reduced tariff of charges—a one dollar per ton goods rate to Shanghai being the unit—and thus throws down the glove to its competitor. The public will witness with satisfaction a contest by which they may profit so largely.

The drama "The Ticket of Leave man" was acted at the Gaiety Theatre last evening to a fairly large audience. We shall take a later opportunity to speak of this drama and the

UNIVERSITY OF CALIFORNIA

actors, but may here say that the general level of excellence of the performance was highly commendable. The play, which was felt to be somewhat long, was not over until a late hour.

The ingenuity and skill of the police of the capital are exercised in tracing out the contraband dealers in rabbits. The traffic is veiled in much mystery, but the authorities are resolved to suppress it, or at least to keep it within reasonable bounds.

The sins of the late editor of the *Hioron Shimbun* have followed him to Osaka where he has recently become conductor of the revived *Osaka Nippo*. He had hardly taken the reins in hand when a decree from Yedo suspended him from the exercise of his new labours and ordered him to serve an eighteen months term of imprisonment. This is hard; but the *Hioron Shimbun* was also a hard hitter, and one cannot have omelets without the breaking of eggs. What was Mr. Seki Shingo doing in that galley?

An extraordinary fish has been on exhibition for some days past in the native town. It is eight feet in length and profusely ornamented with a natural growth of variously-shaped excrescences. A printed legend informs the spectators that it was caught by Daikokuya Yûhachi of Otzuhama in Ibaraki on the 7th March 1872, but it is suspected that the specimen is another instance of the skill of the Japanese in the manufacture of monsters.

The Chief officials of State and the Representatives of Foreign Nations were entertained by H. I. M. the Mikado at the Imperial Palace at Shiba in Yedo yesterday.

The Messageries Maritimes s.s. *Tanais* will be despatched from Hongkong for this port to-morrow, 26th instant, at noon. She brings European mails to the 13th ultimo.

Some twenty men who have been discovered in possession of rabbits, upon which they had not paid the usual tax, have been arrested in Yedo.

The native papers say that Sanjô Saneyoshi, the Prime Minister, will shortly proceed to Europe upon business of the State.

The success which attended the representation of "The Ticket-of-leave Man" has induced the Dramatic Club to announce its repetition on Monday evening next. The admission to a portion of the theatre will be reduced to one dollar for this occasion.

The Russian steamer, *Batrak*, which arrived in this port, for the first time, last Wednesday, we hear is destined to run as a trader, passenger, and mail steamer, between Yokohama and Vladivostock. The trade between Japan and Russia is evidently on the increase, if we may be permitted to infer as much from the putting on this line of the *Batrak*. —*Rising Sun—Nagasaki.*

WHY NOT?

THERE is one question which stares us all in the face at present, and to which it is very important that we should have a full and true answer. It is this: Is Japan becoming richer or poorer year by year through the operation of her foreign trade? If the former, how is it that trade generally is in such a deplorable condition, that there is a steady flow of the precious metals from the country, that the native merchants complain and fail, that the statistics of trade show a declining instead of an increasing activity, and that no revival comes or is looked for? If the latter, what will be the condition of this country in ten years, or in five, for that matter? That the commercial conditions of the Treaties are such as commend themselves to the only school of political economists which has any real weight in the world, or perhaps rather we should say, which is leading the world out of its old fallacies and prejudices, cannot be doubted. When protectionists say "It is clearly so and must be so, " they are most to be suspected—we speak, of course, of their conclusions, not their motives. A very small experience of life is enough to show any thoughtful man that what men call the obvious explanation is most often wholly erroneous. This is peculiarly the case in natural philosophy, and almost always the case in political economy; and thus it is that the fallacies of protection have lasted so long. There is also another potent reason for the tenacity with which these errors keep their ground. The rapidity with which the earth repairs consumption and waste is such that the worst commercial legislation is not strong enough to defy it. A nation may fail to grow rich because it supports a vast idle class, as has been the case in this country, or excessive armies, as in other countries. But erroneous commercial legislation has never yet succeeded in impoverishing nations. All it can do is to retard the increase of their wealth. And therefore figures which prove this increase are often appealed to in order to support the protection theory. It is said, "How can protection be proved to be unsound when trade flourishes so well under its care?" Experience proves, however, that this prosperity is not the result of protection, but exists in spite of it, and this for the reasons we have given above, It cannot but be regarded as ominous of the gradual but inevitable disappearance of the protection theory that both in France and America, long its favoured haunts, it is clearly on the wane. America has suffered cruelly by it, and France has prospered so wonderfully under the greater freedom of trade she adopted during the late Emperor's reign, that her leading politicians are rapidly adopting the creed of her best political economists.

The commercial conditions of the Treaties being thus economically sound, how is the present condition of affairs to be accounted for? It is useless to cry out "Because the Government mismanages everything." This is the idle cry of all men who will not be at the trouble of thinking out questions. We dare say the Government mismanages many things. We are sure it attempts to do too much, and that its views of the functions of government—of what it can do and cannot do, should and should not do—are often very unsound. There is not incentive enough left to the people to take the initiative for themselves. There is not enough individual liberty, and questions which demand looking at in a western manner are looked at in an oriental manner. Taxation is excessive, and the farmers cannot save enough to increase the area of cultivation. But all these are generalities, and really do not assist the solution of the question.

Is there no possibility of something of the following

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

nature?—Cannot some form be devised by which the PRIME MINISTER, speaking for his MASTER and the nation, can address the Foreign Ministers individually and collectively in something of this manner:

"Sir and Gentlemen; I have the commands of His Majesty the MIKADO to invite your attention to the condition of this country, and to give me, with all the loyalty which belongs to your individual characters and the character of the nations you represent, your frank and full expression of opinion regarding the causes which seem to stand in the way of that advance of trade, and those benefits usually resulting from it, which we had every reason to expect from our intercourse with you. In the loyalty to which I have appealed, His Majesty reposes an entire confidence, and the ample experience of successful trade which the history of your own countries—unlike that of Japan—affords you, places you in a position of proffering counsel to us which may be fruitful of good results to yourselves and to Japan. It requires but little of the vast experience of the western nations to discern that our external trade is not a source of wealth to us—rather, indeed, does it appear to be impoverishing us. This cannot be agreeable to your wishes or consonant with your interests: still less can it be consonant with our own. The first axiom of your political economy, and of the policy into which it enters so largely, is that commercial treaties should operate to the equal advantage of both the parties to them. We have no evidence that we have been the gainers by those into which we entered with you, and the worse their effects are on us, the more disappointment they will cause to you. To you, however, the operation of these treaties, though interesting, is of small absolute importance; to us, it is vital."

If diplomacy cannot discover some means by which the results which would legitimately flow from this course could be attained, it is not the art we take it for.

THE NEW TAX.

THE recent Notification of the Government imposing a tax of 25 *sen* upon all native passengers travelling by foreign steamers between the open ports, has several bearings, all of which deserve some consideration. But, speaking generally, it may be discussed most conveniently under two heads; as a measure of police, and as a protective or financial measure.

In regard to the former, the Government is said to view with some apprehension the possibility of a number of men large enough to give momentary trouble, landing at any one of the open ports with intentions which, if carried out, might embroil it with its own subjects or with foreigners. It is supposed to believe and to plead that there is a good deal of discontent in the country; that this discontent is the natural result of a changed order of affairs, and can hardly be expected to subside until the present generation has passed away; and that it would be dangerous, or at least imprudent, to relax precautions against sudden surprises. It is obvious that, if this plea be sincere and founded on actual knowledge of the state of the country, the Government is the sole trustworthy judge of its weight. It knows, as no one else can, the extent of the alleged danger, and as upon it rests the responsibility of preserving order, the repressive measures which may be necessary for this purpose must be held to have been considered in their various bearings upon the welfare of the Empire. But while this abstract proposition may fairly be accepted without demur, it is quite open to observers to believe that this plea is but an excuse for a measure dictated altogether by other considerations, and that under cover of a police regulation, a blow has been aimed at an irritating competition for the carrying trade between the open ports. We shall not hesitate to express our belief that this is the case. We are convinced that the old dreaded danger from the *samurai* is a thing of the past—dead and of impossible revival. There is, of course, more or less discontent, for there is much struggle for existence and heavy taxation. But we must be excused for doubting that there is any serious danger to order from these causes.

We shall assume, therefore, that the measure is mainly one of a protective and financial nature, passed in order to secure for the Mitsu Bishi Company a monopoly of the carrying trade between the open ports. Now, by Article X of the Convention of the 25th June 1866, Japanese subjects may ship goods to any open port in foreign ships, and, by implication, may travel by the same conveyances. To place a tax on them for doing either the one or the other would apparently be, therefore, if not an absolute infraction of this privilege, at least an interference by indirect means with a trade the freedom of which is protected by express agreement. This has a tendency to abridge the stipulations of the treaties, and therefore to produce confusion as to what rights foreigners have or have not in virtue of those instruments. As a question touching the maintenance of good relations between the Japanese and the western Governments, it is of high importance that no indirect means be taken to nullify or neutralize provisions out of which an advantageous trade may arise, or to repress that freedom of carriage, locomotion and communication which stimulates production, increases intelligence, and promotes that free contact between persons of dissimilar capacities or advantages which is so fruitful a source of benefit and improvement to the human race. It cannot be justly pleaded, as is done by a writer whose article from the *Choya Shimbun* we publish elsewhere, that foreigners are trying to wrest the "coast trade" from the Japanese. The traffic between the three open ports, Yokohama, Kobe and Nagasaki, though certainly embraced in this term, is the only section in which we have, or care to have, any interest, and it is far from proved that our participation in it will not be of advantage to the Japanese. A large experience of the evils of monopoly in every form has quite convinced the world that it is a bad thing, while countless benefits flow from a healthy competition. Every dollar which is wasted in bad management under a monopoly, and which is sought to be recouped by high freights, is so much added to the cost of exchangeable products. The very existence of many trades is a mere question of the cost of carriage. If this be low, and transport be certain and rapid, such trades spring up and flourish with astonishing vigour; while they droop and die under the heavy taxation of high freights. If the country can get its transport done closely and cheaply by foreign steamers running their own risks and subject to all the competition of rival companies for which money can be found at any moment to bid for a very moderate interest, it is certain that trade will expand more rapidly than under a monopoly with higher freights and slack management. From a purely economical point of view, therefore, it is much to be regretted that any measure should be adopted by the Government repressive of this healthy competition.

But from a different point of view, viz. that of a Government anxious to develope new forms of industry in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the country, and to encourage in its people the idea of their own national growth, improvement and independence, a competition such as that against which the new tax is a practical though disclaimed protest, must be extremely irritating. The Government has spent large sums of money on its mercantile fleet and subsidizes the Company bountifully—practically, indeed, the Company is the property of the Government. Nor can if be said that, so far as we have hitherto gone, the Mitsu Bishi Line has failed in its duties to the public. It has kept good time, no complaints have been heard about the table and accommodation, there has been no diminution in the average speed, the old standard of the Pacific Mail Line has been fairly maintained, and all this speaks well for the Company. It has therefore neither disappointed the public nor forfeited its claim to their favour.

The basis of the P. & O. Co.'s competition is not so clear. Admitting all that the eastern trade owes the Company—and we should be almost personally ungrateful to forget it—its appearance on this line is accidental rather than premeditated. It had steamers which were useless for its regular work and they were sent here for sale. The Japanese, somewhat overburdened with antiquities of this nature, refused to buy them—to have done so would have been the worst possible policy. "Then," says the Company," we will run them." "By all means" retort the Japanese, and thus the rivalry began. Now we beg to say that this is not a true commercial basis for a competition. So far as the public, Japanese or foreign, can get any advantage from it, by all means let them do so. It will certainly encourage trade, and so far is a good thing. Nor do we mean to say that the Company is not justified in its course. Not the less, however, do we feel that there is somewhat of the taint of original sin in the scheme, from which it had been well were it freer. Still, it is idle to make any point of this. Competition is is competition, and if the hack beat the hunter, he will be called the better horse.

THE TREATY WITH COREA.

NOTIFICATION No. 34.

The following Treaty having been concluded with Corea is hereby made known.

SANJO SANEYOSHI,
Daijio Daijin.

22nd, March 1876.

A Treaty of friendship.

Amity has existed from ancient times between Dai Nippon and Dai Chosen. But its relations never having been clearly defined, it has been thought desirable to base it upon more solid foundations so that it may stand for ever.

To this end the Japanese Government sent its special Envoy Kuroda Kiyotaka, Lieutenant General, Privy Councillor and Chief of the Kaitakushi, together with Inouye Kaworu as Vice-Envoy, to Kokwa Fu in Corea, where they met Shinken, Chief Controller and In Jisho, Vice-Controller.

Here, agreeably to the commands of their respective Sovereigns, the Representatives of the two High Contracting Powers arranged and concluded the following Treaty stipulations.

ART. I.—Corea. being an Independent Sovereignty, and Japan her compeer, in furtherance of their mutual desire for lasting peace and friendship, do hereby settle and conclude the forms and conditions of their intercourse upon terms of equality and mutual regard.

All old rules and observances on either side which have in the past been found vexatious to the opposite party shall be and are hereby abrogated, so that mutual love and peace may for ever be established.

ART. II.—Within fifteen months from the date of this Treaty the Japanese will send a representative to the capital of Corea, where he shall be permitted to communicate freely with the Reiso Hansho in order to arrange between the two countries all the details of mutual friendly intercourse. The Japanese representative shall be free at all times to remain in Corea or return to Japan at will. The Government of Corea may also at any future time send its representative to Tokio the capital of Japan, and there he may communicate freely with the Foreign Office to arrange all affairs of mutual concern between the the two countries. The representative of Corea shall also be free to remain in Japan or return at his pleasure.

ART. III.—In all written communications between the two countries the Japanese Government will write in its native language, giving therewith a translation into Chinese, and the Corean Government shall write in its own language.

ART. III.—Trade having long been caried on at Sorioko in the harbour of Fusan between the Japanese and Coreans, all the old rules and customs of that trade shall be abolished and new trade regulations in accordance with the articles and stipulations of this treaty as in the 5th article shall be provided. Corea shall open two ports upon its coast where Japanese may freely resort for purposes of trade, and may rent land and build houses and stores, or rent houses from Coreans.

ART. V.—Two harbours most suitable for trade shall be sought out on the coast of the five provinces, viz, Keike, Chusri, Zenra, Keisho, and Kankio. After examination of these coasts the locality shall be settled by mutual agreement. The opening of these ports to trade shall be within twenty months from the 2nd month of the 9th year of Meiji according to the Japanese calendar and the 1st month of Heishi.

ART. VI.—Hereafter when any Japanese vessel shall be in distress on the Corean coast, whether in bad weather or in want of fuel of food, and such ship shall be unable to reach either one of the open ports, she shall be permitted to enter any harbour or bay which may be at hand to seek shelter from the winds and waves, and to buy whatever the crew may require, to repair damages or to buy fuel as may be required.

While the Captain of such ship is expected to pay for all the ship may require, yet it is incumbent upon the local magistrates and all the people to show all possible kindness to all ships in distress. Whenever any ship of either country shall be wrecked upon the coast of any part of the other country, the utmost effort shall be made to save life, and the matter be reported to the nearest local magistrates who shall take immediate measures for the relief of the shipwrecked people and for their safe return under official escort to their native land or to the nearest consulate of their government in the country where the shipwreck occurred.

ART VII.—As there are on the coast of Corea many unknown rocks and reefs both above and under the water, Japanese ships shall therefore be permitted to survey all these coasts and make charts, so as to ensure to the ships of both nations safe navigation of the Corean waters by the mariners of either nation.

ART. VIII.—Hereafter Japanese Consuls shall be sent to the ports to be opened in Corea, to govern the people who shall go from Japan to trade or reside there. If at any time any trouble shall arise between the people of the two nationalities, the Japanese Consul shall consult with the local Corea authorities and so settle all disputes by mutual agreement.

ART. IX.—Peace and amity having now been settled between the two countries, the people of either country may freely resort to the other country for purposes of trade and commerce, and officials of either country shall in no wise interfere with or obstruct the trade of the one people with the other.

If the merchants of either country shall defraud those of the opposite country or neglect to pay their just dues, the officers of the delinquent nationality shall examine and rectify the wrong, always providing that the government on either side is not responsible for the debts of its subjects.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ART. X.—If any Japanese subject living in any open port of Corea commits any crime against any Corean subjects, he shall be judged by the officer of his own government. On either side impartial judgment shall be given, according to the laws of the respective countries.

ART. XI.—Peace being now established between the two countries, commercial regulations must be enacted for the convenience of the merchants of either country, and what has been provided for in general in these articles must be considered in detail, for which purpose officials of both countries being duly appointed by their respective governments shall within six months from this date meet at the Capital of Kokua to consult upon and settle all the necessary rules and regulations.

ART XII.—The foregoing eleven articles of eternal Peace and Amity being now concluded between the two countries, shall take effect and be in full binding force upon both of the high contracting parties from this day onward for ever. In witness whereof see the seals and signatures of the respective officials of either government signed in duplicate.

Being of Dai Nippon the 2536 year and of Meiji 9th year, 2 month 26th.

KURODA KIYOTAKA,

Envoy Extraordinary, Ambassador General and Lieutenant General of Army, Privy Councillor and Chief of Kaitakushi of Dai Nippon.

INOUYE KAWORU,

Vice-Envoy Ambassador of Dai Nippon.

Being of Dai Chosen 485 year of Hei Shi, 2 month 2nd day.

SHIN KEN,

Dai Kan, Hanchiu-sufuji of Great Corea.

IN JISHO,

Fuku kan, Josofu Fukuso kan of Great Corea.

The following is the Notification to which we have referred elsewhere.

NOTIFICATION No. 30.

The following regulations will be observed by those who travel in foreign steamers.

SANJO SANEYOSHI,
Daijo Daijin.

Art. 1.—Any person proposing to embark upon and travel in a foreign steamer, shall, on the day previous to departure, present to the local officer of the port which he propose to leave, a paper stating his native place, present residence, name, status, the nationality and owner of the ship in which he intends to embark, and his destination; and a license will be granted enabling him to do so.

Art. 2.—One license is required for each person.

Art. 3.—The sum of 25 *sen* will be charged for such license.

Art. 4.—Personal application must be made for the license, which will not be granted to a substitute.

Art. 5.—The license must be returned to the police authorities of the port at which the traveller disembarks. If a person stops at an intermediate port—as, for instance, if going from Yokohama to Nagasaki, he stops at Kobe—he shall show his pass to the authorities at such intermediate port.

Art. 6.—The license is only valid for one voyage in one given vessel. Should a traveller disembark at an intermediate port and continue his passage in another vessel, the license must be renewed.

Art. 7.—If any person travel without such a license, he shall be held to violate these rules.

(Here follow instructions to the authorities for the due carrying out of these regulations.)

Our readers will be glad to hear still further confirmation of the safety of Mr. Grosvenor and his party. They had arrived close to the frontier of Yünnan on the 3rd February; all well. They had made an attempt to proceed by overland route from a point near Su-chau-fu *viâ* Chao-Ting-fu in Yunnan to their destination; and we understand that this somewhat retarded their progress.—*Courier.*

SPIRIT OF THE JAPANESE PRESS.

COREA.

(Hochi Shimbun.)

(Continued from 18th March.)

The domestic animals are dogs, horned cattle, fowls, horses and pigs, and differ but slightly from those of Japan. The cattle and pigs are very fat and the hides of the former are among the exports of the country. The horses are about the size of our colts between one and two years old, or of the ass of China, and therefore only about one third of the size of an Arab horse. We saw no kites or crows in Kokwa. But we saw birds of the size of pigeons of a dark blue colour with white breasts, sharp bills and long tail feathers—possibly a kind of jay. They build in the willows near human dweilings and were called by our people Corean crows. The number of spaarows appears less than in Japan. Wood is very scarce in all parts of the country which we visited. We saw only pines; no cedar, oak, plum or cherry trees, excepting those in the compound of the Japanese Agency at Fusan. But the Coreans said that such trees were to be found in other parts of the country. Orange trees seem very scarce in Corea, and their fruit is purchased from our people at Tsushima. Tea does not seem to grow in the country, nor do the Coreans appear to be acquainted with the taste of it. The chief drink is an infusion of dried ginseng, or ginger and dried orange peel. When ginger cannot be obtained—it does not grow in Corea—honey is used instead. The tobacco which we saw exposed for sale was a very dark colour. Corea produces rice of much the same quality as that grown in Japan. The people are very proud of its excellence, and aver that it is eaten by the Emperor of China.

Goma (sesamum orientalis) of an excellent quality, grows in the country, and its oil is largely used in cooking, eight or nine out of every ten dishes being prepared with it. It is also used for lamp-fuel. No rape is grown. Cotton is probably to be found, but the parts of the country we saw are not suitable to the growth of the plant.

Corea probably possesses mines. The hills are bare of grass and trees and the soil is very dry, so that it is thought there may be much mineral wealth. But the iron mines are the only ones worked; copper, gold and silver, if such metals exist, are yet untouched. It is possible that this has arisen from a foolish notion that their discovery would be prejudicial to the nation, and disturb the *fêng shuey*—a superstition which prevails in Corea. For this reason no gold coins or ornaments are to be seen; silver is used for hair pins, but only in small quantities, and this comes from China. The copper and tin used in the country come from Japan, and the former is to be found in the coins. The Coreans use copper for many purposes for which we employ earthenware or porcelain. The coins are of two sizes, and are called generically *Tohei Tsuho.* One is larger than the other, but both pass as of the same value.

It is said that there are coal mines in the country, but, strange to say, dear as fuel is, the Coreans do not seem to know the value of coal for this purpose.

There is little worthy of record here in respect of the Corean military forces, though I will say a few words about them. Some fifteen or sixteen hundred men came down to Kokwa when we were there. They wore wooden hats and coats of a reddish colour with wide sleeves and bore neither armour nor helmets, They were armed with match-locks of a small size like those used by our Japanese hunters, and with swords, the blades of which, in all probability, are imported from Japan. The number of banners is large in proportion to the number of men, and some had characters upon them, the top of the colour-poles being ornamented with pheasants feathers. The men appeared to be of all ages; some were young, but many were quite old. They appear better drilled than our troops were prior to the arrival of Commodore Perry, as at that time each Daimio had his men drilled as he chose, while the Coreans had one central government and one army. Their dress seems well enough for fine weather, but bad for rain. It is said that they have only adopted the use of the sword recently in obedience to the command of the reigning monarch.

The various fortresses are mounted with cannon. The guns round the city throw four and five pound shot. None of them were on carriages, but are merely placed on stones. They are fired with tow ropes, and a place is provided for the safety of the man who acts as gunner. The position of the guns was such as to lead us to infer that several men would be required to manage each one of them. The forts are usually on the sides of hills, and are loopholed for three or four guns.

In going up the Kokwa river to get into the Kanko river, we found the current very strong, running between steep banks and very dangerous for small boats. In the Kanko river the current is not so rapid, and large blocks of ice floating down stream struck against us in a rather dangerous manner.

Buddhism prevails, but the priests do not appear to possess as much power as in Japan. It is said that there is a large Buddhist temple called Bongioji at Torai to the north of Fusan, but there are none at Kokwa. The priests dress in the same way as our own, and attend the death-beds of the people, but have nothing to do with their burial, as in Japan. The reason appears to be that the superstition of *Fung Shuey* prevails, and bodies are interred in the paddy fields, in gardens, woods or on the hills, or wherever the inclination of the family may dictate, so that there are no regular burrying places. It is said that stone monuments are erected to men of distinction, but under ordinary circumstances a heap of earth is thrown up over the grave, and when this has disappeared by the operation of natural causes, which it does in thirty or forty years, the soil is again brought cultivation.

It is said that when the French went to Corea, they destroyed the city of Kokwa by fire, and took possession of some precious relics which had been buried with certain of the ancestors of the Corean kings. We went to the site of these tombs. They are two in number, are situated about half way up a hill in a northerly direction from Kokwa, and are encircled with walls three feet high and from twenty to thirty feet in circumference. On the tombstone is inscribed "The tomb of Mansenden." They resemble the tombs of the *samurai* in Japan, and stand in the midst of waste land. The French would not have disturbed them unless they had known they were royal tombs.* At the same time it is wholly improbable that they did know this, so that the story that they disturbed the graves and carried off the valuables contained in them was probably raised by some of the Coreans, who knew that their kings lay buried there, and when Kokwa was in confusion and pressed by the French, dug up and carried off the treasure and afterwards imputed the outrage to the invaders.

The Coreans eat more meat and fat stuff than we do. The beef and pork are excellent. The oil of *goma* and garlic are greatly used in cooking and are even mixed with rice. The Coreans seem to eat but little fish, as we saw no fishmongers' shops, and when we were entertained by the officials there was not a single dish of fish served. At Kokwa we occasionally saw in the shops a small quantity of fish looking like herrings, but this was all we met with. We could not discover whether fish is scarce on account of Kokwa being near the mouth of the muddy Yellow River, or whether the Coreans do not like it.

When the treaty was signed we were entertained with a repast at which music was performed, and I will give a brief description of the dishes served. There was a sort of confectionary made of sugar, flour and oil, cut into squares about two inches each way; a great heap of boiled eggs; a pudding of flour, *goma* and honey; dried persimmons; pine-seeds; honey-like (*sic*) food covered with roasted rice painted red and white, maccaroni soup with fowl; boiled legs of pork, and wine with everything. The wine usually drunk by the Coreans is a strong spirit, but on this occasion was of about the potency of Japanese *saké* of inferior quality. The dishes were of earthenware like the *Imari yaki* (a kind of porcelain) of Japan, or the *yoshi* of China. The table used on the occasion was square, rudely made and painted with persimmon juice. Oiled paper was used for a table-cloth, and the wine was served from copper vessels.

While we were at the hotel we were served with food on common Japanese trays. We presented our hosts with some dried venison, *saké* and oranges, at which they were much pleased and said they would send them to the King.

We saw no wine shops, *geishas* (singing girls) or the like. It is said that all natural sons become priests, and daughters prostitutes; but we could not discover whether this was actually the case. We saw some Japanese hair-oil which they they said was used by the women. The custom of excluding women from the public gaze seems to exist in Corea as in China, and it is said that even among themselves visitors are not permitted to see the wife. Thus we can give no description of the Corean women. Men do not use oil for the hair, which they pin up themselves. We saw no public baths or hair-dressing shops, and we heard that the Coreans do not bathe. In the warmer days of summer they go to the river or sea-shore to wash themselves, and in the hotel where we stayed there was not such a thing as a bath, so that we had to send to the ships for tubs in order to wash. This accounts for the filthy state in which the Coreans keep their persons, and for the dirty hue of their once white clothes.

* i.e, thought they contained treasure.

Précis of a Leading Article.

(Choya Shimbun, March 22nd, 1876.)

A patriotic gentleman named Namiya Shidzuka has written to us bewailing the exertions which certain distinguished fellows among our countrymen are making on behalf of the P. & O. Co. with a view of effecting the fall of the Mitsubishi Company. On first reading this production we could not give credence to it and therefore cast it from our minds, but as what we have recently heard in the streets tends to confirm the greater part of what Mr. Namiya has said, we are compelled to speak on the subject.

It is usual among persons of low standing to disregard what is right for the sake of profit, and that is what has happened among the steamboat touts in Yokohama and Yedo whose vision as to what is just and right has been darkened by bribes, and who when they find a person about to travel by steamboat laud the prosperity and perfection of arrangement which characterizes the P. & O. Company—saying the *Columbian* "which sails on this voyage is "the largest ship in harbour—of 2,383 tons, of such and such "horse-power, of such and such speed, splendid in her interior "arrangements, and is altogether of a class as far above that of the "Mitsubishi steamships as the clouds are above the earth."

With such sayings as these in their mouths they wander about and by them succeed in deceiving even those who had intended to have gone by the Mitsu Bishi steamers.

Among those, however, who do so, there are some, it is said, who are not of the lower classes, who are rich and highly educated, and whose reputations are noised throughout the Empire. Who these may be—whether farmers, traders, or gentlemen we know not—and we cannot yet state their names, but by their selfish regard of their own profits and disregard of what is right, they cause the most serious injury to our possession of the coasting trade. The wrongs which they do the country by exerting themselves on behalf of the rival company are incalculable and the want of any patriotism which they display is worthy of all reprobation.

However, by our advocacy of the Mitsu Bishi interests, we are not to be supposed as urging that the command of our coasting traffic should be given to the Mitsu Bishi Company. If the rival Company were a Japanese one we should not venture to speak of the competition, as whichever gained the day victory would have placed the command of the traffic in Japanese hands, and the competition besides would tend to promote trade. The present case is, however, entirely opposed to this, and every one with any feeling of patriotism must deplore the absence of safeguards for that control of our coasting traffic which we have only recently wrested from foreigners.

In time of war between two countries, if when a fight is as yet undecided and victory uncertain, a soldier were suddenly to reverse his spear and smite the enemy with the blunt end, he would be justly called a traitor, and traitors are hated even more than the enemy, and in all civilized countries punished with death. These Japanese who are now assisting to wrest from us control of our seas cannot be said to be in any way different from traitors, and we shall not fail to endeavour to find their names and publish them. If however we find that Mr. Namiya's letter and the street rumours are based merely on suspicions, we shall say nothing further on the subject.

Law Reform.

(Hochi Shimbun)

In August last we urged that the Government should pass a law of Habeas Corpus, and we were exceedingly glad to find that the many who followed us supported our views. We thought that no long time would elapse before this boon was granted and that the rights of the people would thereby be promoted. Since that time we have been anxiously expecting the passing of the measure, but seven months have flown, and our earnest expectations have not been fulfilled.

When we urged the question for the first time, it cannot be said that we did so prematurely. On the contrary, indeed, it may be said that we were late in bringing it forward. To find now that it has been delayed seven months although so important, proves that a law cannot come into existence by itself but proceeds from the will and power of man. It has not been made because no one has tried to make it, and for the same reason we might wait a thousand years and plead ten thousand times for it without any result. One of the ancients said "Nothing can be [made but by

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

making," and these words are indeed true, for nothing made by man comes into existence spontaneously.

This being the case, must we cease to urge this question by argument, and take more cogent steps to gain our cause? By no means. Our duty is limited to writing on the subject and urging it upon those whose duty it is to make the law. On them must lie the responsibility of refusing the concession.

Some writers have urged that the granting of the law of Habeas Corpus, though beneficial as regards the people, would cause prejudice to the Government, whose power would thereby be diminished; and they contend that, under these circumstances, the government is naturally unwilling to grant it. They say that as the power of making laws lies entirely with the Government and is not shared by the people, there is no chance of getting such a law passed except by means of a Representative Assembly.

It must be admitted that there is reason in this argument. Yet it is not perfectly sound, and belies what we have heard on good authority. For it is grounded on the presumption that the Government is disinclined to promote the rights of the people, while we have heard that the Judicial Department is revising the laws with the intention of extending the people's rights, because it shares the opinion of all wise legislators that the extension of the liberties of the people gives additional power to the Government, and that the whole nation is thereby benefited. Were the officials as selfish as these writers presume, their last object would be to promote the rights of the people. It is pleaded that the officials do not take any direct steps to grant the Habeas Corpus act because they think that the Government would thereby be prejudiced. But we are of another opinion, and believe that the Departments have been so pressed with work that they have not had time to devote to the subject. These are the opinions we hold, and if incorrect we have not another word to say. And though we are greatly desirous of seeing a House of Assembly instituted in order that the people may make their own laws, we feel that the happy day on which the law of Habeas Corpus act will be granted is yet far distant.

We only entreat the Government to pass such a law as soon as possible, as there is a strong desire for it on the part of the people.

And, though it does not belong to the question under discussion, we would further urge that lawyers be permitted to plea in criminal cases. This question has been amply discussed and unanimous approval of the step has been expressed. It is thus unnecessary to adduce further argument in support of the plea, and nothing remains for us but to express a hope that the practice will be permitted as soon as possible.

THE BONIN ISLANDS.

By Russell Robertson, Esq.

Read before the Asiatic Society of Japan on the 15th March, 1876.

(Concluded.)

H. M. S. *Curlew* anchored in Port Lloyd on the morning of the 26th November, having left Yokohama at 10 a.m., of the 22nd, the voyage being principally made under canvass.

The Japanese steamer *Meiji Maru* with the Japanese Commissioners on board, left Yokohama on Sunday the 21st November at noon, and arrived at Port Lloyd early on Wednesday the 24th.

As we made slowly in the early morning for the entrance of the harbour, the approach to which is clearly marked by two conspicuous crags known as "the Paps," the Islands presented a fertile appearance, and the palm trees twisted this way and that by the action of the winds were a conspicuous feature in the vegetation.

The approach to the harbour is marked by bold rocks, and a sheer wall of dark rock rising up at the South side of the harbour dwarfed almost to miniature the *Meiji Maru*, which vessel we descried at anchor well up the harbour. A canoe propelled by three men was noticed about a mile astern of the *Curlew*, but as no signal was made to us Captain Church did not think it advisable to stop, but proceeding on to the anchorage let go close to the Japanese steamer in about 22 fathoms of water. It turned out that the canoe had on board a Frenchman, Leseur by name, the self constituted pilot of Port Lloyd, whom Captain Peters of the *Meiji Maru* had thought fully sent out with a letter to the *Curlew*, in order that Leseur's services might be availed of if required.

The harbour of Port Lloyd open to the south-west is about a mile and a half in length, and has a breadth varying from half a mile to a mile.

At the upper end of the harbour, and on its northern shore, a coral reef extends for some distance, terminating in a pinnacle rock. Westward of this, and but a short distance from the beach, there is a depth of ten fathoms, the spot styled by Captain Beechey of the *Blossom* as "ten fathom hole"; from this the water deepens rapidly towards the mouth of the harbour.

The general character of the scenery as observable from the harbour is hilly, with here and there bold crags; the cliff line rising straight from the water's edge notably so on the Eastern side of the anchorage, while the western and north western shore is marked by a line of yellow sandy beach to the rear of which the ground is flat for a short distance, backed by hilly slopes and steep ascents. A fringe of trees hides the level ground and forms a natural boundary between the plots of cultivated land and the sea shore.

The hills are covered with verdure, but the luxuriant and almost tropical nature of the vegetation is not fully realized until after landing.

The ordinary palm and cabbage-palm trees abound on the rising ground which surrounds the anchorage.

A solitary hut at the head of the harbour in front of which the American flag was hoisted shortly after our arrival, a few canoes drawn up on the beach, and a canoe or two with small white sail flitting across the anchorage, constituted the only outward signs of life visible from the *Curlew*.

It is not within the scope of this paper to give in detail a narrative of what occurred on each day of my stay which occupied exactly a week, my time moreover was for the most part taken up with matters which would have but little general interest; but I will endeavour to give a faithful picture of the condition of the present settlers and to note such matters of interest as will convey to those who are desirous of knowledge on the subject as much information as I myself possess derived from actual observation.

It must be remembered that in 1830 the little colony which in that year first settled at Port Lloyd consisted of Mazarro, Millichamp, Savory, Chapin and Johnson; that of these Millichamp is now living at Guam in the Marianas or Ladrones group, and the rest are dead, Savory having died as recently as the 10th April, 1874, at the age of 79, leaving a widow and six children now residing on Peel Island. Mrs. Savory was the widow of Mazarro above mentioned, and was married to Savory after Mazarro's death, having also buried another husband in the interval.

In 1853, the time of Commodore Perry's visit, there were residing at Port Lloyd in addition to Sandwich Islanders and natives of other groups, eight foreigners—Savory, Webb, Motley, Gilley, the two Bravas, Cullen and Horton. What befell the majority of these has before been stated. These with the other Islanders made up in 1853 a resident population of thirty-one.

The settlers now number sixty-nine, of whom sixty-six reside on Peel Island, and three on the Bailey or Coffin group, of these thirty-seven are males and 32 females, and out of the whole number about twenty are children whose ages vary from one to fifteen. Amongst the present settlers there can only be said to be five whites, namely, Thomas H. Webb, an Englishman born in Wallington, Surrey; Leseur a Frenchman who hails from Brittany; Allen a German who comes from Bremen, Rose, about whose nationality I am uncertain, some calling him a German others a Dutchman; and John Brava whose real name is Gonsalves, a Portuguese; born in the Island of Brava, one of the Azores.

Of these John Brava, born in 1811, and consequently now 65 years of age was the first to come to Port Lloyd where he arrived in 1831 in the British whaler *Partridge*.

He remembers Millichamp, Savory and Mazarro being there when he came, as also another foreigner, probably either Chapin or Johnson, whose name however he has forgotten. He married at Port Lloyd a Sandwich Island woman since dead, by whom he had two sons George and Andrew Brava, the latter of whom is dead as is also his wife; two of his children, however, Francis and Lucy Brava are still living. The other son, George Brava, a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

man now close on 40 years of age lives close by his father; he married a daughter of Savory's, who died leaving three children, Jose, Rosa, and Andrew Brava now living with their father.

Thomas H. Webb, came as I think I have before mentioned to Port Lloyd in the American Barque *Japan* of Nantucket, some time in 1847, and has thus been nearly thirty years a resident on Peel Island. He married the daughter of an Englishman—Robinson by name—she is living with him now and they have a family of eight children.

George Robinson about whose ultimate fate there is much uncertainty arrived at Port Lloyd in the whaler *Howard* some time in 1849 and took up his residence with Webb, whose home was at that time shared by a man named Gilley (afterwards murdered). Robinson did not remain long at Port Lloyd but removed to Hillsboro' Island, the most important of the Bailey Group, where he cleared and planted out a considerable portion of ground. After a residence of a few years he left with his family for Guam and Seypan and in his absence Motley, of whom mention has before been made, went and occupied his clearing on Hillsboro Island.

Robinson eventually returned and appears to have arranged amicably with Motley for a joint occupation of the clearing. Robinson on his return had brought with him some natives from the Kingsmill Group and discontent soon manifested itself amongst them, fomented, so it is said, by a woman named Kitty in the employ of Motley. This appears to have engendered a quarrel between Robinson and Motley for they separated, the Islanders above mentioned leaving Robinson and taking service with Motley. An Englishman, known as Bob, who had run away from a whaler and found shelter with Motley, left the latter and went over to Robinson. At this time Robinson's family consisted of his sons John, Henry and Charles and his daughters Eliza, Caroline and Susan. There was living with him as nurse to the children a woman, Zipher by name, a native of Raven Island.

Notwithstanding the separation of Robinson and Motley, matters appear to have gone from bad to worse and scenes of bloodshed ensued over which I will not linger. It is sufficient to say that one morning, (the event occurred some time in 1861) an attack is said to have been made by the Kingsmill Islanders on the elder Robinson who with his children John, Henry and Eliza fled in one direction, his daughter Caroline, then a girl of 19, taking with her the younger sister Susan and her brother Charles flying in another. In the fight that ensued the man Bob was killed, whether by or at the instigation of Motley is not accurately known. Motley has since died and is buried on Hillsboro' Island. His name will be remembered as one of those appended to the organization scheme.

It is said that George Robinson and the children with him were picked off by a passing whaler, the *Montreal*, Captain Sole; the rest of his family fled to the opposite side of the Island and making their way to the sea shore subsisted there for a period of eleven months living on shell-fish and berries, until attracted by the smoke of a fire, the captain of a passing whaler the *E. L. B. Jenny*, hove to off the land and going ashore in a boat found the two girls Caroline and Susan Robinson with their brother Charles and the nurse Zipher in a most pitiable condition as may well be imagined. Taking them on board he proceeded to Port Lloyd close by, where the family were sheltered by Webb who subsequently married the girl Caroline, Susan later on becoming the wife of a man named Pease, said to have been an American and whose disappearance at Port Lloyd in the autumn of 1874, is generally well known. Mrs. Pease, Charles Robinson and the woman Zipher are now living on Peel Island.

John Robinson is reported to be living at the Sandwich Islands, which would go to confirm the supposition that with his father they had made good their escape from Hillsboro'. The woman Kitty is still living at the Bailey group, with the man Rose and a Kanaka boy, making up the three resident on those Islands.

The next to arrive at Port Lloyd is the Frenchman Leseur better known on the Islands as Louis. He came in the Hawaiian whaler *Wyola* in 1862 or 1863, but he had made several visits to the Islands before that in different whalers. In one of the years however above-mentioned he took up his residence at Port Lloyd where he has since, with the exception of a visit to Guam continued to dwell. He is a stout hearty-looking Frenchman of about 55 years of age, speaking English remarkably well—his present wife Pidear by name is a nature of Grigan, one of the Ladrones group, and is the widow of a man known as John Marquese, a native of the Marquesas.

By a former wife, who is buried at Port Lloyd, Leseur has three children, Albert, Louisa, and Phillis who are still living. I may here mention that it was at Leseur's house we found the copper plate and board put up by Captain Beechey in 1827. Leseur said he had found it in an outhouse on the clearing he now occupies.

We next come to the German Allen who arrived with Leseur in 1862 or 1863. He appears to be a man of fifty and upwards and has taken to wife a Sandwich Island woman, Poconoi by name. They live on Peel Island about a couple of miles from Port Lloyd and midway between the dwellings of Leseur and Webb.

As regards the man Rose now living on the Bailey Islands, it is uncertain when he actually came to reside there. All that is known of him at Port Lloyd is that he made his first appearance there in the French whaler *Gustav* in 1852. He was left there sick, but shipped again and made his appearance at Port Lloyd from time to time in successive whalers. He was eventually found residing on Hillsboro Island, but the precise date of his arrival there, or indeed how he got there at all, is not known.

The settlers other than those of whom I have made particular mention consist of men and women from the Sandwich Islands; from Grigan or Agrigan as it is sometimes called; from the Caroline Islands; and from the Gilbert or Kingsmill groups,—there is also one man from Bermuda, Robert Myers by name, claiming to be a British subject; a Manilla man named Sino, and two Japanese women the wives respectively of Sino and Myers. Of the 66 settlers now on the Bonins 35 have been born on the Islands. The nomenclature is curious, for I found in the list of residents that I procured when at Port Lloyd the following names, Thomas Tewerab, and his wife Bosan, Charley Papa, Friday, Bill Boles, Samuel Tinpot, Zipher, Hannah Poconoi, Samuel Tinpot, Pease, Mrs. Tinaree, and Mrs. Fanny and Mrs. Betty.

Miscegenation has brought about rather curious results. In the male children the white parentage is very distinct; light olive complexion, dark eyes and clear cut features, in the females the micronesian blood is unmistakeable, and I found in many cases the flat face and coarse features of the Pacific Islanders—on the other hand in some cases the women are in appearance very closely allied to the Hindostanee.

The men dress for the most part simply in shirt and trousers with broad brimmed Panama hat; a cotton shirt being replaced by a flannel one in the winter months. The women in print gowns with a bright colored kerchief on the head.

The two Japanese women above referred to were taken from Yokohama in the schooner *Tori* some time during 1873; four or five others also were passengers, but they elected—to return to Yokohama.

Having thus conveyed a general idea of how the resident population is made up I proceed to describe their dwellings, their occupation and mode of life.

Each family has its holding or clearing of cultivated land close to which the dwelling and outhouses are erected, these are situated for the most part round the harbour, but screened from view by a fringing of hummock trees

Webb, Allen and Leseur have their clearings away from Port Lloyd to the south and west of the harbour in each case to the sea.

To the holdings are given distinct appellations. Thus, commencing from the left hand, or north western side of the harbour, there is *Yellow Beach* on which the Bravas father and son, the Tewerabs a family numbering some 15 members and Charles Robinson have their clearings; continuing along the shore a site known as the *Cove* opposite ten fathom hole is reached; then a spot known as

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Jackson unoccupied. From this it is but a step to the *Head of the harbour*, as the location of the savings is called, and continuing along the eastern and southern shore, we come to *Bull Beach*, the dwelling of the Manilla man Sino and his Japanese wife, and but a short distance beyond this the site known as *Aki* the present residence of the widow Pease and former site of the Japanese colony established at the close of 1861 and broken up early in 1863.

Leaving the harbour and coasting round the sea shore, but bearing to the south, Leseur's place of residence known as *Blossom* or *Clarkson's* village is reached; further on is *Poconoi* the dwelling of William Allen, and beyond this *Little River* where Webb and his family reside; to each of these a land track leads starting from *Aki*, but the road is a rough one, and they are more easily reached by canoe provided the weather suits.

The dwelling houses resemble one another closely and to describe one is to describe all. They consist of two rooms, constructed with wooden uprights, and each has a solid wood flooring; the sides and roof are thatched with the leaf of the cabbage palm neatly secured to the rafters with thin wooden slips. Kitchens and outhouses are all separate from the dwelling. Of furniture there is of course not a very large display; a rough deal table, a few chairs and a seaman's chest go to make up the furniture of one room, while the bedroom opening out from it is supplied with a plain wooden bedstead.

Each cabin, for so it may be called, is supplied with a clock—a few cheap and highly colored prints adorn the walls and from the ceiling hang rifle and fowling piece. A few shelves with plates and crockery-ware neatly arranged complete all that is seen in the interior of these dwellings. Everything is scrupulously clean, from floor and woodwork to linen and crockery.

Of books, with the exception of a few I saw in Webb's house, there are none, and, Webb excepted, no one on the Islands can either read or write.

In the cultivated ground which surrounds each dwelling are seen patches of garden vegetables, sweet potatoes, pumpkin, and wherever there is a little running water, taro, from which the article of diet so well known in the Sandwich Islands under the name of *poi* is made.

The dwellings are all with but one exception, that of the widow Pease at *Aki*, situated on low ground and to the back of the cabins the sloping ground is in some cases laid out with Sugar cane, Maize, and a few Cocoa-nut plantations. Plaintains thrive and are grown close to the homesteads, and lemons of excellent quality abound throughout the Island.

Pigs, geese, ducks, and fowls are kept by the settlers, and appear to thrive well. What with wild goat, wild and tame pig, poultry, fruit and vegetable produce afforded by the shore and excellent fish and turtle from the harbour, the settlers are not so badly off for food. It happens, however, at times that violent hurricances play sad havock with the vegetation and now and then there is actual distress for food, one family that I came across being reduced to Indian corn meal alone for diet.

The occupation of the settlers can very easily be imagined. Rising at dawn work is done either in the garden or about the house until breakfast which is taken about eight a.m. the meal varies according to season and consists of whatever the family may have at hand either fresh or salted turtle, fish, corn meal, taro or vegetables. After breakfast work is resumed; one will go after turtle which when in season in April, May and June are turned over in great numbers—one man securing perhaps 50 a day. Another will go fishing or perhaps taking his gun look after a wild goat or pig; firewood has to be cut or a neighbour wants a helping hand to repair his house or erect a new one.

The evening meal is taken shortly before dusk, it is probably the same in materials as the breakfast, perhaps with the addition of goat's flesh or pork. And after supper to bed—and so on from day to day, an existence varied only by the occasional visit of a whaler, now apparently very rare. In addition to the products of the Island already noted I should mention that arrowroot of very good quality is grown, and that the soil seems eminently adapted both for this and for tapioca.

Of running water there seems no lack.

The settlers have of course an eye to trade, though they seem more inclined to barter than to accept money; and naturally so, for money is of little or no use amongst themselves and they can only hope to pass it off with the next incoming whaler, unless perhaps it is hoarded.

Their wants are notably piece goods of any description, provided they are of light texture and suitable for clothing, stores, salt (much used in salting down turtle for winter consumption) soap, tobacco, hardware, nails, knives, tools of different kinds and ammunition. Against these they are ready to barter turtle, turtle-shell, turtle oil, bananas, lemons, poultry and garden produce. If however the purchaser prefers to pay in cash the following are the island rates: Turtle, each $2; turtle oil $10, $15 and $20 a barrel; turtle shell, 50 cents per pound; lemons, $2 a hundred.

It can be understood, however, that the wants of the settlers, which are in themselves comparatively few, are easily supplied to so limited a population. The *Meiji Maru* took down presents in the shape of blankets, piece-goods, tea, spirits, cigars and a few miscellaneous articles, and Captain Church of the *Curlew*, not unmindful of the settlers' wants, made up for each of those who required them a packet containing shirts, flannel, shoes, knives, soap and other useful ships' stores.

As I personally visited the dwelling of each settler, and as in so doing I had to cross the southern portion of the Island in order to visit Leseur, Allen and Webb at their respective holdings, I was enabled to get a very good idea of the character of the scenery, the vegetation and the general resources of the Island. It is not until landing that the more tropical nature of the vegetation is apparent. Palms, what appeared to be a species of wild pine apple, and luxuriant ferns grow in rich profusion, the hill sides are clothed with verdure and the valleys are filled with a description of wild bean, with here and there patches of taro.

The following are the principal trees and plants. I give their names as known among the settlers,—in some cases probably Hawaiian appellations have been adopted.

Tremana; a beautiful wood and largely used by the settlers. Whalers are in the habit of taking away quantities of this wood which is sold to them at twenty-five cents a foot, and on one occasion a schooner took away from the island a full cargo of it.

Mulberry; used on the Bonins for the uprights of houses and generally for building purposes.

Cedar, so called, furnishes a beautiful wood of which the floorings of the dwellings are nearly all made.

Tea tree and *poison* wood tree; used for making the hulls of canoes.

Spruce; used only for fuel.

Rose wood tree; in use for binding down the thatch of the dwellings.

Shaddock; the wood of which is used for roofing purposes.

Yellow wood; no particular use.

Hake wood and white oak; both employed in dwellings.

Lohala tree. Mats are made of the leaves and fibre of this tree—the fruit makes a good food for pigs.

Milk wood, *red iron* wood and *white iron* wood; in use for building purposes.

Black iron wood; used only for fuel.

Soft Hao wood; of which the hulls and canoes are made.

Swamp *hao* wood and mountain *hao* wood; used for making the arms of canoes with which the outrigger is attached to the hull.

Narrow leaf *hao* tree; the wood of this is used for the handles of hatchets and for garden implements.

Kehop tree or shrub; a beautiful plant resembling an aloe and bearing a sweetly scented flower; the leaves of this are much in request by the settlers as they are supposed to contain certain healing qualities; they are made soft by heating before a fire and are then applied to bruises and sores.

In addition to the above mentioned and those already noted there are on the Islands, wild *plum* and *cherry*, *orange*, *laurel*, *juniper* and *box wood* tree, *sandal* wood, *marmottao*, wild *cactus*, *curry plant*, *wild sage* and *celery*. *Mosses*, *lichens* and various kinds of parasitic plants abound.

Of minerals upon the Islands none are known to the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

settlers, unless I except iron *pyrites* specimens of which are found on Peel Island.

The shores are covered with coral, and these, together with the reefs, are strewn with shells some of which are very beautiful.

Earthquake shocks and tidal waves are frequent, the peculiarity of the latter being that no bore rushes up the harbour, but the water suddenly rises just in the manner as described to me by a settler as water is raised in a bowl by inserting an inverted tumbler, when the water has attained a certain height, it as suddenly recedes. The climate is more tropical than temperate. At the time of our visit during the latter end of November the thermometer at noon stood at 70° and 75° and after Yokohama seemed oppressively warm. Sickness is almost unknown amongst the settlers, the only thing they complain of is that on the changes of season from heat to cold, and from cold to heat, they are liable to chills resulting in violent colds.

I noticed no signs of intemperance, nor did I see in any of the houses either beer, wine or spirits.

To those who visited us on board the *Curlew* beer seemed to recommend itself most, but only to the older men, the younger refusing to take anything but water with their meals, when entertained on board the ship. The use of tobacco is general.

I have before remarked that on our arrival at Port Lloyd the American flag was run up close to a cabin at the top of the harbour. This turned out to be on the holding owned by the widow Savory and her family, though the dwelling itself is obscured from the anchorage by trees.

I had a long chat with this old lady who received Capt. Church and myself surrounded by her family, one or two of the other settlers also being present.

She explained that the hoisting of the flag was out of compliment to us, and that one of her husband's dying wishes had been that the flag should be so displayed whenever a vessel arrived or on any exceptional occasion.

I asked Mrs Savory if she had any ideas on the subject of protection by any particular Power, but the family all gravely shook their heads at this, and said they wanted to be regarded as Bonin Islanders, by which I understood them to mean that they wished to be left alone in undisturbed possession of their holdings, and the less that was said about nationality or protection of any kind the better. Close to the house is Savory's grave, and indeed in most of the enclosures the resting places of the dead are conspicuous features surrounded with neat palisades and in some cases a headstone recording in English the name and date of death of the deceased. While on this subject I should not omit to record that one of the settlers told me he had, when digging near the shore a few years back, come across the the skeleton of a child apparently about ten years of age; the bones fell to pieces at the touch and on exposure to the air, from which it is conceived that they had been there many years.

I have not before noted that English is spoken by all the settlers, unless I except some half dozen from the Kingsmill group, who speak their own language.

There is however no attempt at education on the Islands, nor is there indeed any one there who could improve this state of things, Webb being the only one who reads or writes and this indifferently well. Religion has with perhaps the exception of Webb, no name amongst them; the marriage and burial services are however always read by Webb when occasion requires.

When speaking to Mrs. Savory about her husband's death, I asked if his end had been peaceful. She replied "quite so; that he had given certain directions with great clearness," but when following up my question by asking if he had expressed himself in any way about a future state, the question did not seem to be understood and was received with blank looks. Mrs. Savory rather amused me when in reply to a question I put as to what possible charm there could be in such an existence as she and her family were leading she replied, "Well, I guess we pay no taxes here."

From Mrs. Savory, her son Horace, a young fellow of two or three and twenty, from Webb, Lesceur, Charles Robinson and the Bravas, Captain Church and I received much kindness and attention.

It now only remains for me to make some concluding remarks. Popular rumour had ascribed to the Bonins a colony of semi-savages, murdering one another and altogether leading a barbarous existence. I found a small colony of settlers, living to all outward appearances in decency and order, cleanly in their attire, civil in their address and comfortable in their homes. Such is the bright side.

The dark picture is the utter apathy of the settlers; their indifference to anything outside of what goes to satisfy their immediate wants; their suspicion in some cases of one another. No religion, no education, old men and women hastening to their graves without the one, children growing up without the other—and there is a darker picture than this. This paper records the fact of two men Gilley and Bob (so called) having fallen by the hand of their neighbours. On the 9th October, 1874, Benjamin Pease, a resident at Port Lloyd disappeared and it is believed met with a violent death, while on the 11th June 1875 a negro, Spenser by name, strongly suspected of having been Pease's assassin also disappeared, receiving his death blow it is said at the hands of one of the residents. I was informed by a settler that during his stay on the Bonins, now extending over 25 years, no less than 11 men had met with violent deaths. I would not have it assumed, however, that these tragedies are to be ascribed altogether to the bona fide resident population, if indeed, the word population can be ascribed to such a little band.

It must be remembered that the component parts of the population are a few old residents, a few comparatively new, some born on the Islands and now getting on in years, runaways from whalers and men perhaps purposely left behind, and these latter we may be sure not the most orderly of the crew.

I trust that if communication comes to be established with these islands with anything like regularity that the claims of the settlers on the sympathies of the foreign communities of Yokohama and Yedo will not be overlooked, and that an attempt at ameliorating their condition will be made from one or both these settlements if not indeed generally from the open ports in Japan. I can vouch for it that kindly sympathy expressed either in word or deed will not be inappreciated there, and that in spite of many drawbacks, there are as warm hearts on the Bonins as any that beat amongst ourselves.

Correspondence.

DESIGN AND DARWINISM.

To the Editor of the "Japan Weekly Mail."

Tokio, March 23rd, 1876.

Sir,—I have just seen to-night, for the first time some remarks which appeared in your valuable journal of 4th March, in reference to a lecture given by me in Yokohama.

The lecture when printed in its entirety may perhaps be a little more intelligible than it seems to have been in the mutilated form in which it was delivered. I am surprised, however, to see questioned, the position which I took in regard to Lamarck and which is certainly that of all who are really acquainted with the subject. Within the last week I have seen for the first time Huxley's latest utterance, in which that distinguished anatomist refers to the Doctrine of Evolution first *scientifically formulated* by Lamarck and solidly built up by Darwin." I regret if any unwisely harsh expression escaped from me in reference to Darwin's indebtedness to Owen.

Huxley in the same article speaks of "Darwin, Owen and Wallace" in the same breath and evidently recognises, as most continental writers have done, the high claims of Owen in this regard.

My position towards teleology is something like this;—take many of the stock arguments in popular works on Design and as *positive proofs* of the Divine existence, love, wisdom &c., the Darwinist at once seems to tear them to tatters. But this result is by no means fatal to the argument from Nature to God. There are some tools for example actually, as we know from observation, designed by intelligence, of which yet an entirely theoretical account similar to that of Darwin's might be plausibly given—not to speak by the way, of such a trite example as Babbage's calculating machine, in which numbers are evolved so to speak naturally.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Now I had endeavoured to prove that the existence of Beings or or at the very least of a Being of transcendent power and intelligence arose as a necessity even from the extremest demands of the Evolutionists, so then surely there must be found some marks (they might be subtile ones) of that August Being within the field of an influence admittedly so powerful.

I say, however, that in virtue of these atheistic speculations (by which I don't mean to designate Darwin's or all Darwinist work) the telelogical argument must be differently couched from heretofore. Those examples only must be selected which do not admit of a double reading—an objection which is frequently and with some justice, raised. Surely it is useless for us to blink this. It is better to try all the props honestly—cutting away those that no longer give support, and so making room for better ones. There are however not a few indications of formative intelligence ('*design*' is perhaps too limited in its significance) in nature which do not admit of a double reading, and I selected one of these with which I was most familiar—namely the marvellously beautiful valves which assist the return of the venous blood to the heart against gravity, and which would certainly have been checked in their early development by the force they were meant to resist were the principles which Darwin formulates all that had to do with the matter.

Darwin has indeed taught much and clearly of what is both old and true. He has taught some new and useful truths also.

Nothing he has yet established has disproved the inspiration of Scripture. Some of the few important conclusions really *verified* by his school are to my mind wonderfully clear evidences of a miraculous or supernatural element in the Mosaic narrative.

I ventured to criticise on scientific grounds and for the purpose of showing that Darwin's principles were not *final*—the two important and it seemed to me apparently contradictory laws of variation and heredity. I have seen since then, a reference to a lately expressed opinion of Haeckel that "adaptations may be *indirect*—being generated in an organism only to become *apparent* in its offspring,"—on which Wallace remarks—"These form an important class, and seem to suggest that the phenomena of adaptation, thoroughly understood, would go far to explain all the difficult cases of so-called spontaneous variation."

I am not sure if any one ever believed in the creation of forms having no scope for variation from some unalterable type. It is at least usual for careful writers to discriminate between the *creation* of *forms* and the *preexistence* of a *type* or plan after which they are formed and which many supposed to have been *eternally* in the Creator's mind. This idea then if less generally accepted than formerly, still in some form retains a place in the views of many of the leading votaries of so called Positive Science, and variability was *always* recognised to some extent.

I hope you will excuse me referring at this late date to a matter on which a painful degree of ignorance exists amongst highly educated men, while I have to thank you for the friendly wish you express. I would add in reference to an allusion you make—that I am not ashamed of having unmasked spoken out the opinions which in spite of a certain amount of "Purblind Flunkeyism," are held by nearly all foreigners and even by a considerable number of enlightened Japanese in regard to what, now that it is bearing its fruits in other directions, even His Excellency the British Minister himself must feel to have been a most unfortunate blunder.

I am,

Yours truly,

HENRY FAULDS.

HARBOUR MISMANAGEMENT IN ENGLAND.

To the Editor of the "Japan Weekly Mail."

Yokohama, 23rd March, 1876.

Sir,—Captain Calver of 36 years experience in the Surveying Branch of the English Royal Navy has recently addressed a pamphlet to the English public showing the fearful waste of public money on so-called harbour improvements; a few extracts from which I herewith enclose.

1st.—The harbour works at Alderney were first undertaken in 1845. The calculations were that £300,000 would cover the whole outlay, but alterations were made and extensions proposed till in 1855 the estimates reached the enormous sum of £1,300,000.

This work was completed, as far as such a gigantic failure can be said to have been completed, in 1864. In 1866 and 1868 it was very seriously damaged and in 1870 two large gaps were made in the breakwater, and the Committee which investigated the matter in 1871 reported that it would take from £142,000 to £197,000 to repair it, and that it would cost £10,000 a year to keep the work in repair. In 1871 a sum of £44,000 was spent in repairs and in 1872 a Committee of the House of Lords actually considered the propriety of "*blowing up the Breakwater, dispersing the foundation and filling up the harbour.*" Upwards of £1,344,000 has been thus thrown into the English Channel on this useless expensive work.

2nd.—Jersey harbour; this work was commenced in 1847 and the first calculation of two breakwaters was £700,000 and this work had finally to be abandoned after £234,000 had been literally thrown into the sea.

3rd.—Holyhead harbour: the original estimates were, for constructing two breakwaters, £628,063, but *one* breakwater alone has cost £1,285,000 or *four times* the *half* of the original sum.

The proposed works at Dover Captain Calver states will show equally disastrous results, and he concludes by recommending as a remedy for this state of things that Harbour work should be undertaken with the greatest possible caution and I give his own words.

"That which has been already described as involved in the selection and projection of a public harbour, suggests the composition of the proper court for dealing with it. As the subject embraces naval, military, strategical, nautical, and physical considerations, as well as that of marine construction, each of these branches of professional knowledge ought to have two or more representatives."

Your faithfully,

X.Y.Z.

23rd March.

Law Report.

IN H. B. M.'s CONSULAR COURT.

Before Russell Robertson, Esq., Consul.

Friday, March 24, 1876.

This was a petition by Mr. C. J. Frischling to grant a detainer on the proceeds of sale of the stock-in-trade of Messrs. Driscoll & Co., now held by Mr. Henry Peacock. The petitioner was formerly a partner of Driscoll & Co., but left the firm in February, 1875,—an award being then given by Mr. J. Hall, as arbitrator, with regard to the share coming to him. This share had, however, not yet been paid him; and now the stock has been sold out, the name of Driscoll & Co. removed from the signboard, and the name of Peacock put over the door.

Mr. Dickins appeared for the petitioner; Mr. Ness for Mr. Peacock.

Mr. Henry Peacock sworn: I took possession of the goods of Driscoll & Co. on the 10th of February last, in virtue of a bill of sale from Driscoll & Co. to Thomas and William Peacock. I had a power of attorney from Thos. Peacock. The amount of the bill of sale was $10,000. To release goods from the Chartered Mercantile Bank, Thomas Peacock became security to the bank for this amount. In Driscoll & Co.'s books I have seen a statement to the effect that goods to that amount were secured to them by the guarantee of Mr. Thomas Peacock. Mr. Frischling left the firm of Driscoll & Co. in February, 1875. There is a bill of sale dated 5th July, 1875, which comprises the whole of the stock and furniture of Driscoll & Co. I bought that bill of sale from Mr. Lockyer. To the best of my best knowledge, Driscoll & Co.'s name wassigned to that bill of sale. I cannot swear who the other party was. I have seen it a few days ago. I cannot say if Augusta Ellis was the mortgagee under the bill of sale.

Mr. Ness here objected to the tenor of Mr. Dickins' cross-examination.

Cross-examination continued: Miss Augusta Ellis, now Mrs. St. George, did not authorise me to enter upon that bill of sale; but Mrs. Lockyer authorised me, and she showed me an authorisation to her from her sister.

Mr. Ness here explained that Mr. Peacock did, in fact, take possession of the goods in virtue of a judgment given, and an order of execution issued in satisfaction of a promissory note given by Driscoll & Co. to Miss Augusta Ellis.

Cross-examination continued: That judgment was assigned to me by a document (document exhibited by Mr. Ness).

Mr. Ness here explained that Mr. Peacock had taken possession under the second bill of sale; and as this bill of sale had not been satisfied, he had had the order for execution served on Driscoll & Co., put an officer in possession, and removed Driscoll & Co.'s name from the signboard.

Mr. Dickins argued that both bills of sale cover property belonging to Mr. Frischling and are so far invalid. He admitted that Driscoll & Co. are indebted to Thomas Peacock, but he denied the extent to which that debt is said to exist. He denied

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Mr. Henry Peacock's right to take possession in the name of Thomas Peacock and William Peacock, when he had only power of attorney from Thomas Peacock. Mr. Ness exhibited a promissory note from Driscoll & Co. to Thomas Peacock for $10,000 and power of attorney from Thomas Peacock to Henry Peacock. The goods have mostly been sold, but the sale has only cleared about $7,000. Mr. Dickins pointed out that the bill of sale from Driscoll & Co. to Thomas Peacock and William Peacock for $10,000 contains the usual clause that possession under it cannot be taken unless 24 hours previous notice has been given by the holders of the bill of sale, and as Mr. Henry Peacock does not hold a joint power of attorney from Thomas and William Peacock but only from Thomas Peacock, he could not give that notice.

Mr. Henry Peacock examined by Mr. Ness: Driscoll & Co. owed Mr. Thomas Peacock about $15,000, against which I hold about $7,000. The expenses of the establishment have lately been paid by me. I and William Peacock are both attornies for Mr. Thomas Peacock.

Mr. Powis, examined by Mr. Ness: As far as I know our firm, Driscoll & Co., owes Mr. Thomas Peacock now about $6,000. When Mr. Frischling retired on the 28th July, 1875, we owed Mr. Thomas Peacock about $16,000. This debt has not been paid, and I am not aware that Mr. Thomas Peacock relieved Mr. Frischling from his share of liability. Mr. Henry Peacock has of late been paying the expenses of our establishment, and his name is over the door. I asked Mr. Thomas Peacock if he could not release some goods of ours that were held by the Bank, and on my giving him a bill of sale of our stock, he agreed to do so.

Cross-examined by Mr. Dickins: The money owed by us, when Mr. Frischling retired, was due, not from our Hongkong, but from our Yokohama firm.

Re-examined by Mr. Ness: When Mr. Henry Peacock took possession he asked me to remain and sell for him.

Mr. J. W. Hall, sworn, examined by Mr. Dickins: I acted as arbitator when Mr. Frischling left. I went through the books. At the time Mr. Frischling retired from the firm about $3,000 was due by the firm to William and Thomas Peacock. At the same time a considerable amount of stock was in the hands of the remaining partners of Driscoll & Co. The value of stock on hand was $15,000. Mr. Frischling's share in the business was one-fourth.

To the Court: Mr. Driscoll showed me the account of indebtedness of the firm to William and Thomas Peacock up to the time of Mr. Frischling's leaving.

Cross-examined by Mr. Ness: I asked for all the firm's accounts, but I do not know, if I saw them all. Mr. Frischling's status did enter importantly into the matter on which I was to act as artitrator. (Shown 2 documents.) These accounts I never saw.

Mr. Ness explained that these two accounts reached the firm from London shortly after the period of arbitration. He put the documents in evidence as showing that the debt at that time was about $16,000. Mr. Ness now demanded that these proceedings be dismissed. Henry Peacock is here as the attorney of Mr. Thomas Peacock, and has as such succeeded in recovering about $7,000 out of $10,000 due from Driscoll & Co. to Thomas Peacock. In the commencement of the year there existed a bill of sale of the stock in favor of Augusta Ellis secured by a promissory note, both duly endorsed to Mrs. Lockyer, on which a judgment had been taken and an order for execution issued but not served. It is so far from Thomas Peacock owing Driscoll & Co. any money, that on the contrary the latter yet owe the former $3,000.

Mr. Dickins replied that if Mr. Henry Peacock has been in wrongful possession of the goods, he is also in wrongful possession of the proceeds of the goods. If Mr. Henry Peacock had any right to take possession of the goods, it must be in virtue of the bill of sale to Thomas and William Peacock. This bill of sale stipulates that possession cannot be taken unless demand of payment has been made 24 hours before-hand. But no such demand has been made, and Mr. Henry Peacock had no power of attorney from Mr. William Peacock. The learned gentleman, therefore, agreed that Mr. Henry Peacock is in possession of money belonging to Driscoll & Co., which money he claims for Mr. Frischling. When Mr. Frischling retired from the firm, Driscoll & Co. held a considerable amount of stock, of which a share belonged to Mr. Frischling, and Driscoll & Co. could not, therefore, by a bill of sale dispose of the whole stock to Mr. Thomas Peacock. He asked that Mr. Frischling be paid out of the proceeds of sale, or at least so much of the proceeds of sale as represent Mr. Frischling's share in the goods sold.

Decision reserved.

IN THE GERMAN CONSULAR COURT.

Before A Schaeffer, Esq., *Acting Consul.*

Thursday, March 23rd, 1876.

Frederick Bachmann, ordinary seaman on board the German Brig *Otto*, was charged with being drunk and using insulting and threatening language to the Captain.

Captain Jachtmann, master of the Brig *Otto*, produced his log book, and read an entry in the same, according to which the accused, who on Sunday, the 19th inst, had had permission to go ashore, came on board drunk at about 5 p.m., went to the captain's cabin and asked for an advance of $5. The captain refused him the money, telling him that he was drunk and ordering him to the forecastle. Accused then became extremely abusive in his language and the captain had to call the chief officer to get rid of him.

N. Meyer, chief officer of the *Otto*, deposed that he was called by the captain on the 19th instant at half-past five p.m. to remove Bachmann from the captain's cabin. He brought Bachmann on deck. Bachmann used foul language; he was drunk but not so much so as to be ignorant of what he was doing.

F. Bachmann acknowledged that he had been in the captain's cabin last Sunday to ask for $10, but as for the rest of the charge he was so drunk that he did not remember anything of what happened.

Sentenced to pay a fine of $5 and costs.

IN H. B. M.'s SUPREME COURT FOR CHINA AND JAPAN.

IN APPEAL FROM HER MAJESTY'S COURT AT YOKOHAMA.

Shanghai, March 14th, 1876.

Edward Fischer, appellant, and John Middleton, respondent.

JUDGMENT.

After perusing the evidence in this case, I have no alternative but to confirm the judgment of the Court below. The promise alleged by the defendant is one too indefinite to be enforced either at law or in equity. The probability is that some general conversation such as that alluded to by the defendant, and partially but only partially admitted by the plaintiff, did take place, and no doubt the plaintiff did intend to make some deduction from the amount of the commission, and it is a great pity he did not act up to his intention; but as the Judge below said, the promise *qua* promise is not only indefinite and uncertain in its terms, but it is, moreover, unsupported by any consideration, and threfore cannot be sustained as a waiver of a clear and distinct legal right to the commission claimed. The appeal is therefore dismissed, with costs.

ED. HORNBY.
Chief Judge.

REUTER'S TELEGRAMS.

London, 10th March, 1876.

General Dana succeeds General Schenck as American Minister at London.

It is decided that the Queen's title is to be that of Empress of India.

The French Chambers have opened. Mr. Dufaure is Premier.

The Turks have been severely beaten, and lost their artillery with 800 killed.

Bombay, 11th March 1876.

The Prince of Wales shot seventeen tigers at Nepaul. He leaves Bombay on Monday. His progress throughout has been triumphal.

(Straits Times.)

Madrid, 21st Feby.—After severe fighting the Alfonsists have captured Estella.

St. Petersburg, 21st February.—The Grand Duchess Marie, sister of the Czar, has died.

Bombay, 21st Feby.—The *Serapis* anchored in Bombay harbour this morning.

Nepaul, 21st Feb.—The Prince arrived here yesterday.

After dinner, in the evening, Sir Jung Bahadur came in and proposed the Healths of the Queen and the Prince in the most earnest and cordial manner, expressing much the same sentiments as on the occasion of the Prince returning his visit on Saturday.

Splendid sport to-day: seven tigers shot, six falling to the Prince's own rifle.

Upwards of 600 elephants were beating and the sight was most imposing.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Cairo, 22nd Feb.—A Convention has has been signed by Colonel Stokes and Baron Lesseps for a progressive reduction of the Suez Canal dues to three francs per ton. The arrangement is to spread over a period of eight years, the Canal Company agreeing to spend a yearly sum of one million francs in improvements.

The statutes of the Company have been altered increasing the number of Directors to 24, so as to admit of the three English Directors being placed on the Board.

London, 23rd February.—The Reverend Dr. Mylne, of Keble College, Oxford, has been nominated to the vacant see at Bombay.

Paris, 22nd Feb.—The Senatorial Elections have resulted in a triumph for the Moderate Republicans. Of the 225 Senators elected by the Departments only 61 are Monarchists and 55 Bonapartists.

M. Buffet, defeated in no less than four places, has resigned his post as Minister of the Interior.

Madrid, 23rd Feb.—The Alfonists have stormed and captured Tolosa in the Province of Guipuzcoa. The Carlists are flying to the French frontier.

London, 23rd Feb.—The gross total of the Army votes for 1876-77 is £15,250,000 against £14,525,000 is 1875-76, the net increase being £525,000 comprising the sum of £179,000 under head of regimental pay.

Sir William Gregory, the Governor of Ceylon has been gazetted Knight Commander of the order of St. Michael and St. George.

The Colonial Secretary, Arthur Birch, Esq., and the Auditor-General, J. Douglas Esq., have been gazetted Companions of the same order.

St. Petersburg, 23rd Feb.—Intelligence received here from Russian Khokand announces that the Russian troops entered the capital of Khokand on the 20th instant.

Galle, Thursday Afternoon.—The Ship *Sierra Morena* arrived with twenty passengers and crew of the shipwrecked ship *Strathmore*, long given up as lost. Forty-four souls have been living on the largest of the Crozet group of Islands, latitude 45 S. and longitude 45 E. since the first of July.

When rescued they were in a wretched condition.

They were found by the American whaler, *Young Phoenix*.

They had been living for seven months on sea birds and eggs and were nearly naked when rescued.

Forty souls have been lost.

The *Strathmore* was bound for New Zealand with emigrants.

She was long ago given up at Lloyds.

Galle, 25th Feb.—The *Sierra Morena*, bound for Kurachee has put in here, and landed twelve passengers, and eight of a crew, part of the survivors of the *Strathmore* of Dundee, new iron ship, 1472 tons, on her first voyage from London to New Zealand, wrecked on July 1st, 1875, on one of the Crozet Islands, Southern Ocean. The above and 24 others were taken off the Island on the 22nd January by the American whaler *Young Phœnix* in wretched condition. On the 26th January the *Phœnix* fell in with the *Sierra Morena*, and transferred the twenty landed to-day. Owing to scarcity of water she could not take more.

The names of the three first-class passengers landed here, are Spencer Joslen, Frederick Bentley, and George Crombie. There are four first-class passengers on board the *Phœnix*,—Mrs. Woodsworth, Charles Woodsworth, Alfred Walker, and Hilton Keith.

The Captain and Chief Officer were drowned; the second and third officers saved.

Aden, February 24th.—The steamer *Hydaspes*, with the outward mails of 11th instant, left here for Bombay at 9 o'clock yesterday evening.

London, February 24th.—To-day, in replying to a deputation of merchants and others, whose interests lie in the cotton districts

The Marquis of Salisbury said that the Indian Government for months past, has been instructed to prepare the way for the gradual abolition of the present import duties on manufactured cotton goods and yarns, and also to fix a period for their entire abolition. If the finances of India were fortunate, he hoped the object which the deputation had in view would be speedily attained. The Marquis said he was not prepared to recommend any new tax for India.

Paris, February 24.—The resignation of M. Buffet having been accepted, he will be succeeded in the Ministry by M. Dufaure, the Minister of Justice. In other respects the Cabinet remains unchanged.

Cairo, February, 24.—Late advices from Massowah state that the Egyptian Army having occupied the Province of Hamasin met the force of King John near Adowa. The result was a victory for the Egyptians.

The Gallas tribe have submitted to the Khedive.

DARWIN'S INSECTIVOROUS AND CLIMBING PLANTS.*

(The Nation.)

II.

To a naturalist of our day imbued with those ideas of the solidarity of organic nature which such facts as those we have been considering suggest, the greatest anomaly of all would be that they are really anomalous or unique. Reasonably supposing, therefore that the Sundew did not stand alone, Mr. Darwin turned his attention to other groups of plants; and, first to Bladderworts, which have no near kinship with the Sundews, but like the aquatic representative of that family, are provided with bladdery sacs, under water. In the common species of *Utricularia* or Bladderwort, these little sacs, hanging from submerged leaves or branches, have their orifice closed by a lid which opens inwardly—a veritable trapdoor. It had been noticed in England and France that they contained minute crustancean animals. Early in the summer of 1874, Mr. Darwin ascertained the mechanism for their capture and the great success with which it is used. But before his account was written out, Prof. Cohn published an excellent paper on the subject in Germany, and Mrs. Treat, of Vineland, New Jersey, a still earlier one in this country—in the New York *Tribune* in the autumn of 1874. Of the latter, Mr. Darwin remarks that she "has been more successful than any other observer in witnessing the actual entrance of these minute creatures." They never come out, but soon perish in their prison, which receives a continued succession of victims, but little, if any, fresh air to its water. The action of the trap is purely mechanical without evident irritability in the opening or shutting. There is no evidence nor much likelihood of any proper digestion; indeed, Mr. Darwin found evidence to the contrary. But the more or less decomposed and dissolved animal matter is doubtless absorbed into the plant; for the whole interior of the sac is lined with peculiar, elongated and four-armed very thin-walled processes, which contain active protoplasm, and which were proved by experiment to "have the power of absorbing matter from weak solutions of certain salts of ammonia and urea, and from a putrid infusion of raw meat."

Although the Bladderworts "prey on garbage," their terrestrial relatives "live cleanly," as nobler plants should do, and have a good and true digestion. *Pinguicula*, or Butterwort, is the representative of this family upon land. It gets both its Latin and its English name from the fatty or greasy appearance of the upper face of its broad leaves; and its appearance is due to a dense coat or pile of short-stalked glands, which secrete a colorless and extremely viscid liquid. By this small flies, or whatever may alight or fall upon the leaf, are held fast. These waifs might be useless or even injurious to the plant. Probably Mr. Darwin was the first to ask whether they might be of advantage. He certainly was the first to show that they probably are so. The evidence from experiment, shortly summed up, is, that insects alive or dead, and also other nitrogenous bodies, excite these glands to increased secretion; the secretion then becomes acid, and acquires the power of dissolving solid animal substances—that is, the power of digestion in the manner of *Drosera* and *Dionœa*. And thes talks of their glands under the microscope give the same ocular evidence of absorption. The leaves of the Butterwort are apt to have their margins folded inward, like a rim or hem. Taking young and vigorous leaves to which hardly anything had yet adhered, and of which the margins were still flat, Mr. Darwin set within one margin a row of small flies. Fifteen hours afterwards this edge was neatly turned inward, partly covering

the row of flies, and the surrounding glands were secreting copiously. The other edge remained flat and unaltered. Then he stuck a fly to the middle of a leaf just below its tip, and soon both margins infolded, so as to clasp the object. Many other and varied experiments yielded similar results. Even pollen, which would not rarely be lodged upon these leaves, as it falls from surrounding wind-fertilized plants, also small seeds, excited the same action, and showed signs of being acted upon. "We may therefore conclude," with Mr. Darwin, "that *Pinguicula vulgaris*, with its small roots, is not only supported to a large extent by the extraordinary number of insects which it habitually captures, but likewise some nourishment from the pollen, leaves, and seeds of other plants which often adhere to its leaves. It is therefore partly a vegetable as well as an animal feeder."

What is now to be thought of the ordinary glandular hairs which render the surface of many and the most various plants extremely viscid? Their number is legion. The Chinese Primrose of common garden and house culture is no extraordinary instance; but Mr. Francis Darwin, counting those on a small space measured by the micrometer, estimated them at 63,361 to the square inch of foliage, taking in both surfaces of the leaf, or two or three millions on a moderate-sized specimen of this small herb. Glands of this sort were loosely regarded as organs for excretion, without much consideration of the question whether, in vegetable life, there could be any need to excrete, or any advantage gained by throwing off such products; and, while the popular name of Catch-fly, to several common species of *Silene*, indicates long familiarity with the fact, probably no one ever imagined that the swarms of small insects which perish upon these sticky surfaces were ever turned to account by the plant. In many such cases, no doubt they perish as uselessly as when attracted into the flame of a candle. In the Tobacco plant, for instance, Mr. Darwin could find no evidence that the glandular hairs absorb animal matter. But Darwinian philosophy expects all gradations between casualty and complete adaptation. It is probable that any thin-walled vegetable structure which secretes may also be capable of absorbing under favorable conditions. The myriad exquisitely-constructed glands of the Chinese Primrose are not likely to be functionless. Mr. Darwin ascertained by direct experiment that they promptly absorb carbonate of ammonia, both in watery solution and in vapor. So, since rain-water usually contains a small percentage of ammonia, a use for these glands becomes apparent—one completely congruous with that of absorbing any animal matter, or products of its decomposition, which may come in their way through the occasional entanglement of insects in their vicid secretion. In several Saxifragers—distant relatives of *Drosera*—the viscid glands equally manifested the power of absorption.

To trace a gradation between a simply absorbing hair with a glutinous tip, through which the plant may perchance derive slight contingent advantage, and the tentacles of a Sundew, with their exquisite and associated adaptations, does not much lessen the wonder nor explain the phenomena. After all, as Mr. Darwin modestly concludes, "we see how little has been made out in comparison with what remains unexplained and unknown." But all this must be allowed to be an important contribution to the doctrine of the gradual acquirment of uses and functions, and hardly to find conceivable explanation upon any other hypothesis.

There remains one more mode in which plants of the higher grade are known to prey upon animals; namely, that of pitchers, urns, or tubes, in which insects and the like are drowned or confined, and either macerated or digested. To this Mr. Darwin barely alludes on the last page of the present volume. The main facts known respecting the American pitcher-plants have, as was natural, been ascertained in this country, and we gave an abstract two years ago of our then incipient knowledge. Much has been learned since, although all the observations have been of a desultory character. If space permitted, an instructive narrative might be drawn up, as well of the economy of the *Sarracenias* as of how we came to know what we do of it. But the very little we have room for will be strictly supplementary to our former article.

The pitchers of our familiar northern *Sarracenia*, which is likewise southern, are open-mouthed; and, although they certainly secrete some liquid when young, must derive most of the water they ordinarily contain from rain. How insects are attracted is unknown, but the water abounds with their drowned bodies and decomposing remains.

In the more southern *S. flava* the long and trumpet-shaped pitchers evidently depend upon the liquid which they themselves secrete, although at maturity, when the hood becomes erect, rain may somewhat add to it. This species, as we know, allures insects by a peculiar sweet exudation within the orifice; they fall in and perish, though seldom by drowning, yet few are able to escape; and their decomposing remains accumulate in the narrow bottom of the vessel. Two other long-tubed species of the Southern States are similar in these respects. There is another *S. psittacina*, the parrot-headed species, remarkable for the cowl-shapee hood so completely inflexed over the mouth of the small pitcher that no rain can possibly enter. Little is known of its efficiency as a fly-catcher; but its conformation has a morphological interest, leading up as it does to the Californian type of pitcher presently to be mentioned.

But the remaining species, *S. variolaris*, is the most wonderful of our pitcher-plants in its adaptations for the capture of insects. The inflated and mottled lid or hood overarches the ample orifice of the tubular pitcher sufficiently to ward off the rain, but not to obstruct the free access of flying insects. Flies, ants, and most insects glide and fall from the treacherous smooth throat into the deep well below, and never escape. They are allured by a sweet secretion just within the orifice—which was discovered and described long ago, and the knowledge of it well-nigh forgotten until recently. And, finally, Dr. Mellichamp, of South Carolina, two years ago mede the capital discovery that, during the height of the season, this lure extends from the orifice down nearly to the ground, a length of a foot or two, in the form of a honeyed line or narrow trail on the edge of the winglike border which is conspicuous in all these species, although only in this one, so far as known, turned to such account. Here, one would say, is a special adaptation to ants and such terrestrial and creeping insects. Well, long before this sweet trail was known, it was remarked by the late Prof. Wyman and others that the pitchers of this species, in the savannahs of Georgia and Florida, contain far more ants than they do of all other insects put together.

Finally, all this is essentially repeated in the peculiar Californian pitcher-plant *(Darlingtonia)*, a genus of the same natural family, which captures insects in great variety, enticing them by a sweetish secretion over the whole inside of the inflated hood and that of a curious forked appendage, resembling a fish-tail, which overhangs the orifice. This orifice is so concealed that it can be seen and approached only from below, as if—the casual observer might infer—to escape visitation. But dead insects of all kinds, and their decomposing remains, crowd the cavity and saturate the liquid therein contained, enticed, it is said, by a peculiar odor as well as by the sweet lure which is at some stages so abundant as to drip from the tips of the overhanging appendage. The principal observations upon this pitcher-plant in its native habitat have been made by Mrs. Austin, and only some of the earlier ones have thus far been published by Mr. Canby. But we are assured that in this, as in the *Sarracenia variolaris*, the sweet exudation extends at the proper season from the orifice down the wing nearly to the ground, and that ants follow this honeyed pathway to their destruction. Also, that the watery liquid in the pitcher, which must be wholly a secretion, is much increased in quantity after the capture of insects.

It cannot now well be doubted that the animal matter is utilized by the plant in all these cases, although most probably only after maceration or decomposition. In some of them even digestion, or at least the absorption of undecomposed soluble animal juices, may be suspected; but there is no proof of it. But, if pitchers of the Sarracenia family are only macerating vessels, those of *Nepenthes*—the pitchers of the Indian Archipelago, familiar in conservatories—seem to be stomachs. The investigations of the President of the Royal Society, Dr. Hooker, although incomplete, well-nigh demonstrate that these not only allure insects by a sweet secretion at the rim and upon the lid of the cup, but also that their capture, or the presence within of other partly soluble animal matter, produces an increase and an acidulation of the contained watery liquid, which thereupon becomes capable of acting in the manner of that of *Drosera* and *Dionæa*, dissolving flesh, albumen, and the like.

After all, there never was just ground for denying to vegetables the use of animal food. The Fungi are by far the most numerous family of plants, and they all live upon organic matter, some upon dead and decomposing, some upon living, some upon both; and the number of those that feed upon living animals is large. Whether these carnivorous propensities of higher plants which so excite our wonder be regarded as survivals of ancestral habits, or as comparatively late acquirements, or even as special endowments, in any case what we have learned of them goes to strengthen the conclusion that the whole organic world is akin.

The volume upon 'The Movements and habits of Climbing Plants' is a revised and enlarged edition of a memoir communi-

cated to the Linnean Society in 1865, and published in the ninth volume of its Journal. There was an extra impression, but, beyond the circle of naturalists, it can hardly have been much known at first-hand. Even now, when it is made a part of the general Darwinian literature, it is unlikely to be as widely read as the companion volume which we have been reviewing; although it is really a more readable book, and well worthy of far more extended notice at our hands than it can now receive. The reason is obvious. It seems as natural that plants should climb as it does unnatural that any should take animal food. Most people, knowing that some plants "twine with the sun," and, others "against the sun," have an idea that the sun in some way causes the twining: indeed, the notion is still fixed in the popular mind that the same species twines in opposite directions north and south of the equator.

Readers of this fascinating treatise will learn, first of all, that the sun has no influence over such movements directly, and that its indirect influence is commonly adverse or disturbing, except the heat, which quickens vegetable as it does animal life. Also, that climbing is accomplished by powers and actions as unlike those generally predicated of the vegetable kingdom as any which have been brought to view in the preceding volume. Climbing plants "feel" as well as "grow and live"; and they also manifest an automatism which is perhaps more wonderful than a response by visible movement to an external irritation. Nor do plants grow up their supports, as is unthinkingly supposed; for, although only growing or newly grown parts act in climbing the climbing and the growth are entirely distinct. To this there is one exception—an instructive one, as showing how one action passes into another, and how the same result may be brought about in different ways—that of stems which climb by rootlets, such as of Ivy and Trumpet Creeper. Here the stem ascends by growth alone, taking upward direction, and is fixed by rootlets as it grows. There is no better way of climbing walls, precipices, and large tree trunks.

But small stems and similar supports are best ascended by twining; and this calls out powers of another and higher order. The twining stem does not grow around its support, but winds around it, and it does this by a movement the nature of which is best observed in stems which have not yet reached their support, or have overtopped it and stretched out beyond it. Then it may be seen that the extending summit, reaching farther and farther as it grows, is making free circular sweeps, by night as well as by day, and irrespective of external circumstances, except that warmth accelerates the movement, and that the general tendency of young stems to bend towards the light may in case of lateral illumination, accelerate one-half the circuit while it equally retards the other. The arrest of the revolution where the supporting body is struck, while the portion beyond continues its movement, brings about the twining. As to the proximate cause of this sweeping motion, a few simple experiments prove that it results from the the bowing or bending of the free summit of the stem into a more or less horizontal position, this bending being successively to every point of the compass, through an action which circulates around the stem in the direction of the sweep and of the consequent twining, *i.e.*, "with the sun" or with the movement of the hands of a watch in the hop, or in the opposite direction in pole-beans and most twiners.

Twining plants, therefore, ascend trees or other stems by an action and a movement of their own, from which they derive advantage. To plants liable to be overshadowed by more robust companions, climbing is an economical method of obtaining a freer exposure to light and air with the smallest possible expenditure of material. But twiners have one disadvantage: to rise ten feet they must produce fifteen feet of stem or thereabouts, according to the diameter of the support and the openness or closeness of the coil. A rootlet-climber saves much in this respect, but has a restricted range of action and other disadvantages.

There are two other modes, which combine the utmost economy of material with freer range of action. There are, in the first place, leaf-climbers of various sorts, agreeing only in this, that the duty of laying hold is transferred to the leaves, so that the stem may rise in a direct line. Sometimes the blade or leaflets, or some of them, but more commonly their slender stalks, undertake the work, and the plant rises as a boy ascends a tree, grasping first with one hand or arm, then with the other. Indeed, the comparison, like the leaf-stalk, holds better than would be supposed; for the grasping of the latter is not the result of a blind groping in all directions by a continuous movement but of a definite sensitiveness which acts only upon the occasion. Most leaves make no regular sweeps; but when the stalks of a leaf-climbing species come into prolonged contact with any fitting extraneous body, they slowly incurve and make a turn around it, and then commonly thicken and harden until they attain a strength which may equal that of the stem itself. Here we have the faculty of movement to a definite end, upon external irritation, of the same nature with that displayed by *Dionæa* and *Drosera*, although slower for the most part than even in the latter. But the movement of the hour-hand of the clock is not different in nature or cause from that of the second-hand.

Finally, distribution of office being on the whole most advantageous and economical, and this in the vegetable kingdom being led up to by degrees, we reach, through numerous gradations, the highest style of climbing plants in the tendril-climber. A tendril, morphologically, is either a leaf or branch of stem, or a portion of one, specially organized for climbing. Some tendrils simply turn away from light, as do those of grape-vines, thus taking the direction in which some supporting object is likely to be encountered; most are indifferent to light; and many revolve in the manner of the summit of twining stems. As the stems which bear these highly-endowed tendrils in many cases themselves also revolve more or less, though they seldom twine, their reach is the more extensive; and to this endowment of automatic movement most tendrils add the other faculty, that of incurving and coiling upon prolonged touch, or even brief contact, in the highest degree. Some long tendrils, when in their best condition, revolve so rapidly that the sweeping movement may be plainly seen; indeed, we have seen a quarter circuit in a *Passiflora sicyoides* accomplished in less than a minute, and the half circuit in ten minutes; but the other half (for a reason alluded to in the next paragraph) takes a much longer time. Then as to the coiling upon contact, in the case first noticed in this country in the year 1858, which Mr. Darwin mentions as having led him into this investigation, the tendril of *Sicyos* was seen to coil within half a minute after a stroke with the hand, and to make a full turn or more within the next minute; furnishing ocular evidence that tendrils grasp and coil in virtue of sensitiveness to contact, and, one would suppose, negativing Sachs's recent hypothesis that all these movement are owing "to rapid growth on the side opposite to that which becomes concave"—a view to which Mr. Darwin objects, but not so strongly as he might. The tendril of this sort, on striking some fitting object, quickly curls round and firmly grasp it; then, after some hours, one side shortening or remaining short in proportion to the other, it coils into a spire, dragging the stem up to its support, and enabling the next tendril above to secure a readier hold.

In revolving tendril, perhaps the most wonderful adaptation is that by which they avoid attachment to or winding themselves upon the ascending summit of the stem that bears them. This they would inevitably do if they continued their sweep horizontally. But when in its course it nears the parent stem the tendril moves slowly, as if to gather strength, then stiffens and rises into an erect position parallel with it, and so passes by the dangerous point; after which it comes rapidly down to the horizontal position, in which it moves until it again approaches and again avoids the impending obstacle.

Climbing plants are distributed throughout almost all the natural orders. In some orders climbing is the rule, in most it is the exception, occurring only in certain genera. The tendency of stems to move in circuits upon which climbing more commonly depends, and out of which it is conceived to have been educed—is manifested incipiently by many a plant which does not climb. Of those that do there are all degrees, from the feeblest to the most efficient, from those which have no special adaptation to those which have exquisitely endowed special organs for climbing. The conclusion reached is that the power "is inherent, though undeveloped, in almost every plant": "that climbing plants have utilized and perfected a widely-distributed and incipient capacity which, as far as we can see, is of no service to ordinary plants."

Inherent powers and incipient manifestations, useless to their possessors but useful to their successors—this doubtless is according to the order of nature: but it seems to need something more than natural selection to account for it.

ACROSTIC.

THE WORDS.

Favoured by ladies to show off their dress,
(So cynical people are ready to hint)
Though it answers the purpose, we must confess,
While it gives to the lily the rose's tint.

My head's in a whirl with the noise you make—
Stop it, dear children, for pity's sake!

1.—Each half of me black, the whole of me white,
Shrewd you must be if you read me aright.

2.—Once a widow, twice a queen
To kings of different race,
Amongst Albion's early lawgivers
My son's name finds a place.

3.—I'm aught but settled—in fact, a word
That's oft applied to eastern horde.

4.—An adjective affix to me
Expressing antiquation,
My picture books too often cause
The bitterest vexation.

5.—Carried by force away from her father,
Unfortunate source of dire distress,
At the hands of her rival the hapless lover
Met with his doom in blood-dyed dress.

6.—I'm found in all animals old and young
(I fear you 'll exclaim that my verses lack taste),
No theme am I for a poet's tongue,
A thing only fit to make puddings and paste.

Yokohama, 24th March.

Shipping Intelligence.

ARRIVALS.

Mar. 19, *Orissa*, British steamer, Reeves, 1,647, from Shanghai and ports, Mar. 11, General, to P. & O. Co.

Mar. 19, *Amanda*, German barque, Horms, 225, from Takao, Feb 25, Sugar, to F. Knoblauch.

Mar 19, *Nagoya Maru*, Japanese steamer, Young, 1,917, from Shanghai and ports, Mar. 12, Mails and General, despatched by M. B. Co.

Mar. 19, *Infernet* French corvette, Captain Pierre, from Honolulu.

Mar. 20, *Nettie Merryman*, American barque, Master, 600, from New York, July 1, Kerosene, to Order.

Mar. 20, *Constanca Wilson*, British 3-masted schooner, Spence, 178, from Takao via Amoy, Feb. 18, Sugar, to Nethds. Tradg. Co.

Mar. 20, *Bombay*, British steamer, Smith, 1,325, from Hongkong, Mar. 13, Mails and General, to P. & O. Co.

Mar. 21, *Balgowaie*, British barque, Jno. Brown, 324, from Takao, Mar. 3, Sugar, to Chinese.

Mar. 22, *Nevada*, Japanese steamer, Williams, 2,145, from Shanghai and ports, Mar. 15, Mails and General, to M. B. Co.

Mar. 24, *Crocus*, British steamer, Joy, 1,298, from Hongkong, Mar. 16, General. Bound to San Francisco.

Mar. 24, *Caroline*, German 3-masted schooner, Molsen, 238, from Takao, Mar. 6, Sugar.

Mar. 24, *Great Republic*, American steamer, Cobb, 3,882, from Hongkong, Mar. 15, Mails and General, to P. M. S. S. Co.

Mar 25, *Thabor*, Japanese steamer, Pendered, from a cruise, to Lighthouse Department.

DEPARTURES.

Mar. 18, *Tsmaura Maru*, Japanese steamer, Stevens, 630, for Hakodate, General, despatched by M. B. Co.

Mar. 19, *Pelham*, British brig, Bisson, 254, for Takao, Ballast, despatched by Knifller & Co.

Mar. 21, *Malacca*, British steamer, Bernard, 1,709, for Hongkonk, Mails and General, despatched by P. & O. Co.

Mar. 22, *Oxfordshire*, British steamer, Jones, 1,227, for Kobe, General, despatched by Jardine, Matheson & Co.

Mar. 22, *Tokio Maru*, Japanese steamer, Dunn, 2,117, for Shanghai and Ports, Mails and General, despatched by M. B Co.

Mar. 23, *Constance*, British barque, Wilson, 350, for Chefoo, Ballast, despatched by Captain.

Mar. 24, *Stadt Amsterdam*, Dutch steamer, Boon, 1,300, for Kobe, General, despatched by Jardine, Matheson & Co.

Mar. 24, *Scotia*, British barque, Duncan, 321, for Newchwang, Ballast, despatched by Captain.

Mar. 25, *Orissa*, British steamer, Reeves, 1647, for Shanghai and ports, Mails and General, despatched by P. & O. Co.

Mar. 25, *Tokai Maru*, Japanese steamer, Ward, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.

Mar. 25, *Crocus*, British steamer, Joy, 1,208, for San Francisco, General, despatched by Jardine, Matheson & Co.

Mar. 25, *Hafersfjord*, Norg. barque, Meyer, for Chefoo, Ballast, despatched by E. Fischer & Co.

Mar 25, *Amanda*, German barque, Harms, 225, for Takao' Ballast, despatched by F. Knoblauch.

Mar. 25, *Tsusai Maru*, Japanese steamer, for Hakodate, General, despatched by M. B. M. S. S Co,

PASSENGERS.

Per Steamship *Crocus* from Hongkong.—950 Chinese.

Per American steamer *Great Republic*, from Hongkong. For Yokohama.—Messrs. F. P. Chapman, T. E. Screven, J. W. Laing, Kitcheido and servant. For San Francisco.—Mr. J. A. Campion, Mr. and Mrs. R. H. Pye, Rev. S. R. House, wife and 2 children, Mrs. Redwood and native servant, Mr. C. A. Andrews, daughter and maid, Mr. W. Noyes Morehouse, Mrs. Wendel.

Per *Tokai Maru*, for Shanghai and way ports: Messrs. Hashiguchi, FitzGerald, Wiggins, Hore, Sokinaga, Misaki, Fleicher, Gunster, Clataud, and Austin; 189 Japanese and 11 Chinese in steerage.

Per British steamer *Orissa*, for Shanghai and ports:—H. E. Von Weckerlin, Messrs. R. Dowson, W. R. Bennett, Hee Tong, Kobeiyashi, and Ogi.

Per British steamer *Crocus*, for San Francisco.—Mr. Rees.

CARGOES.

Per Japanese steamer *Tokai Maru*, for Shanghai.—Treasure $10,000.

REPORTS.

Constanca Wilson reports a succession of strong gales during the passage. On the 13th was driven up the Suruga gulf with loss of sails and the jibboom. Anchored in Toovia Bay during a very heavy gale from the southward.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

August 1st, 1875. 26 alt.

BROADWELL'S

BREECH LOADING ORDNANCE COMPANY, CARLSRUHE.

MANUFACTURERS and Patentees of the IMPROVED-BREECH, STEEL RIFLED ORDNANCE, largely adopted in Europe and America: Inventors of the new Star ring artillery shell.

The Broadwell System is now applied to the Krupp Cannon.

The undersigned are prepared to receive orders and undertake contracts, on behalf of the Company, for ORDNANCE of any calibre, at the Company's tariff.

COMMERCIAL INTELLIGENCE.

Cotton Fabrics and Yarns.—There is not much change to report in our market, which has continued quiet throughout the last fortnight.

Cotton Yarns 16/24 and good 28/32 continued in moderate demand at previous prices; low qualities of 28/32 are difficult of sale and 38/42 are neglected. In *Grey Shirtings* business has been small, but prices are firm. In *T-Cloth* 7lbs. are saleable in small lots. *Velvets*, in small demand, with lower prices. For *Taffachelass* there is no inquiry and *Drills* are quiet. In *Turkey Reds* light weights have slightly advanced.

The steamer *Orestes*, from Liverpool has been reported as wrecked off Galle; her cargo was chiefly for China.

Grey Shirtings:—					White Shirtings:—				
7 lbs.	38½ yds.	39 in.	per pce...	$1.02½ to $2.20	60 to 64 reed	40 yds	35 in.	nom. per pce. ...	2.10 to 2.30

,, No. 4 Kook-fah... ... ... ,, ...	4.80 to 5 20	Kerosine Oil ... ... per case ...	2 70

Kerosene Oil.—The *Nettie Merryman*, which arrived on the 18th instant, brought a further accession to stocks. The market is quiet, but holders are firm in their demands and unwilling to sell at present rates.

Silk.—Since the 10th instant, prices, especially for all Oshiu sorts, have been fully maintained at our quotations of that date. We have at the same time to report that a higher rate of exchange prevailed during the greater part of the fortnight.

Settlements are 200 bales of Oshiu and 150 of Hanks and Kikai filatures, leaving an unsold stock of about 300 bales.

Shipments have been 460 bales making the total export since the 1st January, 11,801 bales against 9,109 last year for the corresponding period.

Tea.—Since the publication of our last mail issue the market has been quiet, settlements reported amounting to about 2,400 piculs.

The stock now in native hands amounts to some 3,000 piculs, consisting chiefly of low qualities which natives are eager to sell. Shipments by bearer amount to some 5,670 packages.

We quote:

Common	$14.00 to 16.00	Fine	$31 to 34
Good Common	17.00 to 19 00	Finest	35 to 38
Medium	21.00 to 23.00	Choice	Nominal.
Good Medium	27.00 to 29.00		

EXCHANGE AND BULLION.

Exchange.—Sterling rates have fluctuated considerably during the past fortnight. Shortly after the departure of the last American mail rates commenced to advance, reaching 3s. 11½d. for 6 months' sight for Bank, followed by a sudden reaction and a sharp fall to closing quotations.

Gold Yen have fluctuated in sympathy with the Sterling rates.

Rates close as follows:—

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

CAUTION.

J. & F. MARTELL'S BRANDY.

It having come to our knowledge that spurious imitations are imported, Consumers should be careful to see that they obtain the genuine article with our Brand, which is to be had of all respectable Dealers. Agents: Matthew Clark & Sons, 72, Great Tower Street, London.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 14.] YOKOHAMA, SATURDAY, APRIL, 1, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

MARRIAGE.

At Milwaukee, 10th February, 1876, at the residence of Oscar Mohr, Esq., uncle of the bride, by the Honorable D. J. Pulling, Judge, INA, eldest daughter of FRANCIS FISCHER, M.D. of Madison, Wisconsin, U.S., to PAUL HEINEMANNS, of Japan.

Notes of the Week.

The Government has felt its power so sensibly increased by the success attending the Corean negotiations that the Prime Minister has issued a proclamation forbidding the practice of wearing swords, except when in court dress, to naval and military officers and policemen. About four years ago all that the Government felt itself strong enough to do in regard to this matter was to grant a permission to the two-sworded class to give up the practice of wearing swords. The proclamation to this effect, the issue of which had been much pressed on the Government by the Foreign Representatives in consequence of many dangerous attacks made from to time upon foreigners, had a good influence. It put authority on the side of the change, and as the practice was supposed to be out of harmony with the words "civilization and enlightenment"—at that time in every one's mouth—thousands laid aside the hitherto cherished insignia of their birth or rank and abandoned for ever all idea of resuming them. The public feeling coincided with the change, and of late years the number of men to seen carrying swords has been very small. The proclamation of this week is the death-blow of the practice and marks another step in the progress of the country. Many European authors have pointed out the vast social effects produced upon our civilization by the invention of gunpowder—Buckle especially has devoted a most interesting section of one of his chapters to this subject. It may be hoped that the future historian of Japan will have similar reason to celebrate the effect of this proclamation, which is calculated to produce the same results upon society in this country as the invention referred to produced in Europe. Considering all that the proclamation involves, it tells, in terms admitting of no possible dispute, of a revolution more rapid and thorough than any of which history speaks. It shows also that the forces which have produced and been produced by this revolution, are under control.

A fire broke out in Kanagawa this evening after night fall, and is burning as we go to press.

There appears to be some dissatisfaction in the capital that no mention has been made by the Prime Minister of any apology given by the Coreans for the Kokwa outrage. The *Nichi Nichi Shimbun* contains an article on the subject which has the appearance of being inspired from official sources, and argues that it would show greater consideration and generosity on the part of Japan to suppress the apology than to publish it. The question is a nice one. The object of Japan certainly is to let bygones be bygones, and begin an era of friendship and commercial relations. Corea seems disposed to accept the same view, though with no great heartiness, for she has little more than a glimmer of what trade means. But the Japanese think that when an apology has been received, honour should be satisfied, and the publication of it is a needles act of braggadocio on one side and an unnecessary humiliation to the other. Under all the circumstances of the case, and in view of a desire on both sides to efface all unpleasant recollections and begin again as friends, we rather side with those who would suppress the apology. But the country should certainly be informed under the Prime Minister's sign-manual that such an apology has been received. It has a right to demand this, and it is bad policy to disappoint or baulk the healthy spirit of a nation. The feeling of chivalry or expediency which dictates the suppression of a document of this kind is worthy of respect. But if it exists—and a public notification to that effect from the Prime Minister would not permit a doubt to remain that this was the case—the nation should be told so, and be satisfied with the assurance. The Japanese have—quite rightly—asked for no indemnity. They satisfied themselves with knocking the offending fort about the ears of the garrison, and have since imposed their terms on the Coreans, who seem to have lied with true oriental readiness when asked why they committed the outrage. People who behave like this must not expect any extreme consideration to their sensibilities On the whole they have come off well and got off easily. But it is idle to cocker up a nation so dirty, so inhospitable and mendacious in the delusion that it has any business with self-respect.

It may be hoped that the exertions made by the Kobe Regatta and Athletic Club will be as well appeciated as they deserve to be. The Committee have provided an excellent programme for the 26th, 27th, and 28th of this month, embracing races of many kinds both on land and water, and opportunities for those feats of strength or activity which constitute the staple of a good day's amusement in athletics. The great feature of the programme is the challenge it gives to our local athletes, and in view of the friendly rivalry it invites we sincerely hope they will take advantage of the occasion to muster strongly and brave the Kobe men on their own ground. These interportal contests are on all hands to be encouraged as means for promoting good fellowship and good sport, and special exertions seem to have been made this year at Kobe to render them attractive and agreeable. The scene of the contests will be the space at the Eastern end of the Bund, granted for the purpose by the courtesy of the Commissioner of Customs, and a hearty welcome is promised to all comers.

As some curiosity may be felt as to the entertainment known as "*No*" of which a representation will shortly be given at Mr. Iwakura's house, we may mention that this form of dra-

Digitized by Google

matic representation is the oldest known in Japan and attained its greatest popularity some five hundred years since. The *Shibai*, or ordinary theatrical performance as now known, is an outgrowth from the *No*. The latter performance was given exclusively in the houses of the nobles and personages of high rank, (though the performers were not of necessity confined to those classes,) a consequence of the reverence in which all that possessed the flavour of antiquity was held in days past. The chief difference—and the differences are many—between *No* and *Shibai* is that the actors in the former assume masks, painted in such manner as to represent the sex of the character intended to be portrayed, while the latter employ the aid of paint and powder to produce the requisite illusion. In the *No* performance the rudiments of the Japanese theatre as it now exists may be discovered.

We observe that the proprietor of the late *Bankoku Shimbun* has undertaken to enlighten the public as to the causes which led to the abrupt close of its career by publishing his correspondence on the subject with H. B. M. Vice-Consul, at Yedo. We do not now propose to enter afresh into a discussion of the merits of this case; it has doubtless received every consideration at the hands of the Vice-Consul to whom the appeal for redress was submitted. But we must protest against the unusual course adopted in making this correspondence public, which, whether with the view of arousing sympathy or with other purposes, is in the last degree improper and indecorous. Nor can it be said that its statements are altogether indisputable, the allegation that Mr. Black has "experienced incalculable damage by these acts of the Japanese Government" being assuredly open to serious question.

The thieves, who have been distributing their attentions with perfect impartiality among the dwellers on the Bluff for many months past, invaded Mr. Goodwin's dwelling-house on Thursday evening, while the family was at dinner and the attention of the servants fully occupied by household duties, and carried off the contents of the hall—coats, umbrellas and other gear of greater or less consideration. Though we can scarcely believe the robbers to have been actuated by personal feeling towards a branch of the law which is not regarded with over much kindness by their *confrères* in Europe, we can conceive that the fact of carrying on their depredations on the very threshold of Themis must have imparted a curious and pleasant flavour to the improper business; and as Sydney Smith declared it necessary that a Bishop should be sacrificed in order to procure the abolition of the locking of the doors of railway carriages, we may hope that the robbery of a Judge will produce some commensurate result in the diminution of the thefts which are fast becoming the curse of householders. The hour was unusually early, but it must be remembered that the "Ticket of Leave Man" was advertised for performance, and that the police can hardly be grudged a relaxation which possessed for them a truly professional attraction.

From the "Japan Mail Dail Advertiser."

The *Hochi Shimbun* says that the Corean Envoys, Kuroda and Inouyé will be entertained by His Majesty at the Imperial Palace on an early day. The chief officials of state will also be present.

A new cavalry saddle is about to be adopted for the Army. Several patterns are at this moment under the consideration of the military authorities.

We learn from the *Hochi* that it has been determined to connect the Biwa Lake with the Kamogawa by a canal. It is not stated at what time the work will be begun.

Tanaka Fujimaru, Vice-Minister of the Department of Education is about to leave for Philadelphia by an early opportunity.

The grounds of Uyeno have now been cleared of the tea-houses with which the eastern portion was covered and steps are being taken to proceed with the building of the national Industrial Palace. It is not quite clear as yet where the site will be, but it is to be hoped that the advantages of the position once occupied by the large temple will not be overlooked. We observe that a Japanese newspaper fixes the period of its completion for the 15th year of Meiji.

The movement in favour of Popular Assemblies is making considerable progress in the Yamagata *ken*.

A nobleman named Tzugaru, relates the *Choya Shimbun*, who had been educated in Yokohama, returned some time since to his native province with a mind stored with the fruits of modern learning. He entered largely upon the national art, agriculture, and is now promoting by his example an improved system of cultivation, growing the vine and engaged in other useful branches of farming. Stimulated by the example of their former *daimio*, many of the *samurai* have embarked their means in farming pursuits, and it may be hoped that their success will be sufficiently large to procure them many followers from their own class.

A certain Suyeki of Kofu, whose story is told by the *Akebono*, will not it is to be hoped find many imitators. He sent his son, a child of twelve years, to school. The lad proved to be precociously clever, and rapidly running through the classes soon became head pupil of the institution. His father thereupon took alarm at his boy's cleverness, and, notwithstanding protests from all quarters, removed him from his teachers and sent him to service in Yedo.

The P. & O. Company's steamer *Sunda*, with London mails viâ Brindisi to the 18th ultimo, left Hong Kong for this port on Monday, 27th instant, four days in advance of her contract time.

The *Nichi Nichi Shimbun* has heard it rumoured that Tsuruga will probably soon be added to the ports opened to foreign trade. It adds that a Railway will most probably be made to connect it with Kiôto, and that surveys are already being made in this intention.

A new number of *Punch* appeared yesterday. The range of matter has been scarcely wide enough to allow the artist a fitting choice of subjects, but the cartoons 'Peace with Corea' "Nimium ne crede collari" and "Club Civil War" are of the usual average of merit.

The epidemic which has been ravaging the flocks of horned cattle of late is now receiving the watchful attention of the authorities, who hope to check its further dissemination. The *Hochi Shimbun* reports the slaughter of three animals attacked with the disease in Yedo a few days since, which were subsequently burnt. We understand the disease to have originated among the foreign or half-bred herds.

An exhibition will be held in the temple of Zenkogi, in Shinano, for the space of fifty days. It will be opened on the 15th of next month.

Hitherto the native newspapers have for the most part abstained from publishing on the *ichi-roku* days. The new arrangement under which Sunday becomes a legal holiday, and the *ichi-roku* is abolished, has decided the greater number of newspaper proprietors to observe it as a close day on and after the 1st April.

In consequence of an accident to the cable which connects Penang with Madras, all telegrams for India and places west will be sent viâ Russia until further notice.

The following vessels are in course of construction in England for the Imperial Navy.

The *Fusokuan* carrying 250 men, to be armed with 10 Krupp guns.

The *Kongokwan* and *Hiyeikwan*, each carrying nine guns.

All of these will be ready in about two years.

The Shanghai *Courier*, in reference to the receding value of silver, points out that practically the India office has sold no Council drafts for two months past, and that this reluctance to accept the position of the silver market will not improbably occasion a still greater fall when the Government is at length compelled to become a purchaser of bills.

The German Government is said to be vigorously pushing its claims in the *Iltis* piracy case at Peking.

It is said that Government intends to build a handsome official residence for the Minister for Foreign Affairs at a cost of 15,000 *yen*.

A priest of the *Monto* sect of Buddhists has received permission to preach in the poor-house at Yedo.

Kido has sent in his resignation from the Cabinet on the ground of ill-health. Goto, *Sangi*, no longer holds office in the Ministry.

The Kanagawa *Ken* has presented a sum of 50 *sen* to each of the fifteen coolies who assisted in rescuing the men capsized from a small boat belonging to the *Genkai Maru* on the 15th December last.

The editor of the *Hioron Shimbun*, and a writer on the staff of the same journal, have been sentenced to one year and two month's imprisonment respectively.

We hear that Mr. Nakashima, at present governor of this ken, has been appointed to the office of *Gikuan* of the *Genro-In*. Nomura, a *Gondaijo* or vice-secretary of the Foreign Office, has been nominated to the Vice-Governorship of Kanagawa.

The following notification has been published:

No. 38.

No individual will henceforth be permitted to wear a sword except he be in Court dress, a member of the military or naval forces, or a police officer.

(Signed) SANJO SANEYOSHI,
Prime Minister.

March 28th, 1876.

As might have been expected the publication of this order has created no slight commotion among the *samurai* of the capital.

The *Akebono Shimbun* has heard that certain officials are now largely engaged in considering the question of protective duties upon foreign manufactures, and infers from this that there is a probability of the matter being brought before the Ministry as a Government question.

The U. S. Consul-General has received a report from Capt. Connor, master of the pilot boat *Black Hawk*, that on the 26th instant, about 8 p.m., when he was off Misaki, four miles below Sagami light, a junk, manned with Japanese, armed with pikes and spears, came alongside his boat, and demanded food. He drove off the junk; but the next morning another junk, in which there were twelve armed men, boarded his boat, cut his sails, drove their pikes into the sides of his boat, and took away his four sendos. He was going to abandon his boat, and return to Yokohama overland, when the sendos were sent back to him. The outrage has been made the subjetc of representation to the Kencho.—*Herald.*

The Kunaisho (Department of the Imperial Household) has sent for exhibition at the Yedo Exposition some rare works of art, executed in copper before the Christian era. They are of Chinese manufacture.

Asada, a physician who practises in the Chinese school of medicine, has recently opened a hospital at Asakusa in Yedo to which many sufferers have already resorted.

The *Nichi Nichi Shimbun* has heard that on the 4th, 5th and 6th of April an entertainment consisting of *No* (classical dramatic representations of the olden time) will be given at the residence of Iwakura, *Udaijin*. On the first day His Majesty will honour the performance with his presence. The Empress and Empress Dowager will be present on the second day, and on the third day the Princes of the Imperial Family are expected.

Our readers may be interested to learn that the cherry trees which line the road to Mukojima on the Sumida are now coming into bloom and may be expected to be in full blossom in the course of a few days.

A foreigner who was recently convicted of an attempt to defraud a tea-house keeper at Meguro has been dismissed from the employment of the *Kuadzoku Kuaikuan*, or Nobles' Club, in which he was engaged.

The *Nichi Nichi* publishes the news of a calamitous fire in Idzusi which began at an early hour on the 26th instant. At the hour at which the post left the fire was spreading fast, aided by a strong wind, and it was feared that the entire town would be destroyed. It is composed of some 3,000 houses.

The *Nichi Nichi* notifies the intended establishment of a Japanese Consulate at Kushin Kotan in Saghalin, the former settlement of the Japanese in that island.

It is stated that among the *Kucho* and *Kocho*, officials of the Niigawa *ken*, not more than one or two in every ten men can read the Government Notifications. The same complaint has been frequently made in reference to other provinces, and would seem to call for a simplification of the official language.

A person from Yetchigo was arrested in Yedo on Thursday, having been found wearing a sword. The sword was confiscated by the police. This, the *Hochi Shimbun* observes, is the first instance of an arrest under the late regulation.

The Governor of Kioto, departing from the regulations laid down for the governance of the press, has decided that all numbers of the local newspaper shall be submitted to his examination previous to their publication. This occasions a delay and considerable inconvenience to the public, whose modicum of daily news is thus unnecessarily withheld.

THE TREATY WITH COREA.

THE version of the Corean Treaty which we publish to-day differs slightly from that of our last week's issue, and may be held as an authentic one for all future reference. We shall make no apology for the text which it supersedes—the best which it lay in our power to obtain at the time of publication. But no nicety of scholarship is thrown away upon instruments of this nature, and we shall readily be excused for placing the Treaty a second time before our readers when the mere fact of doing so is a guarantee for the correctness of the later version.

The delay which occured in the publication of a document which is interesting and important alike to the Japanese and foreigners is not easily explainable. A plausible reason has been given, viz, that the extra-territoriality jurisdiction clause which it contains placed the Government between the horns of a dilemma, the choice of either of which was distasteful to it. But it will be observed that a writer in the *Nichi Nichi Shimbun* who comments upon the Treaty in an article which will be found translated elsewhere, repudiates this supposition with some warmth and such disdain for the intelligence of the mind which conceived it as comports with the rather severe notions of literary decorum held by Japanese writers. The correctness of one of his conclusions, however, does not necessarily guarantee the solidity of the other, and it is far from impossible that the Government felt some little embarrassment at seeing in a treaty of their own Envoys' dictation the admission of a principle against the existence of which in our own treaties they have been vehemently protesting for many years.

The Treaty now before us seems, as a whole, to justify the favourable views which have been generally expressed regarding it. But while some of the commendation it has received seems to us silly and overstrained, we do not think that sufficient justice has been done to the spirit of fair dealing which it demonstrates, and which strikes us as rather remarkable. Nor does this arise solely from the fact that the Coreans have undoubtedly made good terms for themselves, and certainly have held their own very fairly throughout the new terms of intercourse. The spirit to which we allude is that which seems to abandon willingly all claims to a position of superiority or dictation, in the interests of peace and friendly relations. It is hardly too much to say that with five thousand men, who certainly could have been thrown into Corea in the month from any declaration of war, Japan could have dictated her own terms and held the capital to ransom. The accounts we have of the defences of the country prove this amply. There might have been a fair show of resistance for a few days, but two or three brigades of well armed and fairly disciplined men, with a couple of batteries of modern artillery, would have driven everything before them. We do not say this could been done without very considerable expense, or that there was any eager desire to do it. But if the disposition existing in this Government and people twenty years ago had existed at this moment, this is what certainly would have been done, and the absence of any desire of the kind marks an advance among the Japanese, which is in itself sufficiently remarkable, of what may be called the modern spirit. Some objections have lately been raised to the Treaty on the ground that the Coreans had gained much more by it than the Japanese, and that Japan had lost a tributary and gained nothing to compensate her for the loss. But, as we showed in a short answer to these objections, they come with singular inappropriateness from a foreigner. Had they been pleaded by a Japanese *samurai*, they would have been both intelligible and characteristic. To him the abandonment of a position associated in however remote a manner with the anicent military renown of the Empire, would appear like the relinquishment of a solid advantage, for which the offer of commerical privileges was a worthless and degrading mockery. But the true value of this supposed advantage is weill exhibited in an article in the *Nichi Nichi Shimbun*, a translation of which will be found elsewhere in our columns. In the first place it is clear that Corea was in no real sense a tributary of Japan. During the Shogunate the relations between the two countries seem to have been conducted on a footing of equality. Corea accepted no dictation—even if dictation was ever attempted, of which there is no evidence—in regard to the succession of its rulers, its laws, or its calendar—the latter point being one on which considerable stress is laid among the oriental nations. The Chinese seem to have some traditions that the Japanese were formerly their tributalies, and the latter appear to have consoled themselves by a similar fiction regarding Corea. Nor can it be doubted that the existence of the Japanese Agency at Fusankai is a trace of the conquest of the country by Taikosama. But it is no more than this. The trade carried on there, apparently by means of an extremely equivocal nature, was indeed a source of loss to the Coreans, for we have it on good authority that the revenues of certain districts were appropriated to maintain it. It is obvious, however, that the arrangement was one rather of a private than a public nature as far as Japan was concerned, and though the Coreans perhaps could not shake it off, they did not feel that it militated against the actual independence of the country. The truth is, that it was just such a trade as is always found existing between nations of unequal civilization, neither of whom have any solid notions regarding the laws which regulate the creation and distribution of wealth, and whose traders have only the faintest possible perceptions of commercial morality. Each tried to cheat the other, the keenest gained the day, and Japan had the best of it.

But it is surely remarkable that instead of any attempt being made to remodel this arrangement, it has been swept entirely away as a barbarous and even discreditable form of intercourse, not only unjust in itself, but certain to perpetuate among the Coreans feelings of antipathy to this country, and that aversion to trade which it is in no sense remarkable they should feel in view of their experience of it. The intercourse Japan has had with the western nations has at least taught her that such relations as have hitherto existed between herself and Corea are out of all harmony with the form of civilization she is striving to adopt, and she has therefore abolished them *in toto*. In place of them she proposes to frame a commercial treaty on the model of those which have been found so effective among ourselves, to promote friendly intercourse between the two countries, and to convert antipathy and antagonism into amity, and, as far as may be, into cooperation. The writer in the *Nichi Nichi Shimbun* does well in pointing out that Japan would do ill to seek to extend the sphere of her jurisdiction in Asia. Her insular position is an excellent defence to her against assault, and she would be wrong to perpetuate even the semblance of responsibilities which divert her from her true duty—that of strengthening and enriching herself within her own borders. It may here be remarked that no trace of the spirit which, however carefully concealed at the time of the Formosan expedition not the less certainly animated the Government, the spirit, we mean, of foreign

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

conquest, is apparent in the conduct of the late proceedings. Had the Coreans proved obstinate, refused all overtures for negotiation, and all explanation of the outrage at Kokwa, the Japanese were certainly prepared to extort by strong measures the satisfaction denied to their pacific overtures. But we doubt if there be a particle of evidence to prove that they had any idea of holding the country after their immediate object was effected. It was entirely otherwise in the Formosan affair, and abundant evidence exists that their idea at that time was to hold, retain, and colonize the eastern side of Formosa. Will they now doubt on which side true prudence lay? If we reproached them passionately and bitterly with a scheme so visionary—as indeed we did—must they not now acknowledge that in the abandonment of this design they showed a returning prudence which had temporarily deserted them? The late negotiations amply prove that another and a better spirit animates the Government, and it may be hoped that nothing will occur to shake its conviction that its real conquests are to be made here—conquests over poverty by utilizing the capital, skill, intelligence and enterprize of foreigners in developing the resources of the country: conquests over narrow views which foster monopoly instead of competition: conquests over an undue tendency to mistake the fair expression of opinion for contumacy and disloyalty: conquests over the obscurantism of a rapacious and tyrannical bureaucracy, and over the tendency to interference which prevents all the free expansion of the national mind and popular action.

The writer in the *Nichi Nichi Shimbun* refers to an incident in the negotiations which seems to prove that the Envoys were not disposed to admit claims on the part of China which they willingly abandoned on behalf of Japan. The Corean Commissioners were about to insert the date in the Treaty according to the Chinese style, but this was demurred to by the Japanese on the ground that their recognition of the independence of the country rendered that style of chronology obsolete. Whether or not this may be held to impose upon the Coreans the assertion of their independence in relation to China, does not seem quite clear. Assuredly the abandonment of the Japanese claim to suzerainty does not settle the question of the relations between China and Corea. It is easy enough to dispense with the Chinese style and to date the Treaty "The year of the opening of the country." But China is little likely to acknowledge that the proceedings of the Japanese at all affect the position of Corea in regard to herself. The Japanese, on the other hand, may imagine that they have made a point, as against China, in this little innovation, and it would curious to know the light in which it is regarded by the Cabinet at Peking. Japan would do well to refrain from arrogating to herself the power of setting up or pulling down crowns and empires, which this act very much resembles. That she is destined to produce a very considerable influence upon the quietism of China, we have always maintained and sought to prove. But the more free her action is from all taint of unnecessary self-assertion, the more likely is it that this influence will be considerable in amount and rapid and durable in action. The ambition of effecting "a balance of power" in the east is a dazzling one which will certainly create a smile and may lead in the direction of some dangerous quagmires. A precedent afforded by the example of England, France and Russia in the case of Greece might be pleaded with greater success did the material and moral forces in the one case stand in any calculable proportion to those in the other.

The return of the Fusankai factory to the Coreans, with an offer to rent or purchase it, appears to be the joint act of the conscience and the fears of Japan. Enquiry into the trade of Fusankai seems to have convinced the Envoys that it was about as low a juggle as ever was perpetrated upon people very ignorant of the fair conditions of external trade. In this light the act excites the same admiration as the return of "conscience money" to the Chancellor of the Exchequer—that curious measure and record of the oscillations of the individual British conscience—and is creditable to the Japanese. But the fears of which it tells are groundless. If the Western Powers had treaties with Corea, and the lives of their subjects or citizens, established in the country on the faith of those treaties, were in such danger as reasonably to justify the course, they would send means to protect them, all objections to the contrary notwithstanding. Of this the Japanese may be most certainly assured. Nor should they forget that the presence of the troops of England and France in this country was at one time a source of security which relieved them of one of their worst fears—that arising from their own inability, during the throes of revolution, to give us the protection contemplated by every treaty under which the subjects of one power inhabit the territory of another power.

Lastly, we come to the extra-territoriality jurisdiction clause of which we spoke last week. The Japanese claim that it is more liberal than that of our own treaties, inasmuch as it is reciprocal and permits of Coreans resident in this country being tried by their own laws and authorities. We must be pardoned for saying that we can admit no comparison of any kind between the administration of justice among the leading powers of Europe and the oriental nations. It is more than a difference of degree; it is a difference of kind. Do the Japanese seriously believe—we hardly like putting the question—that if one of their countrymen committed an offence, let us say, in London, he would not have as perfect justice done him as in Tokio, or from an English Judge as from the Japanese Minister? If they do believe it, we can only say that their hardness proves what we have often asserted—in explanation rather than reproach—that the Japanese mind moves in a plane so far below that of the European that he does not and can not see the difference between scientific and empirical jurisprudence. There are many evidences that a great number of the Japanese have, during the past few years, risen from lower to higher intellectual planes, and who would themselves confess that conclusions or processes of reasoning which they were formerly wholly incapable of embracing or following, are now among the solid and daily employed possessions of their minds. Their steady advance in this respect makes the most enlightened of them see how impossible at present is the excision of the obnoxious clause from our treaties; so much so, indeed, that a negative or affirmative opinion on this question might be held as a fair test of the appreciation of any given Japanese of the difference which exists between our own laws—let us say our own civilization—and that of this country.

We have been far too long over the Treaty, and must claim the indulgence of our readers for detaining them so long. But it is an interesting occasion, and while we have shewn what we conceive to be the less solid side of the instrument which records and gives power to the late negotiations, we say without hesitation that it is a document in which the Japanese have every reason to find satisfaction, and which will be accepted by the world as an evidence alike of their good sense and good feeling.

THE COREAN TREATY.

Treaty of Peace and Friendship.

The Governments of Japan and Chôsen being desirous to resume the amicable relations that of yore existed between them, and to promote the friendly feelings of both nations to a still firmer basis, have, for this purpose, appointed their Plenipotentiaries, that is to say;—The Government of Japan, Kuroda Kiyotaka, High Commissioner Extraordinary to Chôsen, Lieutenant-General and Member of the Privy Council, Minister of the Colonization Department, and Inoüye Kaoru, Associate High Commissioner Extraordinary to Chôsen, Member of the Genrôin; and the Government of Chôsen, Shin Ken Han-choo-Su-Fu-Ji, and Injishô, Fu-so-Fu, Fuku-sô-Kwan, who, according to the powers received from their respective Governments, have agreed upon and concluded the following Articles.

Art. I.—Chôsen being an independent state enjoys the same sovereign rights as does Japan.

In order to prove the sincerity of the friendship existing between the nations, their intercourse shall henceforward be carried on in terms of equality and courtesy, each avoiding the giving of offence by arrogation or manifestations of suspicion.

In the first instance, all rules and precedents that are apt to obstruct friendly intercourse shall be totally abrogated, and, in their stead, rules, liberal and in general usage fit to secure a firm and perpetual peace, shall be established.

Art. II.—The Government of Japan, at any time fifteen months from the date of the signature of this Treaty, shall have the right to send an Envoy to the capital of Chôsen, where he shall be admitted to confer with the Rei sohan sho on matters of a diplomatic nature. He may either reside at the capital or return to his country on the completion of his mission.

The Government of Chôsen in like manner, shall have the right to send an Envoy to Tokio, Japan, where he shall be admitted to confer with the Minister for Foreign Affairs on matters of a diplomatic nature. He may either reside at Tokio or return home on the completion of his mission.

Art. III.—All official communications addressed by the Government of Japan to that of Chôsen shall be written in the Japanese language, and, for a period of ten years from the present date, they shall be accompanied by a Chinese translation. The Government of Chôsen will use the Chinese language.

Art. IV.—*Sorio* in Fusan, Chôsen, where an official establishment of Japan is situated, is a place originally opened for commercial intercourse with Japan, and trade shall henceforward be carried on at that place in accordance with the provisions of this Treaty, whereby are abolished all former usages, such as the practice of Sai ken sen (junks annually sent to Chôsen by the late Prince of Tsusima to exchange a certain quantity of articles between each other.)

In addition to the above place, the Government of Chôsen agrees to open two ports, as mentioned in Article V. of this Treaty, for commercial intercourse with Japanese subjects.

In the foregoing places Japanese subjects shall be free to lease land and to erect buildings thereon, and to rent buildings, the property of subjects of Chôsen.

Art. V.—On the coast of five provinces, viz.: Keikin, Chiusei, Jenra, Keisho, and Kankio, two ports, suitable for commercial purposes, shall be selected, and the time for opening these two ports shall be in the twentieth month from the second month of the ninth year of Meiji, corresponding with the date of Chôsen, the 1st moon of the year Heishi.

Art. VI.—Whenever Japanese vessels either by stress of weather or by want of fuel and provisions cannot reach one or the other of the open ports in Chôsen, they may enter any port or harbour either to take refuge therein, or to get supplies of wood, coal and other necessities, or to make repairs, the expenses incurred thereby are to be defrayed by the ship's master. In such events both the officers and the people of the locality shall display their sympathy by rendering full assistance, and their liberality in supplying the necessities required.

If any vessel of either country be at any time wrecked or stranded on the coasts of Japan or of Chôsen, the people of the vicinity shall immediately use every exertion to rescue her crew, and shall inform the local authorities of the disaster, who will either send the wrecked persons to their native country or hand them over to the officer of their country, residing at the nearest port.

Art. VII.—The Coasts of Chôsen, having hitherto been left unsurveyed, are very dangerous for vessels approaching them, and in order to prepare charts showing the positions of islands, rocks, and reefs, as well as the depth of water, whereby all navigators may be enabled safely to pass between the two countries, any Japanese Mariner may freely survey said Coasts.

Art. VIII.—There shall be appointed by the Government of Japan an officer to reside at the open ports in Chôsen for the protection of Japanese merchants resorting there, provided that such arrangement be deemed necessary. Should any question interesting both nations arise, the said officer shall confer with the local authorities of Chôsen and settle it.

Art. IX.—Friendly relations having been established between the two contracting parties, their respective subjects may freely carry on their business without any interference from the officer of either Government, and neither limitation nor prohibition shall be made on trade.

In case any fraud be committed, or payment of debt be refused by any merchant of either country, the officers of either one or of the other Government shall do their utmost to bring the delinquent to justice and to enforce recovery of the debt.

Neither the Japanese nor the Chôsen Government shall be held responsible for the payment of such debt.

Art. X.—Should a Japanese subject residing at either of the open ports of Chôsen commit any offence against a subject of Chôsen, he shall be tried by the Japanese Authorities.

Should a subject of Chôsen commit offence against a Japanese subject, he shall be tried by the Authorities of Chôsen.

The offenders shall be punished according to the laws of their respective countries.

Justice shall be equitably and impartially administered on both sides.

Art. XI.—Friendly relations having been established between the two contracting parties, it is necessary to prescribe trade regulations for the benefit of the merchants of the respective countries.

Such trade regulations, together with detailed provisions, to be added to the Articles of the present Treaty to develope its meaning, and facilitate its observance, shall be agreed upon at the Capital of Chôsen or at Kok'wa Fu in the country, within six months from the present date by special commissioners appointed by the two countries.

Art. XII.—The foregoing eleven articles are binding from the date of the signing hereof, and shall be observed by the two contracting parties, faithfully and invariably, whereby perpetual friendship shall be secured to the two countries.

The present Treaty is executed in duplicate and copies will be exchanged between the two contracting parties.

In faith whereof we, the respective Plenipotentiaries of Japan and Chôsen, have affixed our seals hereunto this twenty-sixth day of the second month of the ninth year of Meiji, and the two thousand five hundred and thirty-sixth since the accession of Zimmu Tenno; and, in the era of Chôsen, the second day of the second moon of the year Haishi, and of the founding of Chôsen the four hundred and eighty-fifth.

SPIRIT OF THE JAPANESE PRESS.

The Corean Treaty.

("Nichi Nichi Shimbun" of March 28th, 1876.)

The Treaty with Corea, which we have been anxiously expecting, was notified by our Government under date of the 22nd instant, and we had the honor of publishing it in our issue of yesterday. This Treaty commences with a preface, which repairs our friendly relations (with Corea), and terminates with twelve Articles. Its wording, however, is exceedingly clear and terse, and embraces the important points of Friendship, Public Relations, Commerce, and Navigation, and it has established the foundation upon which the minor clauses can in after time be suitably determined.

Upon a perusal of the several Articles, we find that in the first Article our Government has recognised the independence of Corea and has acknowledged her possession of rights equal to those of Japan. This is indeed the result of the tolerance of our Government, and must be styled a worthy action that follows in the same track as the cession last year of Saghalin in exchange for the Kurile Islands. In order, as stated in this Article, to prevent *arrogance and hatred* and to do away with *opposition to public relations*, Corea must be considered as an independent country, and, in dealing with her, she must be treated *as on a footing of equality*, or else it would be utterly impossible to *determine the perpetual existence of peace*.

Those persons who feel disappointment in consequence of this 1st Article, and who, worst of all, declare that by treating as an independent country a land that is a dependant and a tributary of Japan, we have openly given evidence of a diminution of our national power, are but short sighted politicians. We will here address a word to such persons. Corea has not, from the very commencement, been a dependency of ours. Distinct mention is certainly made, in our histories, of the payment of tribute after our conquest of the three States of Corea in olden times, but can this be regarded in exactly the same light as the payment of tribute from a dependent country? We cannot but feel much doubt between the two cases. And why so? We beg the advocates of the above arguments to be so good as to glance at the history of China. It is written in her records that, after the dynasty of Tō, tribute was paid by the country of Wa or Japan, but in point of fact Japan certainly never sent either tributary embassies or tribute money to China. It is probable that as ideas of arrogance and self pride were early developed in China, these ideas extended together with her literature, to our country, and that while in actual fact the relations between the two nations were on a footing of equality, she merely boasted to her own people that our land was sending tributary embassies and tribute money to her. We have never been a dependency of China, and yet in the Chinese histories we are considered as being a tributary country. How, then, in regard to ancient Corea too, can we guarantee that there was not something similar to this mode of dealing? The people of Corea have never yet received from Japan directions as to the succession of their Rulers, nor yet our Calendar,—nor have they rendered obedience to our laws and Code. We are therefore all the more desirous to give clear evidence of this fact.

Though, however, we may diverge a little (from the truth) and yielding one step to those who use this argument grant that Corea was in ancient times a tributary country of Japan, still, this does not furnish trustworthy evidence of the truth of a matter of over one thousand years ago. When too the Tokugawas held the Government, did they not always treat with Corea on terms of equality;—and how then can we now on the strength of what took place a thousand years ago say that that country is tributary to us?

Supposing, however, that we by our military strength terrified the Coreans into becoming our tributaries and into accepting our instructions as to the succession of their rulers and their year names what advantage would our country obtain thereby? We regret to say that we can see none whatsoever. Even if Corea had previously been tributary to us and under our jurisdiction, we should in view of the present state of affairs in the East now desire to sever our connection with her and let her become an independent country; and how much the more ought we not to desire this when she has from the first been perfectly free? Careful consideration of the nature of our country shows us that her insular position in the Eastern seas is an excellent defence against the assaults of other countries, and that it is not for us to cross the seas and extend our jurisdiction to the continent of Asia; our doing so would resemble the approaches made by England to the continent of Europe. The provinces of Normandy, Brittany, Guise and Calais on the western coast of France were subject to the King of England and their being so was a continuous source of complication between the two Sovereigns of France and England, and the wars that arose in consequence were never ending. England was greatly impoverished by these possessions, and, in the middle ages, having come to see that she could not count on remaining undisturbed for any length of time, she finally cast them off, and thus freed herself from what had long been a source of misfortune. The positions both of England in the west and of Japan in the east must be said to be adapted for securing their defence and for rendering it inadvisable for either country to advance to the continent. The reasons are not founded on the considerations of weakness or strength of military power, or of wealth or poverty of the inhabitants, but on the impossibility of striving against the natural position which Heaven has assigned to each country.

Territorial advantages are not to be compared with good will. Even suppose one to say, that notwithstanding the disadvantages of the natural position which Heaven has assigned to Japan, we could without any difficulty by our power bring Corea into subjection to us;—we will not deny that we have the strength to do so, but once having made her our tributary, entered into an engagement to protect her and published the same to the world, it would be necessary for our Government to defend her against the attacks of all the world, and in the present state of our foreign intercourse Japan has quite sufficient to do in defending herself against attack, and where will she obtain the extra strength by which she will be able to protect Corea? Supposing then we conquered her and brought her under our jurisdiction or even only rendered her submissive and tributary to us, no profit would be derived from our control over a country separated from us by seas and we should have to guarantee her against assault from foreign countries. These two serious considerations would sooner or later force us to sever our connection with her and declare her independence. This will be plain to all, and, being plain, all will understand how much better is our present plan which has provided against such contingencies. Nor is this the only advantage which we gain from declaring Corea independent, for our having done so is an additional safeguard for the whole of Asia.

Corea has always held the opinion, with regard to Japan, that she is on a level of equality with us; but in her attitude towards China she has yielded a point, styled the latter her Sovereign, and observed her Calendar and her directions as to the succession of Corean Rulers. Of course, the state of affairs at the present date is merely nominal, and the Chinese Government have distinctly declared in public that Corea is not a dependency of theirs; thus, then, there may not be actually visible any especial profit or disadvantage to us (from dealings with Corea), but still it is impossible for us to know what rise or reverse of fortune may not be experienced by China in after years. Thus we have long desired, in view of the march of events in the Eastern Seas, that Corea should be speedily made an independent country. We have heard that when the time came for the signatures to be appended at the foot of the Treaty, the Corean High Commissioners were about to write down the period of "*Kōjo*,"* when our High Commissioners put a stop to this, and said that now that Corea was already an independent nation there was not any reason for making use of the Chinese name of the year,—whereupon there was put down instead such and such a year of the "opening of the country." Did not our Government for some object here press forward the independence of Corea? This was a matter greatly similar to the fact of Russia, England, and France helping Greece to become an independent country, and assisting Egypt to become a Vice-Royalty, and thereby diminishing the power of Turkey. We feel certain that our idea in this regard has in all probability hit the mark. In such case, the 1st Article of the Corean Treaty must indeed be said to have in the first place removed a source of calamity to Japan; in the second place, to have restored to Corea freedom of action; and, in the third place, to have effected a balance of power in the general affairs of the East. Why do not all disputants make use of their eyes, and, observing carefully the condition of affairs both at home and in foreign lands, give due consideration to the question of profit or disadvantage!

The second Article of the Treaty with Corea provides that both countries may send Envoys to the capital of the other to deliberate upon matters connected with the intercourse between them, a period of fifteen months being granted to the Corean Government for the purpose of making preparations for dealing with our Envoy.

The third Article which provides the mode of correspondence between the two Governments says "that of Corea will use the

* *Kōjo*, the name of the reign of the present Emperor of China.

Original from UNIVERSITY OF CALIFORNIA

Chinese language" the term "true style" being used in order to distinguish it from that which is in use in Corea.

The fourth article is the most important of all, and its purport, when taken along with the fifth and eleventh articles, seems to us to be that Corea shall open three ports to Japanese trade, Commissioners of both countries to meet either at the capital of Corea or at Kokwa Fu and decide upon those to be opened, after which trading rules are to be settled by the end of August in the present year. Of the three ports, one, Fusan, is made an open port for Japanese trade from the day on which the Treaty was signed, the two others are to be selected from those along the coast of Keisin, Chinsei, Zenra, Keisho and Kankio, the Corean Government appearing to have the right of selecting these two ports, but the Japanese that of approving of them or not as the case may be at the time of such selection. The date for opening these two ports is fixed to be within twenty months from the second month of this year, and we have heard that it is the intention to open one of them in fifteen months and the remaining one within the twenty months. We suppose however that these points will be left to the decision of the commissioners.

What we find most worthy of praise is the provision in this fourth article for the abolishment by the two Commissioners Extraordinary of the old practices and also of the custom of *Saiken-sen*. As we have previously argued, the Japanese (meaning in this case the people of Tsusima) have been accustomed to inflict great wrongs on the Coreans, to such a degree that the revenue of one whole circuit was devoted to the expenses of the *Saikensen* and the trade, and the result of these being carried on for several hundred years is that the Coreans are convinced that foreign trade is a misfortune which would bring ruin on their country; and these old customs are probably among the reasons persisted in which have caused the Coreans to persist in keeping their country closed against foreign intercourse. We suppose that it is on this account that it is written in the first article that "Rules and precedents "calculated to obstruct friendly intercourse are to be abolished, "and liberal rules adopted in their stead."

The Japanese Factory in Sorio, Fusan, is on a piece of land measuring several thousand *tsuboes*, and on it dwelling houses and godowns covering over three thousand *tsuboes* have been erected at the expense of the Coreans. Not only has it been the custom of the Japanese to pay no rent for the use of these buildings but also to pay nothing for the land. It has now been decided that both these buildings and the land shall be given back to the Coreans, a course by the adoption of which some persons may say we have thrown away a real advantage through our foolish fondness of good fame. This is, however, a very superficial view to take, for a careful consideration of the basis on which this treaty is founded will show that it was not desired by it to secure an unjust profit by means of old practices and traffic, but that it was made with the view of general and public benefit. Looking to that which has already been thus gained, the recording of the independence of Corea and the abolishment of unjust practices, should we grudge the trifling concession that has been made in respect to this single factory at Sorio? And even though the Japanese Government may by this treaty hand back the factory to the Coreans, their doing so will surely be no obstacle to their again renting or purchasing it as a residence for Japanese, a fair rental or price, as the case may be, being paid.

It appears to us that by our action in handing back this factory to the Coreans we have in addition to the direct advantage of removing from their minds the suspicions which they entertained (of our honesty of purpose) gained the more general one of providing for the safety of Corea, in future. We have hitherto been accustomed to look upon this place as a military station far beyond the seas. Now the establishment by foreign countries of a military station in Japan was certainly not for the purpose of protecting this country, but, owing to the incessant assassinations of foreigners which took place at the close of the Tokugawa *régime*, troops were landed in Yokohama both by England and France and that place guarded by them. These foreign troops being there did not actually make Yokohama a military station of those two countries, but, notwithstanding that, until their entire removal last year, our reputation suffered great injury from them. If we now maintain in Sorio an establishment resembling this military station previously in our country, European countries, when on some future day they come to make Treaties with Corea, will most certainly demand a lot for a public office on the same terms as those on which we hold one, nor will Corea be able to refuse it, and once having yielded to a request of this kind she will never be able to go back upon it. And supposing that foreign countries establish their military station on the eastern coast of Corea directly opposite to us, will that, we wish to ask, prove a boon or an injury to our country? Far better is it for us to abandon this very trifling advantage and to gain instead two great ones—the public one—that of making our sense of justice plain to the world, and the one not so open of guarding against a military establishment being ever placed there by foreign countries. Our argument so far effectually proves that praise which we bestowed upon this Article of the Treaty was not undeserved.

A *précis* of Articles 6 to 9 shows that they contain items providing that both countries shall mutually assist each other's vessels in distress, that the Corean Coast shall be surveyed by Japanese vessels, that Japanese Consuls shall be located at the open ports in Corea, that no interference with nor prohibition of trade between the subjects of the two countries shall be made by the officials of either.

Article 10 contains the stipulation providing what is called extra-territoriality, that is to say the right of trial in our or their own respective courts,—a subject which is so much discussed by learned men of the present day. Some one may argue in respect to this point that no matter for how long a time Foreigners may reside in Japan, they should be made subject to our laws, but that if we go to Corea, even for a short while, neither our lives nor properties can be entrusted to the mercies of the Corean Government. Let the justice of this be what it may, we for our part cannot regard this provision with feelings other than those of satisfaction.

The editor of the *Gazette*, a newspaper published at Yokohama, gives vent to the prejudiced opinion that the reason which has hitherto prevented the Japanese Government publishing this Treaty is this extra-territoriality compact contained in it, thinking that their doing so would give rise to difficulties in the deliberations which they are carrying on with the view of bringing foreigners under the control of Japanese law, and that it was only published when, notwithstanding the delay that had taken place, there appeared to be no likelihood that the several foreign ministers would assent to a proposal that extra-territoriality should be abolished and also as both Japanese and Foreigners were waiting in expectation of seeing the Treaty.

In writing such an argument as this the foreigner merely gives vent to his own conjectures. Pray what is there that our Government should dread from foreigners to cause it to make the postponement referred to? If our laws were such that foreigners could place full confidence in them, a hundred thousand treaties containing extra-territoriality clauses concluded between us and savages would not give rise to the slightest difficulty in our deliberations with either Europeans or Americans. The rawest student who knows anything at all of the condition of Japan will understand that the publication of the Treaty could not have been deferred until after the revision of the Treaties with Europe and America. For the sake of editor of the *Gazette* himself we are very sorry that he should have given vent to such a strange theory and exposed himself in doing so to the ridicule of all Japanese.

We have thus pointed out how perfect the Treaty is from first to last, and, looking generally at the state of Asia, our opinion that the prevention of the establishment in future of any military station at Corea by a foreign power, which we have secured by the Treaty, is of far more importance than any advantage which we shall gain from trade opened up by it. Every Japanese will, we think, agree with us in feeling pride over it.

("Nichi Nichi Shimbun" of March 28th, 1876.)

The Treaty with Corea has already been publicly notified, but what can be the reason that the letter of apology from Corea has not yet been published? This point is the subject of general enquiry at the present moment. By reason of their ignorance regarding the affair, all persons give forth their several opinions, based upon their own respective ideas,—while, worst of all, some of them go so far as to entertain doubts as to whether our two High Commissioners have brought back with them any such letter of apology at all. Can we newspaper writers, while hearing the noisy chatter of street-rumours, abstain from enquiry into the facts of the matter or from giving expression to our views likewise?

Confidential points in foreign negotiations are matters which we are from the very commencement, unable, by our own powers of search, to ascertain perfectly. And yet, if we are led by those among the items of news that have hitherto reached us which we consider worthy of belief, we learn our Embassy held communication at Kok'wa with the Corean Government, and caused Corea to send a proper letter of apology. We have heard that when the Embassy first enquired as to the offence of firing upon the *Unyō-kan*, Corea, just as was expected, made use of various equivoca-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

tions. It was said that "the garrison of the fort were not aware "of the fact that the flag blazoned with the Sun was the ensign "of Japan";—that "the Sun-blazoned flag of the gunboat "appeared at the moment to be altered to a yellow colour, which "fact caused the garrison to be unable to know that she was a "Japanese vessel";—that "if it were in order to obtain wood and water a Japanese vessel should go to Fusan;—and that "Kokwa was not a sea-thoroughfare." But though they made these various excuses, each several point was fully explained by our Embassy, and they eventually were unable to find any plea at all. The Corean Government, therefore, eventually wrote out a public document, in which they acknowledged the error of the fault committed by them.

As has been previously argued by us, Corea has hitherto been in the habit of bigotedly adhering to the evil custom of closing her country, and of blindly following old prejudices. Thus, then, her action in having, during a space of several years, refused admittance to our Embassies and obstinately preferred arguments with reference to the three expressions 'Great,' Emperor,' and 'Imperial Decree,' was nothing more nor less than the result of her being led astray by the *Satoi**, which is styled "the Public Laws of all countries." Moreover, astounded at the total change suddenly set on foot by the Japanese in respect to their costume and general ceremonials, there is no doubt but that the Coreans thought within themselves "Ah! Japan has "already become of like mind to that of the foreign barbarians, "and seems to be watching our Corea:—the fact of her spying "out, by means of this gunboat, the very approaches to our capi- "tal is a sign of some evil design, and we must therefore at once "beat her off." Upon a consideration of the state of Japan rather more than ten years ago, it is not difficult for us to form a conjecture as to the spirit of the natives of Corea at the present time. Again, the fort of Yeisō that was destroyed by the *Unyōkan* was situated at a distance of several *ri* from the spot where the boat of the said vessel was fired upon, and the number of the men killed in the fort is reckoned at several hundred whereby there has has been left to the present day a feeling of bitterness that cannot adequately be expressed in words. And therefore, the idea of the Coreans that Japan would accept the one combat at the fort of Yeisō as sufficient to appease her anger in respect to the "*Unyōkan*" is in truth a matter not altogether undeserving of pity.

Upon meeting the arguments put forward by our Embassy, the Corean Government for the first time took into consideration, just as a thick mist becomes dispelled and the full moonshine is perceived, the question of calculating future profit or disadvantage. They then formed the desire of flinging aside their barbarous ideas of suspicion and hatred, and pressing onwards towards the good influences of strengthened intercourse, and so wrote out an apology in terms of regret. How could our Embassy after becoming well acquainted with this state of feeling, and after having received this public document of apology, do otherwise than pardon the offence? There may be some pestilent disputants who wilfully urge that unless indemnity be levied, upon the precedent of the Peking Treaty, there is no actual merit in obtaining an acknowledgment of the fault; but this line of argument is nothing more than an idea of youthful students. Now public relations are animated machinery, and the condition of Corea is dissimilar to that of China. The subject of the negotiations at Peking was explanation of the complications of the Formosan question, and the perfection of our national prestige; while the Kōkwa proceedings had for their object the removal of the old hatred between the two countries, and the prevention, by means of the re-establishment of friendship, of any suspicion at a future date. The former negotiations were principally to settle an affair that had already happened,—the latter had the intention of general civilization in after days. How can we regard in the same light these two ideas and objects that are quite distinct from each other, or measure the worth or otherwise of an acknowledgment of error by the standard of whether indemnity is or is not to be paid? We are of opinion that the fact of our embassy having solved the hitherto existing difficulties by obtaining a written apology, and having then at once proceeded with their desired object—the Treaty, is a matter that derived its root from the above arguments.

After the Treaty had been concluded, Corea at once became a friendly neighbour of ours. Why, therefore, should we be puffed up with pride, and publish both at home and abroad her letter of apology, so as to obtain for ourselves praise merely in our own neighbourhood! Even supposing that by making the letter of apology publicly known, we were to obtain the praise of foreigners and receive the commendation of the street-folk,—pray what merit is to be derived therefrom? The real loss we should sustain by arousing adverse feelings in the people of Corea owing to its publication could never be sufficiently repaired by means of the false advantage of wordy praise from our countrymen and from foreigners! We cannot but consider this to be the reason why our Government have published the Corean Treaty alone, and so deserved the praise of Corea,—but have not published at home and abroad the letter of apology. Should our ideas chance to have hit the mark, we fully believe that the Japanese Government have, in connection with this affair, taken measures that are quite proper. And we moreover believe, that it is by no means a fact that on account of the non-publication of this apology the meritorious action of our two Envoys in bringing it back with them has been made of no avail, nor yet that their successful negotiations will in after time be deemed less or greater on that account.

For the sake of the people of Japan, our desire that this letter of apology should not be published will ever be as above argued. As, however, it is impossible to say but that when the general public consider the matter they may not come to see this, and, worst of all, wilfully assert that there is no actual proof of the apology, and so furnish pleas for turbulent advocates, it would seem that no injury would be caused to the designs of our Government if they were to dispel these doubts by publishing a notification to the bare effect that the letter of apology had actually been brought. We have therefore published what has come to our ears in connection with this point, and have also made known what we think of the same, leaving the affair to the consideration of the public, as herein shown.

The Corean Treaty.

(Hochi Shimbun.)

The Corean question which has been at the root of so many evils, such as the Saga insurrection, the Formosan expedition and the resignation or discharge of so many officials, recently arrived at a crisis, and many urged immediate war. But the Corean treaty which was issued by the Prime Minister and is the fruit of the skill of our Envoys has relieved us from all anxiety, and the prospect of dark days anticipated by many has vanished.

At the same time we are very sorry to find some among the Japanese talking in this wise:—"Japan" say they "sent Envoys to Corea on several occasions, but the Coreans would not receive them; moreover they were so insolent as to fire upon one of our vessels. Our Government, however, instead of instantly declaring war, sent Envoys of peace and they induced the Coreans to agree to our terms. But they made no apology for their misconduct, and in this they were wanting. The Government should have extorted such an apology and placed it on record. But we find nothing of the kind in the Treaty."

Thus it would seem that there are certain Japanese who are dissatisfied with the peaceful solution of the question between us and Corea. But as this view is confined to those who were clamorous for immediate war it hardly seems necessary to argue against it and to convince them of their error. Still, as they form a section of the nation, it seems to be our duty to state what may fairly be said against them.

If we examine the Treaty as a whole, we cannot find a single clause in it calculated to act prejudically to us, while the 4th, 5th, 7th and 8th clauses are clearly advantageous to us. Now these advantageous clauses must be adverse to the Coreans, so that they may be accepted in the light of an apology. Moreover, trade is a thing detested by the Coreans, (we shall not argue the question whether it is a good or bad thing for a nation) and now that they have consented to open up commercial relations with us, is this not an ample acknowledgement of their misconduct?

Now that this long pending question has been settled, we hope that the revision of our own treaties with the foreign powers, the time for which has long past, may take place.

Corea.

(Continued.)

As the Chinese character is extensively used in the names of places, offices and the like, and as Corea itself is close to China, many Japanese are led to suppose that the Coreans must be very learned in Chinese literature and very wise in their actions. But such is not the case, for a Corean expressed his views on this subject in the following terms—"it is true that we are acquainted with the Chinese characters, but we are barbarians for all that. And this is true enough, for the mass of the people are no more advanced than the people of Yezo.

* The Chinese classic *Tsoo chuan*.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The Coreans believe that there is nothing equal to the literature of China and the doctrine of its sages, and honour them with unbounded respect. When they saw that we we were dressed as Europeans, they showed great anxiety as to how far the doctrines of Confucius, Mencius and the great Chinese sages were still revered among us.

The art of drawing seems in a very backward state among the Coreans. They have pictures in which various colours are used and some in Indian ink only, and seem greatly to prefer the former. But if we compare either of these with their writing, the painting is far behind. The pictures which we saw on the screens in the best room in Corea might be purchased for a *tempo* or so in Japan.

There seem to be some among them who compose poetry or write in prose, but we never could find any of their works in print, which is doubtless due to the small demand which exists for such labour. Some of the writings of Japanese authors, of Kakuseki and Sorai for instance, are praised and honoured by the Coreans, but the books they chiefly read are the writings of Confucius and his commentators.

Corea produces ginseng and other drugs, but our medical men are so well acquainted with them that there is no object in enumerating them.

The country abounds with tigers and leopards.

The cotton cloth is of a very low quality, but very cheap, though we inferred that there was very little of it, as even under the small demand for it made by our vessels, its price doubled immediately.

The Corean silk is useless, and I doubt whether the quantity of hides available is large enough to induce any trade in the article. If the Coreans can be prevailed on to turn their attention to commerce, I imagine they might export sea-weed and dried *awabi* (the "sea-ear" or *haliotis tuberculata*).

The climate is in general cold.

Corea is divided into eight provinces, of which Kankio and Heian are of about the same mean temperature as Yezo. In these the people live on millet. The climate of Kogen is a little milder than that of the former two provinces, while that of Keiki, in which the capital is situated, may be judged of by the fact that while we were there the thermometer fell to 20° Fahrt. at night and rose to about 30° after sunrise. I understand that the province of Zenra is much warmer, the mean temperature being about that of Tokio. Very little snow falls in Corea, and this may account for the soil being so poor. We saw no wheat or barley, and the remains of such crops as cotton and *goma* were still to be seen in the fields. This shows that the agriculturists are indolent and do not work in the winter. Rice is about 3 or 4 cents per *sho* (about 2 quarts) and fowls are 6 or 7 cents a piece. The cost of daily living is therefore small, and this may be the reason why we found so many Coreans lolling about in the streets, smoking pipes two or three feet long, and doing nothing more.

It is stated in the *Shoshoki ban* that there are 1,600,000 families in Corea, which, at an average of three persons to each family, gives 5,000,000 of inhabitants. The population at present cannot vary much from this estimate.

The whole nation appears to be poor, and the protection of the Government seems not to extend to all, so that when famine or pestilence comes thousands lose their lives, and it is even said that the population has decreased of late, which may be true enough.

I do not know what are the yearly revenues of the Government, but the number of officials is enormous, and there seems to be a governor to every district which can yield ten thousand *koku* of rice, so that there is much useless expenditure on the machinery of government. It is said that the revenues of the king can hardly be greater than those of the late Prince of Kaga, but, when told this, I replied that the amount available for the king can hardly be as great as that disposed of by the Prince of Kaga, because the expenses of government are so heavy.

It is said that more than the half of the army was at Kokwa while we were there, and that the government was sorely troubled to find the men in food. Something may be inferred from this of the state of affairs in the country.

The Delay in the Revision of the Treaties.

(Choya Shimbun.)

Our disputes with Russia were settled by the exchange of Saghalin for the Kurile Islands, and our dispute with Corea by our late treaty, which is a cause for congratulation.

But there yet remains an important matter to be settled, viz., the revision of the treaties, the stipulated time for which is already past. The delay has probably arisen from the desire of the Government to examine fully into everything, and to act in such a manner as to make the treaties as beneficial to us as possible. These are good steps for the Government to take, but we imagine that there are other causes for the delay. The Government desires to obtain jurisdiction over foreigners resident in Japan. Foreigners, however, do not think that our laws are yet such as will afford them proper protection, and do not wish to be placed under them. Now the laws of Japan have been much reformed of late and are very different from those which existed some few years ago. But if we compare them with the laws of the western nations, we discover a wider distance than between our laws as now existing and those which they have superseded. We have no law of Habeas Corpus and no juries, lawyers are not permitted to plead in criminal cases, and torture has not yet been abolished. These things constitute ample reasons why foreigners are not willing to place themselves under our laws. But the government intends to make these reforms, which would take but a short time to effect were it to set itself earnestly to work at them.

We have heard, however, that there is still another cause for the delay referred to. Since the Government issued the Press-laws many of the editors and writers for the Press have been punished by fines and imprisonment, and there are at this moment nineteen men in prison on this account. When intelligence of this kind is carried into foreign countries by means of the foreign newspapers of Yokohama, the condition and circumstances of Japan not being well understood in distant countries, people conclude that the Japanese Government is acting somewhat harshly by the Press, and that this has tended to afford a fresh reason for the revision of the treaties. This is what we have heard, though we are unable to verify it. But if it be true, the Press has additional cause for sorrow. The Government made the Press and libel laws from a prudent view that some limitations of the freedom of the Press were necessary, and punishment has befallen so many writers because they acted rashly and thoughtlessly. Our impression is that people abroad mistake the recklessness of these writers for the oppression of the Government, and this tends to delay the revision of the treaties. The newspaper writers should feel a double sorrow that this has been the result of their conduct.

The Travelling Tax.

(Nichi Nichi Shimbun.)

Passing through the streets of Yokohama a short time back, I saw a notice at one of the Steam-ship Companies' Office to the following effect—"Rejoice, for the Notification No. 30 of the Prime Minister restores to us the right of navigation on our coasts;" and the employees of the Company were regaling themselves on *saké*. I doubted what this might mean, but on my return home I looked into the *Nichi Nichi Shimbun* and found there the notification containing the regulations for those who travel in foreign steamers, and I at once inferred that the rejoicing was on this account. The payment of the 25 *sen* is a matter of no great account, but the 1st and 4th articles of the notification are calculated to give much vexation to travellers. Passengers going from Tokio find it very troublesome to have their baggage examined at the Custom House. But if they are to make a statement first at the Kencho regarding their intended destination and then go to the head quarters of the police to get a pass, this will indeed involve a great deal of trouble! If this were obligatory in travelling by all steamers, there would not be so much to say about it. But when it is unnecessary in the Mitzu Bishi line, and the fares by these steamers are also lower, it is very clear that no one will travel by the dearer and more troublesome line, and the Company named may rightly say that it has regained the monopoly of the coast navigation. But it is equally clear that there must be some companies in as much sorrow as the Mitsu Bishi is in joy. The foreigners will not be silent on this subject, but we hope that nothing will occur to necessitate the withdrawal of the above notification.

We understand that the visit of Mr. Tong King-sing to Foochow has for its object the establishment of a Chinese Banking Company or Corporation, under the auspices of Ting Jih-chang. It is said that there are to be branches in London, Japan, and elsewhere. The principal shareholders are certain Cantonese merchants who we are informed have already subscribed nearly all the requisite capital, consisting of three hundred thousand taels. We do not vouch for the accuracy of every detail of this information, but believe it to be in the main correct.—*Courier.*

Correspondence.

AN UNCOMMON FISH.

To the Editor of the "Japan Weekly Mail."

Sir,—A short paragraph appears in your columns of sundries describing an 'extraordinary fish' which is supposed "to be another instance of the skill of the Japanese in the manufacture of monsters." If I do not greatly err, the same specimen was exhibited recently in Tokio and is a very perfect and beautiful example of that highly prized and in England 'Royal' fish the sturgeon. The so called 'excrescences' are normal cartilaginous growths, and are supposed to show the affinity of the sturgeon to the extinct ganoids. The old gentleman in possession pointed out to me with national pride the mystic form of Fusiyama which these cartilaginous scales had assumed.

Your readers should pay the fish a visit, and the Government would do well to secure the specimen for their museum.

I am, Sir,
Your obedient Servant,
AMATEUR NATURALIST.

Tokio, March 29th, 1876.

[We believe our correspondent to be right as to the identity of the fish. That now shown in Yokohama is said to have been captured in 1872, and though believed by our Japanese informant—probably from its rarity—to be factitious, it is, we are assured, undoubtedly a specimen of the true sturgeon.—Ed. *J. W. M.*]

THE SPRING MEETING.

The following is the programme for the Spring Meeting:—

First Day.—Wednesday, 17th May.

1. The Trial Plate.—For China Ponies that have never won a Race here. Weight for inches. Entrance, $5. Once round.

2. The Griffins' Plate.—Value $150, with Entrance Fees added. For Japan Ponies *bonâ fide* Griffins. Weight for inches. Entrance, $10. Five Furlongs. First Pony to receive 70 per cent., Second 20 per cent., and Third 10 per cent.

3. The Celestial Cup.—For all Ponies. Weights as per scale. Entrance, $5. Three quarters of a Mile.

4. ————For Japan Ponies. Winners of two Races at last meeting excluded. Weight for inches. Entrance $5. Five Furlongs.

5. The Challenge Cup.—Value $150. For China Ponies. Weight for inches. Entrance $5. One mile and three-quarters.

6. The Stand Cup.—For Japan Ponies that never won an open Race. Winners of No. 4 excluded. Weight for inches. Entrance $5. Half a mile.

7. ————For China Ponies. Winners at this meeting excluded. Weight for inches. Entrance $5. Once round and a distance.

8. ————For Japan Ponies. Winner of No. 4, and Winners of any open Race at or previous to this meeting 10lbs. extra. Weight for inches. Entrance $5. Three-quarters of a mile.

9. ————For China Ponies. Winners in China or of two Races here during 1875, and Winners at this meeting excluded. Weight for inches. Entrance, $5, Once round.

Second Day.—Thursday, 18th May.

1. ————For all Ponies. Winners of the Celestial Cup or Winners of two Races at the meeting, 7lbs. extra. Weight as per scale. Entrance, $5. Once round.

2. The Maiden Stakes.—For Japan Ponies that never won a Race. Weight for inches. Entrance, $5. Half a mile.

3. The Ladies' Purse.—For all Ponies. Winner of No. 1 (2nd day), or of any Race under a mile, and winner of two races at the meeting, 7lbs. extra. Winners of more than two Races excluded. Weight as per scale. Entrance, $5. Half a mile.

4. ————For Japan Ponies that never won an open race. Winners of Nos. 4 and 6 (1st day) excluded; other winners, 7lbs. extra. Weight for inches. Entrance, $5. Five Furlongs.

5. The Visitors' Cup.—For China Ponies. Winners of One Race at the meeting, 7lbs; of Two Races, 10lbs, extra. Winners of more than two races excluded. Weight for inches. Entrance, $5. One Mile and a half.

6. ————For Japan Ponies. Winners of mixed races, and winner of No. 8 (1st day) excluded. Winners of any open race at or previous to this meeting, 10lbs. extra. Weight for inches. Entrance, $5. Three-quarters of a mile.

7. ————For China Ponies. Winners at the meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

8. The Yokohama Plate.—For Japan Ponies. Winners at the meeting excluded. Weight for inches. Entrance, $5. Three-quarters of a mile.

9. The Criterion Stakes.—For China Ponies. A forced entry for all Ponies that have run at the meeting. Winners of one race, 10lbs.; of two races, 14lbs. extra. Ponies that have run twice, and have not been placed, allowed 7lbs. Weight for inches. Entrance, $5. One Mile and a quarter.

Third Day.—Friday, 19th May.

1. The Hurdle Race.—Value, $75. For all Ponies. Over Six (6) Hurdles. China Ponies, 10st. 7lbs.; Japan Ponies, 10st. Entrance, $5. Once round and a distance.

2. ————A Handicap for all China Pony winners at the meeting, To be handicapped by the Stewards at the close of the second day's racing. Entrance, $5, *compulsory*. Open also to beaten Ponies at the meeting. One Mile and a quarter.

3. ————A Handicap for all Japan pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, $5. *compulsory*. Open also to beaten ponies at the meeting. Once round.

4 The Scurry Stakes.—For all Ponies. Weights as per scale. Entrance, $5. Three furlongs.

5 The Solace Cup.—For all beaten Japan ponies at the meeting. Weight for inches. Entrance, $5. Five furlongs.

6 The Consolation Plate—For all beaten China ponies at the meeting. Weight for inches. Entrance, $5. Once round and a distance.

7 ————A Handicap for all ponies. To be handicapped by the Stewards at the close of the second day's racing, when entries will be received. Winner of No 2 excluded. Winner of No. 3, 7-lbs., and winners of any other race after the publication of the handicap, 3-lbs. extra. Entrance $10. Once round.

Law & Police

IN H. B. M.'S CONSULAR COURT.

Before Russell Robertson, Esq., Consul.

Monday, March 27, 1876.

C. J. Frischling *vs.* Henry Peacock.

Decision was given to-day in the following terms:

I find that Henry Peacock does not owe money to or hold money belonging to William F. Driscoll, Edward Powys and Thomas N. Driscoll. The rule is, therefore, discharged with costs.

Russell Robertson,
Consul.

Ausust Soderberge, seaman on board the British Barque *Truth*, charged with being absent without leave, was ordered to pay costs and sent on board.

Thursday, March 30th, 1876.

Regina *vs* Lookoo and Seyd.

Lookoo and Seyd, Malays belonging to the crew of the steamer *Bombay*, were charged with assault and battery.

Longtai, a Chinaman, whose left eye was closed and his head bandaged, warned to speak the truth, said: I am boy on board the *Bombay*. Last night, about 10 o'clock, as I was walking in the streets I met the two prisoners; the first one, Seyd, had brass knuckles on his fist, with which he gave me a blow in the face and then ran away. I called out for the police, and two policemen appeared, to whom I told what had happened. I went to the police station where they sent for a doctor for me. The man who struck me was arrested by the Japanese police.

P. C. Mansbridge, sworn, stated that when the Chinaman came to the police station his face was swollen and overrun with blood. The two prisoners were both drunk.

San-fook, also a Chinaman, whose left eye was blackened and partly shut, deposed that he is boy on board the *Bombay*. Last night between 9 and 10 p.m. he was standing in the street, when the prisoner Seyd came up to him and struck him in the eye. Witness ran away and afterwards heard that Long-tai had been similarly attacked.

Original from UNIVERSITY OF CALIFORNIA

Prisoners sentenced to pay costs and to imprisonment with hard labor, Seyd during seven days, Lookoo during forty-eight hours.

Friday, March 31st 1876.

Cobb & Co. *vs.* J. Wickers.

J. Wickers was summoned to show cause why he had not complied with a judgment rendered 9th March, 1875, ordering him to pay a debt of $60 odd to Cobb & Co. in monthly instalments of $5.

J. W. Sutherland, partner of the firm of Cobb & Co., appeared for Plaintiffs.

Defendant appeared personally.

Examined by J. W. Sutherland: I was paid 20 rios last month by Mr. Helm for a horse, but it was not my own horse: I have done work for James and Wilson

To Court: I have not paid any instalments because I have not been able to do so. My earnings, which are about $30 or $40 a month, have just been sufficient to pay for my rent and food. My books are kept by a Mr. Bailey, who works for James and Wilson: they show the payments I have received. Some months I have not earned $30 but only $25. I do not think I ever have made more than $50. Sometimes I have not been able to pay Mr. Bohm my house rent, which is 26 rios. I cannot buy my food for less than $15 a month. I have not in a single month since the judgment was passed been able to pay the instalments of $5

Mr. J. W. Sutherland observed that the horse sold to Mr. Helm was the property of defendant, who had offered it to him, Sutherland, in part payment of the debt. He asked that defendant be ordered to produce his books.

Defendant wes ordered to produce his books in Court on Monday next, at 10 a.m.

U. S. CONSULAR-GENERAL COURT.

Before Gen. T. B. Van Buren, Consul-General,

Wednesday, March 29, 1876.

William Bolton Spratt and Joseph Moses Emanuel, trading at Victoria, in the British colony of Hongkong, plaintiffs, *vs.* George Frank Graham, defendant.

This action was brought to recover $4.443.29, defendant's half share of a judgment debt, and costs paid by plaintiffs, with interest. The petition set forth that in September, 1872, defendant, then a master mariner, purchased the wreck of a sailing vessel, the *Marie*, then sunk in the river at Whampoa, and that the plaintiffs had an interest in the raising and salving of said vessel; that defendant entered into a contract with one Stuart, of Hongkong, to raise the vessel; that in March, 1873, the said Stuart commenced an action against the plaintiffs and the defendant Graham, in the Supreme Court in Hongkong, and judgment was given in favour of the said Stuart for the sum of $5,736.60; that in June, 1873, the plaintiffs, at the request of defendant Graham, paid the whole of the said judgment debt and costs, fees, &c.—in all $7,160.40; that defendant Graham has acknowledged that he is indebted to plaintiffs for his half share of the above money, which, with interest, amounts to $4,443.29.

Mr. H. L. Litchfield, barrister-at-law, appeared for plaintiffs. Defendant, Mr. G. F. Graham, appeared personally.

Mr. Litchfield stated his case, and produced a receipt dated July, 1873, signed by one W. Wotton, for $5,736.60 received from Messrs. Spratt & Co. In proof of the signature of Mr. Wotton he produced an affidavit, stating that the signature of Mr. Wotton is in his usual handwriting.

His Honour refused to admit this affidavit as proof of signature.

Mr. Litchfield stated that the judgment money is $7,160.40, half of which is $3.580.20, and interest added to this makes the $4,443.29. He produced a letter from Captain Graham, dated Macao roads 29th June, 1873, in which Captain Graham acknowledges to be indebted for the half of the judgment money with costs, and promises to pay the same in time with 6 per cent interest. Mr. Graham acknowledged this letter to be in his handwriting.

Mr. Litchfield called upon Captain Graham to produce a letter, dated the 30th June, 1873, in reply to his letter.

Captain Graham declared that he had not got that letter. He had got a bill, but not the letter.

Mr. Litchfield further produced a letter from Captain Graham, dated 22nd June, 1874, and called upon him to produce a letter written in reply on the 28th of July, 1874 by Spratt & Co.

This letter was produced by Captain Graham and read by Mr. Litchfield; it contained an offer to take $300 per month as instalment with 10 per cent interest.

Mr. Litchfield further produced two letters from defendant dated from Yokohama in 1874, also containing acknowledgments of the same debt and promises to settle it. From October, 1874 up to present date, nothing further has been heard from Defendant.

Captain Graham, sworn: In 1873 the German barque *Marie* was wrecked near Hongkong. I had been out of employment for some time, and was then living with Messrs. Spratt & Co., and recommended them to buy the vessel, and in the event of the vessel being raised, and they concluded to repair her. I would take one half interest in her. The wreck was to be sold by public auction by Messrs. Blackhead & Co. W. B. Spratt & Co. commissioned me to purchase the vessel. I attended the auction and bought the ship for W. B. Spratt & Co. for a sum of about $1,100. They made a contract with Mr. Stuart to raise the vessel. I was a mere witness to this contract. The contract was to pay $2,000 for putting the vessel into a dock at Whampoa. Stuart succeeded in raising the vessel, but never got it to Whampoa and eventually gave up the contract. I explained to Messrs. Spratt & Co. that I could put the vessel in dock, and they commissioned me to do so. I put the vessel into the Aberdeen docks in Hongkong; there she was found to be seriously damaged. She was floated out and anchored in Hongkong harbour. It was understood between Messrs. Spratt and myself that the vessel would be taken to Wampoa and repaired. One of the firm of Spratt & Co. left Hongkong for San Francisco, and as soon as he had left, the firm gave me notice that the vessel would be sold at auction, which was done. I do not know how much she fetched. The gear was sold separately, and then the vessel. I myself purchased a part of the gear for about $500 or $600. I had at that time some money with Messrs. Spratt, some $2,000, which I drew in April or May, 1873, and invested in a barque.

Adjourned until 2 p.m.

On re-assembling

Captain Graham resumed his statement. In the meantime the suit entered by Stuart against Plaintiffs and myself was going on. The judge ruled that I was an agent of W. B. Spratt & Co. I was repairing my barque the *Lizzie*, and chartered her to the firm of Jardine, Matheson & Co, and sailed in her. But before I sailed, I received a letter from the attornies of Spratt & Co. (Letter produced). This letter, dated 29th June, 1873, demanded payment before noon the next day of $2,868.40. To avoid the consequences threatened by that letter I gave a letter of acknowledgment. (Document exhibited). When I gave that letter, I fully intended to come back to Hongkong to test the question of my liability, without inconvenience to my charterers. But I never went back to Hongkong since, and in explanation of my letters from Yokohama, in which I promise to pay the debt, I have to say that I was then yet in command of the *Lizzie*, and feared to be taken out of the ship for debt.

His Honor remarked that the judgment passed in Hongkong on the 12th May, 1873, expressly sentenced both Spratt & Co. and Defendant to pay Stuart a certain amount of money, and the question settled by that judgment he was unwilling to reopen. On the other hand the vessel *Marie* has been sold, and if Defendant was part owner in the vessel he is entitled to part of the proceeds of sale, and of these there is no account.

Captain Graham: I was not paid for my trouble in bringing the *Marie* into dock; all the expenses therewith connected were paid by Spratt & Co. I never paid any part of these expenses.

Cross-examined by Mr. Litchfield on a newspaper report of the trial in Hongkong: I was a witness on the trial in Hongkong. My memory is ordinarily good. I attended as witness at the request of Spratt & Co. The evidence I then gave was the truth. I think I remember now what I then said. I did not say then that after I purchased the vessel I made it over to Spratt & Co. to join in a speculation. I am not aware that I at that trial said that "I gave Spratt & Co.'s name at the auction as buyers because they were known to the auctioneers," nor that I said "there had not been one word between Spratt & Co. and me authorising me to use their name." I do not remember to have said at the previous trial that "Mr. W. B. Spratt did not consider the vessel worth more than $2,000." I do not know Mr. Wotton, the clerk of Messrs. Spratt & Co.'s attorneys. My evidence was not taken down on the 9th of May, 1873 by the attorneys of Messrs. Spratt & Co. before I went into Court.

His Honor observed that Defendant may be examined as to what he swore to on the trial, but not as to what he may have said to Mr. Wotton. The letter is no evidence. Therefore the affidavit of Mr. Wotton cannot be admitted, as no evidence can be admitted which Defendant has not had the opportunity to cross-examine.

Cross-examination continued: Stuart got the vessel off the rocks and landed her on the beach. I was in command of a tug boat,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

towing her towards Whampoa. It commenced to blow, and I had to let her go and she sank. I then had to raise her and eventually brought her down to Hongkong. Mr. W. B. Spratt ordered me to put the vessel into dock and afterwards ordered me to sell her. I cannot remember if I said on the former trial that "Mr. W. B. Spratt advised me to sell, and told me that they would bear half the losses." I do not think the question was ever brought up, if Spratts were to bear half the losses. I certainly considered them bound to bear half the losses, if the ship had been repaired; but the ship was not repaired, and my contract with Spratt was broken, when Spratt left for San Francisco. Stuart was supplied with spars by W. B. Spratt in order to raise the ship. When it is said in the newspaper report that "Nelson Spratt bought the spars and that I authorized Spratt to pay for the spars" then the meaning is that my receipt given to the seller, Mr. McDonald, for the spars, was tantamount to an order upon Spratt to pay for them. There was a letter produced on the trial signed by me "F. Graham and on behalf of Spratt & Co." But I do not remember now what explanation I then gave of that signature. My arrangements with Spratt & Co. were not made after the agreement with Stuart, but before. I do not remember to have said on the previous trial that "I proposed to Spratt & Co. to go partners, but that they answered that they would not go partners in a sunken ship." I do remember to have said that "after the ship had been brought into dock Spratt & Co. offered to pay for the repairs and to go partners to the extent of the repairs." I believe the barque *Lizzie* has gone to the Australian colonies. I had a share in her. I left her in 1875 because I sold my interest out of her.

His Honor here observed that Defendant had been sentenced jointly with Spratt & Co. to pay Stuart, and he has repeatedly promised Spratt & Co. to pay his half share of the judgment money.

Judgment would be, therefore, given for plaintiffs with costs.

IN THE GERMAN CONSULAR COURT.

Before A. SCHAEFFER, Esq., *Acting-Consul.*

Monday, March 27th, 1876.

Mr. Julius Helm was charged by the Kanagawa Kencho, with having on the 14th instant passed on horseback over a bridge in Furo ichome, which was under repair and on which a notice was posted forbidding horses and vehicles to pass. A policeman had warned Mr. Helm to desist, but he passed on only giving his card.

Mr. Helm explained that he did not see the notice posted on the bridge, although it may have been there, and it was only after he had passed that the policeman spoke to him.

Fined $1.

Reinhardt Gerstmann and August Muller, seamen on board the German Barque *Amanda*, were charged with not coming on board in due time and with refusal of duty, thereby hindering the ship from going to sea.

The Consul read the charge to the prisoners. Captain Horms, master of the Barque *Amanda*, produced his log book, according to an entry in which the prisoners on the 24th instant obtained leave to go ashore, on condition that they should be on board the same evening, as the ship was to sail next morning for Takao. The prisoners, however, did not return. The Captain had to report them to the police, by whom they were arrested on the night of the 25th and brought on board on the morning of the 26th. On coming aboard they struck work under the pretext that they wanted to see the Consul, and Gerstmann also to see a doctor. In the afternoon they left the ship without leave and returned drunk in the night.

The prisoners acknowledged the correctness of this entry, only they denied having been drunk.

The chief officer corroborated the charge brought by the captain. Witness had made the entry in the log book. The ship should have left on Saturday morning.

The Consul said that as the ship was leaving port he could not sentence the prisoners to imprisonment; he should fine them $10 each and order them to pay costs.

Before A. SCHAEFFER, Esq., Acting Consul;
and
T. PELTZER and H. FRANCKE, assessors.
Tuesday, March 28, 1876.

Frederick Jahrnick, who, on the 22nd February last, was sentenced to four weeks' imprisonment for theft, was again brought before the Court, charged with having, on the 16th inst., stolen a coat, and a pair of trousers and drawers, in the Temperance Hall, No. 86.

Prisoner pleaded guilty to the charge, but said that on that evening he was drunk, and that he went to the Temperance Hall—not with the intention to steal but to visit an acquaintance from the *Shalimar*, named Stuart. He did not find this man; and on passing the open door of a room, he saw the coat and pants hanging on a nail on the door. He possesssd himself of these: put on the coat, and took the pants under his arm. When he left the Temperance Hall and had gone a short way down the street he was caught by a man, who brought him back to the Temperance Hall. Since he was released from prison, he has had no regular residence. He had got drunk in the Sailor's Home, where he had met some sailors who had been paid off.

Henry Clayton, manager of the Temperance Hall, deposed that on the evening of the 16th inst. he was told by a boarder that a man had passed down stairs with some clothes. The man was followed, and brought into the office of witness. He had a pair of pants and drawers hidden under his coat, and gave his name as Brown. The police were sent for, and took him away to the station. After he had been taken away, a boarder missed a coat, and went to the police station, where he found his coat on prisoner's back. There was at that time a man named Stuart living at the Temperance Hall; but not in the room where the clothes were stolen.

Sentenced to two months' imprisonment and costs.

IN THE FRENCH CONSULAR COURT.

Before EMILE KRAETZER, Esq., Acting-Consul;
and
A. V. DEVEZE and F. DE FISCHER, assessors.
Saturday, April, 1, 1876.

A. LAPLACE *vs.* J. PAGES.

This was an action to recover the metal gear of a turn-spit given to defendant for repair.

Plaintiff stated that the spit had been returned to him; but that the gear had been changed, and that he understood that his gear was now in the possession of Mr. Bonnat.

Some evidence was produced, which went to show that defendant had, at the time he was in possession of plaintiff's turn-spit, also repaired a turn-spit for Mr. Bonnat.

Defendant acknowledged this, but contended that the gear he had sent to plaintiff, and which the latter had returned as not belonging to him, was really that of plaintiff.

JUDGMENT.

Considering that Mr. Pages has kept the gear sent to him for repairs by Mr. Laplace for a very long time; that he has not sufficiently accounted for what he has done with this gear during the time it was in his possession; that it has been proved that he at the same period has delivered similar gear to Mr. Bonnat; that Mr. Laplace does not recognise as his the gear that has been sent to him, and as it is impossible to ascertain if Mr. Pages really has tendered the gear which he has kept for an unduly long time;

And whereas Mr. Laplace, although he has been deprived of the gear for a certain time, has not therefrom sustained any loss,

Mr. Pages is sentenced to pay Mr. Laplace $8, the amount at which the gear is valued, and to pay costs.

E. JUBIN & Co. *vs.* MESSAGERIES MARITIMES S. S. Co.

This was an action to recover $194.89 from the M. M. S. S. Co. for damage to goods shipped from Marseilles to plaintiffs in the Co.'s steamer *Tanais*.

A survey had been ordered by the Consul and the surveyors had found the cases, containing window glass, badly damaged, and although they considered that the packing could have been better, they attributed the damage to careless treatment on the part of the M. M. Co. They had advised that the goods be sold at public auction; this had been done, and the plaintiffs now claimed the difference between the proceeds of sale and the value of the goods, viz., 194.89 and costs.

Mr. G. T. Blakeway appeared for the plaintiffs and Mr. Conil for the defendants.

Mr. Conil stated that after the survey had taken place, he had proposed to plaintiffs to examine all the packages, seventeen in number, in order to fix the real amount of the loss. This proposal had, however been rejected, and the goods had been forced to public auction, where they, in the depressed state of the market, had been sacrificed. Out of seventeen packages shipped in Marseilles sixteen were more or less broken: this proportion proved, what the experts had also hinted at, that the packing was faulty. They had been obliged on board to nail new boards on several of the packages because they had become disjointed and could not be handled in that state. There is a clause in the bills of lading

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

issued by the Company which in such cases acquits the Company of responsibility.

JUDGMENT.

When a captain replaces and renails boards on the packages and repairs the same, without at his arrival at the place of destination demanding a survey of this stowage, then he creates a presumption against himself, and he cannot in that case throw the responsibility for damages to the cargo on accidents from the sea.

Considering, then, that when cargo is visibly damaged, the captain ought neither to unload nor tranship it without having the stowage surveyed, or he will be held responsible for the damage;

Considering that when a captain has omitted to demand such survey before discharging the cargo, he cannot supply this omission by a latter survey, and that, moreover, in the present case the survey was not even demanded by defendants, who have declared that the agent was only present at the survey as a disinterested party;

Considering that when a captain delivers the packages in a visibly bad condition and does not prove that his cargo was properly stowed, then he becomes responsible for the damage suffered by fragile goods on board his ship, notwithstanding the clause in the bill of lading, which acquits him of such responsibility;

And that the clause in the bill of lading, which relieves the Company from proving proper stowage, cannot be held to extend to packages visibly broken;

And that the sale at auction of the damaged packages took place at the advice of the surveyors;

The Company is sentenced to pay Messrs. E. Jubin & Co. $194.89 with 6 per cent. annual interest from to-day, and also to pay costs, the survey therein included.

T. WALLACE *vs.* E. GIRAUD.

This was an action to recover from Mr. Giraud some wines sold by plaintiff to F. E. White.

Plaintiff stated that he on the 4th of last month, had an auction for Mr. Laplace, at No. 61, when five cases, each containing 24 bottles of burgundy, were sold to Mr. White. When he came to deliver them, he found they had been taken away by Mr. Giraud. He wrote to him demanding them, but received a reply refusing to give them up, on the plea that the price of the wine was limited, and the wine had not been sold.

Plaintiff called as witness,

General Van Buren, who stated that he was at Laplace's auction on the 4th March; that he heard, he thought, six cases of wine offered; one sold for $12, and Mr. White offered to take the balance for $10, and that offer was accepted. Mr. Giraud was there.

Mr. F. E. White: I was at the auction at No. 61. Six cases of wine were offered for sale; one was sold for $12. I offered to take the balance for $10 a case; my offer was accepted, and the wine was knocked down to me. When I afterwards called for it, it could not be found.

Mr. Edward Wallace gave similar testimony, and said that Mr. Giraud was there.

Mr. Antoine Reynaud: I was at Mr. Laplace's auction. I was there at the request of Mr. Laplace, to look after his interests. Mr. Giraud had told me when the goods were ticketed, that this wine was not Mr. Laplace's, and could not be sold under $16 the case. I told Mr. Edward Wallace so at the sale. I offered myself for the wine, and the first case was knocked down to me for $12.

Mr. Edward Wallace denied that any limit had been fixed for the price of the wine.

Mr. Reynaud, cross-examined by Mr. Wallace: I bought in the one case, because I was pushing the sale for Mr. Giraud. The reason why I did not buy in the rest was, that I did not hear them being sold.

Mr. Giraud stated that only one case had been sold; the other five were not offered for sale at the auction at all. He had fixed the limit at $16, and explained the fact that one case was, nevertheless, sold for $12, but that this case was bought in for himself. He was at that moment next to Mr. E. Wallace, the brother of the auctioneer. He saw General Van Buren there. The wine did not belong to witness, and if he parted with it at $10, he would personally lose $30.

Mr. T. Wallace here produced his auction book, in which no limit had been marked for this wine.

Mr. Baptiste Vivet, sworn: I was charged to take notes at Mr. Laplace's auction of all the sales. I heard one case of wine sold for $12. Immediately after the auction Mr. Giraud asked me to let him see my notes, and I told him that his wine had not been sold. At the time of the sale I was quite close to the auctioneer.

Mr. Giraud examined, by Mr. T. Wallace: I have not offered Mr. White $12 a case for the wine.

Mr. White: The day after the sale Mr. Giraud offered me $2 on my bargain, he offered to give me $12 per case.

The court asked Mr. Edward Wallace, if he could swear that no limit had been placed on the price of the wine.

Mr. E. Wallace took his oath that no limit had been given him.

JUDGMENT.

On the 4th of March last, Mr. Wallace held an auction at No. 61, at which Mr. Giraud caused to be offered for sale six cases of wine. Mr Giraud states that he limited the price to $16 per case; but the first case was knocked down for $12 to Mr. Antoine Reynaud, who made no observation to the auctioneer about the price being limited to $16, although he states that he himself had by instructions from Mr. Giraud given the auctioneer this limit before the auction took place. If Mr. Giraud really had the intention thus to limit the price, it appears that the parties have not properly understood each other, as Mr. Wallace does not speak French.

Considering that it has been proved by witnesses that the 5 cases have been knocked down to Mr. White at $10 the case immediately after the sale of the case at $12,

And that Mr. E. Wallace has taken his oath that no limit was given him,

Mr. Giraud is sentenced to deliver the cases sold within five days from to-day, or in default pay an indemnity of $75, and also to pay costs.

REUTER'S TELEGRAMS.

London, 17th March, 1876.

Lord Hartington's motion was rejected by the Commons, who went into Committee on the titles Bill.

Singapore, 16th March, 1876.

Datusagar who was implicated in the murder of Mr. Birch has been captured and imprisoned.

PASSED CANAL.—*Outward*—"Viking."

London, 14th March, 1875.

The German squadron in China is to be reinforced.

VIA AMERICA.

LYONS, February 29th.—Gambetta, in a speech here yesterday, said that the Republican programme was peace abroad, and progress at home. He urged the necessity for a conciliatory policy, and declared that the Republic should be open to all who came to it in sincerity.

London, February 29th.—The *Times* announces that M. Ferdinand De Lesseps and his coadjutors of the Suez Canal Company have abruptly dismissed Sir David Lange from his position as representative of the English interests in the Canal Company's directorate. This step is taken in consequence of letters writters written under obviously patriotic influences to Earl Granville in 1871, having been inadvertently published among Parliamentary papers relative to the Canal purchase.

London, February 27th.—John Ruskin has been elected to the Slade Professorship of Fine Arts at Oxford University.

The six Greeks and the five others of the crew of the ship *Lennie*, charged with the murder of Captain Hatfield, were arraigned this morning and remanded to to prison.

A Berlin letter says: A colossal statue of Bismarck will be sent to the Centennial exhibition at Philadelphia. A copy is to be erected at Kissengen, on the spot where Kulman attempted the Chancellor's life.

LONDON, February 26th.—Robert Watson Boyd has completed negotiations for a four-oared boat's crew to go to America during the coming regatta season. The crew will be composed of Robert Bagnall, bow; W. Nicholson, Robert Chambers, and Boyd himself as stroke. Boyd has challenged any crew in England to row over the champion course on the Thames or Tyne; and if this challenge is not accepted he will assume the title of champion. The four will then proceed to America as a representative English crew.

London, (Noon) February 25th.—Business is flat, and there is almost a panic. All kinds of securities are falling rapidly. The feeling of anxiety is supposed to be in consequence of the elections.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Paris, February 22d.

It is not yet known to whom President MacMahon will entrust the formation of the new Cabinet. The *Republique Française*, Gambetta's organ, says that the Buffet Cabinet will have to render an account to the country of its administration of public affairs, and declares that any revision of the Constitution, except in a Republican sense, is now impossible. The Republican papers comment on the calm and tranquil manner in which the country associated itself with Republican ideas.

THE WIFE OF JOHN ADAMS.*

(The Nation.)

We welcome this volume as called for by the needs and the spirit of the times: on the one hand, by its faithful portrayal of a New England wife; on the other, by its illustration of the part which such a wife plays in the life of her husband. Abigail Smith was born in 1744 and died in 1818. Of these seventy-four years, fifty-five were passed in wedded life. She married a man who was fast rising into distinction in law, his profession, and who was to be still more distinguished in statesmanship, the profession of all true men of those days. Her education was such as home could give her; she never went to school. With such means, and none other, she was to pass through life with John Adams, partly leading, partly leaned upon: softening the asperities of his temper by her gentle words, *ἀγανοῖς ἐπεσσιν*, and strengthening his higher aspirations by her intelligent sympathy.

"You have this day," she wrote, when he had reached the summit of an American statesman's legitimate ambition, "to declare yourself head of a nation. And now, O Lord, my God, Thou hast made Thy servant ruler over the people. Give unto him an understanding heart, that he may know how to go out and come in before this great people: that he may discern between good and bad. 'For who is able to judge this Thy so great a people?' were the words of a royal sovereign, and not less applicable to him who is invested with the chief magistracy of a nation, though he wear not a crown nor the robes of royalty.

"My thoughts and my meditations are with you, though personally absent; and my petitions to heaven are that 'the things which make for peace may not be hidden from your eyes.' My feelings are not those of pride or ostentation upon the occasion. They are solemnized by a sense of the obligation, the important trusts, and numerous duties connected with it. That you may be enabled to discharge them with honor to yourself, with justice and impartiality to your country and with satisfaction to this great people, shall be the daily prayer of your A. A."

These are the words which make men ardent and resolute in duty, and firm and confident in trial. She had cheering words, also, when the occasion called for them. "I am a mortal enemy," she writes to her husband, apparently in an anxious moment, "to anything but a cheerful countenance and a merry heart, which Solomon tells us does good like a medicine." What a glimpse of herself she gives us in these lines: "I have taken a very great fondness for reading Rollin's 'Ancient History' since you left me. I am determined to go through with it, if possible, in these my days of solitude. I find great pleasure and entertainment from it, and I have persuaded Johnny to read me a page or two every day, and hope he will, from his desire to oblige me, entertain a fondness for it." That Johnny, conning history at his mother's knee, was the John Quincy Adams of after fame.

She applies her history, and quotes Polybius to enforce a practical lesson:

"Did ever kingdom or state regain its liberty when once it was invaded without bloodshed? I cannot think of it without horror. Yet we are told that all the misfortunes of Sparta were occasioned by their too great solicitude for present tranquillity, and from an excessive love of peace they negected the means of making it sure and lasting. 'They ought to have reflected,' says Polybius, 'that as there is nothing more desirable or advantageous than peace, when founded in justice and honor, so there is nothing more shameful and, at the same time, more pernicious when attained by bad measures and purchased at the price of liberty.'"

John Adams is surprised by his wife's statesmanship: "Pray where do you get your maxims of state? They are very apropos." We might fill pages with passages like these, and see her still growing wiser and stronger under the discipline of events, while John Adams also unveils himself in this commerce of the heart. It is not probable that she ever expected to see her letters in print. But he had been too long before the public to be troubled by the thought of publicity; had taken too large a part in great affairs not to know that history is never more truthful than when made up of materials like these: "I write you this tittle-tattle, my dear," he writes her from York, July 2, 1774, "in confidence. You must keep these letters to yourself, and communicate them with great caution and reserve. I should advise you to put them up safe and preserve them. They may exhibit to our posterity a kind of picture of the manners, opinions, and principles of these times of perplexity, danger, and distress."

Here is one such picture:

"I believe I forgot to tell you one anecdote. I first came to this house; it was late in the afternoon, and I had ridden thirty-five miles at least. 'Madam,' said I to Mrs. Huston, 'is it lawful for a weary traveller to refresh himself with a dish of tea, provided it has been honorably smuggled, or paid no duties?' 'No, sir, said she, 'we have renounced all tea in this place; but I'll make you coffee.' Accordingly, I have drunk coffee every afternoon since, and have borne it very well. Tea must be universally renounced, and I must be weaned, and the sooner the better."

Compare this as an expression of public opinion with the following, written the very next day:

"A notion prevails among all parties that it is politest and genteelest to be on the side of administration; that the better sort, the wiser few, are on one side, and that the multitude, the vulgar, the herd, the rabble, the mob only, are on the other. So difficult is it for the frail, feeble mind of man to shake itself loose from all prejudice and habits."

Of Mrs Adams's letters, that of November, 1775, is certainly one of the most remarkable:

". . . Colonel Warren returned last week to Plymouth, so that I shall not hear anything from you until he goes back again, which will not be till the last of this month. He damped my spirits greatly by telling me that the Court had prolonged your stay another month. I was pleasing myself with the thought that you would soon be upon your return. It is in vain to repine. I hope the public will reap what I sacrifice.

"I wish I knew what mighty things were fabricating. If a form of government is to be established here, what one will be assumed? Will it be left to our assemblies to choose one? And will not many men have many minds? And shall we not run into dissensions among ourselves? I am more and more convinced that man is a dangerous creature and, that power, whether vested in many or a few, is ever grasping, and like the grave, cries 'Give! give!' The great fish swallow up the small, and he who is most strenuous for the rights of the people, when vested with power is as eager after the prerogatives of government. You tell me of degrees of perfection to which human nature is capable of arriving, and I believe it, but at the same time lament that our admiration should arise from the scarcity of the instances.

"The building up of a great empire, which was only hinted at by my correspondent, may now, I suppose, be realized even by the unbelievers. Yet will not ten thousand difficulties arise in the formation of it. The reins of government have been so long slackened that I fear the people will not quietly submit to those restraints which are necessary for the peace and and security of the community. If we separate from Britain, what code of laws will be established? How shall we be governed so as to retain our liberties? Can any government be free which is not administered by general stated laws? Who shall frame these laws? Who will give them force and energy? It is true your resolutions, as a body, have hitherto had the force of laws; but will they continue to have it?

"When I consider these things, and the prejudices of the people in favor of ancient customs and regulations, I feel anxious for the fate of our monarchy, or democracy, or whatever is to take place. I soon get lost in a labyrinth of perplexities; but, whatever occurs, may justice and righteousness be the stability of our times, and order arise out of confusion! Great difficulties may be surmounted by patience and perseverance.

"I believe I have tired you with politics. As to news, we have not any at all. I shudder at the approach of winter when I think I am to remain desolate. I must bid you good-night; 'tis late for me, who am much of an invalid. I was disappointed last week in receiving a packet by post and, upon unsealing it, finding only four newspapers. I think you are more cautious than you need be. All letters, I believe, have come safe to hand. I have sixteen from you, and wish I had as many more.

"Adieu. Yours."

We would call particular attention, also, to the descriptions, so full of life and of graphic power, of the closing days of the siege of Boston, and the unconsciousness with which both husband and wife paint themselves for posterity. This volume takes its place by the side of the most valuable documents of our Revolutionary history.

* 'Familiar Letters of John Adams and his Wife, Abigail Adams, during the Revolution. With a Memoir of Mrs. Adams. By Charles Francis Adams.' New York: Hurd & Houghton. 1876. 1vol 12mo.

The Wusung Tramway was officially opened this afternoon at three o'clock. Messrs. Medhurst, C. F. R. Allen, Captain Woolcombe, all in official uniform, Mr. Morrison, the Engineer, the late Acting Secretary of Reuter's Telegram Agency and a group of distinguished citizens too numerous to mention were present. A trip was made on the small experimental engine for a distance of five miles down the line, being as far as the line is already laid without a break. The engine worked well and ran at a speed of some fifteen miles an hour: no interference whatever was received: a crowd of Chinese were assembled at the Shanghai terminus and many at the different crossings along the line. The engine is named Pioneer and a very young one too we should say by its appearance. We trust that this young pioneer will be succeeded by a numerous and healthy posterity.—*Shanghai Courier* (20th inst.).

DOUBLE ACROSTIC.

We twain, as erst our sires, have sought a foreign strand;
As they returned, so we, with honour to our land.
They brought back trophies gathered with their swords;
Ours have been won for us by honeyed words.
Call us not boasters, bid us not be mute,
Olive, than laurel, beareth fairer fruit!

1.—Horses and cows, fruit, flowers I introduce,
And hope, I may, at last, prove of some use.
2.—A crown is on my head, one by my side;
Yet with defeat my name is still allied.
3.—The sweetest, saddest tale is surely mine.
Such bliss and woe shall ne'er again combine.
4.—A famous painter, of whom all have heard,
Reverse his birthplace and you have the word.
5.—So foolish, insolent, by rank alone made great,
Who pities him of those who shudder at his fate?
6.—Though small and insignificant to see,
When I appear, all yield at once to me.

SOLUTION OF ACROSTIC OF LAST WEEK.

Though at *Tennis* the ladies are always well dressed,
I am sure that no man will refuse
To admit that the charm which attracts, is the skill
With which they the *Racket* now use.

1.—Your *Tartar* first catch to avoid a dilemma,
2.—Then seek out a Saxon Queen who was named *Emma*,
3.—Wits are roving if next at *Nomadic* you stick.
4.—Oh! breathe not his name—call him simply *Old Nick*!
5.—The sorrows of *Iole* call for a sigh
6.—Which *Suet* dispels with a vision of pie!

X.

Shipping Intelligence.

ARRIVALS.

Mar. 27, *Kolga*, German barque, Kiölseth, 380, from Takow, March 12, Sugar, Captain.

Mar. 29, *Colorado*, American steamer, Connolly, 3,727, from San Francisco, Mar. 1, Mails and General, to P. M. S. S. Co.

Mar. 29, *Flintshire*, British steamer, Reynolds, 1,243, from London via Singapore, Mar. 14, General, to Jardine, Matheson & Co.

Mar. 30, *Hiroshima Maru*, Japanese steamer, Furber, 1,870, from Shanghai and ports, Mar. 22, Mails and General, to M. B. Co.

Apr. 1, *Saco*, American corvette, Captain McDougall, 900, from Nagasaki, Mar. 27.

DEPARTURES.

Mar. 24, *Scotia*, British barque, Duncan, 321, for Newchwang, Ballast, despatched by Captain.

Mar. 26, *Great Republic*, American steamer, Cobb, 3,882, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

Mar. 26, *Constanca Wilson*, British 3-mast schooner, Spence, 178, for Formosa, Ballast, despatched by Netherlands Trading Co.

Mar. 28, *Volga*, French steamer, Nondedeu, 960, for Hongkong, Mails and General, despatched by M. M. Co.

Mar. 28, *Otto*, German brig, Jachtmann, 315, for Chefoo, Ballast, despatched by Netherland Trading Co.

Mar. 28, *Tuck Sing*, British barque, Marshall, 388, for Chefoo, Ballast, despatched by Smith, Baker & Co.

Mar. 29, H. M. S. *Charybdis*, Captain Smith.

Mar. 29, *Thabor* Japanese steamer, Pendered, for Yokoska.

Mar. 29, *Lady Elizabeth*, British barque, Cobbett, 657, for Nagasaki, Ballast, despatched by Captain.

Mar. 30, *Balgownie*, British barque, Brown, 323, for Takao, Ballast, despatched by Captain.

Mar. 30, *Colorado*, American steamer, Connolly, 3,727, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

Mar. 30, *Nevada*, American steamer, Williams, 2,143, for Shanghai, and ports, Mails and General, despatched by M. B. Co.

Mar. 31, *Caroline*, German barque, Molsen, 238, for Chefoo, Ballast, despatched by Captain.

PASSENGERS.

Per Steamship *Colorado* from San Francisco.—For Yokohama: Lieut.-Commander A. S. Barker, Mrs. Campbell, L. D. Craig, Mrs. G. Howard, Miss M. J. Burrows, T. W. Asana, Lieut. N. W. Lyon, Mrs. L. Rose, W. J. Ankersmith, Lieut. T. D. Bolles, Captain A. Morse, Revd. A. H. Leavitt and wife, Miss K. Megata, Miss A. Starkweather, B. Hazeltine, Mrs. F. Forester; steerage B. Roth. For Hongkong: J. H. Bacon, Miss S. L. Bacon, W. E. Carleton, J. D. Deming, Mrs. E. Mitchell, Mrs. C. A. Douglas, and 105 Chinese in the steerage.

Per Steamship *Hiroshima Maru* from Shanghai and ports.—Miss Van Doven, Messrs. A. W. Scrutten, F. I. Marnham, G. A. Edwards, W. F. Harding, J. Catclof, F. S. Wallace, Young, Braess, J. Woodhead, W. R. Bennet, Hawkins and 12 Japanese, cabin, and 364 various in the steerage.

Per Steamship *Volga* for Hongkong.—Messrs. P. Deacon, Leopold Meir, wife and 4 children, H. Michelsen, J. A. Derring, P. L. Paris, Madame Jourdan and child, and Mr. Carl Nielsen.

Per Steamship *Colorado* for Hongkong.—Lieut. Commander Barker, Mrs. E. Mitchell, Miss S. L. Bacon, Mrs. C. A. Douglas, Messrs. Walsh, Cromwell, J. H. Bacon, W. E. Carleton, J. D. Denning, and 105 Chinese in the steerage.

Per Steamship *Nevada* for Shanghai and ports.—Messrs. Iwasaki Kojiro, D. Craig, A. Center, Geisenheimer, S. W. Bryan, Chapman, Mr. and Mrs. Morse and infant, Mrs. Middleton and infant, Dr. Harris, Dr. Tripler, Messrs. Fottiger, Sekimuchi, Cottam, Gorham, Tuskamoto, North, Skedaiya, Mr. and Mrs. England, Captain Morse; 192 Japanese and 4 Chinese in the steerage.

CARGOES.

Per Steamship *Volga* for Hongkong.—

Silk to London	42 bales.
Marseilles	194 „
Total ...	263 bales.
Waste silk	46 bales.

Lastings, Japan	22—30 yds. 32 in.	13.00 to	14.50	Blankets, scarlet & green 7 to 8 lbs.	per lb.	0.40 to	0.41
Plain Mousseline de Laine	—30 yds. 30 in.	0.19 to	0.20				

Sugar.—*Formosa Sugar* is again lower, although no sales have been reported since 26th ultimo. The arrival of one cargo has to be recorded. Stocks are large.

China Sugar is quoted higher, with moderate stocks.

Sugar:—Formosa in bag	per picul....	3.35		China No. 5 Kong-fun	per picul ...	4.20 to	4.80
in Basket	„	3.25		„ No. 6 E-pak	„	3.30 to	3.50
China No. 1 Ping fah	„	7.30		Swatow	„	2.60 to	2.80
„ No. 2 Ching-pak	„	6.50 to	7.00	Daitong	„	2.60 to	2.90
„ No. 3 Ke-pak	„	5.50 to	5.90	Japan Rice	„		
„ No. 4 Kook-fah	„	5.00 to	5.30	Kerosine Oil	per case ...	2.55	

Kerosene Oil is quoted at $2.55 nominal but there are no sellers, the immediate demand having been satisfied by sales made "to arrive" ex *Nettie Merryman*. Holders continue firm in their demands in view of telegrams from the States reporting a higher range of prices.

EXPORTS.

Silk.—Since the 23rd ultimo, arrivals are 140 bales, and deliveries 220 piculs. Prices, notwithstanding a rise in the rate of exchange, are not only firm but owing to better advices from the home markets show an upward tendency.

A parcel of the Kofu filature (Koshiu) is held at $630.

Tea.—Transactions have been on so slender a scale—amounting only to some 200 piculs—as barely to demand notice, and the quotations which we subjoin are therefore nominal.

Common	$14.00 to	16.00	Fine ... $31 to 34
Good Common	17.00 to	19.00	Finest ... 35 to 38
Medium	21.00 to	23.00	Choice ... Nominal.
Good Medium	27.00 to	29.00	

EXCHANGE AND BULLION.

Exchange.—Sterling rates are all but nominal at quotations; the tendency is, however, towards higher rates.

Rates close as follows:—

Sterling—Bank 6 months' sight	3s. 10⅝d.	On Shanghai—Bank sight	72½
„ Bank Bills on demand	3s. 9⅞d.	„ Private 10 days sight	73¼
„ Private 6 months' sight	3s. 11⅛d.	On New York—Bank Bills on demand	91
On Paris—Bank 6 months' sight	4.90	„ 30 days sight Private	93
„ Private 6 ms. sight	5.00	On San Francisco—Bank Bills on demand	91½
On Hongkong—Bank sight	¼ per cent disct.	„ 30d. sight Private	93½
„ Private 10 days' sight	⅜ „ „	Kinsatz	399½

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed) "TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS,

"Cameron & Saunders, London."

March 4, 1876. 1-f 13 ins.

CAUTION.

J. & F. MARTELL'S BRANDY.

It having come to our knowledge that spurious imitations are imported, Consumers should be careful to see that they obtain the genuine article with our Brand, which is to be had of all respectable Dealers. Agents: Matthew Clark & Sons, 72, Great Tower Street, London.

THE GREATEST
WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

THE BEST INVESTMENT OF THE DAY FOR A SMALL OUTLAY.

And where there is no previous knowledge of the business required, is a Lemonade, Ginger Beer, and Soda Water Machine, as the public taste is so much on the increase for Aerated Drinks. The book of 90 pages of illustrations and information forwarded free.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 15.] YOKOHAMA, SATURDAY, APRIL, 8, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

There has been a shower of honours and rewards this week upon those who participated in the negotiations at Peking which brought the Formosan affair to a close. General Le Gendre gets the decoration of the Second class of the new Order of Merit and two thousand *yen*; M. Boissonade the same decoration and 2,500 *yen*; and Yanagiwara, who went as the first Envoy to Peking, and subsequently gave the *pas* to Okubo, one thousand *yen*. Looking on at these matters as spectators, we do not quite like the donations of money side by side with the stars and ribands—or whatever may be the insignia of the new order. The honours bestowed by princes should be among what Burke calls "the cheap defences of nations;" *i.e.* they should rank as superior to, and supersede the necessity for, rewards in money.

The *Hochi Shimbun* gives the following account of the affair:—

Yesterday the three gentlemen below mentioned were summoned to the Household Department. The Imperial addresses to them were as follows:—

To Yanagiwara Sakimitsu, member of the Genrôin, *Shôshi-i*. (Upper 4th Rank.)

Some time back, when serious complications arose with China on account of the matter of the Savage Territory in Formosa and while the High Commissioner Ôkubo Toshimichi had not yet gone thither, you conducted various negotiations with the Chinese Government, whereby the matter was finally arranged. We are exceedingly gratified at this, and consequently bestow upon you as a reward the sum of 1,000 *yen*.

To *Risen-toku*, (Le Gendre.)

From (the time of the origin of) the affair of the Savage Territory in Formosa, until the conclusion of the negotiations with China, you exerted yourself and showed diligence in not one matter only, but laboured to a great extent. We therefore confer upon you the 2nd class of the Order of Merit, and also present you with the sum of 2,000 *yen*.

To Boissonade,

You accompanied the High Commissioner, Ôkuko Toshimichi, and at the time of the negotiations with the Chinese Government you exerted yourself and showed diligence, and achieved no slight merit. We therefore confer upon you the 2nd class of the Order of Merit, and also present you with the sum of 2,500 *yen*.

Nor has this flattering shower descended on the heads of the chiefs alone. On the same day about two hundred policemen who were sent from Tokio to render assistance during the Saga insurrection, were summoned by the chief officer of police to receive Imperial rewards for their services.

It has been pointed out to us that we were in error last week in imagining that the Corean Treaty contains any conditions of reciprocity in connection with the extra-territoriality jurisdiction clause which forms so noteworthy a feature of it. The Japanese do not intend to allow Coreans resident in or visiting Japan to be under Corean jurisdiction. Article X of the Treaty refers only to the "open ports of Chosen," and though it seems superfluous to say that a Corean shall be punished by his own laws in a Corean port, the same singularity is observable in Article V of the British Treaty of 1858. Indeed, a comparison of the two Articles proves that that in the Corean Treaty is almost a *verbatim* copy of that in our own. Apart, however, from this, is it not the case that the Coreans live under the old system of Chinese laws, made during the best times of the Empire, and do they not regard the Tartar dynasty now on the throne as *parvenue*, and far less civilized than the old line from which they derived their laws? We rather think it is so, in which case there is less ground than the Japanese may imagine for the extra-territoriality jurisdiction clause inserted in the treaty. The Coreans may, however, be below their old code, as the Japanese are rising above theirs.

We have on several occasions been requested to publish decisions of the Japanese courts in cases where foreigners have believed themselves to be greatly aggrieved by such decisions. The grounds of dissatisfaction have been sometimes better, sometimes worse; but careful consideration of the whole question has confirmed us in a conviction of the undesirability of publishing such decisions in the absence of the arguments *pro* and *con*. But a case has recently been brought to our notice in which the judgment pronounced is so completely at variance with reason, and appears to us to have such an important bearing upon the question of Japanese jurisdiction over foreigners, that we are not only justified in departing from a general rule, but could hardly justify ourselves for not doing so. The case, in an abstract form, is as follows:—

A. (a foreigner) sues B. (a Japanese) for a sum of money. Judgment is suspended for a while, during which B. sets up a counter claim against A. The Court decides that A's claim is invalid, but orders B. to pay interest on the sum claimed from date of claim to date of judgment.

On no conceiveable theory of law or justice can any such judgment be upheld, but being that of the Court of ultimate appeal, there is manifestly no remedy through this means. In its own interests we would call the attention of the Japanese Government to this decision.

A comparison between the circumstances attending Shimadzu Saburô's departure from Tokio early this week, by a passenger steamer, with a few followers, the swords of the whole party being wrapped up in bundles, like the family bundle of umbrellas, parasols and sticks so well known to paterfamilias travelling on the continent, and the circum-

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

stances attending his departure on the fatal day of the Richardson murder, afford a measure of the revolution which has taken place in this country in the last sixteen years. We have no wish to open old sores. The old Satsuma chieftain is a survival of a period and system as completely past as the period of the ichthyosauri. He is a living fossil, and, it must be said, one of singular interest. But fitter and not less interesting forms are taking his place, and if men are even more the creatures of their times than children of their fathers and mothers, he must not be greatly censured for the part he has played in the modern history of Japan.

A Regatta, in which the competitors will be students of the Naval College, the Mitsu Bishi Mercantile Marine School and other kindred institutions, in now in course of organization. We would suggest that the commanders of the vessels of war lying off Yokohama at the time of its being holden, should contribute to excite a somewhat sluggish emulation by entering the boys of their crews for various handicaps, which are to be open to all comers.

Orders have been issued that the Kucho and Kocho of every ward in Tokio shall assemble on the 5th of every month at the principal police station for the purpose of discussing such measures as are demanded by the interests of the city or of their respective wards.

If any one wishes to form a true estimate of the noble manner in which this settlement has been laid out, let him walk up or down Water Street from No. 5 to No. 8, before the stones which have been thrown down as a bed for the road are trodden in. Let him try to escape from the road-way to the side-walks, and carefully watch the phases of his own emotions as protruding shutters or tea-tasting windows may excite them. A settlement with even only one such permanent blot upon it—for permanent it must be—is condemned to an eternity of shame.

From the "Japan Mail Dail Advertiser."

A fire broke out at a village on the Tokaido, a suburb of Kanagawa, on Saturday evening at about half past six o'clock. The fire originated in an outhouse at Motomochi and rapidly spread to the surrounding dwellings in the direction of the railway. The engines from Yokohama were taken to the spot as early as possible, but before the advance of the fire could be stayed some thirty houses were destroyed, nine of these being situated on the main road. The fire was got under at about half past ten o'clock.

The signal gun fired this morning announced the departure of the Lighthouse Department steamer, *Meiji Maru*, which has sailed for the N. E. coast. She carries a quantity of mining stores and material.

The Prime Minister has issued a notification declaring that henceforth the age of twenty will be deemed the age of manhood of males in this country.

The Christian day of rest was yesterday observed for the first time as a holiday in the public offices and by the newspapers. To-day being an anniversary of Jimmu Tenno will also be celebrated as a holiday.

A Japanese newspaper has heard that the brick buildings which line the Main Street of Yedo will shortly be continued in the direction of Nihon Bashi.

A fire which occurred at Nagoya on the 31st instant destroyed twenty-two houses.

The fire at Takata in Yetchigo destroyed some 600 houses.

The Tochigi *Ken* has been invaded by a virulent small-pox. About one in nine of the persons attacked has, says the *Hochi*, succumbed to the disease.

Penalties are accumulating upon the unfortunate editor of the *Yokohama Daily News*, against whom a verdict for a further term of imprisonment of 328 days for a fresh offence has just been registered.

Certain reforms says the *Nichi Nichi* have been taking place in the province of Satsuma of late. *Geisha* and loose women have been proscribed and many persons of these classes who were found to be natives of other provinces have been ordered to leave Satsuma.

The early cherry trees which ornament the grounds of Uyeno are now in full bloom and attract large numbers of visitors to the spot. On Saturday and yesterday many thousands must have been present.

Ex-*Sadaijin* Shimadzu Saburo, the *Hochi Shimbun* has heard, is expected to return to Satsuma on the 6th instant.

The Minister of the Interior has issued a circular to the *Fu* and *Ken*, pointing out that permission to reside outside of the several foreign settlements can only be accorded on special application to foreigners employed by the Government, to their relatives of the same name, and to their servants. No other foreigner may be permitted to reside with them except as a visitor for a short period. The heads of departments are recommended to see that this regulation is strictly observed.

A Chinese newspaper says that Li Hung Chang has memorialized the Throne to repeal the law against poppy planting. India, it says, is now planting tea for fear of her opium being supplanted by that of native Chinese growth.

The *China Mail* (Hongkong) writes:—

It is not expected that the ships of the Flying Squadron will stay here longer than to allow refitting, rigging, etc., say ten or fourteen days, when they will most likely proceed to the Northern ports.

At a meeting of the creditors of Messrs. Malcolm, Hudson, and Co., in the Japan trade, who failed recently, the statement of affairs submitted showed that the total liabilities were £85,778, including £32,103 to unsecured creditors, £20,386 the liabilities on bills (of which it is expected that £2,000 will rank against the estate for dividend), and £28,159 liabilities on bills payable on account of Messrs. A. Collie and Co. The assets were stated at £6,075. The meeting was adjourned till the 17th April to await the return from Japan of Mr. Malcom, the senior partner.—*L. & C. Express.*

Yesterday being one of the anniversaries of Jimmu Tenno was observed as a Japanese holiday. The native town was decorated in the usual manner and business in the public offices was as far as possible suspended.

The usual Athletic Sports of the pupils of the Imperial Naval College of Yedo will be held on the grounds at Tskidji on Friday afternoon next. Prizes for the reward of the successful competitors have been prepared, and will be presented at the conclusion of the sports.

The Prime Minister has issued a notification for the regulation of the practise of adoption. The age of children whom it is proposed to adopt should not be less than sixteen. Should, however, the adopting household comprise any female, either wife or daughter, whose age exceeds sixteen, the adoption will in such case not be permitted.

Exhibitions would now seem to be much in vogue throughout the provinces. It is announced that one will be opened at Matsmoto in Shinshu on the 15th of this month. Another at Kumamoto will be opened on the 10th instant.

It is intended to exercise the students of the Military College at Toyama at target practise. Monthly exercise will shortly be commenced.

The *Nichi Nichi* announces the approaching departure of the *Kinjo Kan* on an experimental cruise to Vladiswostock and Corea for training purposes.

General Le Gendre, Foreign adviser to the Foreign Office, and Mr. Boissonade of the *Shihosho* had the honour of receiving at the hands of H. I. Majesty yesterday at the Imperial Palace the new decoration.

The U. S. flag ship *Tennesee*, Rear-Admiral Reynolds, which arrived from Shanghai at noon yesterday was received with the customary salutes.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

His Majesty was present at the performance of *No* at the residence of Iwakura *Udaijin*, on the 4th instant.

The *Hochi Shimbun* has heard that since the beginning of the month some ten among the *Kuadzoku* who have not yet obtained appointments in the Jako-no-ma (a sinecure office) have nevertheless kept guard daily at the Imperial Palace.

The *Choya Shimbun* writes: In Hirosaki in Awomori are 8,000 houses, 3,000 of which belong to *samurai*. These 3,000 households, it has been discovered, contain only 200 persons who read the newspapers, while in the remaining 5,000 houses belonging to commoners there are only twenty persons who read them.

It is intended shortly, says the *Nichi Nichi* to illuminate the Gigon machi in Kiôto with gas.

An aged woman residing in Motomachi, Homura was murdered at an early hour yesterday morning. Her son who occupied an adjoining room was roused by her groans and hastened to her help, but found her dying from the wounds inflicted by her murderer.

The Yokohama Normal School for Japanese teachers will be opened to-day.

The *Hochi Shimbun* has been informed that the large sum of $44,000 has been spent in repairing the copper roof of the temple of Kannon at Asakusa, in Yedo. It is believed, however, that at the ceremony of *Kaicho*, or opening of the shrines to the public, the offerings of the devout will be amply sufficient to cover even this heavy expenditure.

An ungroomed pony, with a sore back and tattered carpet saddle cloth, conveyed a prominent official to Court on the 3rd inst. The contrast between dirt and splendour of the horse and his rider excited admiring comment by European spectators of the display.

His Majesty's private band, will commence the study of European music this month, under the tuition of Mr J. W. Fenton, late bandmaster of H. B. M.'s 6th Regiment.

The Messageries Maritimes steamship *Volga*, with European mails from Marseilles to the 27th February, will be despatched from Hongkong for this port at 10 o'clock a.m. to-day.

We are requested to intimate that the firing of the noonday gun on Saturday from the *Tiptree* hulk will be resumed to-day and will be continued until further notice.

Minute guns were fired by the U. S. frigate *Tennessee* yesterday in respect to the memory of Rear-Admiral Stringham whose death has been reported. The men-of-war in harbour carried their flags at half-mast during the day.

An unusually impressive funeral service was held yesterday over the remains of the poor woman, who was murdered by a thief a few nights since in Motomachi, at the Zotoku-In temple in that suburb.

A notification has been issued by the Tokio *Fu* condemning all unnecessary or excessive noise at *matsuri* or *kaicho* (the opening of the shrines). Henceforth the lieges must take their pleasure and devotion more quietly.

Since this notification was issued a temple of the Nichiren Buddhists in Yedo has put forth a placard, entreating the faithful to abstain in future from practising their devotions at midnight; and further begging that they will abandon the usual beating of tom-toms.

A balloon ascent from the Navy Yard at Yedo, which the Mikado was expected to witness, was promised yesterday.

The *Choya Shimbun* reports the destruction by fire of some 28 houses at Okuchi machi, Yedo, on the 6th instant.

A *post mortem* examination, which was made yesterday afternoon by Dr. D. B. Simmons, assisted by Dr. Stuart Eldridge and Dr. Wheeler, of the body of the late Mr. J Stephen, master carpenter, who had died suddenly at his residence, No. 113, Creek, showed the immediate cause of death to have been the rupture of a blood vessel while suffering from convulsions.—*Herald.*

THE SWORD PROCLAMATION.

THE late diplomatic success in Corea has been appropriately followed up by the issue of a proclamation abolishing the practice of wearing swords, nor is it easy to conceive a more happy sequel to a peaceful victory. A vast, half-military population, sufficiently powerful to control the Government, has hitherto paralysed the energies of this Empire, devoured its substance, and obstructed that accumulation of wealth which is absolutely requisite for any solid advance in civilization. Whatever special problems the condition of society in this country may present to the foreigner, there can be no doubt that, compared with that of Europe, it is simple and rudimentary in the extreme. An overpowering predominance has been exercised by the military class, and until quite lately the military or civil service has been regarded as the only form of occupation worthy of men of gentle birth. That vast variety of avocation known to European life, capable indeed of generalization under a few heads yet possessing practically infinite ramifications, is unknown in this country. The politeness of the Japanese manners has been purchased at the expense of a contempt for trade and the trading spirit. The increase of wealth which, in free nations, strengthens the middle classes and gives new impulse to commercial enterprise in all its thousand shapes, has had but little play in this country, while the habit of regarding multitudes as totally destitute of rights has combined with the military spirit among the *samurai* to modify the naturally amiable disposition of the Japanese race with traits of a ferocity equally odious and dangerous. The personal and political liberty which we attained so early in our history—the parent of those municipal institutions which in their turn have done so much to consolidate that liberty—has been practically unknown to the masses of the people of Japan, and the impulse to industry which has ever flowed from this source has been wanting in the social economy of the country. No such powerful influence as that of the Jews or Lombards has been at work here to assist in the commercial development of the nation, and the capital which these classes accumulated in beneficent reservoirs in Europe and directed into channels of reproductive enterprise, has been squandered for purposes or on objects which have done only too little for the national development and advancement.

The edict to which we shortly referred last week promises to be the precursor of a vast change in all these respects, though we must not be impatient if its coming be tardy. The first thing is to secure obedience to the order, against which many a fierce spirit will rebel bitterly. It must not be imagined that the masses of the people of Japan have undergone anything like the change which is observable among the residents of Tokio. Any foreigner so disposed may find in the more distant provinces of the Empire, and especially in the towns or villages along the Inland Sea, ample evidence that the spirit of old Japan survives there in remarkable vigour. The generation which had finished its education—so far as education may be had at school—before the European influence had seized the mind of the leaders of this wonderful movement, is barely yet thirty years of age, and the number of Japanese who have been abroad or who have actually come into contact with foreigners so as to find their minds stirred and transformed by this contact, is yet comparatively very small. The mass of the nation's teachers are still those who were reared up under the old system, and though they have doubtless been greatly influenced by the new movement they are not the children of it, as will be the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

instructors of the next generation. It will be no wonder if some difficulty is found in securing an immediate obedience to the new measure, strong as the Government may now be. Yet its orders are those of men who have not dreaded the drawing of the sword where the national honour dictated this course. The perils of a war with China have been dared, and there was plenty of military spirit behind the prudent negotiations which secured the late treaty with Corea. Let the effect, too, of this proclamation be well understood. It is not the abandonment of this military spirit. It is rather the transfer of the sword from the hands of a vast body less amenable to discipline, to those of a small body much more amenable to discipline. As we said last week, it does for Japan what the invention of gunpowder did for Europe. It takes a rude arm from every one—an arm greatly tending, in a rude state of society, to make its possessor turbulent and defiant—and, laying it aside, places a better one in the hands of those who can only use it in the interests of order, or, at all events, with the authority of the representatives of the Sovereign. So long as men carried swords, two results were certain to follow: the first, a disposition to use it to subserve their personal interests; the second, a disdain for those who had not the same privilege. The practice rendered rebellion easy instead of difficult, and fostered the disposition to make the sword the arbiter of personal quarrels or causes. Under this influence Imperial interests had to give way to local or class interests, the civil law could take no hold on the national mind in its totality, the commercial spirit was contemned and the industrial spirit dwarfed. Now, however, men whom the the force of inseparable association has perpetually kept in more or less of opposition to the civil law, must yield to it on all points, and must forego the demoralising and impoverishing luxury of looking down with disdain upon useful labour. A fresh incentive has been given them to join the ranks of the industrious classes, their union with whom will be a mutual benefit, and an enlightened self-interest among them will be substituted for those emulations, jealousies, conflicting sentiments and insatiable desires which have been the source of so much evil in this country.

The proclamation itself is doubtless the immediate outcome of the memorial addressed to the Throne by YAMAGATA, Minister of War, which will be found in a translation elsewhere. But ARINORI MORI, now Japanese Minister at Peking, was one of the earliest to see the importance of the measure and to urge it upon the Cabinet. It is certain, however, that desirable as it may have appeared to the rest of the Sanghi, some favourable conjuncture was necessary to render its enforcement possible. "There is nothing so successful as success," and the satisfactory result of the Corean negotiations has enabled the Government to do at a stroke that which should do more to consolidate the intellectual and social revolution which has taken place in the country, than any single measure yet passed by the Cabinet.

It is necessary in conclusion to say a word about one at least of the precautions which this measure demands. As we have already shewn, it takes a weapon from the many, and puts it, or another, into the hands of the few. The few will be proportionately more proud of the privilege of bearing it, and this pride has too often shewn a tendency to exceed proper limits. Bodies of the newly made military class are sometimes to be met with in the capital in a half-drunken and therefore dangerous state, swaggering about with their side-arms to the serious alarm of quiet folk. It is not long since, too, that a marine, landed as a guard at a fire at Hiogo, deliberately fired three shots at one of the English employés who was actively engaged in the performance of duties rendered necessary by the emergency. This betrays a want of control which might lead to the most serious consequences, and tallies with some of the complaints made in the local foreign papers of insults passed upon foreigners in the capital during the last twelve months.

THE ARTERIES OF WEALTH.

BEWILDERED as this much-instructed nation has of late years been, by multitudes of counsellors,—in some of whom, if wisdom exist, she lurks under strange disguises—she has received one piece of advice not of the veneering kind, which by dint of repetition in diplomatic colloquy and editorial homily, appears at last to bear promise of result. It did not need a Solomon to discover the fact that good roads would develop fresh sources of wealth, give work to the unemployed in the interior, increase the value of waste land from nil to par, add to customs receipts, and, by causing the country to take higher rank amongst the world's producers, secure for it enhanced respect, and, in the event of pecuniary aid being besought by its agents in foreign money markets, better terms. But in the discussions which settled some months ago the repair of certain military roads and others leading to famous shrines and places of popular resort, the commercial element of the question appears not to have been duly considered. Great undertakings as were the old Roman ways which still remain to mark the transalpine marches of victorious legions, commercially considered, their value is utterly incomparable with that of the shortest existent railway in an iron or coal district, constructed on the basis that they are only to be made where commerce requires them and at a cost proportionate to what that commerce can afford to pay. Viewed from this point, it therefore becomes an important enquiry as to what is the best and cheapest practicable manner of constructing roads which shall afford the utmost facility for rapid transportation of goods and passengers from point to point, and especially where the formation of the country is mountainous, and therefore unlikely to repay the cost of constructing and maintaining a broad highway. Advice on this point does not appear to come forward freely, and those who would fain see the Tokaido and its byways assimilated to the drive from Warwick to Coventry or the postroads of France, have been singularly reticent of counsel as to ways and means. Under these circumstances it may not be inopportune to consider the adoption of some recently preposed schemes for improved communication, which appear suitable for this country in outlying districts where deposits of ore, coal, sulphar and other substances crop out at the surface, valueless and useless till removed.

One of the simplest and best is that patented by Mr. J. F. Cass, of Ontario, which he considers especially applicable for the rapid transmission of heavy freight off of regular railroads. Evidently it is useless to give a road a hard smooth surface twenty or thirty feet in width, when only a few inches breadth of unyielding surface is required for the wheels to run on, and is less suited for the tread of the horse than a reasonably elastic surface. He therefore acts upon this theory, and, if about to construct a way across a country field for carriage traffic, simply beds a longitudinal timber in the earth, flush with the surface, joining each length by iron sockets, and caps

Digitized by Google
UNIVERSITY OF CALIFORNIA

this with either a hard wood or metal rail. This upper rail, if of oak or maple (two inches by four), will last with considerable traffic for two to three years; but would require to be renewed several times before the bed timber is decayed. This, if of cedar, would be of service and sound after twenty-five to thirty years wear. On either side of the central rail is a gutter filled with broken stone to give a hard smooth surface for the tread of ordinary wheels. The cars to run upon this tram-way are based on a frame consisting of a single beam, suspended at the centre of its length from an ordinary carriage axle and pair of wheels, and also supported at each end by a double flanged wheel, constructed of wood sectors, having thin plate iron runs bolted or rivetted to their sides, the edges of which are turned up over the inside wooden flange, thus increasing its strength. A wheel thus constructed of oak or maple wears the track but little, and is thoroughly durable. Ordinary vehicles can use this tramway by carrying two small flanged wheels beneath their axles, which are lowered into gear with the rail by a screw and rack attached to their iron arbours.

The simplicity of this arrangement and its cheapness admirably adapt it for levels or easy gradients, and whether horse-power or traction engines be used for the propulsion of trains of loaded wagons, the saving in point of friction as compared with that on an ordinary road is self-evident. The cost of constructing these roads in America, where labour is dear, and material about the same price as in this country, is as follows, where no grading is required, per mile :—

264 cedar balks, 20 feet each	at 10 cents	.....	$26.40
3520 feet of maple or oak	at 2 „	.....	70.40
1700 lbs. cast iron sockets	at 3 „	.....	52.80
200 „ spikes	at 8 „	.....	16.00
labour in laying and construction		.....	75.00
			$240.60

This is exclusive of the wheel tracks on either side of the rail, which might, however, in certain districts, be replaced by wood. It is also evident that this system is capable of being extended to moderately steep gradients by the aid of ropes and drums to wind and lower trains of cars. The cost of such an apparatus suitable for transporting such trains across an abruptly rising hill, half a mile in width, viz. two 6 h.p. nominal engines with self-moving and reversing gear, two speeds, winding drums, self-coiling gear and the necessary lengths of steel rope, is given by the eminent engineers, Messrs. John Fowler & Co. at £949. With water-power at hand, the turbine could be utilized at far less cost.

The wire rope system of transporting minerals, now becoming very general in mountainous countries, appears to be peculiarly suited to the needs of Japan. In Norway, where the productive iron mines of Aalsund had long been neglected by reason of the inaccessibility of their sides by other than rugged, steep, zigzag bridle paths, this invention has opened up a vast source of wealth. From the mouth of the mines, which are perched on the summit of a precipitous height, stretch two steel ropes, of forty tons breaking strain, to a point in the valley below, being kept in tension by weight boxes buried in the earth at either end. The incline is an angle of 45 degrees, and the ropes span a distance of 750 yards without support. On each rope is a cage suspended by grooved wheels capable of containing about 12 cwt. of ore. Attached to each is a light steel rope which passes round a brake sheave at the mouth of the mine, checking the speed of the loaded cage when descending the rope by its gravity, and raising the empty case after it has discharged its load into a tramway truck at the bottom. The speed at which the cages run is about 17 miles an hour, in which time they discharge 100 tons load, the sole expense, beside insignificant wear and tear, being the wages of the men required to work it, namely, three at the top, and two at the bottom.

The modification of this system has been perfected by Mr. Hodgson, after years of patient study to improve upon devices by which, when the loads had to be transmitted across wide ravines to a point level with that from which they were started, the conducting or guide ropes were worked by hand power, or by swing beams which, alternately raised or lowered at either side of the ravine, sent off the boxes by their own gravity. It is one peculiarly applicable for cases where the transit is long, over varied levels and land or water of such widths or abruptness of incline as would otherwise present obstacles impossible to be surmounted. An endless wire rope from one to twenty miles in length is supported on a system of pulleys carried by hollow iron posts from the mine to the shipping point, and movement is given to the rope by a drum constantly rotating in one direction, which may be placed at any point of the circuit, but preferably at the loading point. It is driven either by wind, water, or steam, and possesses the advantage of working so steadily that in the great Penrhyn slate quarries it has superseded the tramway, which involved breakage. The iron supporting posts are usually about eighty yards apart, but, in case of necessity, their distance can be increased to a thousand feet, whilst, so long as the line is straight between each post, any angle may be turned or any incline not greater than one in six can be readily attempted. On the rope, which is rotated at a speed of about five miles an hour, boxes containing the loads are hung by pendants, the grippers of which are so arranged that when the load approaches an upright, it swings clear of the support, but resumes its perpendicular immediately after passing it. When arrived at their destination they can either have their contents automatically tipped, or they can be detached from the travelling rope and reattached when it is requisite that they shall be returned to the loading point. The efficiency of this plan is proved by an annual transmission of no less than 30,000 tons of stone from a quarry at Bardon Hill, England, to a railway station truck five miles away. The cost of this line, capable of carrying 200 tons a day, complete with boxes, pulleys, posts, stations and steam power in full working order, was less than £700 per mile.

A modification of this has recently been introduced into San Francisco, to overcome the difficulties of street traffic on one of the steep hills so frequent in that city. The endless wire rope circulates in tubes laid below the level of the street. The cars, carrying from 20 to 30 passengers are attached to the wire by a gripper which descends from the front of the platform of the car, which clutches or releases its hold of the rope by means of a wheel break. Thus no motive power is visible, no obstruction is caused to other vehicles, and the whole force of the engine is availed of throughout the entire length of the rope. A similar difficulty is overcome in Glasgow by the use of Mr. Scott Monerieff's pneumatic car worked by compressed air, the use of which as a motor is rapidly extending. A notable adaptation is one to underground haulage, made by the Uskside Company, Newport, Monmouthshire, which only weighs a ton and a half, and is comprised in a space 6 feet by 4 by 3, and yet is capable

Digitized by Google
UNIVERSITY OF CALIFORNIA

of doing the work of 20 horses in hauling coal trains underground, and entirely does away with the slavery formerly undergone by boys in pushing or hauling on their hands and knees the loaded cars along low cutttings to the pit's mouth.

In closing this hasty review of some of the most obvious appliances for bringing goods to market from remote districts, it may be remarked that in the majority of cases in Japan, steam power may be dispensed with and wind and water utilised. Few of the country hillsides are without streams running to waste, from which, by means of turbines, sufficient power could easily be obtained to do all the work required, whilst, where there is little, coal and peat occur in plenty. Although the Kanagawa Ken formerly refused permission to Takashimaya to erect a wind-mill upon Nungi hill, it is to be hoped that with recent years enlightenment sufficient has been afforded the officials to enable them to emancipate themselves from the thrall of the opinions of that Tycoon, who ordered the windmill brought to Decima by the Dutch to be destroyed, and none used thereafter in the realm, lest the rice pounders should be deprived of their daily work.

SPIRIT OF THE JAPANESE PRESS.

(From the "Nichi Nichi Shimbun," April 4, 1876.)

Memorial from the Minister of War respecting the abolition of the wearing of swords—(taken from No. 4 of the Native and Foreign Army News.)

It has for years been the established custom for the military class (*i.e.* the *samurai*) in this country to gird on two swords, the reason therefor being that though the advantages of the sword, it being a weapon used in war, were limited to repelling enemies and protecting one's self, still, on the conclusion of war, it was impossible in view of the habits prevalent under the feudal system that it should be laid aside. However, times having changed, the *samurai* are released from the necessity of military studies, the *Han* have restored their lands to the Government, and, in 1873—greatest change of all,—the conscription was enjoined and is now in force throughout the whole country. Previous to that measures had been taken against foreign war or internal disturbance by the establishment of the Imperial Guard for the protection of the Court, and of garrisons for controlling the seven circuits. The safety of town and country, too, had been provided for by the organization of a police force in each *ken* and *fu* and evildoers were arrested by it. By these measures human safety has been sufficiently provided for and the Emperor's behests are observed, and not the smallest distrust of them aroused. Notwithstanding all this, however, a large number of the nobles and gentry throughout the country still continue to wear the swords in accordance with the old custom. These obstinate and unpolished men, unobservant of the changes which have occurred in the spirit of the times and in the military system, trust to themselves to keep off their enemies by the sword and to ensure thereby their own safety. Not only, however, is this practice of wearing dangerous weapons of no advantage to the empire, but owing to it the habit of assassination and wounding lingers under the false name of military spirit. As long as the wearing of the sword is not put a stop to serious trouble may arise to the Government at any time. The fact, besides, of there being persons not soldiers wearing military weapons considerably affects the latter's privileges, and I therefore beg that orders may be speedily issued abolishing the sword, and the Japanese people thus caused to advance in the path of civilization. I reverently await your order.

(Signed) YAMAGATA ARITOMO,
Minister of War.

December 7th, 1876.

ABOLITION OF THE PRACTICE OF WEARING SWORDS.

(Nichi Nichi Shimbun, March 29th, 1876.)

We beg our readers' careful atttention to the Notification published to-day, forbidding, on and after the 28th of March 1876, the wearing of swords. No distinction is made between nobles, gentlemen and commoners, but the Notification extends to all Japanese; according to it persons in Court dress and Naval and Military men and police officers in uniform only are to wear swords. Is not this step a great change?

Japanese had been long wont to look upon the sword as an insignia to be highly praised and as being the very essence of a *samurai*, when, at the time of the revolution, civilization having made great advance, persons of superior intelligence came to understand the impropriety of the daily wearing of warlike weapons and the awing of commoners by the sword, and the theory that it was neither an ornament nor the essence of a *samurai* gradually gained ground. The first time that the abolishment of the practice was publicly proposed was in the year 1869 when the member of the deliberative council for Satsuma, Mori Kinnojo (now Mori Arinori, Minister to Peking) brought forward the proposal in the Council. A reference to the Gazette of that Council will show that the members were greatly averse to the proposal as was also the opinion of people in general, and Mr. Mori finally got the reputation of trying to bring about inordinate changes. Though his proposal met with so unfavourable a reception at that time it has since then gained great ground in the minds of all persons of advancement.

From the revolution down to the present time the following gradual changes in the rules as to the wearing of swords have been made. In 1868 on the 20th of October an inquiry was made as to the farmers and traders who had been permitted to wear swords by the Tycoon's Government. On the 24th of December 1869 it was forbidden to allow the wearing of swords when transacting business or attending upon Princes, court or landed nobles and their officers. On the 19th February, 1869, those farmers and traders who had been allowed by the Tycoon's Government to wear swords were forbidden to do so any longer. On the 9th December, 1870 the disciples of the primate were forbidden to carry name boards or swords. On the 4th of January, 1871, farmers and traders were forbidden to wear long *wakizashi*.* On the 13th February, 1871, orders were given to prevent the indiscriminate wearing of swords by farmers, artisans, or traders. On the 2nd of October, 1871, pupils of Tamba† were forbidden to wear swords. On the 12th of November, 1871, the privilege that had been granted to certain farmers and traders by several of the *Han* was taken away from them. By these several notifications the number of sword-wearers was largely diminished and the privilege reverted to its original position of being confined entirely to *samurai*, but there seemed to be no sign of the approach of the abolishment of the practice. The important point in it was that both the name and reality pertained to the *samurai*, but not to priests, physicians, farmers or traders.

Shortly after orders had been given for the abolishment of the *han* and establishment of the *ken*, namely on the 23rd of September, 1871, it was publicly notified that the wearing of the sword was optional by persons wearing their hair in foreign style or in undress or in *seifuku* (regulation dress), but compulsory when in full dress, and this seems to us to have been the first step towards the abandonment of the sword on the part of officials, nobles, and gentlemen. We think that it will prove of some interest for future years if we now explain the meaning of these several terms. The foreign hair dressing is what is now called *zangiri*.‡ The *seifuku* is western clothing. The foreign fashion had already been adopted by that time for the clothing of soldiers and hence the name 'regulation dress.' Full dress meant noble's coats, *hiladari* and such garments. Undress included the mantle and trowsers.

When we consider the state of things in Yedo at that time we see that the wearing of foreign clothes was not confined to military men. Civil officers also, finding their convenience, wore them, and, without awaiting orders from the Government, gave up their swords, even when attending at the offices. Although, however, it became the fashion in Yedo to discard the swords in undress, the orders from the Government amounted only to a permission to discard them, not to a prohibition to wear them, the idea of the Government being that while the sword was the becoming appendage of a nobleman or gentleman it was found convenient to discard it on ordinary occasions, its wearing being enjoined only when in full dress.

The human mind cannot however foresee the changes which time will bring about. After the above single order had been given, the joy with which all persons in Yedo discarded their swords was

* The shorter of the two swords usually carried by Japanese.

† Hereditary Court Physician.

‡ *Zangiri* is written with two Chinese characters meaning 'butcher' and 'cut,' the idea of the Japanese in giving this name to the foreign fashion of hair dressing being that by it the hair is butchered or 'mangled,' and neatness sacrificed to time and economy.

Original from UNIVERSITY OF CALIFORNIA

very unlike the opposition that was given only two years previously to Mr. Mori's proposal that the swords should be abolished. In the month of December, 1872, the Japanese Government, reserving only the cap of ceremony for religious occasions, abolished all the old full dress and appointed instead a full Court uniform for all classes of officials, and also a ceremonial dress to be worn on all general occasions, and, by this, a further change was effected in respect to the wearing of swords; for, in the previous Court dress, the wearing of swords was compulsory, while, in the case of the new one, it was impossible, and, this being so, the only occasions that were left to gentlemen on which they could be worn was when in ordinary Japanese undress. The fashion of discarding them thus gradually extended through Yedo and the other large towns.

Notwithstanding this, however, a number of conservative gentlemen throughout the *ken* still retained their fondness for wearing the two swords together with other relics of the feudal system, and continued to strut about as arrogantly as ever. The Government did not at once forbid this, fearing the ill will which their doing so would provoke among these gentlemen, and also believing that the time therefor had not yet come. After the disturbance in Saga in March 1873 the *samurai* of that *ken* were for a while forbidden to wear swords, but the measure was only a temporary one, applying to Saga and not Japan in general, for the purpose of securing the restoration of tranquility and it was soon done away with.

Since then the measure has been largely discussed, and of all those who have discussed it there has not been a single one (excepting a few conservative gentlemen) to find fault with it. The people of Yedo finally came to point out and deride any person seen wearing the hair in the old style and the swords to such a degree as to make others ashamed to be in company with such a one. A further advance has now been made, in that instead of allowing the discarding of the swords their wearing has been actually forbidden, and Mr. Mori's proposal has after a series of changes been carried out in the month of March 1876.

Our Article on this subject so far bears only on the opinions held in Yedo and the other large towns, but we have as yet not touched upon those of the country in general and we venture to think that our advancing a step and doing so now will not be unprofitable.

This notification affects the gentlemen of all *fu* and *ken* and there will be some places in which its enforcement will be found much more difficult than in others. Of course we must not judge of the condition (of advancement) in which remote places in the country are on the basis of that which we find in Yedo. The sentiments of all *samurai* who reside in this place have been changed by civilization, and not more than one in a hundred thousand of them continues to wear the long sword and to preserve the old military spirit, and, on the other hand, there are in all about six thousand policemen in the several police offices. As therefore the sword can be readily taken away from any one seen with it, we are certain that no one will wear it. Should, however, by chance there be any rowdies who wilfully disobey the notice, resist the police and refuse to deliver up their swords, the police through their numbers will very easily succeed in getting the better of them. We are therefore firmly persuaded that in Yedo this notification will at once have full effect and that there will be no difficulty to prevent it being put in practice.

As regards the *fu* and *ken*, people generally may entertain no doubt that the case will be the same; that, though there are several very obstinate conservatives, no large number will be found so much so as to refuse for a short time to discard the swords which they wear for their protection, and that even those who may appear most likely to resist will be found when they are brought to face the order to yield a compliance to it beyond what could be expected and to afford in the end an illustration of the old proverb "Pains of labour are easier to bear than the anxiety that precdes them." When however we give our attention to the carrying out of any piece of work, we must estimate beforehand the likelihood or otherwise of any difficulties arising to interfere with us, and we will now do this in respect to the putting this notification into effect in the different localities. We cannot say that there may not in the remote places in the east and west of Japan be found some persons who will not render obedience to this order, or that there may not be some rowdies who will oppose the police; the number, too, of those who wear swords in such places is large and the number of the police to restrain them is smaller than in Yedo, and we are afraid that if the local authorities do not in each case consider the disposition of the gentry living in their jurisdiction, and also the strength of the police which they have at their command to suppress opposition, that some difficulty, small though it may be, will be experienced in enforcing the notification.

It seems to us that those persons who violate this order and whose swords are taken from them at once by the police, should be arrested and brought to the police station and there examined, and should it appear that they had continued to wear the sword knowing from the first the breach which they were committing and of the shame attendant upon their doing so, they will have made up their minds beforehand to the censure which they receive from the police, and their case is therefore very different from that of persons arrested for breaches of minor police regulations (where the offence cannot have been premeditated). Supposing, too, they, with their long swords, resist the police who are armed only with staves, the task of the latter will be a difficult one.

This is, however, merely a supposition, and we may seem to be carrying our anxiety too far in suggesting it. If it is yet too soon to prohibit the wearing of swords, when will the time for doing so come? The Government appears to think it has already arrived and has therefore notified that "henceforward &c." We cannot but feel the highest admiration for the wisdom it has displayed in doing so.

It is clear from this notification that swords come under the category of "dangerous weapons," and we therefore think it important that rules regulating their manufacture, sale, and possession should be established, as in the case of fire arms, and that the Government should not be content with simply notifying the prohibition to wear them. There are two kinds of routine followed in the issue of notifications; the first, in which the subject to be dealt with is beforehand stated generally and the leading points afterwards established; the second, in which the leading points are first proclaimed and the general principle afterwards. Recent examples of these are of the first class; the new coinage notification and that for the exchange of the *han satsu* of the second class: the administration of the *Han* and the abolishment of the *Han*. Although the two classes present the above difference in their routine both establish some law, and one cannot be considered as being either better or worse than the other, the important point only being that whichever is best adapted both to the subject contained in it, and the spirit of the times in which it is published, should be adopted. The present notification comes under the second class, and it cannot be denied that in making it of this class the proper course has been followed. The officers of the several *fu* and *ken* will now estimate the difficulty or ease with which the prohibition can be carried out in their several districts and make a full report thereon to the Central Government, which from these reports can judge in what districts the numbers of the conservative *shidzóku* are still large, and also those which have not yet escaped from the darkness of the old feudal system, and then easily frame rules for the regulation of the sale, manufacture and possession of swords which will meet the requirements of each place.

If we are not wrong in the opinion which we hold in respect to this notification the publication to all of the prohibition to wear the sword is not the only good effect which will attend it, but, owing to it, the old clouds of conservatism will be broken, and the evil customs of the feudal system will be swept out of the land by the advance of intellect and the dawning of civilization. We must say that it is now the time for a bold advance in the development of our rights.

Regarding the history of Japan.

(Hochi Shimbun.)

We ransack our old histories for information about our ancestors, but with very unsatisfactory results, a fact which we attribute to the low state of their education. It would be deplorable, however, if our descendants had to speak of us as we of our ancestors, and those who feel this to be true should so act that no such difficulties as we ourselves experience should be in store for our posterity. The late advance of education places us at a great advantage in this respect.

If we examine our books of history we find that they mostly consist of narratives of the struggles of contending parties for the throne; of the troubles caused by ambitious men; of miracles and wonders superstitiously said to have been wrought by our forefathers; and all this cannot be called true history. For more important information we must go to other sources.

First, we must enquire whether we Japanese were really created on these islands or came from other quarters. It is very gratifying to find that the descendants of the Son of Heaven survive to the present day. But the stories told about Jimmu Tenno do not appear very credible. An excavation was lately being

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

made in the province of Hiuga,* and a number of articles were found which do not look as if made by the Japanese of those days, but probably came from some foreign country. A friend of ours informed us that in a temple situated in that province there is an image of a man carrying a fishing-rod on his shoulder, and the people of the place have no idea when it was brought to the temple. But the workmanship of it proves that it never was made in this country, but came from abroad If this be true, it proves that our ancestors came from some other land, though they may have found an aboriginal race here. It would therefore not seem improbable that Jimmu Tenno forced his way towards the interior with the aid of men who had more knowledge than this aboriginal race, and, were we to pursue the methods of the European scholars and make a comparative study of the old relics which are to be found in this country, ample proof of this theory might be obtained.

As to our form of government, when the Daimio, Seizanko by name, of the province of Mito, assembled learned men from different parts of the country to consult and write the *Dai Nihon Shi* (History of Great Japan) Awoyama Nobutate, one of the assemblage, said that the political history of Japan might be divided into two great sections, viz.: the establishment about A.D. 645 by Katoku Tenno of the *Kokushi* to govern provinces, and the *Gunshi* to govern districts, the old feudal system then ceasing. In about A.D. 700 the reins of government fell from the hands of Mommu Tenno, the then Emperor, into those of his wife's party, the family of Fujiwara. In A.D. 1155 this power was usurped by the Shoguns who retained it until the downfall of the Tokugawa family, and these are the main changes which our form of government presents.

There is no trustworthy source to which we can go for information about the state of education, religion, foreign intercourse, trade, mining, manufactures and customs. But we may say a few words about our literature.

In ancient times we may have used hieroglyphics as the Egyptians and aboriginal Americans did, but it is probable that we had no distinctive mode of writing until the Chinese characters came over to us. In about the year A.D. 285, in the reign of Ojin Tenno, Onin of Kutara in Corea, brought over the *Rongo* and *Senjiimon* (Chinese classics) which were studied by Ojin Tenno's son, and from this time the diffusion of Chinese literature dates. In the reign of Tenchi Tenno, or about A.D. 660, Chinese literature was greatly cultivated; and, again, in A.D. 720, in the reign of Shomu Tenno, a proclamation was issued that every house in Japan should possess a copy of a Chinese book called *Kokio*. In A.D. 770, Japanese students were sent over to China for educational purposes, and such men as Abe Nakamaru and Kibi Daijin became famous scholars among the Chinese. Down to about A.D. 945, such famous masters as Kobo Daishi, Ono Takamaru, Miyashi Kiyotzura and Kanshojo (or Tenjin Sama) flourished, but from that time literature became little better than a plaything and men occupied their time in writing poetry, forgetful of more useful ends.

After the usurpation of the Shôguns in A. D. 1155 there was a relapse again into barbarism, and the *kuge*, who had been more addicted to literature than any other class, were prevented from occupying themselves any further with it, It took peaceful refuge therefore in the temples. The reigns of the Shogûns of the Genji, Keike, Hojô and Ashigawa dynasties may be called the period of no literature, and, in the time of Iyeyasu, a priest, Fujiwara Saigu by name, became eminent in letters which continued to flourish again from that time.

We have now briefly shewn how and when literature came into existence in Japan, how it declined from its once flourishing condition, and how it was again revived by the priest Fujiwara, who left the ranks of the priesthood about the beginning of the Tokugawa dynasty and became a professor of literature, doing all in his power to advance the cause of education. From that time until the downfall of the Tokugawa dynasty literature flourished and many learned men appeared from time to time. The education sought to be imparted to the people in the present day is, however, very different from that of former days, and the necessity for and power of it have greatly increased. Under these influences the study of Chinese literature has much diminished, and we may expect that the results of the education now pursued will differ widely from those produced by the older system.

It may now be well to make a few remarks upon our religion.

Before the Buddhists arrived in the country Shintoism was the most prevalent form of faith, but the probability is that its founders did not regard it exactly in the light of a religion, a presumption favoured by the absence of anything in it calculated to improve the hearts of men. At the time of Kimmei Tenno, A.D. 553, gold and copper images of Buddha and books containing the Buddhist doctrines were brought over to Japan from Kutara in Corea, and were soon held in high reverence. Soga Iname, then Prime Minister, became a convert to Buddhism, and made a temple of his own residence. But, just at that time, a pestilence broke out which swept away many thousands of lives, and it was currently said that Buddhism had brought this evil in its train. Soga, however, continued in office as Prime Minister, and as his ardour was not in the smallest degree relaxed by this untoward circumstance, he succeeded in making many converts. Yomei Tenno (A.D. 856) assembled his ministers to deliberate whether or not he should embrace the Buddhist faith, and Soga Umaga (the son of Soga Iname), extolling the Emperor's wisdom, declared that it would be an excellent step. But another minister, Monabe Moriya by name, opposed this view, and a division arose between which terminated in the defeat of Monabe Moriya. Soon after this the Coreans sent over to Japan the *Shari* (a small hard substance like a precious stone said to have been left in the ashes after the burning of a Buddhi st saint), and nine priests with carpenters to construct Buddhist temples. A priest, Shotoku Taishi by name, a very able and highly educated man, embraced the Buddhist faith about this time, and by means of his enthusiasm, his zeal and labours contributed greatly to its spread. From that time, although constantly opposed by many able men, it set them all at defiance and maintained its triumphant course until the downfall of the Tokugawa dynasty. It met with but few reverses, and so completely gained the confidence of the people that it became a common saying that "every family in which there is a Buddhist priest will go to heaven."

If we examine into the causes of the success of Buddhism in Japan, we find it due to what we venture to call the power of recoil. When it first arrived many attempts were made to suppress it, but it always thrived in proportion to the vigour of these attempts. Such men as Nichiren the founder of the *Nichiren Shu* sect, and Shinran, the founder of the *Shinshu* sect, were persecuted in every conceiveable manner, but this only fortified their resolution, and their increased zeal thus added immeasureably to the number of believers who joined their standards.

The Confucian doctrines have never made any great impression on the Japanese mind, owing perhaps to their embodying mere moral truths and not religious teaching, and no great efforts have ever been made either to suppress or promote them.

Christianity once existed in Japan and was brought over by a people whom we called *Nanban*—in all probability the Portuguese—who carried on trade with us from the date of the Ashikaga dynasty of Shogûns. In A. D. 1574 two men from Nanban, Uramon and Ataran by name, came to this country, and, as it is said, were asked by Otu Nobunaga, the then Shogûn, what they purposed or desired here. They replied that they wished to diffuse the knowledge of their religion. Nobunaga then placed them in a temple called Riushogi, and assembled his ministers to consult with him whether these men should or should not be permitted to preach their religion. The Ministers were divided, some urging that the permission should be given, others that it should be refused. But as Nobunaga thought that some good would spring out of it, he ordered a church to be built at Kiôto for them, and a piece of land allotted to them in accordance with the custom by which Japanese temples are maintained. The rent of lands was set apart to defray the expenses of the church. Another version of the story is that Nobunaga himself became a convert to Christianity, and that being about to build a castle at Azuchi, he had it planned in European style. It may be added that the term *Tensha* or Lord of Heaven, was applied from this time to the towers of castles, and the Roman Catholic religion is called by the Japanese *Tensha Kio* to the present day. Another story says that Nobunaga afterwards began to dislike the new religion, and that Toyotomi Taiko (Taiko sama) was ordered by him to destroy the Christians. When Taiko became Shogûn, which happened shortly afterwards, he is said to have oppressed and and persecuted the Christians to no small extent, who thereupon fled to Kiusiu in order to be as far beyond the reach of the Government as possible. When Tokugawa came to the Shogûnate, it is said that he made it one of his principal aims to extirpate the Christians, and had edicts prohibiting Christianity posted throughout various parts of the country. Otomo Sorin, Daimio of the province of Bungo, together with all his people, is said to have embraced the Christian faith, and the religion certainly flourished for a while in Kiusiu. Finally, the Christians armed and assem-

* The scene of the descent of Jimmu Tenno from heaven,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

bled themselves in the Castle of Amakusa in Shimabara with the intention of setting the Government at defiance. It was a brave attempt, but proved fatal to them. They numbered twenty thousand, but there were so many aged persons, women and children among them that probably only three or four thousand of the whole could bear arms. They were collected in a fortress far away from the world and none came to their support, yet they kept a hundred thousand men sent against them by the Government at bay for upwards of three years without decisive results on either side. Doubtless this brave defence owes its character to the religious bond which united them, and had not Buddhism been so deeply rooted in the country the Christians would, in all probability, have prolonged their defence and maintained their position and that of their faith. But it was otherwise. They were defeated, and though individual Christians were from time to time arrested in Kiushiu after that date, very few of them survived this struggle.

Christianity is now again reviving in this country, but it is impossible to foretell at present what its future will be.

Such is very briefly the story of the rise and fall of various systems of education and religion in this country.

We should like to have given also a succinct account of the changes which have taken place in regard to intercourse with with foreigners, our habits, customs, &c., but the limited space at our disposal does not permit of this, and we cannot carry the subject further. We have written the above in the hope that some of our contemporaries who may wish to promote the knowledge of the present generation regarding the history of their ancestors and the various changes which have taken place in this country in olden times, may follow our example and treat these subjects hereafter with the minuteness which they may fairly be held to claim.

ONLY A PENNY.

Good Reader! do you feel the *auri sacra fames?* Would you "turn a penny"? You would not have the least objection, methinks I hear you answer. Did you ever try? You didn't. Well! perhaps you'd find the task no easy matter if you did. And yet it's not a ponderous body either, this penny, nor very large; but for all that the turning of it is beset by difficulties. Why should that concern one after all? It is possible to conceive a world which wags unconscious of this puissant penny. Aye; true enough, my friend, but that world is not ours and so needs no consideration at our hands. The penny reigns triumphant here beneath the moon; round it the health, wealth and happiness of all mankind revolve. Of small account is he who has himself no penny to turn, or wants the wit to turn his neighbour's; his blood may be as blue as indigo and his forefather the first historic man; but what of that? He cannot fill his mouth with food, nor clothe himself, nor strut before his friends. Away with him, he's lumber—food for crows; the penny is king, he but the accident, so to speak.

A consideration of this subject will shew that it is involved in paradox. It can hardly be denied, for instance, that this useful coin is in a condition of perpetual motion, and yet many persons can be found to complain that its inertia is so persistent that, do what they will, they cannot move it; no effort of theirs, however well directed and applied, so much as stirs it, or, if they now and then succeed, they find it does not follow Nature's laws, by which it is enjoined that a vacuum should be filled up. A fig for the vacuum! away it flies anywhere and everywhere, but in the direction of the exhausted receiver. Then, again, it is no less extraordinary that with some its possession would seem to be so irksome that they are never happy until they have flung it from them out of sight, and that with the knowledge that they must begin the moment after and grope about and grovel for what they 've just discarded. They cannot plead as their excuse that, like a blind man who drops his staff unwittingly, and by reason of its having rolled down hill cannot recover it, they are the victims of misfortune; rather may they be likened to him who from some senseless whim or other and forgetting the weary road above him, flings far away his trusty *alpenstock*, having first the better to confuse his senses turned three times round with eyelids closed. My word! he'll have to toil and sweat and groan ere ever he's passed another milestone! He'll meet with many on his journey who struggle on a little and then give up and seat themselves beside the path, and trust to passing charity to help them on their way, whilst some few pass him by and gain the top by steady climbing. To sweep away this flimsy metaphor and display the game is easy. To some the penny never comes at all, and they are fain to leave the field to others. Some never even try to turn it, but depend upon their friend's assistance, sitting down cross-handed. Whilst others—a slender company—by dint of industry or luck at last clutch hold of it and win the game.

To "turn an honest penny." Beware of him who "turns an honest penny." He's either half ashamed to earn his bread and must adorn the penny with an ornamental adjective to hide its quality, or else he plays his game dishonestly. The *chevalier d'industrie* turns an honest penny. The—but we've got into the clouds. To enumerate the ways and means employed to "turn a penny" would take a cycle and yet be hardly told. Some are new, others as old as the sun; many ingenious, not a few curious, but none of them surely more curious than that resorted to by Ichitaro of "Our Neighbourhood" when we have our festivals.

Behold him of a frosty morning, clad in a cotton garment, like a shirt—a dirty one; before him on the ground a bucket filled with water, in one blue and mottled hand a brazen bell and in the other a wooden ladle. He can hardly be esteemed a pretty object, this Mr. Ichitaro, with his sodden brutish face, his dirty cotton shirt, a bell in one hand and in the other a ladleful of icy water. Ding, ding ding, he rings his brazen bell, and through his chattering teeth he mumbles something, for aught one knows, a prayer, more like a curse, whilst from the corner of his bloodshot, sloping eye he views the shifting crowd. Will no one notice him this morning? Will no kind soul relieve him and send him off to get his fill of something hot? His presence chills the sunshine! Yes, here's a buxom matron coming towards him with a copper in her dimpled fingers. Ding, ding, ding, how loudly now he rings, how fervently he prays! He takes the welcome coin, and as he makes a slight obeisance towards the donor, he pours a ladleful of water on his shaggy head and shudders. How pleased she looks. It was the shudder called that smile into her face. Ah! me, it is a curious world! What is there can't be purchased for a penny? Here's six pence, villain; pour your cursed bucketful of water on your shivering body and beget a rheumatism, —I can afford to pay thee.

YEDO NAVAL COLLEGE.

Athletic Sports.

On Friday the Athletic Sports so long talked of, and thought of by the students not only of this college but of some of its compeers in the capital,—the Mitsu Bishi and Kaitakushi schools to wit—came off in the Parade ground opposite the College and adjoining Monzeki Temple. For the accommodation of visitors and guests tents were erected, refreshments provided, and all that could be done to afford them comfort and amusement sedulously looked after by the gentlemen who acted as committee. The prizes were provided by the contributions of the officers of the college, and the affair was specially fostered by Captain Jones, and Captains Motiyama and Haiyashi. The Committee consisted of the latter, with, as umpires, Lieutenant E. Etzuki, Mr. St. John, Mr. Chipp and Mr. Hammond, Mr. Bailey acting as starter and timekeeper.

Although this was not the first occasion of the kind, it appeared to have for the boys an entire novelty, and their shyness in the presence of strangers hindered many from exerting the strength and skill they really possessed, and it is this diffidence which has been sought to be exorcised vainly since the former sports two years ago. Their lithe, agile make, and the readiness with which they accomplish some of the more difficult *tours de force* comprised in the French school of gymnastics, indicate latent power to the development of which it is eminently desirable that more attention should be given than is done at present by native officials, whose general practise is to ignore the "sound body" whilst unhealthly cram-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ming the mind. The government has at last apparently awakened to the necessity of physical education for its youth, and the Benten workshops are now busied with the construction of approved gymnastic appliances for the various Yedo grounds.

Sir Harry Parkes, and other officials witnesed the sports, a programme which will be found below, and several ladies graced them with their presence.

PROGRAMME.

1.—FLAT RACE FOR STUDENTS under 15 years, Dist. 100 Yards.
Sakamoto 1
Hiriei 2
Moratta 3

2.—HURDLE RACE FOR STUDENTS over 15 years, Dist. 300 Yards.
Imi 1
Assada 2
Inouye 3

3.—FLAT RACE FOR STUDENTS under 12 years, Dist. 150 Yards.
Yamada 1
Ito 2
Arai 3

4.—LONG JUMP.
Inouye ..... 14 ft. 6 in.

5.—HIGH JUMP.
Kano ..... 5 ft. 1 in.

6.—THROWING THE SHOT.
Inouye .....

7.—THREE LEGGED RACE.
Iabarra } Katoka } 1
Shiga } Ichige } 2

8.—FLAT RACE FOR STUDENTS over 15 years, Dist. 450 Yards.
Omia 1
Takada 2
(Ito ran very pluckily.)

9.—POLE JUMP.
Kano ..... 7 ft. 6 in.

10.—JAPANESE FENCING.
Niijima 1
Koiké 2

11.—HOP, STEP AND JUMP,
Kano ..... 32 ft. 7 in.

12.—STEEPLE CHASE FOR ALL COMERS Dist. 300 yards. N B Restricted to those belonging to the Naval Department.
A. H. Sakamoto 1
Sukahara 2

13.—CATCHING A PIG BY THE TAIL (Time allowance) no Pig no Prize (Can start twice.)
Nijima 1

14.—THREE STANDING JUMPS (Feet to be close).
Aini 1

15.—THROWING HAMMER.
Tomioka 1
Fuji 2

16.—PIG WITH THE GREASY TAIL.
Niijima 1

17.—TUG OF WAR.
Naval College 1
Artilary Cadets 2
Naval College Cadets 3

By Permission of the Admiralty the Band of the Imperial Marines enlivened the proceedings with some popular music, very creditably played.

The Japanese soldiers in Nagasaki have been under inspection during the past week. Officers from the Military Department arrived here, and took up their quarters at a temple in the native town, and commenced their inspection on the 27th inst. Out of a number of 377 recruits, between the ages of 15 and 20, only 90 passed the scrutiny and were drafted into the army. At Hirado and Shima-bara, in Nagasaki ken, out of 240 only 63 were fit for service.

Correspondence.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 8th April, 1876.

SIR,—The Postage question is one of great perplexity to many persons here and to none more than myself.

We English are rather apt to boast of our Post Office and its arrangements, but at present we have little cause to do so; whilst our friends the Americans have promptly set us a good example and the French have been equally accommodating to the public interests.

Letters for Europe by the American Packets are conveyed for 10 cents, by the French packets for 12 cents (except to England), but the English Post Office still charges 30 cents *viâ* Brindisi and 24 cents *viâ* Southampton.

The most curious part of the scheme relates to the mutual accommodation of the French and English Post Offices. The French mail steamers carry English post bags made up at the English Post Office, while, *vice versâ*, the English steamers carry French Post bags made up by the French Post Master. But the letters so carried from this port in this friendly fashion are subject to very different treatment according to the Post Office from whence they are despatched. Letters placed in the English Post Office bags and conveyed either by the English or French steamers, must bear stamps of 1s. 3d. or 1s.- equal to 30 and 24 cents. Letters placed in the French bags and conveyed by either French or English boats need only bear stamps of 12 cents, equal to 6d.

A letter sent by P. & O. steamer to Paris through the French Post Office and thence reposted to London would cost 8d. *i.e.*, 6d. to Paris and 2d. across the Channel, while the same letter posted in the English Office would cost as above 1s 3d., even if carried in a French steamer. Can you afford me any explanation?

I am, Sir,
Your obedient Servant,
A BRITISH READER.

[We are as bewildered on the subject as our Correspondent, to whose letter we would draw the attention of the authorities.—ED. *J.W.M.*]

Law & Police

IN H. B. M.'S CONSULAR COURT.
Before R. ROBERTSON, Esq., Consul.
Monday, April 3rd, 1876.

J. B. WATSON *vs.* DRISCOLL & Co.

This was a claim for $332.93 and $13.33 costs. Mr. John Such appeared for plaintiff, Mr. F. Driscoll for defendants, who did not dispute the claim.

Judgment rendered for plaintiff for the amount of $332.93 with costs, $13.33.

COBE & Co. *vs.* J. WICKERS.

This case, which was adjourned on the 31st ultimo, was resumed to-day. Mr G. W. Sutherland appeared for plaintiff; defendant appeared personally and produced his book. He claimed to be credited with $16 for work done for plaintiffs.

Mr. Sutherland agreed so far to reduce his own claim for $67.

His Honor rescinded the former judgment, and gave a new order, defendant to pay the debt, as now reduced, within two months from date.

GANDAUBERT *vs.* T. WALLACE.

Mr. Gandaubert stated that he, at Mr. Laplace's auction at No. 61, had bought six marble-top tables, the first of them for $7.50; but this one he found, when he came to take delivery, had been taken away by Mr. Beguex, in Tokio. He had seen defendant about it, who had promised to see it all right, and he had written to Mr. Beguex, but received no reply.

He produced several witnesses, who swore that they had been present at the auction, and heard the table knocked down to Mr. Gandaubert for $7,50.

Mr. T. Wallace deposed that he, on the 6th of March, had sold a marble-top table to Mr. L. Beguex for $7.50; it had been so entered in his books by Mr. Curtis, and Mr. Beguex had paid for it, and received it. As Mr. Gandaubert had afterwards expressed

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

a wish to have that table, he (witness) wrote to Mr. Beguex about it, but received an answer that as Mr. Beguex had bought the table, he intended to keep it. (Letter handed in).

His Honor observed that he considered the evidence of Mr. Beguex so important, that in order to obtain the same, he would adjourn the case until Saturday next, at 10 a.m.

N. Sonderberg, seaman of the British barque *Truth*, was brought up on the charge of having been absent without leave.

As this was his second offence of the same kind, he was sentenced to ten day's imprisonment with hard labour.

Tuesday, April 4th, 1876.

George Shaw, an unemployed seaman, was charged with being drunk, creating a disturbance and destroying property last night at Takashimacho. Prisoner pleaded *Not Guilty* to the charge of destroying property.

Police Sergeant Loxton, sworn: The prisoner was brought to the station last night, charged by the Japanese police with having been fighting in Takashimacho.

A Japanese policeman deposed that last night while he was on duty in Takashimacho, he was sent for to arrest prisoner, who was creating a disturbance in a house. There was a screen broken in the house, but witness did not know if it was broken by prisoner or by another foreigner who made his escape.

Mita, a Japanese employed in a house in Takashimacho, stated that last night a party of Chinamen came to the house and ordered some supper. Afterwards prisoner and another foreigner came, and went upstairs where the Chinamen were, and commenced fighting with them. He broke the furniture and flung a *hibashi* across the room so that the live coals were flying about. Witness then went to call the police.

Prisoner, whose head was broken and bloody, stated to the Court that his head was broken by a Chinaman with a stick. He admitted that he was drunk, but said that he was going home when he was attacked by the Chinamen.

Sentenced to 14 days' imprisonment with hard labor.

Wednesday, April 5th, 1876.

George Frank, an unemployed seaman, was brought up charged with having taken part in the affray the night before last in Takashimacho, as reported yesterday, and with having drawn a knife.

Evidence was given to the effect that prisoner was one of four Europeans, who came to a house in Takashimacho the night before last. One of them took off his boots and wanted to dance. Prisoner was drunk and created a disturbance, and when threatened with the police he drew a sheath knife and made a rush at a Chinaman. He was then struck on the head and ran away.

Prisoner, whose head was bandaged, denied having used a knife.

Sentenced to three weeks' imprisonment with hard labour.

N. Collins was charged with having assaulted a man named James Clegg. As prosecutor did not appears the case was dismissed.

Saturday, April 8, 1875.

G. Gandaubert *vs.* T. Wallace.

This case, in which plaintiff claimed a marble-top table, sold by defendant at the auction at No. 61, on the 6th ultimo, and now in the hands of Mr. L. Beguex, Tokio, was resumed to-day, having been adjourned from the 3rd inst., in order to procure the evidence of Mr. Beguex.

Both plaintiff and defendant were in attendance.

Mr. L. Beguex, sworn, to defendant: I remember the 6th of March, and the auction at No. 61. I bid for a marble-top table at that auction. I remember that in reply to your letter I wrote you that I had bought the table, and would not give it up.

To Court: The table was a square one, and was in the billiard room. My highest bid for it was $7.25. I do not remember if it was knocked down to me. When I sent my man to take away the things I had bought at the auction, that table was given to him with the other things. I had bought a lot of things, altogether for over $200. I have paid $7.50 for the table.

To plaintiff: I remember you wrote to me asking for the table, and offering to pay the expenses of sending it down to Yokohama.

To Court: I did not agree to return the table.

Judgment reserved.

In the U. S. Consular-General Court a sailor from the U. S. gunboat *Saco* was brought up this morning charged with having been found drunk in the street. He was warned and sent on board.

REUTER'S TELEGRAMS.

Shanghai, 24th, March 1876.—The German Minister has renounced the German Treaty with China.

The Tsung-li Yamen has instructed the Authorities at Shanghai to allow the Woosung Railway to proceed unmolested.

London, 24th March, 1876.—The Queen's Title Bill has been read for the third time. In a long maintained debate Mr. Disraeli dwelt upon the political reasons for the step, especially the advance of Russia towards the India frontier and the conquest of Tartary. It is well known that in India the title Empress would be regarded as an unmistakeable sign of our resolution to maintain the Empire.

Mr. Lowe and Mr. Fawcett strongly censured the allusion to the designs of Russia as incautious and unwise.

Major General Colborne has been gazetted Knight Commander of the Bath and Captain Buller, Companion of the Bath.

SHANGHAI, 22nd March, 1876.

Passed Canal.—Outwards—"Meikong." Homewards—"Priam."

Shanghai, 14th March, 1876.—The Honble. Mr. Grosvenor and party reported to have been all well on the 10th February. They expected to arrive at Yunnanfoo on the 25th.

London, 22nd March.—In the House of Commons last night, Mr. Disraeli said the Queen would not take the title of Empress of England (?) if her children were not to be called Imperial Highnesses. All the amendments were rejected and the Bill passed into Committee.

Singapore, March 20.—Sultan Ismail has been delivered up to the Government by Rajah Quedah, and is expected at Penang to-day.

London, March 18.—The Marquis of Hartington's motion has been rejected. The Commons went into committee on the Title Bill.

Madrid, Feb. 26th.—Carlists, numbering about one thousand, are submitting to King Alphonso. This protracted struggle is now considered to be virtually ended.

Nepaul, February, 26th.—His Royal Highness had a most exciting day's sport yesterday.

The Prince and suite, accompanied by Sir Jung Bahadur, went in pursuit of a wild rogue elephant, a magnificent animal with huge tusks, which, after a long day's chase, was eventually captured by means of Sir Jung's tame elephants.

The party were charged several times by the animal.

The shooting, since the first day here, has been good. Four more tigers and one panther have been bagged, the Prince shooting the majority.

London, Feb. 26th.—A Coroner's inquest on the bodies of Mr. Thomas Quinlin and Mr. William Russell, who were drowned in the *Strathclyde*, has resulted in a verdict of Manslaughter against the Captain of the *Franconia*.

In the House of Commons last night Mr. Holms' motion regarding the condition of the Army led to a discursive debate.

Mr. Gathorne Hardy refuted Mr. Holms' statement: and replying to Sir George Campbell, he said there was no hope nor chance of detaining English soldiers in India so long that they would not enter the reserve on their return to England.

Miss Carpenter has arrived as Ahmenabad and visited the Female Training College. She presented the Queen's Journal to the College, and was presented herself with a handsome black and scarlet velvet cushion by the students. In the evening she attended the Brahma Samaj Church.

78,000 deaths from cholera occured in the Presidency of Madras during the nine months ending December last.

London, 28th Feb.—Lord Lytton will leave London on the 1st March. He will remain for a few days in Paris, and embark at Naples.

Replying to a deputation of the Manchester Chamber of commerce, Lord Lytton stated that he coincided with the views of the Marquis of Salisbury, as expressed to a deputation on the 24th ultimo. Lord Lytton pointed out how great was the financial difficulty connected with the removal of the import duties on Cotton Goods in India.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

London, 26th Feb.—His Royal Highness the Duke of Edinburgh will accompany the Duchess to St. Petersburg before joining the ship *Sultan*.

General Haines will accompany Lord Lytton to India in the *Orontes*.

Paris, 29th Feb.—Don Carlos has re-entered France and the war is ended.

Paris, 1st March.—Don Carlos having been forbidden to remain in the South of France, is going to England.

Vienna, 1st March.—The insurgent refugees are being expelled from Austria.

Madras, 29th February.—A telegram from London to one of the Bombay papers states that Lord Salisbury closes his correspondence with Lord Northbrook in terms of great severity, thus;—"The urgency of the occasion did not justify your failure to inform me of your intention to legislate or render necessary a sudden conversion of proposals into law, proceedings which were little less than a scandal and should have been avoided, even if you were unable to refer home for instructions for fear of information leaking out." The papers say the rebuke was deserved.

The Maharajah of Cashmere has given £200 for placing a tablet in Calcutta Cathedral to commemorate the Prince of Wales' visit.

London, March 2nd.—Lord Lytton left London *en route* for India yesterday evening. His Lordship will meet the Prince of Wales at Suez on the 24th instant, and will then proceed to Bombay, where it is expected he will arrive on the 7th of April.

The question of the great depreciation in the value of silver is exciting serious attention in home circles. It is considered probable that either a Select Committee or a Royal Commission will be appointed to enquire into and examine the subject.

Bombay, March 1st.—The Prince of Wales dines with the Governor on the night of his return here on the 11th instant.

H. R. H. will afterwards will go on board the *Serapis*.

His Royal Highness leaves on Monday, the 13th.

Captain Glyn goes to Allahabad to meet the Prince and be invested with the order of C. S. I.

Small-pox very bad here; forty deaths registered on Monday.

OBITUARY.—Lady Augusta Stanley.

London, March 2nd.—The Navy Estimates for 1876-77 give a total of £11,250,000, against £10,750,000 in 1875-76, showing an increase of £500,000.

In the House of Commons last night Lord George Hamilton gave notice of a motion for to-morrow for the appointment of a Select Committee to enquire into the effect of the fall in Silver on exchange on India.

THE LOW VALUE OF SILVER AND ITS EFFECT ON INDIA.

(The Economist.)

When the great gold discoveries were made in Australia and California most people expected that there would be a more or less rapid fall in the value of gold as compared with silver. But, as a matter of fact, the effect has been the reverse. The value of silver as compared with gold was 59¾d per oz, or as 1 to 15·7 in 1849; it now is 54¾d, or as 1 to 17·1. Not only what the best judges expected has not happened, but the very contrary of it *has* happened.

And this has not been the result of any collateral cause; it is the direct consequence of the gold discoveries themselves. The effect of these discoveries has been a great improvement in the currencies of the world, which, without them, would not have been possible. The countries of great commerce and large transactions require a more valuable medium of exchange, bulk for bulk, than countries of petty trade and minor transactions. The labour of paying 1,000,000/ in sovereigns is only a tenth of that of paying it in rupees, and therefore, where millions have to be paid sovereigns are a ten times better currency than rupees. Gold is much the best currency for rich nations of large trade, though silver does well enough, and is in some respects most suitable, for poor nations of little trade. But thirty years ago it would not have been possible for the nations of great commerce to have adopted this best currency. There would not have been gold enough obtainable. The supply from the mines was then barely sufficient to maintain the existing gold currencies; it would have been entirely insufficient for establishing new currencies on a large scale. No one then would ever have dreamed of proposing it. But, as we all know, Germany has just now tried the experiment on a great scale. She is buying gold, and selling off her silver. And in consequence silver is cheaper than it has ever been before.

Probably, if there were gold enough for all the world, it would be best that there should be only a single standard of value throughout the world, and that one—gold, But this is impossible. Some have doubted whether there is gold enough even for the nations which now intend to use it; and there certainly is not enough for all the world. Happily, the East has always been a country which had much silver, and for whose purposes silver was quite sufficient. The transactions of the East are small in comparison with those of the West, and therefore a bulky paying medium is not so inconvenient there as it would be here. Since economical history has been written silver has been always sent from Europe to China, India, and the richer parts of the East, and never more so than in our own time. The payments of England in silver to India during the cotton famine were probably the greatest cash payments ever made in so short a time by one country to another. There is, therefore, in the end a certain market for the silver displaced from Europe; it will ultimately go, as the rest has gone, to the East, where it is the ancient and the best-attainable paying medium.

But for the moment there is a difficulty in disposing of silver. There is no new sudden demand for it in the East. The case is not like that of the cotton famine. Then we had incurred a large debt to India, and we had to pay it in the only currency which she would take. We had to find an immense quantity of silver on a sudden, and France—owing to the peculiar operation of her double standard—found it for us. But now there is no such debt; the present problem is not to find the silver, but to find the use for the silver. And this is a slower process.

Sooner or later, however, the ordinary laws that govern foreign exchanges will do it for us. The consequence of the low value of silver is that the rate of exchange is now 1s 9¼d per rupee (or less), the lowest, or almost, the lowest, ever known. And this operates as a direct discouragement to ship goods to India. These goods are paid for in rupees, and when the merchant wants to bring home those rupees to England he finds that they do not go so far as they used to do. He has to pay much more for every 1,000/ bill on England, and this extra cost destroys or diminishes his profit.

Secondly, the same state of the exchanges is a direct premium on sending goods from India to England. 1,000/ received for those goods here, will go further in buying bills on India than it used to do; in plain English, it will lay down more rupees at Calcutta, in the same time than, formerly, and this increase is so much extra profit. By this combination, therefore, exports from India increasing on one hand, and imports into India diminishing on the other hand, before long a large debt will be created, which this silver, set free from Germany, will have to fill. The process will take time, but the effect is inevitable. The tendency of this great import of silver into India will be of course to raise prices, but the degree in which it will have that effect will depend on the degree in which it is counteracted by the causes which have intercepted its effect before—the hoarding habits of the people; the use of silver in ornaments (the ornaments being a sort of reserve fund to be sold in difficulty); the greater extension of silver in rude districts, where barter is still much used; and the general increase of trade, which rising prices always tend to quicken and develop.

When this rise of prices has taken place the encouragement to exports from and discouragement of imports into India will manifestly cease. The value of the rupee at Calcutta, as against bills on England, may remain as it is now; but the diminution of that value as compared with former times will be compensated by the greater number of rupees which the English exporter to India obtains for the goods which he sells there. The value of the 1,000/ in London in purchasing bills payable on India in rupees may be as unusually great as now, if we compare it with the past, but there will be a corresponding difficulty in obtaining the 1,000/ in London. The merchant in India will have to pay more for the goods which he sends to London, and in the end this loss will be equal to the other gain.

If new silver should still continue to come into the market the same process must go on. The step must be incessantly repeated. The value of the rupee must fall as against sterling money; instead of being 1s 9d, it may fall to 1s 6d. And, then, *mutatis mutandis*, what we have just described as happening will happen again.

The effects, therefore, of the fall in the value of silver on the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

trade of India will be temporary only, but its effect on the financial position of the Indian Government will continue as long as the fall lasts. The Indian revenue is received in silver, and, therefore the less far silver goes in buying, the poorer will the Indian Government be. And this is of more instant importance to the Indian Government than almost any other, because its foreign payments exceed those of most Governments, and those payments are made in gold. It has to pay interest in gold on a very large debt in England, to pay home salaries, maintain home depôts, and buy English goods and stores all in gold; and the less valuable silver is in comparison with gold, the less effectual for these necessary purposes will the Indian revenue be.

On one species of its debt the Indian Government will, indeed, not lose. The interest upon rupee paper is payable in rupees in Calcutta, and therefore the diminution in the value of the rupee is a loss to the creditor who receives, and not to the Government which pays.

How long the fall in the value of silver will continue no one can say. In the last resort, and taking great intervals of time into the reckoning, the relative value of gold and silver will be determined by their cost of production; but in the case of articles so durable, and so liable to be affected by political events like changes in coinage, it is difficult to say how long an average must be taken in order to exhibit distinctly this final result.

MR. MARTINEAU ON MATERIALISM.

(The Spectator.)

Professor Tyndall's reply in the November number of the *Contemporary Review* to Mr. Martineau's criticisms on some of the positions of his Belfast address in 1874, has elicited a rejoinder from Mr. Martineau in the new number of the same periodical, which in the clearness of its positions and the precision of its reasoning, should, at least, protect him against any reiteration of Professor Tyndall's accusation of want of lucidity in his style, and want of accuracy in his apprehensions of the issues discussed between them. Indeed to those who look out so much at the descriptions of physical phenomena referred to for purposes of illustration, as at the exposition of the intellectual assumptions involved in the scientific description of these phenomena, and the rational inferences drawn from them, it will appear, as we ventured to intimate in commenting on Professor Tyndall's paper in the November *Contemporary*, that the charge of vagueness of conception and looseness of exposition may be made with much more truth against his own presentation of the case than against Mr. Martineau's. Indeed, we defy any one to apprehend clearly what it is that Professor Tyndall meant to assert, when he derived all the various elaborate forms of life now existing from what he called the "potency" of matter, and what it is, on the other hand, that he was angry with his opponents for supposing that he meant to assert and earnestly protested that he refused to assert. If we are not mistaken, he will find that Mr. Martineau had a much clearer conception than he himself had of the intellectual creed shadowed forth in the Belfast address; nor need he be much abashed by the discovery, since it has been one of Mr. Martineau's chief works in life to discriminate accurately between the philosophical significance of various systems of thought, while it has been his own duty chiefly to push forward science rather than to analyse its logic, or to distinguish sharply its fundamental assumptions from the rationale of the methods it pursues and the conclusions which it gathers. At the same time, when the purport of a popular address such as that given at Belfast is distinctly philosophical, as distinguished from merely scientific, when it deals boldly with the great question of origin, and calmly relegates religion to the sphere of emotion, bidding it beware of meddling with the realm of knowledge, it is not perhaps too much to expect that the thinker who delivers it would have a clearer grasp of the belief he is endeavouring to spread than Professor Tyndall appears to have had in his Presidential address at the British Association. It will be, we believe, the destiny of that picturesque survey of the achievements and claims of Science to make converts to a system of Materialism in which it is, to say the least, doubtful whether Professor Tyndall has ever held, and tolerably clear that he never accurately understood.

Materialism may be practically defined as the philosophy which lavishes on the elementary material agencies discovered to be at work in the universe, the wonder and admiration which all religious creeds reserve for the Mind by which the believers in these creeds assume that those material agencies are moulded and expanded till they produce the results which we all see. Now, whether Professor Tyndall really intended to imply that this wonder and admiration ought to be lavished on those material atoms which contain, according to him, "the promise and potency of every form of life," or whether, as we somewhat incline to believe, he intended us to suspend our judgments absolutely as to the proper object of this wonder and admiration,—in fact, wished us to indulge the emotion without defining any object for it at all, while we studied the forms in which this feeling would be apt to express itself, if the intellect refused to come to any decision as to the proper object of the emotion,—it would be a rash thing to affirm with any sort of confidence. In criticising Professor Tyndall's thesis that human emotion, not knowledge, is the true foundation for a religious philosophy, Mr. Martineau had replied that so soon as emotion proved empty, he hoped we should stamp it out, and get rid of it. On this Professor Tyndall brought a charge against Mr. Martineau, that he was kicking away the only foundation of his own faith. Mr. Martineau, as we understand him, now rejoins that he did not in the least intend to depreciate the testimony which emotion may supply to the existence of a real object for it, but that what he meant to say was, that if the emotion is felt *without* a real object for it, if it makes us indulge in illusions as to an object which does not exist, if, in fact, it wraps us in a world of phantasm, instead of guiding us safely amid the realities of life, then, and then only, he hoped we might stamp it out. If, on the contrary, it be only a sign of something real, though as yet imperfectly apprehended, above and beyond us, then our effort ought to be to get a solid grasp, as far as our faculties admit, of the reality which arouses these emotions, but not to indulge them in the dark without any conviction that such an object really exists:—

"It is for 'emotion' with a vacuum within, and floating *in vacuo* without, charged with no thought and directed to no object, that I avow distrust; and if there be an 'over-shadowing awe' from the mere sense of a blank consciousness and an enveloping darkness, I can see in it no more than the negative condition of a religion yet to come. In human psychology, feeling, when it transcends sensation, is not without idea, and is but a type of idea; and to suppose 'an inward hue and temperature,' apart from an 'object of thought,' is to feign the impossible. Colour must lie upon form, and heat must spring from a focus, and declare itself upon a surface. If by 'referring religion to a region of emotion' is meant withdrawing it from the region of truth, and letting it pass into an undulation in the medium and with no direction, I must decline the surrender. In thus refusing support from 'empty emotion,' I said 'kick away the only *philosophic foundation* on which it is possible to build religion.' Professor Tyndall is certainly not exacting from his builders about the solidity of his 'foundation;' and it can be only a very light and airy architecture, not to say an imaginary one, that can spring from such base; and perhaps it does not matter that it should be unable to face the winds. Nor is the inconsistency involved in this statement less surprising than its levity. Religion, it appears, has a 'philosophical foundation.' But 'philosophy' investigates the ultimate ground of cognition and the organic unity of what the several sciences assume. And a 'philosophical foundation' is a legitimated first principle of some one of these; it is cognitive begining a *datum* of ulterior *quæsita*—and nothing but a science can have it. Religion, then, must be an organism of thought. Yet it is precisely in denial of this that my censor invents his new 'foundation.' Here, he tells us, we know nothing, we can think nothing; the intellectual life is dumb and blank; we do but blindly feel. How can a structure without truth repose on philosophy in its foundation?"

To this we cannot conceive any reply, unless it be that emotion may be properly aroused by even an unknown cause, when we contemplate the magnitude of the effects produced by it,—which is true, so long as the emotion is limited to one of pure surprise and desire to sound what is nevertheless not to be sounded. But then if it be so limited, it is quite certain that no religion can ever be got out of it. A religion, if it be a religion in anything but name, implies moral trust in something, but moral trust is wholly unwarrantable, if all that we see can be even more securely referred to matter as "the promise and potency of every form of life," than it can to any ulterior spiritual cause beyond matter which gave matter this "promise," and implanted in it, so far as it can be said to contain, this "potency." Mr. Martineau's argumentation in his new essay is wholly devoted to showing that in no sense can the higher forms of life be really educed out of the lower, unless you already assume as latent in the lower, the fullness of power which is eventually expressed in the higher. He analyses with great force and precision the real assumptions of the atomic theory so far only as the chemistry of the universe is supposed to be implicitly contained in its mechanics, and shows, as it seems to us unanswerably, that the only sense in which qualitative differences are explicable by the assumption of differences in the bare form and motion of otherwise homogeneous atoms, is a sense in which the hypothesis does not in the least *explain* the qualities thus resulting, but only finds for us a valuable scientific test and measure of their existence and their intensity—

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

just as the assumption as to the length of different waves of light, while it gives us a test and measure of the different colours, and enables us to predict the results of interferences, does not in the least explain the sensation of colour, any more than the expansion of the mercury or the spirit in the tube of a thermometer, while it measures for us the intensity of heat, gives us the slightest explanation of the sensations which accompany the various gradations of that heat in our own frames. Show, if you can, that the chemical qualities of a substance might be connected with the assumed form and vibratory velocities of the atoms of which it is composed, yet this only means that you have discovered certain uniform criteria of the relation between mechanical and chemical phenomena, by the help of which you can predict the latter from the study of the former. Does that make it at all more philosophical to say that the latter are contained in the former? Is the quality which we call heat (of sensation), in any way latent in the criterion which leads us to expect it? Is the beauty of the flower latent in the seed, even in conjunction with the earth and air and moisture which lend that seed the constituents of its growth? If so, as Mr. Crosskey, of Birmingham, finely put it in the masterly sermon which he preached before the British Assiciation last August at Bristol,* "in the attempt to reduce 'spirit' to 'matter,' matter is itself transfigured and becomes spirit." Or to quote the passage more at length :—

"The words 'promise' and 'potency,' as used by Tyndall, do exclude intellectual action or describe an imagined physical substitute for a 'Father in heaven.' 'Potency'—for what? Power exercised according to method is equivalent to power guided by controlling thought—and where there is controlling thought, the Lord of the Heavens and the earth is near at hand. In the last analysis matter itself disappears in any tangible sense, and force alone remains. What is force restricted to definite combinations, but the expression of a determining will? When 'promise' is connected with 'potency,' there must be that forecasting of the future of which we know nothing except as a mental act. If qualities commonly described as mental are referred to the 'promise and potency' associated with 'matter,' mind is not degraded to matter, but matter is uplifted to mind. The tendency of philosophical materialism is not to scepticism, but to idealism. The resolution of matter into force, and the attribution to force of those mighty qualities, connected with ordered intellectual action, render the phenomena of the universe the manifestation of an authority possessed of every characteristic the Christian ascribes to his God. In the attempt to reduce 'spirit' to 'matter,' matter is itself transfigured and becomes spirit."

To apply the same argument in a particular case,—in what sense can the "struggle for existence," which Mr. Darwin has found to be so efficient a cause in superseding lower by higher forms of life, —in other words, in producing a "survival of the fittest,"—be said to contain the "promise and potency" of the higher forms of human pity and sympathy, except only in this, that as a matter of fact, the one can be traced back in lineal descent to the other, though it so far transcends and indeed disguises the features of its ancestor, that the two are more like deadly antagonists than near relations? You can trace the steps of the descent, but it is mere folly to say in the case that the antecedent in any true sense carried within it the essential life of the consequent. And so, too, what spiritualists maintain, they maintain on strictly rational grounds. Man, as a speculative being, finds it reasonable to recognise in such transformations as these the moulding power of a Mind which sees the end from the beginning, rather than the magic transformations of a force which is always adding to its own conquests, without any pretence of being guided by the intellectual plan of a conqueror, and which is always improving on its former achievements without any standard by which to measure the better and the worse, or any goal at which its endeavours are aiming. To go back once more to the atomic theory, with which Mr. Martineau in this paper has chiefly dealt, it seem to us that he has really justified Sir John Herschel and Professor Clerk Maxwell in their assertion that even assuming the atomic hypothesis to be so elaborated and established as to account for the phenomena of chemistry, —which as yet it is far from being,—the atoms so assumed must be regarded as resembling much more closely "manufactured articles,"—*i.e.*, articles fully of properties carefully induced in them,- than those bare and blank units of solidity which the true materialistic hypothesis requires. In other words, the different atoms must already be distinguished by such remarkable differences of form and capacity for vibration, that it is certainly not wonderful that they result in different qualitative properties if they result in qualitative properties at all. Yet the fact that difference in form and vibratory character, is a note of some coming difference of quality, remains just as inexplicable, and as in need of a philosophic assumption to explain it, as the fact that the law of conflict and competition ultimately results in a law of sympathy and compassion. "No connection" says Mr. Croskey, in the admirable sermon to which we have already referred, "that may be established between the act of thinking and the peculiarities of our bodily organisation, can alter the fact that to exist as beings capable of thought and moved by passion, implies relationships which the elements into which our flesh and blood may be resolved, do not share." And till Professor Tyndall can show that it is not a more legitimate intellectual inference to refer the less to the greater, than it is to refer the greater to the less, he will hardly be able to justify his own strange teaching that religion is concerned only with the region of emotion, and that he who tries to evolve a religious creed from the operations of *all* the higher faculties of man, instead of from mere blind feeling, is on a false scent, in which he will only mislead mankind, and prepare for himself a heavy disappointment.

* *The Religious Worth and Glory of Scientific Research.* A Discourse delivered in the Lewin's Mead Chapel, Bristol, on Sunday, August 29th, 1875, on occasion of the Forty-fifth Meeting of the British Association for the Advancement of Science. By Henry William Crosskey, F.G.S. London: Whitfield.

ARRIVALS.

Apr. 1, *Saco*, American corvette, Captain McDougall, 900, from Nagasaki, Mar. 27.

Apr. 2, *Willard Mudgett*, American barque, Dickey, 875, from Nagasaki, Mar. 24, Coal, to Pacific Mail Co.

Apr. 3 *Tanais*, French steamer, Reynier, 1,010, from Hongkong, Mar. 25, Mails and General, to M. M. Co.

Apr. 5, *Sunda*, British steamer, Edmonds, 1,680, from Hongkong, Mar. 27, Mails and General, to P. & O. Co.

Apr. 5. *Gaelic*, British steamer, W. H. Kidley, 2,652, from San Francisco, Mar. 16, Mails and General, to O. & O. Co.

Apr. 5. *Tennessee*, American frigate (flag ship), Captain Law, 2,100, 14 guns, from Nagasaki, Mar. 30.

Apr. 5, *Eme*, British ship, Sproule, 773, from Hakodate, Mar. 31, Ice to H Allen.

Apr. 6, *Diana*, German brig, Jacobsen 164, from Takao, Mar. 18, Sugar, to Knüffler & Co.

April 6, *Genkai Maru*, Japanese steamer, Connor, 1,917, from Shanghai and ports, March 29, General, to M. B. S. S. Co.

April 6. *Columbian*, British steamer, Harvey, 2,283, from Shanghai and ports, March 29, General, to P. & O. Co.

DEPARTURES.

Apr. 3, *Meiji Maru*, Imperial Government steamer, Peters, for the N. E. coast of Japan with mining stores and material.

Apr. 4. *Bombay*, British steamer, Smith, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.

Apr. 5, *Kolga*, German barque, Kiölseth, 380, for Takao, Ballast, despatched by Captain

Apr. 5, *Hiroshima Maru*, Japanese steamer, Furber, 1,869, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Apr. 6. *Gaelic*, British steamer, Kidley, 2,652, for Hongkong, Mails and General, despatched by O. & O. Co.

Apr. 8, *Flintshire*, British steamer, Reynolds, for Kobe, General, despatched by Jardine, Matheson & Co.

PASSENGERS.

By *Meiji Maru*; four passengers attached to the Imperial Mining Department.

Per Steamship *Tanais* from Hongkong.—F. Augt. Luhdorf and wife, C. J. Van Doom, A. Schenck, C. Hart.

Per Steamship *Bombay* for Hongkong —Messrs. Hudson, Woodhead and Groves, Mr. and Mrs. Lockyer.

Per British steamer *Gaelic*, from San Francisco. For Yokohama. —Mr. Norman Wiard, son and servant. For Shanghai.—Mr. E. P. Hague and wife, and 1 European, in the steerage. For Hongkong.—Mr. C. V. Lang, and 56 Chinese in the steerage.

Per Steamship *Sunda* from Hongkong —Marquis of Kildare, Honb. A Cole, Captain Saunders, Dr Willis, Captain Alderton, Mr. Chung, M. Wukee, and 2 Chinese on deck

Per Japanese steamer *Genkai Maru*, from Shanghai and ports.— Mr. and Mrs. Campbell and child, Miss Snowden, Mrs. Wise, Mrs. White and child, Mr. and Mrs. Fay, Messrs. R. H. Percival,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Gunkler, Cuthbertson, Fromliez, Cocking, J. H. Duus, S. Anderson, M. Mariam, Capt. Harper, and 34 Japanese in the cabin. For Liverpool.—Mr. and Mrs Scarborough.

Per Steamship *Hiroshima Maru* for Shanghai and ports.—Messrs. Ponuta, Nakagawa, Iwasaki, Iwaski, Harde, A. Schenck, Mr. and Mrs. Luhdoof, Shimadzu, Prince of Satsuma and suite, Dr. Perkins Mrs. Toyama, Messrs. Luki, Shimomura, Harada, Saigo, Tokunaga, Sano, Ullman, A. T. Griffin, Shinagawa, Katsa, Ankersmith, Schenten, Ahrens, Nakata, Egawa, Mr. and Mrs. Hague, Mr. and Mrs. Leavitt, Miss Barrons, and Miss Starkweather; and 374 Japanese, 4 Chinese and 5 Europeans in the steerage.

Per Steamship *Columbian*, from Shanghai and ports.—Messrs. Nachtigal, North, J. C. Boyce, W. Jaffray H. W. Daniels, W. Hamilton, H. Joseph, Hickley, McCulloch, Sutor, Miss Odell, Skibara, Asayi, Matsuda, Osturi, and 140 Japanese, in the steerage.

CARGOES.

Per Steamship *Bombay* for Hongkong.—

Silk to France	...	72 bales.
Italy	...	3 "
England	...	96 "
Total	...	...171 bales.

Per Steamship *Hiroshima Maru* for Shanghai and ports.—
Treasure 23,970

Per Steamship *Genkai Maru*, from Shanghai and ports:—
Treasure $30,000

REPORTS.

The *Sunda* reports leaving Hongkong at 6 a.m., March 27th, and at 9 same morning had to stop the engine for some slight repairs. Proceeded again at noon: had very heavy weather with strong N.E. gales, heavy sea and a good deal of fog.

The *Gaelic* reports: left San Francisco March 16th, 1876, at 12.10 p.m., with 5 cabin passengers, 2 European steerage, 56 Chinese steerage, 730 tons cargo, 9 pkgs treasure, and fifteen pkgs. mails. Experienced variable winds during passage. Arrived at Yokohama April 5th, at 5.30 a.m. Running time 18 ds. 17 hr. 20'

The German brig *Diana* reports very severe weather throughout her passage.

The British ship *Leicester*, came down from Shinagawa yesterday forenoon, and will remain here a day or two to take in any light freight that may offer.

The Norwegian barque *Hafresfjord* having taken in sufficient rice here for stiffening, was towed up to Shinagawa yesterday afternoon, there to complete her cargo for Melbourne.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—In the earlier part of closing fortnight there were some indications of a better feeling in the market which the upward movement of exchange tended to strengthen. As we close, however, trade is quiet and prices show, if anything, a receding tendency for many articles, 38 42 *Yarns* and *Taffachelass* remaining unsaleable. Purchases have been restricted to current wants and quotations are nominal.

Grey Shirtings:—					
7 lbs.	38½ yds. 39 in.	per pce....	$1.90	to	$2.20
8 lbs.	38½ yds. 44 in.	,, ...	2.20	to	2.50
8 lbs. 4 to 8 lbs.	38½ ,, 39 in.	,, ...	2.20	to	2.50
9 lbs.	38½ ,, 44 in.	,, ...	2.50	to	2.90
White Shirtings:—					
60 to 64 reed 40 yds. 35 in. nom.		per pce ...	2.10	to	2.30
Turkey Reds 24 yds. 30 in. 2¼—3 lb.		per lb...	0.75	to	1.05
Black Velvets			8.00	to	9.00
English Drills 15 lb. 40 yds, 30 in....			3.30	to	3.45
Taffachelass	12 yds, 43 in....	*nom.*	2.00		

Yarns.—

No. 16 to 24	per picul...	$31.00	to	34.50	
No. 28 to 32	per picul...	$34.00	to	40.00	
No. 38 to 42	per picul...	$41.00	to	45.00	nom.
Reverse Twist ... 16 24 ...	,, ...	$34.00	nom.		

Woollens.—The market is unusually quiet owing to diminished enquiry and the coming warm season. Few transactions worthy of notice have occurred and prices continue therefore nominal.

Plain Orleans	40—42 yds. 32 in....	6.50	to	8.00	
Figured Orleans	29—30 yds. 31 in....	4.75	to	5.25	
Chimagoro	30 yds. 30 in....	5.25	to	5.75

Iron and Metals.—Induced to do so by the low rates which prevail, dealers have shown a greater desire to purchase, and fairly large sales of bar and rod iron have been made at current rates. We quote:—

Iron flat and round...	...per picul... ...	$3.30	to	$4.00	
,, nail rod assorted ...	,, ...	2.75	to	3.50	
,, small size...	,, ...	3.60	to	4.00	
Iron hoop	...per picul	$4.00	to	4.50	
,, pig	,, ...	1.50	to	2.00	

Sugar.—In consequence of further arrivals Formosa Sugar continues to decline. No sales have been reported since the 1st instant, and stocks are still large and accumulating.

The market for China descriptions is unchanged.

Sugar:—Formosa in bag	...per picul....	3.30			
in Basket	,, ...	3.15	to	3.20

Japan Rice	,, ...				
Kerosine Oil	per case ...	2.47½			

Kerosene Oil.—Quotations are nominal, holders continuing firm in their demands.

EXPORTS.

Silk.—Since the 25th inst., settlements are 275 bales of Hanks, 100 of Oshiu and 125 of filature. Exchange has risen nearly 3½ per cent, but we have no change to report in prices, most of which are nominal as supplies being inadequate to the demand the stock on offer is reduced to about 150 bales.

The product of the Imperial steam filature of Tomioka has for the first time been placed in the open market, and is, we understand, held at $710.

The shipments of the fortnight are 407 bales, making the total export since the 1st July 12,108 bales against 9,771 last year for the corresponding period.

		At Exchange 3s. 11½ in London.	*At Exchange 55.0 at 6 m.s. in Lyons.*

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 16.] YOKOHAMA, SATURDAY, APRIL, 15, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTHS.

On the 11th instant, the wife of JOHN WALTER, of a daughter.

DIED.

On the 13th instant, at No. 84. Bluff, Yokohama, ELIZA, daughter of the late Paul Lepper, Esq., Quebec and wife of MR. RICHARD J. WALISH, formerly of Yonkers, N.Y., aged 40 years.

(New York, Canada, and St. Paul, Minn. papers please copy.)

Notes of the Week.

The week has been a quiet one, devoted, at least here, more to holiday than to work. There has been apparently little of movement in Tokio or news of interest. The native papers are speculating upon the reasons which induced Kido to resign his post, and led to Goto's being relieved of office, but are barren of all matter of importance.

We read in the *London & China Express:*

The Japanese Government have applied to the Italian Government for three professors to fill three chairs of architectural drawing, ornamentation, and sculptural painting in the Academy of Fine Arts recently founded. These professors must engage themselves for a period of five years; they will receive a payment of 20,000 francs a year, besides lodging, and the expenses of their journey.

Kido's resignation of office as *Sangi* was accepted by the Government on the 28th ultimo. The *Nichi Nichi* has heard that his appointment to the office of *Naikaku Komon* (Councillor) was made on the same day. The emoluments of the office are stated to be 3,000 *yen* yearly.

The *Nichi Nichi* speaks of the ardour with which Buddhists as well as the Christian Missionaries are now engaged in promulgating their respective tenets in Hakodate. But the *Shintó* priesthood, it is added, has apparently disappeared altogether.

After attending the Council yesterday morning H. M. the Mikado proceeded to visit the paper mills of Oji. He was attended by Iwakura and other gentlemen of his *suite*. His Majesty partook of luncheon at a neighbouring tea-house and subsequently honoured Kido with a visit at his house at Somei, where he was met by the various members of the Ministry.

We read the following in the native papers:—

Several officials have received rewards of various amounts in consideration of their services during the Saga insurrection in 1874.

It is reported that eight Chinamen, residing at Tsukidji in Yedo, were apprehended on the 11th instant on the charge of smoking opium.

A hotel in the foreign style has been opened at Uyeno. It is named the Seiyoken, and is a branch of an establishment of that name in Tsukidji.

The streets of Yedo are shortly to be repaired; the large sum of two millions of *yen* have been allotted to the purpose.

Another writer on the staff of the unlucky *Hioron Shimbun* has been before the Yedo Saibansho. We do not find his sentence recorded.

Since the abolition by legal enactment of bull-baiting in England we had imagined all other forms of this sport to be localised in the peninsula of Europe. A bull-fight has, however, narrowly escaped coming off at Takasaki, in Joshiu, where a large number of spectators had assembled together to witness an exciting combat. The bulls would seem, however, to have been of too peaceful a disposition to lend themselves to the diversion, and though no doubt goaded to the extreme limits of their mild temper, could not—much to the annoyance of their patrons—be prevailed upon to fight.

A decided discouragement to bull-fights as a speculation was afforded in the result. The money was returned to the spectators of the failure, but as these included among them many who had not paid for their entrance to the arena, the enterprise of the *impresario* will show a Flemish account of the day's performance.

It is stated by the *Hochi Shimbun* that the noted paper mills of Oji will shortly be purchased by the State for the use of the paper money department of the Treasury.

At a Court held by H. M. The Queen, at Buckingham Palace, on the 25th of February, the wife of Uyeno, Minister to England had the honour to be presented to Her Majesty by the Countess of Derby.

The sudden withdrawal of their "stroke" from illness has somewhat imperilled the chances of the Yokohama crew at the approaching Regatta at Kobé and unless their "coach," fortified with his university experiences, be able to throw these into the scale, some apprehension may fairly be entertained as to their fate. A preliminary "spin" on Tuesday, however, with a scratch crew of boating men exhibited them in excellent training form and well able to give a good account of their adversaries. It is much to be hoped for the honour of Yokohama that Mr. Litchfield may yet be able to take part in the race and lead his crews to victory.

The Spectator, writing of Mr. Crookes late discovery which has attracted so much attention, says:—

Mr. Crookes has applied his remarkable discovery that radiated light exercises a repelling force in a vacuum to *weigh* the light of a candle. He uses the repelling power so as to twist a certain glass thread round and round, and the number of turns required to untwist it again is registered on a scale, and supplies a measure of the twisting power exerted. A little iron weight of one hundredth of a grain which is within the tube is lifted by a magnet on to the little cross-bar, and the torsion caused by its weight is observed in the manner explained Then the light of the candle was tried in the way, and it was

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

found that while the iron weight of a hundredth of a grain caused a torsion of 10.021 degrees, the candle caused a torsion of only 1.628 degrees, or a torsion between a sixth and a seventh of that due to the iron bar. In other words, the impulse due to the light of the candle was weighed. Mr. Crookes calculates that the force exerted by the sun's light is equal to 32 grains on the square foot, or 75 tons on the square mile, or three thousand millions of tons on the whole earth, a repellent force which, but for the far more powerful attractive force of gravitation, would drive the earth off into space. As not a little of the invigorating effect of fine weather is said to be due to the increased pressure of the atmosphere, so it is possible that the stimulus certainly given by light to the nervous system may be partly due to this minute pressure.

Does it not appear strange that calculations based upon the theory of gravitation alone, *i. e.* which take no cognizance of the dynamical value of light, and which are yet so perfectly verified as they were in the discovery of the planet Neptune by the inverse problem of perturbations, should accord with observed results, if there is another such force at work as that which Professor Crookes has discovered? We have heard during the week that the force supposed by Mr. Crookes to proceed from light is actually due to the action of heat, and that the true inferences from his experiment are given in *Nature*. But we have carefully looked through the pages of its recent numbers without finding anything of the kind, and it is impossible that the *Spectator* of the 19th February, from which the above note is taken, should be misinformed upon the facts.

From the "Japan Mail Dail Advertiser."

The *Choya Shimbun* announces that Mr. Goto's resignation was accepted by the Ministry on the 28th March.

It is announced that in consequence of the rupture of the cable between Awomori and Hakodate a small additional charge will be made for messages until communication is again restored.

The Tokio *Fu* have issued a Notification concerning street vendors, musicians, &c., intimating that the grounds of Uyeno are to be converted into a public garden, and forbidding them to exercise their several callings there henceforward.

The latest curiosity, the Singapore elephant—a very small and uninteresting specimen by the way—having exhausted all the spare coin of the native sightseers of Yokohama and district will be removed to Tokio within a few days where it is intended to exhibit it at Asakusa.

Narutomi Hiyokage, at present Japanese Consul at Kushinkotan in Sagahlien, has been presented with the sum of $500 in consideration of his services in China during the Formosa negotiations.

The Petroleum Company of Yedo has, according to a Japanese newspaper, announced its bankruptcy after a somewhat unusual fashion. The Company, it would seem, finding itself unable to pay its debt to a foreign creditor formerly in its employment, caused a notice of its bankruptcy to be placed in a finely ornamented frame, hung with purple crape, and placed it in a prominent position in the front of their buildings. The editor moralises upon this mode of celebrating a commercial disaster.

A tolerably severe earthquake shock was felt at a few minutes after 2 a.m., on Tuesday, and a slighter shock at 7.10 o'clock on Wednesday morning.

The former Daimio of Tzuwano has recently presented a sum of 3,000 *yen* to his former retainers.

The students of the common schools of Yedo, we read in the *Hochi Shimbun*, have been undergoing examination since the 4th instant.

It adds that there are in the capital 170 primary schools, and that of these some 55 are private establishments.

The vacancy occasioned by the retirement of Goto, late Vice-President of the *Genro-In*, will, it is said, be filled by Prince Arisugawa no Miya.

Notwithstanding the discouragement offered by the Government to the traffic in rabbits there are, the *Hochi Shimbun* thinks, strong symptoms of the revival of this form of gambling in the capital at present. The secret trade in these animals is suspected to be very large, but there are many, the writer hears, who pay the tax and continue their dealings publicly. It would appear that the demand runs upon white rabbits with black eyes and black rabbits with red eyes: for these abnormal creatures 100 *yen* are willingly paid.

Two serious fires are reported to have occurred in the Interior. One of these took place at Fukuyama in Yezzo and destroyed 200 houses; by the other at Obatamura in Choshiu 220 families were rendered homeless.

The editor of a newspaper published in Shinshu has been adjudged imprisonment for 30 days and a fine of 10 *yen* for having violated the press-laws.

Four new members have been recently appointed to the *Genro-In*.

A hall of about forty-eight feet square will shortly be opened in the Tokio *Fu*. It is intended as a place for holding discussions on public questions, and it is probable that the meetings of *Kucho* and *Kocho* will be held there.

The *Nichi Nichi* hears that a sub-sect of the *Nichi-ren* Buddhists, hitherto prohibited from promulgating its tenets, has obtained sanction from the Government to teach its doctrines publicly.

The late proclamation would appear to have brought a large number of swords into the market. Availing themselves of the low value to which they have now fallen, certain speculative merchants in Yedo are making extensive purchases with the view of consigning them abroad.

The *Hochi Shimbun* relates that as a party of tile-makers were getting earth in a dried-up pond at Udanomura near Osaka, they were surprised to meet with a considerable escape of gas from beneath the ground they were digging, and on the 3rd instant, much to their alarm, a jet of flame issued from the ground. The event has created much excitement locally, and on the 5th instant the Governor of Osaka visited the spot.

A "Daniel has come to judgment" in the unexpected form of a constable of the Yedo Municipal Police, whose judicial acumen is thought worthy of being chronicled by the *Akebono* in the following story:—

A well-dressed man who was passing near the Suyabashi in Yedo hailed a *jinrikisha* man and enquired his fare to Nihonbashi. The coolie replied, "One *shu* and two *sen*." "How," said the well-dressed fellow, "so much! I should not mind drawing it so far myself for two *sen*, and cannot see why you should demand more." "In that case," said the coolie, seating himself, "you shall have an opportunity of gratifying yourself with a little exercise. I will travel and you shall pull me. Drive on." To this however his interlocutor would by no means assent; the dialogue grew warm; and the wordy war between the disputants soon brought a constable to the scene, to whom the contention was submitted with the following result: The would-be hirer, having himself fixed the tariff, was condemned to draw the *jinrikisha*, and the coolie, having undertaken to pay two *sen* should ride as passenger. The verdict was carried out.

The following are the shipments of tea per O. & O. S. S. *Belgic*.

MR. BLACK'S CASE.

BY publishing the correspondence between himself and H. B. M. Vice-Consul in Yedo on the subject of his claim on the Japanese Government for the suppression of his newspaper the *Bankoku Shimbun*, seven days after its birth, MR. BLACK has appealed to public opinion, and must not be disturbed if it does not entirely coincide with his own. Assuming his statement of the antecedent facts to be true, the history of the affair seems to be as follows.

In the year 1872 Mr. BLACK received a special permission from the Japanese Government to publish a newspaper in the Japanese language in Tokio, and accordingly established the *Nisshin Shinjishi*. His outlay upon it was considerable; he conducted it for two years without pecuniary success; but the tide turned at last and the enterprise became profitable. Towards the end of 1874, the Government issued the code of Press laws which has since attracted so much notice, and one of which is that no foreigner should be the proprietor or editor of a Japanese newspaper—obviously because he could not be rendered amenable to Japanese law. Mr. BLACK, however, had received a prior permission to publish his paper, and the question arose how he was to be got rid of. A trick was resorted to, according to Mr. BLACK, and it tallies with everything we know of the oriental character. A Mr. HOSOKAWA HIROYU, one of the Secretaries of the *Sa In*, appeared and asked Mr. BLACK if he would assist the Government in establishing the *Min Sen Gi In* (the Popular Representation Deliberation Assembly)—we use his own words here, on account of the extreme comicality of the whole affair. "A day or two afterwards," the narrative says, "he called again and told me that *Sa In*"—why is this mysterious institution thus spoken of as a personality?—"wished me to become an official of that department, as it would be inconvenient to send to my newspaper office to consult me." The question of salary was arranged, "on the distinct understanding," says Mr. BLACK, "that I should retain my interest in the paper." At a subsequent interview he was informed that as Japanese officials are not permitted to enter into business engagements, it would be necessary, *for form's sake*, for him to take his name off the face of the paper; while at the next interview, the further step was insisted upon that the name of the paper must be removed from the registry of the Mombusho. Objections appear to have been made by Mr. BLACK, but they were one by one overridden by the man in the shining garments,—the whole story will recall the appearance of The Flatterer to Christian and Hopeful, how they fell into his toils, and were released by one of the shining ones, though only after a free use of his whip of small cords—and Mr. BLACK was, as he says, cajoled into accepting the required conditions. Is it always in vain that the net is spread in the sight of any bird? Among these conditions was one that his engagement was for two years, but could be terminated by the Japanese on three months notice. He naturally enough represented that this was merely a three months' engagement, but having no suspicions of the good faith of his employers, he appears to have banished all misgivings and swallowed the glittering bait. No sooner had he entered upon his official duties than he discovered the trick which had been put upon him. He was never required for the purposes stated, and soon saw that he had been made an officer of the *Sa In* for the sole purpose of getting his name off the register as the proprietor of a Japanese newspaper. The Press-laws were issued not very long after, and Mr. BLACK'S services were dispensed with agreeably to the terms of his contract. In order to counter-check the Japanese he betook himself to Tsukidji, the foreign settlement of Tokio, and there set up the *Bankoku Shimbun*, a newspaper which would probably have never been heard of outside Japan had it lived for a hundred years, but which, in a life of seven days, has achieved a name in history:—

A life too short for fortune, not for fame.

Within a week of its birth, the issue of the newspaper was stopped by the Government, and, in twenty-four separate clauses, numbered *seriatim*, Mr. BLACK sums up the grounds of his claim on the Government, which he estimates with scientific accuracy, according to the annuity tables of the British Government, at £13,100 or 65,500 *yen*. This claim, which, Mr. BLACK says, is the very least he can make, was sent in to Mr. PLUNKETT,—at that time in charge of the British Legation during Sir H. PARKES' absence,—who, however, did not feel justified in submitting it to the Japanese Minister for Foreign Affairs, though he expressed to Mr. TERASHIMA his opinion that Mr. BLACK might justly have some compensation awarded him "for his loss of time while engaged on the publication of the paper."

Now, we shall not deny that Mr. BLACK has, if his statements are correct, been very badly treated by the *Sa-In*. To urge one word in extenuation of a trick like that by which he was induced to give up his paper and become an official of the *Sa-In*, for the sole purpose of evading a difficulty which ought to have been overcome by straightforward and open negotiation, would be to abandon the manly frankness of European ethics for the trickery which from time immemorial has constituted the ideal of cleverness among all the oriental nations. But, we would have Mr. BLACK remember that he went into the affair with his eyes wide open—however much their sense may have been shut. He lent himself to Mr. HIROYU'S suggestion to evade the provision of the Japanese official code that no employé of the Government should engage in any occupation external to his official duties, and he bound himself by a contract, which was literally fulfilled by the *Sa In*, though the representations, and even promises, under which he was induced to enter into it, were set at naught and broken. Far from defending any such conduct on the part of the officers of the *Sa-In*, we think it was mean and dirty—there are no other fitting terms—in a high degree. But Mr. BLACK destroys all our sympathy for him in making the extravagant and preposterous claim he sets up, which, indeed, is so absurd, and is yet so seriously urged, that we fear he does not take very solid views of life, its obligations and contingencies. To calculate the revenue derivable from an enterprize like a newspaper, or any other business, on the terms of a Government annuity which is practically as certain to be paid as the sun is certain to rise to-morrow morning, is so exquisitely absurd that we have to go to Mr. Micawber or Harold Skimpole for any analogy for it. These may be the relations of money to human affairs in some other planet, but they surely do not hold good in this world. We do not wish to say anything which shall wound Mr. BLACK'S feelings at a time when the disappointments connected with his enterprises in Japanese journalism must weigh seriously upon him. But his first step in these affairs, as we have shewn, involved an evasion of the rules binding upon Japanese officials, into whose ranks he was entering, while his second step was a deliberate flying in the face of Japanese Municipal law, in which he hoped apparently for the support of the BRITISH MINISTER. This support Sir HARRY PARKES has not thought it consonant with his duty to

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

afford, and we have some time since fully stated the grounds on which we think his action will be approved at home. The fears which have been expressed in relation to this question appear to us to have but a small foundation. The word newspaper to which the notification solely applied, is capable of moderately exact definition,and is but of small circumference, however full of meaning within that boundary. We cannot conceive any more radically unjust and unjustifiable interference with the sovereign rights of a Government than that involved in the course Sir HARRY PARKES has been blamed for not pursuing. The liberty of the Press is not an end, but a means—a means whereby nations may advance in the path of good government, and whereby the individual members of the nation may become firmer and stronger members of the body politic. But this liberty cannot be administered as a specific without danger of the imputation and the consequences of quackery, and there is ample reason for thinking that the political state of this country could as little bear the action of a perfectly free press, as a free press in Japan could be trusted to use its vast powers with that wisdom and prudence which alone would render them useful and beneficial.

We doubt whether it would be possible to show the utter weakness of Mr. BLACK's case better than by transcribing the concluding words of his last letter to Mr. DOHMEN, while in doing so we are giving him the opportunity of speaking for himself. He says:—"But the broad stand I take is on my rights as an Englishman, to publish anything I like in any language I please; always, of course, subject to the laws of my country, which are ample to pursue and punish me if I write or publish sedition or libel." If Mr. BLACK will repeat in Russia, Prussia or France the experiment he has made in Tokio, he will soon see how far English law will protect him. It is idle for him to plead that in those countries he is not under English law. We refer him to his "broad stand," the visionary nature of which is only equalled by that of his claim.

SPIRIT OF THE JAPANESE PRESS.

ADVICE TO THE SHIDZOKU.

(Choya Shimbun.)

The wealth of a country depends much upon the manufacturing industry which it possesses. If this does not exist, such articles as clothes and the thousand objects of daily use must be purchased from foreign countries, and this would tend to impoverish a country. Now our foreign trade has assumed very considerable proportions, but we have been seized with a vain desire of imitating foreign countries of a higher condition of civilization. The value of what we buy from them greatly exceeds the value of our exports, and this causes patriotic men to fear the eventual bankruptcy of the Okurasho. It appears to me, however, that there are many ways by which such a catastrophe may be averted, one of which is the promotion of the industries of the country.

The *kadzoku* and *shidzoku* are receiving pensions, and the fruitlessness of this must be apparent even to children, so that it is unnecessary to say much on this part of the question. Latterly some of the *shidzoku* seem to have been persuaded of the violation of natural laws involved in this course, and a desire to pursue some useful avocation has shewn itself among them. Our wish is that the Government should assist these men on the road of industry, in order that those who are only half inclined to this course may commence business and thus support themselves independently. They will find perhaps that manufacturing is no easy task, but it is certainly easier than working under a burning sun during the summer or in deep snow in winter, as the farmers are forced to do, and they will have the further advantage of not being led astray by cunning merchants and involved in bankruptcy by a single transaction, as has been the case with many of the *shidzoku* who went into business. Thus, manufacturing and industries of this nature are the very things to suit the *shidzoku*.

But we have discovered the reason why the *shidzoku* cannot make up their minds to go into business. We see thousands of them seeking for official employment. All of them desire a *maximum* of pay and a *minimum* of work, and as the Government offices are just the places for this, they desire to enter them. There is scarcely a quarter in the whole empire from which *shidzoku* have not come for this purpose to Tokio, and so strong is the desire for office that all the old manly sensitiveness to honour and disgrace has apparently disappeared from among them them and been replaced by an ominous spirit of sycophancy. Were we, by way of trial, to reduce official salaries twenty-five per cent and correspondingly increase the amount of labour, we do not think there is a single official who would resign his post, though he would be a loser to the extent of fifty per cent, for he would know that he could not get so good a salary elsewhere. It would seem therefore that the average rate of official pay is too high. Let us suppose, for instance, that there is some article worth thirty dollars in Europe, but which, transported to an oriental country, fetches a hundred dollars. We cannot say that its actual value is a hundred dollars, for it was a mere piece of folly to buy it at such a price. In all probability it would have been sold cheaper, but the seller naturally wanted to get as much as possible for it, and took this price although aware that it was much above the value of the article. The same process goes on in the minds of the *shidzoku*, and they cannot muster up courage enough to take to industrial occupations. Of course, the blame does not lie with them alone. It must be shared by the Government for paying its servants so much more than their real value.

Some people deny that the *shidzoku* are actuated by these feelings, and say that many of them possess ideas which they desire to turn to the benefit of the nation, which they cannot do except in the channel of official life, and that this is their reason for seeking Government employment. It appears to us, however, that plenty of good might be done to the nation, outside official life, by men who will make resolutions to be industrious and carry them out. We hope, therefore, that the Government will reduce the salaries of officials and increase their duties as much as possible, thus forcing idle men to work. Men of ability, also, ought alone to be chosen for official appointments, and not men whose only accomplishment is flattery. This would soon make the *shidzoku* forsake their foolish craving for office and turn them into industrious men. By these means the wealth of the country would be quickly promoted.

YEDO MIMPEI.

THE MITSU-BISHI AND THE P. & O. CO.

(Choya Shimbun.)

I have lately seen articles in several of the newspapers to the effect that there are some Japanese of note who are rendering assistance to the P. & O. Company which is now an opposition line to the Mitzu Bishi Company—and who say that it is wrong and unpatriotic for Japanese to aid that Company. Now I am wholly unacquainted with the Japanese who are giving this assistance, nor do I know for what reason they are doing so. I think, too, that it may be reasonable for the several newspapers to argue in the above manner. But, for all this, speaking for myself it is my greatest wish the P. & O. may not be beaten by its competitor but may exist for ever.

If any one ask why, I would make the immediate reply that I like to see the rates of passage and freight as low as possible. From the time that the Pacific Mail Company ceased to run its steamers on the coast up to the time that the P. & O. commenced running, the rates were exceedingly high. But as soon as the advertisement that the P. & O. were going to run steamers on the coast made its appearance, the Mitsu Bishi lowered its rates of passage and freight very considerably, and I do not believe that the Mitsu Bishi Company would have made this reduction if the P. & O. Company not had started. But, as things stand now, the conveyance of merchandise to different parts of the country at the present low rates of freight tends to increase the wealth of the country. It is unnecessary to argue this point, for we have actual proofs before us. Before the P. & O. commenced to run, the steamers of the Mitsu Bishi Company did not carry many passengers, nor did they always have enough of freight, but now since the opposition commenced the number of the passengers has vastly increased, and the steamers of both companies have usually been filled with freight each trip, and at times in certain trips the companies have had more freight than their ships could conveniently carry.

We can, after seeing this, say that the P. & O. is benefiting our country and that the Japanese who aid it are patriotic. Some say that it is very well for companies to run opposition lines and to bene-

Digitized by Google
UNIVERSITY OF CALIFORNIA

fit our country thereby, but it is not very pleasing to have competition between Japanese and foreigners—so, when such occurences take place, all Japanese must put their forces together to overcome such a foreign competition—and when we have overcome it then we must carry on competition among ourselves, for otherwise loss may be incurred on our side I do not believe this, for no competition like the present can be carried on among the Japanese alone. When running under such competition it is true that the companies must lose to a certain extent, but all that loss is more than gained by the travellers and merchants from the low price of passage and freight, and thereby the loss from a single source benefits thousands, so there is not the least harm done to "our side." Now to have such an opposition as this continue for a long time, requires powerful companies, and it can be carried on by no other company in Japan. Moreover, the Mitsu Bishi are extensively aided by the Government, and for a Japanese company to attempt to run an opposition line against the existing line is just like running an opposition against the Government, and this we fear no Japanese will ever attempt. Others say it cannot be affirmed with certainty that the Mitsu Bishi Company will not finally be beaten. I would then reply that the Mitsu Bishi Company is receiving a subsidy from the Government, and this the Government does not give the Company in order that the Company may avail itself of large profits, nor does the Government intend to make money under the name of the Mitsu Bishi Company. It gives that enormous subsidy so as to benefit the nation by affording to the people conveniences of trading and travelling, and this subsidy is therefore very different from such money as that which is lent for the purpose of collecting an annual or monthly interest, and probably will be continued as long as the Government sees that it does actual good to the country, so it is not very probable that the Mitsu Bishi Company will very soon be beaten. The late regulations for Japanese travelling in foreign vessels were probably made for the purpose of protecting the people, and this will surely prevent all Japanese who dislike trouble from travelling in foreign vessels, those of the P. & O. Company especially. If the P. & O. should be beaten by this policy, then the Mitzu Bishi would in all probability lose no time in raising their rates again and thereby prevent so many travellers and so much freight from being carried to the different ports of our country, and this will be prejudicial to trade. Should affairs turn out thus, then the subsidy that the Government would be giving to the Mitsu Bishi Company in the interest of the whole nation would profit the Mitsu Bishi Company solely and not the nation in general. On the contrary, it may cause injury to trade, and it is for these reasons that I expressed my wish to see the P. & O. Company last for ever. For these reasons, too, it cannot be said that the sprit of patriotism does not exist in the Japanese who are giving any support to the above Company. If there are any mistakes in the grounds of my opinion I hope that some person will convince me of them.

The Legal Examinations.

(Chogai Shimbun.)

The Government did wisely in issuing on the 22nd February last the rules for the examination of men desirous of practising as lawyers in our Courts. Previous to the issue of these rules, the Government, desirous that none of its subjects should have cause to complain of any injustice, permitted lawyers to act for them in the Courts. All sorts of men without the slightest knowledge of law immediately became lawyers, and frustrated the very intentions of the Government by betraying the interests of their clients —a sad state of things indeed.

The Government then made these rules binding upon those who desired to become lawyers, and promised licenses to all who passed the requisite examinations enabling them to practice for one year—such license requiring renewal after the expiry of the year, when a more severe examination had again to be undergone, so that none but able men should be able to act as lawyers.

I have heard that when the candidates for licenses in the Tokio *Fu* were examined, they were asked about the Railway rules, and the laws relating to collisions of ships. But none of them had ever even dreamed of acting in such cases; and knowing nothing about them, made no answers. I only heard this as a rumour, for the truth of which I cannot vouch. But if true, it shows that the examinations are very searching, for men who could answer such questions beforehand must be acquainted with all laws, and certainly there are not many such to be found in Japan.

If we go a little deeper, however, and consider that such difficult questions are asked and such strict examinations undergone, we shall hardly be wrong in expressing a hope that the officials of the various courts are thoroughly acquainted with the various notifications of the Government and law generally, from that of enlightened countries like England and France down to those of such barbarous regions as Corea and Formosa. But alas! our own laws are not easy of examination.

Uyeno.

(Nichi Nichi Shimbun.)

The grounds of Tôyeizan, or Uyeno, in Tokio, were formerly called Shinobugaoka, and were given by one of the first of the Tokugawa dynasty of Shogûns to a *daimio* Tôdô by name, who had in his own domains in the province of Iga a place called Uyeno, the scenery of which so much resembled that of the piece of ground presented to him by Tokugawa that he changed its name from Shinobugaoka to Uyeno. But in the third reign of the Tokugawa dynasty, in the second year of Kanyei (A.D. 1627) the land was returned to the Shogûn and converted into the family temple grounds of the Tokugawas, and the temple there was called Kanyei-ji from the name of the year in which it was built. In this temple there used to reside a succession of high ecclesiastics, who were always relatives of the Mikado and bore the exalted title of *Ippon Shinô* (first in rank.) The *Shichidô garan* (seven buildings) attached to the temple for various purposes, and thirty-five minor temples, were subsequently built in the most exquisite style, and the surrounding grounds were laid out with the utmost piturесqueness.

But in 1869 the retainers of the Shogûn had a fight in these grounds with the Imperial troops and most of these fine buildings were destroyed by fire. As the scenery is pretty, pleasure seekers frequent the place all the year round, and specially in the Spring when the cherry trees are in blossom.

The Government now intends to lay the grounds out as a public park in European style; and the alterations were begun last month and the improvement is already marked. Carriage and foot ways are to be made to Sannoyama, on the top of which there is to be a tea-house in which both foreigners and Japanese may regale themselves with tobacco and tea, and where newspapers will be provided. When the opening of the new Park takes place it is said that the Imperial band will play. Gardeners will be permitted to exhibit and sell their plants there, and as the people are to be allowed to resort to the Park on their holidays, it will surely be a benefit to the public health.

Ins and Outs.

(Hioron Shimbun.)

Mr. Goto has resigned the office of *Fuku Gicho* (Vice-President of the *Gen-ro-in*), and it is said that Mr. Kido is about to resign his position as one of the *Sanghi* and will become *Naikaku Komon** (a Councillor of His Majesty or the Cabinet). On this account many rumours are abroad the amount of truth in which we are wholly unable to ascertain, but as any such occurrences are of importance to the country we think it well to notice them. Some say that Mr. Kido is a strong conservative and that Mr. Okubo is desirous that power should be centralized in the Cabinet, because now that the Corean affair is over the time has come for making important internal reforms. The views of these two officials cannot, however, be made to harmonize, and thus it is that Mr. Kido proposes to resign. Others says that he is desirous of seeing Mr. Inouye Kaworu—who has acquired a great reputation for his honest views on political economy and the trouble he has had in the Ozarugawa copper mine affair—Minister of Finance. But Mr. Okubo opposes this as he has the greatest confidence in Mr. Okuma who now fills that place. This is said to be one of the principal reasons why Mr. Kido wishes to resign his post, and his appointment to the office of *Naikoku Komon* is a mere pretext for depriving him of power.

Others say, "Kido is wise, and though his opinions may not agree with those of Okubo, he is not a man to become angry readily or to throw up without reason duties which he might discharge with benefit to the country. The probability is that he desires to become *Naikoku Komon* in order the better to serve His Majesty and promote the national welfare."

We do not profess to be in the secrets of the Cabinet, and what we have written has been suggested by the importance of these affairs. We should also like to know whether the public regards these rumours as credible, for it is our duty to know all we can.

After the termination of the Formosan affair certain men of note held a meeting at Osaka, and Messrs. Goto, Kido and Itagaki were reappointed to their offices. The latter resigned again very

* A special referee upon questions before the Cabinet. [Ed. *J. W. M.*]

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

shortly, and now that the Corean question has been settled we find the other two resigning. Why are our officials always changing in this manner? The future is indeed dark.

THE TWO LAMPS.—A FABLE.

(Choya Shimbun,)

A torn and ill-used Japanese paper lantern despairingly said to a foreign-made lamp, "Since you came to this house I have been neglected and shunned by all. I have been pushed into the corner of the kitchen or into the serving maid's bedroom, I am now no longer ever seen in the drawing-room, and I am not even kept clean."

The foreign lamp answered with a sympathetic sigh—"I greatly commiserate your fate. Whilst I remained in my native land, I was condemned to the basest duties, but since I crossed the ocean I have been treated with the utmost kindness by all. This is because my spirit (Kerosine) is of a very hot temper, and when I receive any ill-treatment I become furious and dangerous. It is on this account that so much care is taken of me. The reason that you are contemned and ill-used is that you are of too mild a nature. If any one ever attempts to put anything over my head or to stop up the holes through which I breathe, I at once fly into a passion and begin to kick, and if this conduct is persevered in I blow up and burst, and even set the house on fire."

The paper lantern then hid its face in shame and said:—"Your powers are great and exceed mine. I have none such."

"Do not despair," retorted the lamp. "The servants have become somewhat lazy of late, and do not seem to take as much care of me as they did formerly. If this state of affairs continues I intend to blow up and set the place on fire. If this comes to pass, do you fall down and add your oil to increase the blaze I make."

"In good sooth, I will," replied the lantern, with much apparent satisfaction.

REVIEW.*

It is much to be regretted that the author of this little book, which is directed against the doctrines of the materialists, and so far has our entire sympathy, should betray in it so much bad spirit and temper, so much misconception of the subject, so much dogmatic and inconsequential statement, and so much bitter personal feeling, as to more than counterbalance such argument as he adduces in favour of the cause he desires to advocate. When a writer of the calibre of *Tu quoque* goes so far in his first chapter as to apply the epithet 'puerile' to any view of John Stuart Mill—especially to one of his most mature views—we may be prepared for something startling in the shape of censure further on. And of course, we find it in this work. Thus, we are told that "the enemy,"—a generic word with the author for all who do not agree with him, whether naturalists, evolutionists or Darwinists, and whom he otherwise calls atheists generally—'betray the most prodigious capacity for credulity.' Elsewhere they betray 'the most miserable powers of reasoning': they are 'sublimely oblivious of this extraordinary solecism'; 'they are sublimely oblivious of the radical distinctions which exist between the material and the immaterial.' In another place a writer, Huxley indeed, is charged with "the most superb confusion of moral ideas" because he says that a French soldier who was shot in the region of the left parietal bone, and who at certain times developed a remarkable tendency to kleptomania, would 'steal his own things and hide them away.' *Tu Quoque* triumphantly retorts, 'how can a man steal his own things'? and, we presume justifies his charge of 'confused moral ideas' in Huxley by this question. Huxley might fairly reply that he hardly conceived human dulness could be crass enough to find any difficulty in understanding his words. Next, we find that 'the Physicists possess most unparalleled powers of self-assertion,' and that 'if the negative particle were interspersed throughout many of their paragraphs, the grammar would be equally good, the writing as clear, and the sense far nearer the truth.' Darwin's work on *The Emotions* is said always to have appeared to *Tu Quoque* as 'a fine specimen of the serio-comic.' Elsewhere the 'arrogance of these physicists' is bitterly complained of. Worse still, 'even marriage is threatened with their baleful breath'—a passage apparently suggested by some reflections upon bees and other insects made by Sir John Lubbock. (*Tu Quoque* may thank his stars he is not within the reach of Sir John's arm, and there can be no harm in asking him whether he ever read Milton's Treatises bearing on this subject.) Then we have some remarks upon Dr. Bastian's experiments on spontaneous generation made about a year ago, an interesting article upon which appeared in the *Saturday Review* and was republished in these columns. Dr. Bastian's experiments do not, we rather think, fully justify his assertions, and, so far, the most distinguished physicists are against him, as we should have expected both from *à priori* and inductive reasoning. But Dr. Bastian thinks otherwise, and *Tu Quoque* charges him with crying out "self-evolution! no God!" We have no evidence that Dr. Bastian argued from his experiment to the theology or atheology which other people may attach to it. It is nothing less than infamous to make these charges. The sole object of Dr. Bastian was to discover whether generation is necessarily *ab ovo* or sometimes spontaneous. The uses or abuses to which his discovery may be put, whether by theologians or anti-theologians, are independent issues with which the naturalist, as such, is not concerned. *Tu Quoque* cannot roast Dr. Bastian, but the spirit which he exhibits is that which heaped the faggots round Giordano Bruno and would still heap them round Darwin, and Huxley and Tyndall, if it had the chance. We write from memory, but if we recollect rightly, Dr. Bastian's experiment was something in this wise. He took an infusion, of turnips we rather think, in which he found that *bacteria* appeared after exposure to the air for a certain time. He then satisfied himself that life in this form could not survive if the temperature of the infusion were raised to 140° Fah. He heated the water to this temperature, hermetically sealed the glass, and watched the result. In the space of some days the fluid became rather cloudy, and shortly afterwards *bacteria* appeared. It is quite possible that the experiment may not have fulfilled all the conditions of a crucial test, and we rather think Huxley pointed out why it did not, though we speak in doubt on the subject. Dr. Bastian, however, thought otherwise, and claimed to have proved spontaneous generation as a fact. *Tu Quoque's* reflections on the experiment indicate an absolute want of perception of the issue, and, we really think, an incapacity for apprehending it. "As if glass could arrest the creative energy of the Almighty!" he exclaims. The issue is not whether the creative energy of the Almighty can be arrested by glass, but whether the *bacteria* came from the undestroyed ova of other *bacteria*, or from molecules of matter previously uncombined in the form of life. If we state our own opinion on this question it is not because we imagine that the slightest value attaches to it, but because we have no wish to be thought as siding with what we conceive to be an error. The spontaneous generation theory however, seems to us unproved, and until better evidence and authority for it has been produced than any yet existing, we shall continue to hold that opinion. But we should think it a crime to touch one hair of Dr. Bastian's head in violence or anger for holding a contrary opinion, and until we know more than we now do of his opinions in regard to the nature of mind and matter, we think it very shameful and wicked to call him an atheist. Man may measure the gravity of infractions of the various commandments in the Decalogue by their effects upon society. But we have not the slightest certainty that the Deity does so, and, for all we know, there may be as much sin, using a theological term, in bearing false witness, as in breaking any of the other commandments.

The simple fact is that *Tu Quoque* is a survival of those days when men called each other bad names because they differed in opinion about matters many of which will remain open questions to the end of time. The world has been deluged with blood by these wretched disputes and we have fortunately outgrown them. Society has improved, has grown more humane, more courteous, more charitable, more tolerant. The spectacle presented by a priest put in a passion by what he imagines to be a scientific or philosophical error is humiliating and shocking, and recalls the mischief which has been committed in all ages by men who have mistaken their own conclusions or *manière de voir*, for final truths, and persecuted the rest

* The world:—Whence cometh it? or what certain Physicists are saying. By *Tu Quoque*.

of the world for not seeing the great problems of life and theology precisely in the same light as themselves. We can and should never forget that some of the most detested opinions have been held by men of the purest lives and loftiest virtue and benevolence. Let Socrates and Spinosa bear us witness. Materialism seems to us a baneful error, and atheism as erroneous as we hold it to be incompatible with an elevated and progressive condition of society. But angry and denunciatory invective is not the weapon with which to deal with error, and the evident passion and rancour displayed by *Tu Quoque* from the true measure of his fitness to touch such questions as those which he has approached in this spirit. One sign only of prudence he has exhibited. He has withheld his name—but the courage requisite to call other men hateful names through a mask is any thing but that of a Christian gentleman.

In order that our readers may judge for themselves how far *Tu Quoque* understands certain of the questions he touches, we place his Chapter IV before them. It will be obvious at a glance that he has not a conception of Darwin's line of argument which he here attacks. He seems to imagine that the *desire* of an animal for such and such an adaptation to its external conditions is the cause of subsequent modification in its structure. It is needless to say that nothing of the kind is to be found in Darwin's work. It is the "survival of the fittest" and the transmission by heredity of that which makes it the fittest, which produce the variations in species. Of course Grove's theory of the correlation of forces comes in for equal respect—and fortunately, in this chapter. *Tu Quoque* infers that Grove's doctrine is not true because electricity cannot travel through a vacuum. It must, therefore, he argues, have been created for and on this earth, and is neither a conversion of light into another form of force, nor, by parity of reasoning, convertible into light. But this is not a logical inference. What is there to exclude the possibility that the force of which light is but one manifestation has, in accordance with the power and wisdom of a designing intelligence of which we meet the evidence at every turn, assumed the form of electricity on this earth in such proportions as are necessary for its economy? The delight of theological analysis seems to be to insist upon separate and, so to speak, compensating and almost corrective, manifestations of the Divine power. The delight of science, on the contrary, is in discovering and contemplating the essential unity of things and regarding the universe as one great fact, instead of a multiplicity of unrelated facts, each one of which demands a special exhibition of the Divine power for its creation and maintenance. The further we go back into the history of opinion, the more clearly we see that the human mind is steadily advancing in this conception of universal law. Nothing seems to please the writers of *Tu Quoque's* school so much as to make the water turbid instead of assisting to make it clear, to place obstacles in the way of a clear apprehension of law instead of assisting the vision of men to see law more clearly. The true line of the theologians seems to us to be, first, an enlightened criticism of each successive inference of science—a discipline which would have excellent results on both sides—and second, the reduction of these new inferences into their proper rank and order in the great army of arguments which support the thesis of the existence of the Deity and demonstrate his attributes. But it is only fair to give the whole Chapter, so that the wheat and tares may be seen together. We have chosen it as neither the best nor worst—all the others have the same characteristics in about the same proportion, the last being principally remarkable for the qualities to which we have referred, more in sorrow than in anger, in the earlier portion of these brief remarks. In dealing with the question treated in this work we have to choose between two issues which which may be shortly and roughly stated as follows. We have either to believe that on some given day, a pair of elephants, let us say, appeared on some spot on which, a moment before, there was no elephant, and began to browse on such food as they found suited to them. Or, we have to believe that, endowed by the hand of the Almighty with a richness of prerogative of which we are now only beginning to form a true estimate, molecules of matter, have, according to designing law and formative intelligence, been built up into the various forms of life in which we now find them, and by processes with which we are gradually becoming acquainted. It is not too much to say that the conception of the former issue is practically impossible to any mind at all scientifically trained. The conception of the latter harmonizes very much with what we know of the operations of nature. Once for all, this is not a question of the extent of the Divine Power, but of the mode of its operation.

CHAP. IV.

Evolution untenable in itself.

Evolution, as its advocates explain it, means that, in consequence of certain innate impulses, an animal may gradually produce, *conatus ad motum*, certain organs, or modifications of organs as the case may be. This I believe to be untenable, on many grounds. First, it implies intelligence, and when we think of it, a very high degree of intelligence. For the production of one particular organ would be utterly insufficient: related organs and accessories must be created at the same time. For instance, suppose a crowd of waterfowl; one set takes a fancy for long legs, and by persistent efforts through millions of years becomes at length the crane, or heron, or flamingo; another set conceives a notion for web feet, and ultimately evolves the goose, or swan, or pelican; a third has an impulse for long continued, and rapid flight upon the surface of the waters, and in course of time is transformed into the stormy petrel or the still more wonderful frigate bird; and so *ad infinitum*. But observe, the desire for one particular organ would be of no use; long legs necessitate long neck, &c.; in short, any modification or alteration of any important limb, requires a corresponding alteration of the shape of the whole body; the wings, the head, bill, eyes, in fact everything *external* and *internal*. All these organs, therefore must be *effected* out at the same time and in the same degree. This is Evolution. Now observe what it implies. 1st, that an animal can conceive a new desire for something not yet possessed; 2nd that it knows what is suitable for the attainment of that particular object; 3rd that it understands what organisms will harmonize with the desired change; 4th, that it also has a clear conception as to what degree of effort, and in what direction, effort should be put forth, not only for the elongating of the leg, but the lengthening of the neck, changing the contour of the body, and the modification of the whole system of the creature. But 5th, each series of birds must possess a most extraordinary adherence to one purpose, from birth to death, more than sufficient to make a whole generation of Livingstones;—a decision of character which would delight the heart of John Forster. Sixth, it also implies that one character, and one set of feelings, and the same special definite impulse, have descended from generation to generation, more undeviating than this world has ever seen in any other circumstances; a persistency in aim and effort far eclipsing the proverbial feudal propensities of the ancient clans. Had Byron known of it he might have sung:—

> "Volution's battle once begun,
> Bequeathed from "steadfast" sire to son,
> Though baffled off, is ever won."

But, seriously, consider this matter a little further. Here is a primordial form, or say a few primordial forms; suppose these multiplied into some hundreds. These few hundreds of original animals or birds, strike out each a different path; efforting after a special organization. Their successors keep undeviatingly to the same line; a thousand lines all adhere perfectly to their own course; no intermingling or hesitation on to the grand consummation. What a wonderful thing this! One link missing would have spoiled the whole; or, had several individuals of the series changed their minds in the process,—say conceived an impulse for the glorious wing rather than the half formed web foot,—the developement would have been retarded and perhaps spoiled. What wonderful animals! possessed of such knowledge, capacity, oneness of purpose, and perseverance.

If this be true there certainly has been evolution in this world, but then it has been evolution backward—degradation; for clearly there are no such animals of such superhuman knowledge and capacity on earth now-a-days.

But, 7th, a still more impossible postulate must be admitted if we are to maintain this theory,—a difficulty first pointed out in the *North British Review* for June 1867, and afterwards quoted by Mivart in his *Genesis of Species*, pp. 69, 73; *viz.*, the need for the simultaneous modification of many individuals at the same time, in the same place, and in the same way. That writer shows that the advantage gained by one or more in any direction of development "would be utterly outbalanced by numerical inferiority;" and one individual with a strongly marked variation would be perfectly inadequate to perpetuate the change. One hundred would be insufficient; a multitude would be necessary, and these all working together. The Reviewer says:—

Suppose a white man to have been wrecked on an island inhabited by negroes, and to have established himself in friendly relations with a powerful tribe, whose customs he has learned. Suppose him to possess the physical strength, energy, and ability of a dominant white race, and let the food and climate of the island suit his constitution. Grant him every advantage which we can conceive a white to possess over the native; concede that in the struggle for existence his chance of a long life will be much superior to that of the native chiefs; yet from all these admissions there does not follow the conclusion that, after a limited or unlimited number of generations, the inhabitants of the island will be white. Our shipwrecked hero would probably become king; he would kill a great many blacks in the struggle for existence; he would have a great many wives and children;.....". In the first generation there

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

will be some dozens of intelligent young mulattos, much superior in average intelligence to the negroes. We might expect the throne for some generations to be occupied by a more or less yellow king; but can any one believe that the whole island will gradually acquire a white, or even a yellow, population?"

Mr. Darwin himself says of the article quoted: "The justice of these remarks cannot, I think, be disputed. If, for instance, a bird of some kind could procure its foot more easily by having its beak curved, and if one were born with its beak strongly curved, and which consequently flourished, nevertheless there would be a very poor chance of this one individual perpetuating its kind to the exclusion of the common form." Mivart remarks:—"This admission seems almost to amount to a change of front in the face of the enemy!"

But, 8th, if this theory of evolution be true, then it implies that among the remains of former animals we shall find innumerable specimens partially formed, or half way on to their climax—*in all states* of progress and intermediate development. But in the pages of the great book of nature there is no evidence of minute intermediate forms.* Does not this shew that the theory of "Natural selection" instead of being a grand exposition of the mysteries of nature is more like a dream of the imagination? "But" say they "this is only negative evidence which could at any moment be destroyed by one positive fact." And thus the mislead simple minded readers, by veiling the sophism that "negative evidence" is *no* evidence, and if it be scientific to accept without evidence, judge ye.

Again; reverting to our supposed crowd of water-birds. I have further to ask.—At the beginning what caused one to choose web feet; another a three feet throat, and two feet legs; one a large, and another a small body? The environment was the same,—the same swamps, same water, same grass, &c. To predicate any supernatural cause would be most atrocious heterodoxy, which could not be listened to for one moment. All was evolved from the animals themselves: they determined their own form and structures and selected their own habitat. And they have managed everything perfectly, and stopped at the proper places; so that the thousands of species which now exist are fixed, and there is no evolution in our times.

Wonderfully wise evolution!

When analyzed in this way the absurdity of the whole hypothesis comes out in all its vividness and extravagance.

But, further, evolution is at variance with the other departments of nature. Physicists know full well that there is no evolution or mutual convertibility among the sixty elements of matter. Clerk-Maxwell, who has gone into this subject more thoroughly than any man, affirms:—

"We can procure specimens of oxygen from very different sources,—from the air, from the water, from rocks of every geological epoch. The history of these specimens has been very different, and if, during thousands of years, difference of circumstances could produce difference of properties, these specimens of oxygen would show it.

In the case of molecules, however, each individual is permanent; there is generation or destruction, and no variation, or rather no difference, between the individuals of each species. Hence the kind of speculations with which we have become so familiar under the name of theories of evolution, is quite inapplicable to the case of molecules."

Again he remarks:—

"In the heavens we discover by their light, and by their light alone, stars so distant from each other that no material thing can ever have passed from one to another, and yet this light, which is to us the sole evidence of existence of these distant worlds, tells us also that each of them is built up of molecules of the same kinds as those which we find on earth. The molecule of hydrogen, for example, whether in Sirius or in Arcturus, executes its vibrations in precisely the same time as in this world.

No theory of evolution can be formed to account for the similarity of molecules; for evolution necessarily implies continuous change, and the molecule is incapable of growth or decay, of generation or destruction: none of the processes of Nature, since the time when Nature began, have produced the slightest difference in the properties of any molecules."†

These atoms, therefore, must either have been created or have existed from eternity. But the latter is a *Suppositio ab non supponendo*.

If, therefore, these atoms cannot have been evolved from one another, but must have been directly created,—is it more difficult to create a species? And if not only the different species of atoms but every individual atom in inorganic nature has been separately created, is not this a presumption in favour of the fundamental species in animated nature being also created and fixed? If the one needed the intervention of creative power why not the other? To deny this is pure dogmatism.

But there is more on this point. The forces of nature were supposed by many to be transmutable, and it was considered scientific until a few months ago, to regard light, heat, electricity and magnetism as in reality only different forms of the same power. Now, however, almost synchronously, two men in different parts of the world,—experimenting on different forces,—have set this matter in a very different light.

Prof. Crookes has, this spring, demonstrated before the Royal Society that the light of a candle brought to bear on a card with a black and white side revolving on a vertical wheel in the best attainable vacuum, will set this wheel revolving; or, in similar circumstances, cause a pendulum to vibrate; and that "a ray of sunlight allowed to fall on a pendulum will at once set it swinging vigorously."‡

Here then we have light exercising a propulsive power through vacuum. The other experiment refers to electricity, and is the very opposite of this. It has been long known that Rumford's coil would cause a jet of electricity,—say one inch long,—transferred to an ordinary vacuum, to shine forth as a ray from a foot to twenty inches.

It was thus inferred that in a perfect vacuum the pencil of electricity would rise much higher. But no; many experiments have now been made and it has been found impossible with the strongest batteries to send a jet of electricity through such a vacuum even when the points are brought as close as half an inch.* Here we have the undeniable antipodes of the action of light,—proving that they are forces entirely distinct from one another.

This fact also shows that while light may have traversed the void of space, *electricity never could*, and must have been created in this world.

Again, as we have seen, all experiments go to show that the difference between the "living and the nonliving" is absolute; that each bioplast produces only its own kind of life;—a fact fatal to evolution. And when we proceed from life to instinct, and from instinct to reason, we see more and more that the gulf fixed between creatures is absolutely—as far as the most advanced researches go—impassable. This last appears in many ways. Let one example suffice. For instance, an elephant might be able to find out that two and two make four; but reason goes far beyond this. Man can see not only that two *plus* two make four, but *must* make four and cannot do otherwise. Or again, suppose an animal able to measure distance, and to find out that the three angles of a triangle are equal to two right angles; that is all it could do; but man sees that of necessity this *must* be so. And so in infinitely numerous cases—all showing the radical difference between instinct and reason. When we think, we must have an object of thought; this object must be conceived of under certain modes of being, or possessed of certain qualites. The object which thus subjectively becomes a thought may suggest emotions, as I have said, and these emotions may create desires, and both combined may present themselves before the will with the view of influencing it. But that is all this department of our nature can do. At this point Reason steps in and points out which line of conduct will be conducive to our interest, and either strengthens or modifies our desires. Afterwards come Conscience with its authoritative judgments, and places the matter in an entirely new light. But above all stands the Will; and this will determines which course we shall follow, whether *Video meliora proboque deteriora sequor*† or the reverse.

Such is a description of our mental processes. In this we see we have both freedom and responsibility.

To adopt an illustration from Lewis, which Mivart has used in the "Contemporary,"—a circle is circle with one centre and certain definite properties; but depress the edge ever so minutely, and you entirely change its nature. Henceforth it is ellipse with *two foci*. No human eye and no instrument may be able to detect the divergence; but nevertheless the properties and character of the figure are completely changed. So no man may be able to point out how life starts,—or where the vegetable ceases and the animal begins,—where instinct ends and reason steps forth into light,—or where expediency vanishes and moral obligation appears; but, notwithstanding, there is a line which divides every species from one another, and across which none can pass but at the touch of the creating hand and at the fiat of creative power.

The following is from the *Engineer*. The decay of the artistic power of the Japanese must not, however, be assumed from the evidence furnished by the designs on cheap glove-boxes, cabinets, trays &c with which the English market is now supplied.

Among the curiosities of the export business now being done in England we have to state that for some time past at least one of the Birmingham japan firms has been quite busy in making japan trays for Japan. They are iron japanned, and in sets of the usual sizes—namely, 14 inch, 15 inch, and 24 inch. The patterns are designed to suit the market, being chiefly a masonic of Japanese characters, inlaid with gold, and there are as many as sixteen colours used in every tray. So elaborate is the artistic work that in decorators' wages alone it costs the makers 18s. per set. We know the price at which the sets are sold by the manufacturer, but it would be unfair to state it. It may, however, be said that, considering the heavy decorative cost, the figure should not lead to any complaint by the merchant. As far as is known, the trade with Japan in this branch is likely to increase, and there is a decided promise in favour of a growing profitable communication between this country and that. It cannot but come about that the makers of hardwares will be benefited by the active business which the sedulous Japanese manufacturers are themselves doing with our own country; but it is sad to see how Japanese art is suffering.

Law & Police

IN H. B. M. CONSULAR COURT.
Before Russell Robertson, Esq., Consul.
Tuesday, April 11th, 1876.
Regina *vs.* Alexander McLean.

Alexander McLean, seaman on on board the British ship *Eme*, was arrested on the 10th instant, at the Temperance Hall in consequence of being reported by his captain as being absent without leave since the morning of Friday, the 7th instant.

Sentenced to three weeks' imprisoment with hard labour, but to be replaced on board should the ship leave before the expiry of the time of imprisonment, and to forfeit five days' pay.

Wednesday, April 12th, 1876.
G. Gandaubert *vs.* T. Wallace.

Judgment in the above case was given as follows :—

The evidence that has been adduced by the plaintiff and that given by the witness Beguex who was called by the defendant, goes to show that the table in question was purchased by Gandaubert and not by Beguex.

As the table has, however, passed to Beguex, I am unable to compel specific delivery of the property in question and therefore give a verdict for the plaintiff in the sum of $6, being the difference between the price at which the table was purchased by Beguex and the price paid for a similar table purchased by Gandaubert at the same auction.

Costs of Court to be borne by defendant.

(Signed) Russell Robertson.

IN THE FRENCH CONSULAR COURT.
Before Emile Kraetzer, Esq., Acting Consul,
E. G. Vouillemont and J. J. Fourcade, Assessors.
Tuesday, April 11, 1876.
Charles Huot *vs.* Hermann Legrand.

Plaintiff in this case claims $526 for 100,000 sheets of rice paper ordered by defendant in the month of February, 1875.

Plaintiff appeared personally; defendant was represented by Mr. Johannes Reynaud.

Plaintiff produced a letter from defendant, dated Paris, 17th February, 1875, containing the above order, without any limit as to the price, and stated that he had supplied the paper through a mercantile firm in Hongkong, but that defendant, when the paper arrived in Paris, refused to take delivery, on the plea that it was too dear.

As the case will have to be decided at Paris, the present suit is only instituted for the purpose of laying an embargo on what may be due to defendant in Japan.

Mr. Joseph Ruel, of Tokio, sworn, stated that he owed Mr. Herman Legrand $350 on three promissory notes of respectively $100, and $150. Two of these notes are already overdue.

Mr. C. Levy sworn, deposed that he held about 320 reams of paper for Mr. Legrand on which about $10 are due to him for insurance premium paid.

Mr. J. Reynaud, sworn, deposed that he held a power of attorney from Mr. Legrand, and that he is in possession of money belonging to Mr. Legrand.

The Court gave the following judgment :—

Considering that Mr. Legrand, in his letter dated the 17th February, 1875, had ordered 100,000 sheets of rice paper from Mr. Huot without limiting either the price or the time of delivery ;

That Mr. Huot has actually through the firm of Degenaer in Hongkong delivered the 100,000 sheets of rice paper to Mr. Legrand, who for several reasons has refused to take delivery ;

That Mr. Huot having on the 14th August, 1875, drawn on Mr. Legrand for francs 2,839, the draft was protested in consequence of Mr. Legrand refusing payment ;

Considering that the evidence, given on oath by Mr. J. Ruel, Mr. C. Levy, and Mr. J. Reynaud, is in conformity with law, and that the opposition made by Mr. Huot to any money belonging to defendant being paid over to defendant is in order ;

The said opposition is declared good and valid to the extent of $750. The said Mr. Ruel, Mr. Levy, and Mr. Reynaud shall pay into the Consular chest whatever moneys they may owe to or receive for Mr. Legrand, to the amount of $750 ; and these moneys shall remain in deposit until final judgment has been given by the judges, at the place where the defendant has his domicile, in *re versus* Legrand.

Mr. Legrand is condemned to pay costs.—*L' Echo du Japan.*

IN THE KANAGAWA SAIBANSHO.
Before Mr. Asaina Kansui, Vice-President.
Tuesday, 11th April, 1876.
Roper *v.* Mitsu Bishi Mail S. S. Co.

This was a claim for $5,320, for alleged breach of agreement and wrongful dismissal.

Defendants, in their answer, pleaded breach of agreement on the part of plaintiff, and disobedience of orders, as justifying them in dismissing him.

Mr. Dickins appeared for plaintiff, and Mr. Ness for defendants.

The case had been adjourned from the 24th of December last, in order to take evidence in Shanghai by commission.

Mr. Ness stated that this evidence was now in the hands of the Court. He then called as witness

Mr. Frahm, who deposed as follows : In May last I was second mate on board the *Kanagawa Maru*. I have got a master's certificate, and have been master of a vessel for about two months. I recollect the *Kanagawa Maru* entering the Shanghai river on the evening of the 22nd May last. She passed the lightship about 8 p.m. ; she passed at full speed. She made no signal for a pilot, she only blew her whistle. The customary signal for a pilot at day time is a flag, as given in the commercial code of signals ; at night time there are different signals,—for instance, firing a gun, firing a rocket, showing blue lights. I never heard blowing a whistle used as signal for a pilot. As we passed, a bright light was shown from the lightship. I heard Capt. Roper say to the chief officer when we were close to the lightship, "Mind, I am running a great risk in taking the vessel up the river without a pilot, as I have instructions to take a pilot from the lightship." As a matter of fact, no pilot was taken on board. After we had passed the lightship, between 11 and 12 p.m., the vessel ran ashore. I was not on deck when she ran ashore; it was my watch below, but I felt that she ran ashore. As soon as I felt that, I left my bunk, and ran on deck. I think she remained ashore about three-quarters of an hour. My watch commenced at 12, and I then went on the bridge. About ten minutes after, the vessel was again afloat. About 2 a.m. the vessel ran again ashore off Flag Point. That was during my watch. I was then on the bridge. Captain Roper was also on the bridge. I heard him sing out to the quarter master, "Starboard." The order was obeyed, and the vessel was now mid channel; there she was steadied. Captain Roper then again sang out: "Hard-a-starboard." The order was again obeyed and placed the ship at an angle of about sixty degrees to the bank, and within two ships' lengths' distance from the same.

Witness here said that would be about 600 yards from the bank, but corrected himself by saying that he had a better idea of ships' lengths than of yards—Captain Roper then sang out, "port" and the vessel was ported ; again Captain Roper sang out : "Hard-a-port," and ran to the telegraph. Two or three seconds after the vessel ran ashore. The vessel was then going full speed ahead. I do not know the cause of the vessel being run ashore. There was no steamer in the way, and no vessel could have been in the way without my seeing it. It is not true that the vessel was run so near the bank in order to avoid collision with another steamer. About forty minutes after we had run ashore, a steamer hove in sight. After we had run ashore Captain Roper fretted at the third mate and blamed him for the accident. When we ran ashore the chief mate, Mr. Dubois, was below. Immediately after he came on the bridge. The ship remained aground 49 hours. The cargo was discharged into lighters and sent up to Shanghai.

Cross-examined by Mr. Dickins : When it is my watch I always look out for the purpose of seeing that there is nothing in the route, and when we ran ashore I saw no steamer. If passengers have sworn that they at that time saw a steamer I do not say that they have perjured themselves, I can only say that they must have better eyes than people generally, because I see as well as most people, and I saw none. If the captain of the steamer swears that he passed the *Kanagawa Maru* at the moment she ran ashore, he will in my opinion be perjuring himself. My opinion is that Captain Roper's hot temper was the cause of the *Kanagawa Maru* running ashore. I was on watch at that time, but I did not in any way try to prevent him from running the ship ashore, nor did I give him any advice. I do not think Captain Roper intended to run ashore. I cannot say if it was to please or displease his own hot temper. Captain Roper first ordered "starboard" and the ship was starboarded, afterwards the ship was steady, without Captain Roper having ordered so, and Captain Roper then ordered "hard-a-starboard ;" when she was about two ships' lengths from the shore, Captain Roper sang out "port," and she was ported, whereby the ship got closer to the shore. Captain Roper then again sang out ;

"hard-a-port." When I said that the ship ran ashore through the hot temper of Captain Roper, I mean that Captain Roper got angry with the quarter-master for steadying the vessel without his orders. I saw the usual light on the lightship and a bright light aft on the starboard quarter. The light was moving to and fro. We were about two ships' length from the light. The light was waved all the time till we had passed the light ship. I heard nobody hailing us from the lightship. Perhaps we were too far off considering the noise on board a steamer. There was no particular noise on board at that time, nor any boisterous wind or wave. I am now in the employ of the M. B. M. S. S. Co. As far as my duty goes, I am bound certainly to do the best for my employers. I have commanded a brig for about two months. I have been in charge of a steamer bringing her down from Shinagawa to Kanagawa. The distance is about thirteen miles. It took me about seven hours to bring her down. I brought the *Bohama* from Shinagawa to Kanagawa. That was not the ship to which I just alluded. She was towed down and the tug boat took her ashore because it had not power enough to tow her. After Captain Roper left the *Kanagawa Maru*, I asked the new captain to promote me from second to chief mate. Captain Roper said in my presence that I was not fit to be promoted. That was the morning after I had refused to acknowledge the diagram Captain Roper had drawn of the accident to the *Kanagawa Maru*. I was not angry at Captain Roper not recommending me, but certainly I should have been better pleased if he had recommended me.

Re-examined by Mr. Ness: There was no other steamer visible when the *Kanagawa Maru* ran ashore, I was on the bridge with Captain Roper and if I could not see it, he could not see it. It cannot be true that passengers saw a steamer. I do not say it was through carelessness, but I repeat that it was through hot temper that Capt. Roper ran the *Kanagawa Maru* ashore. I do not consider my duty to the Mitsu Bishi S.S. Company demands from me saying anything else than the truth.

On the re-assembling of the Court, Mr. Ness called

J. H. Dubois: I was chief officer in the *Kanagawa Maru* in May last. I recollect passing the lightship in Shanghai river at 8 p.m. on the 22nd May. The *Kanagawa Maru* passed at full speed. She made no signal for a pilot. The customary signal for a pilot is,—at day time, the blue peter at the fore; at night, firing a gun, rockets, or blue lights. None of these signals was given on this occasion. The *Kanagawa Maru* blew her whistle. A bright light was shown from the lightship. Passing the lightship, I had no conversation with Capt. Roper. After passing the lightship, Capt. Roper told me he ran a great risk in going up the river without a pilot, as he had received instructions in Nagasaki to take a pilot. As a matter of fact, no pilot came on board at the lightship. Afterwards we struck. That may have been about half-past 11. It was a mistake of the captain. It was not my watch, but I was on deck. The vessel was got off within 7 to 10 minutes. Later on the ship struck again. That was about 2 a.m. I felt the ship strike, and immediately went on deck. I saw no steamer. If a steamer had passed at that time I must have seen her, for I came on deck within three-quarters of a minute after we had struck. After the vessel had grounded, the captain had a growl at the third mate; he said "the wheel had been put the wrong way." It was three quarters of an hour after I came on deck that I saw another steamer. That steamer passed us. The *Kanagawa Maru* remained grounded for about 48 hours. The cargo was discharged, and taken to Shanghai in lighters.

Cross-examined by Mr. Dickins.—I do not know who paid for taking the cargo to Shanghai. I have only been up the Shanghai river twice. We passed the lightship at about two ships' lengths distance. No rocket nor blue light was thrown up from the lightship. I heard no one hailing from the lightship. I do not know why the *Kanagawa Maru* whistled in passing the lightship. If I had been told that a pilot was waiting for me at the lightship, I should have considered it necessary to signal with rockets or blue lights, although I passed within two ships' length. This might certainly have brought down all the pilot boats from the neighbourhood. On the lightship I observed the usual light at the masthead and a small bright light swinging on the deck. I did not see very distinctly where it was because I was not on the bridge, although I was on deck. It was immediately after the whistle being blown that Captain Roper told me that he had been ordered to take a pilot. There was no answer to the whistling. I do not know why Captain Roper told me that he had instructions to take a pilot from the Lightship. I think it was the Captain's mistake that we ran ashore the first time. There was no moon. When the ship struck the second time, I immediately ran on deck. It took me only three seconds to reach the bridge. Capt. Roper told me then that he had been obliged to get out of the way of a steamer and that was the cause that he had run ashore. I looked round but I could see no steamer. It was about 2 a.m., and there was no moon, but is was not uncommonly dark. I only saw a steamer a little before 3 a.m. I did not report her to the Captain because we were aground. It was not my watch then. I think the fact of the steamer being seen at 3 o'clock is entered in the log book. The steamer was then about a quarter of a mile distant from us. It was about abeam of us. I know Mr. Jones, the 3rd officer, and I know Mr. Bell, the 2nd engineer, and as far as I know they are truthful people. Nevertheless, I think it likely that they would tell an untruth to please Capt. Roper; I myself would not tell an untruth to please anybody. I am in the employ of the Mitsu Bishi Co. As far as it is my duty, I am desirous to promote the interests of the Company. I have not seen Mr. Ness since 12 o'clock to-day. I was asked to give evidence in this case two days ago. A few days after arriving at Yokohama, I was questioned about what had happened. My deposition was not taken down in writing.

Re-examined by Mr. Ness: The bright light on the lightship was visible as soon as the lightship came in sight. I do not know if it was visible after the whistle had been blown, because as soon as we had passed the lightship I never looked. The night was not darker than that I could see as far as a mile. When Captain Roper said that there had been a steamer in the way, he said what was not true. There could have been no steamer without my being able to see her.

This closed the case for the defence. Captain Roper observed that as this lawsuit had been reported in the newspapers he should also like the evidence taken in Shanghai to be published, and he consequently requested the Court's permission to do so. The Court granted his request.

JAPANESE CONSULATE GENERAL, SHANGHAI.

Before E. SHINAGAWA, Esq., Consul-General.

Jan. 22, 1876.

Capt. ROPER *v.* MITSU BISHI MAIL S. S. Co.

Mr. N. J. Hannen appeared for the Mitsu Bishi Company; Capt. Roper conducted his own case.

Captain John Rayner stated: I am commander of the British steamer *Ningpo*. I remember leaving Shanghai on the 23rd May last. I left between the hours of half-past one and two o'clock. So far as I know, no other steamer left previous to me that morning. In going down the river I passed a steamer on shore: a large three masted steamer. I do not know the *Kanagawa Maru (Madras)*. The steamer I saw was a screw steamer, and on shore in about the position marked on Capt. Roper's chart. (Chart put in, and sealed by Mr. Shinagawa.) That is, she was on shore on the south bank of the river. It certainly is not the right side for a ship coming up the river; it depends as great deal upon the position a captain is placed in. I remained upon deck after leaving Shanghai until after passing Woosung Bar. My chief officer hailed me from the forecastle, and said, "There is a steamer ashore ahead." I then looked, and saw the steamer I have mentioned.

Q.—Could your approach have caused that steamer to go on shore there?

A.—It greatly depends upon the captain of the other steamer. One captain might starboard the helm, and another port. When we passed, I looked at the ship. I did not notice that she was going astern. I cannot say that she appeared to have given up efforts to get off. I could not see; it was a very dark night. I did not think any more about what the ship was doing there; I was attending to the navigation of my own ship. I have very often passed the Light-ship *Tungsha*. As a rule I never saw any other lights on board the Light-ship besides the mast-head light, except when one of our pilots is on board. I should not consider it a signal if I saw a man carrying a light about the deck, not unless they shewed a flare-up.

Cross-examined by Captain Roper.

Q.—Can you tell me how the tide was?

A.—Nearly high water when I left the wharf at Shanghai. The time was 2.50 a.m. when I passed as near as I can recollect within 10 minutes or so, or even a quarter of an hour earlier or later on either side.

Q.—Before you saw the hull of the three-masted steamer did you see any lights?

A.—In passing you I saw her mast-head light, and starboard side light (green). It was a dark night and a steamer drawing 18 feet, the screw might have been working without my seeing it.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

We passed about 500 to 600 feet distance, and the steamer was on my starboard side.

By Mr. Shinagawa.

Q.—Is it usual to send a boat for a pilot?

A.—No, it is usual for a pilot to find his own boat.

Q.—Is it not necessary to stop the steamer to wait and send a boat?

A.—No, unless you see a pilot or a pilot's signal.

By Mr. Hannen.—Does a pilot on board the Light-ship keep a boat.

A.—I have never seen a boat kept by a pilot, to come off from the Light-ship.

The Court then adjourned until Monday, the 24th January, at 2.30 p.m.

January 24th, 1876.

Mr. G. H. Fotzli: I am Deputy commissioner of Customs here at Shanghai. I was on board the steamer *Kanagawa Maru* on the voyage when she reached here on 22nd or 23rd of May last as a passenger. I cannot remember if I was on the deck at the time we passed the *Tungsha* light-vessel. I was on deck when the steamer ran aground, the first time. Shortly after the steamer ran aground, a pilot boat crossed the bow and came on the starboard side. She passed on the starboard side within hailing distance. I did not hear any one hail her.

Cross-examined by Captain Roper: I am not able to say whether the pilot boat was a cutter or a schooner, that is to say I do not know the difference in the rigging. I do not know if the vesse had two masts or one, but I think only one. It was not a parti cularly dark night, but I did not attend to whether the sails of the boat were made of canvas or matting.

Mr. Hannen here said that Captain Roper had admitted that a pilot boat did cross the bow and come on the starboard side.

Captain Roper protested against its being recorded, and denied having made such a statement, at any rate it should have been taken down at the time it was said.

The question was then referred to the decision of the Court, and ordered to be recorded.

Examination continued: I do not remember if the pilot boat showed any light or signal. I do not know if it may not have been a pilot boat without a European pilot on board. I was not on board of her. I thought at the time that a pilot boat would not have come to us as she did if there had not been a pilot on board. I did not hear any one hail from either vessel. I should have thought that we were on shore for half an hour, but that may be an exaggeration. As the pilot boat came alongside the steamer was just off.

George Edowes; I am an American. In May last I was second mate of the *Tungsha* lightship. On May the 22nd my watch was from 8 to 12 p.m. I remember the steamer *Kanagawa Maru* passing on that night. She passed the lightship about 9.35 p.m. by our time, which means the lightship time. When the steamer hove in sight, by the way she was steering, I thought she wanted a pilot. I showed a flash light. A flash light is sometimes called a flare-up light. I was then answered with three long whistles from the steamer. I then shewed the light again.

Captain Roper here asked the Court that this witness might be placed upon his oath.

Mr. Hannen made no objection.

Witness was then sworn.

Examination continued: What I have previously stated is all true. After I had shewn the second light I went to call pilot Sutherland who was on board. He came on deck and I shewed the flash light again. The steamer was then very close to us. I was answered by three short whistles from the steamer. The steamer's head was towards the Lightship. She then drew her head off from pointing towards the lightship and proceeded towards Shanghai. There are certain rules for the regulation of persons on board the lightship. There is a regulation with regard to lights. Any light that is shewn above the rail of the lightship is a signal. We were ordered when we wanted to signal to a ship to show a light. If I shewed a light above the rails except we wanted to signal, the officer shewing it would be either fined or discharged. On that night not a light was shewn except the flash lights I have mentioned, and the ordinary mast head revolving light until ten minutes to 12 p.m. when we lowered the revolving lamp to trim. In its place during trimming a small lamp was hoisted and a flash light burned.

Q.—Mr. Hannen: Captain Roper has said that he saw what appeared to be to him a small lamp attached to the awning ridge-rope. Was there such a lamp?

A.—No.

Q.—Was there anything that could have been mistaken for such a lamp?

A.—No. It was more than my place was worth to allow such a thing. The steamer passed close enough to the lightship for me to see the people on board. I think 10 minutes is the outside time it would have taken the steamer to have fetched pilot Sutherland. Steamers always fetch from and take back any pilots they may require. This refers to pilots who stop at the lightship.

Cross-examined by Captain Roper: I am not on the lightship now. I left on account of sickness. I think it was about two months after May last I left the lightship. I went to the General Hospital and was for a time steward there. I remember Mr. Reis, the Mitsu Bishi Agent, calling on me there. I cannot tell the date. I gave Mr. Reis a paper. I cannot tell the date. It was about four months after the 22nd of May. The statement I then gave Mr. Reis was given from memory. I wrote the same as I am speaking now. On other nights there are steamers going in and out. I cannot remember what steamers passed on the 21st of May nor on the 23rd of May, but even after four months had elapsed I can remember one special one going in on the 22nd May. It was a common occurrence to show flare-up lights to steamers or ships. At the time the steamer was passing on the night of the 22nd May I was sure it was an old P. & O. boat, but I did not know it was the *Kanagawa Maru* until McCaslin came down the next afternoon in the *Takasago Maru* and came on board the lightship and stopped there. I had some conversation with McCaslin, the Mitsu Bishi pilot. He did not tell me that the *Takasago Maru* had stuck in the dock at Shanghai. Mr. McCaslin came on board on the 23rd May. When I shewed the first flash light the steamer was a mile and a half to two miles off to seaward. I heard the whistle distinctly. There was an interval of about 3 minutes between the first flash light and the second, and between the second and third flash light, an interval of 5 to 10 minutes. When I shewed the last flash light the steamer was two cables' length off. We keep a log book on board the lightship. Every light shewn above the rail is a signal, and every one that is made is recorded. We use our own discretion as to whether the signal is entered in the log book. If I shewed a blue light I should enter it in the log book. All signals are entered on the slate and copied into the log book, but not by me. I marked on the slate the time the steamer passed, but I do not know if I made any remark about the flash lights. By my not doing so I ran the risk, if it was known, of being fined. By not recording it I omitted to do my duty and ran the risk of being fined or discharged at the option of the Harbour Master. After the lapse of four months I consider that my memory is as accurate as a log book written at the time.

Q. (repeated): Do you think your memory for the accuracy of flash light business, four months after the affair had happened, can be as trustworthy as a log book written at the time of the occurrence?

A.—Yes, I should have remembered the circumstances had they occurred in connection with any other steamer, if I had been, as I considered, insulted as on this occasion. I consider that the way the steamer gave the last three whistles and went off was an insult.

Q.—Is it not an additional reason that it should be recorded that the flash lights had been shewn?

A.—I did not do my duty by not writing them down. When I shewed the last flash light, pilot Sutherland was on deck. No other Europeans but him and myself.

Q.—Have you seen a copy of the lightship's log to refresh your memory?

A.—Yes, in the Hospital, Mr. Reis, M. B. M. Co.'s agent brought it.

Re-examined by Mr. Hannen: The answers that I have given to Captain Roper's questions are true. About the times and distances I was going by guess work. I remember that I shewed the second flash light directly after the three whistles had been given, and that I shewed the third light directly after I had called pilot Sutherland. I cannot be sure as to the times between them. I told Mr McCaslin all the circumstances as I have told them to-day, on the day after the occurrence. He told me he had passed the *Kanagawa Maru* on shore, and this is how the circumstance came to be impressed upon my memory.

By Captain Roper: The Captain of the lightship relieved me at midnight and I told him all, including that I had shewn three flash lights.

Q.—Is the log book an official record of all that occurs on board?

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

A.—It is supposed to be a correct official document of everything that takes place on board.

Court then adjourned until Wednesday, Jan. 26th, 1876, at 2 p.m.

January 28th, 1876.

Mr. J. H. Hunt, sworn, stated: At present I am engaged as an officer in the inside Customs Department. On the 22nd of May last I was a passenger on board the steamer *Kanagawa Maru*, bound from Japan to Shanghai. I remember passing the *Tungsha* lightship on that date, about between 9 and 10 at night. I had been on deck before this about an hour, and after passing the lightship about an hour. We passed about 200 to 300 yards from the lightship. I heard the *Kanagawa's* steam whistle sounded before coming to the lightship. Just before I heard that whistle sounded I did not see any flash light or flare-up light on board the lightship. Neither after or before the whistle had been sounded, did I see any flash light or flare-up light. Even within 300 or 400 yards I did not see any flash light. I was on the starboard side of the deck of the *Kanagawa Maru* as we passed the lightship. I was walking up and down the deck at the time. I saw no light or signal of any kind as we passed the lightship. I remember the time that the ship grounded, on the morning of the 23rd May. I was in my cabin at that time. It was on the starboard side of the ship. I heard shouting on deck on board the *Kanagawa Maru*. When I heard the shouting I looked out of the port, and saw a steamer on our starboard bow, close on the starboard bow of the *Kanagawa Maru*. The steamer was coming out from Shanghai, and proceeding on an opposite course to ourselves. I saw her starboard green light and her masthead light. She passed about 300 to 200 yards. I got up to go on deck. I went on deck. The steamer was then on the ground. By the time I got out on deck the other steamer had passed us. I saw no negligence on your part in the navigation of the ship, or inattention to the passengers. I have travelled before with you on board the *Kanagawa Maru*, under your command. I have never seen any carelessness or inattention to your duties.

By Mr. Hannen.—I am fourth assistant in the Custom House. I was a passenger on board the *Kanagawa Maru*. It was not my duty to watch the lightship from the moment we saw her till we passed her.

Q.—Are you so positive as to the flare-up light from the lightship to be able to say that any one who has sworn that they showed one from the lightship while the *Kanagawa Maru* was in sight has perjured himself?

A.—I swear that I was looking at the lightship and I saw no signal nor flash light as we passed. The *Kanagawa Maru* was perhaps an hour in sight of the lightship before we came to her. I did not keep my eye on her for the whole of the time, no matter what the time was. I did not look at my watch when the ship grounded the second time. I was looking at the lightship before and after the whistle sounded. The whistle sounded three times. I swear that I was looking at the lightship all the time after the whistle was sounded until we passed. The noise on deck awoke me when the ship grounded. I was undressed. I put on a pea jacket before I went on deck. I swear that the steamer I saw was not a tug. I should say that it was a large-sized vessel. I know the steamer *Ningpo*. As far as I could see the steamer that passed was about the same size. It was a dark night and I judged by the lights she shewed and her cabin lights.

Mr. Edgeworth Starkey: I was a first class passenger on board the steamer *Kanagawa Maru* about the 22nd May, 1875. I remember passing the *Tungsha* lightship on that date about 1 hour to 1 hour and a half after dinner at night. I am not certain if I was on deck when the lightship was first sighted. To the best of my recollection I was on deck half an hour before we got abreast of the lightship. I was on deck half an hour afterwards. We passed the lightship between three or four ships' lengths aff. I heard the steam-whistle of the *Kanagawa Maru* sounded when we were close to the lightship. I saw no flash light or flare-up light whatever at any time while passing the lightship before or after. I do not think it possible that I could have been mistaken in my statement.

By Mr. Hannen: Without my spectacles I am short-sighted. I was looking in the direction of the lightship off and on from the time we first sighted her. I could not be mistaken in such a matter as a flare-up light. By a flare-up light I mean a large bright light waved in the air, something like a torched dipped in resin and waved about. I am prepared to say that any person who has sworn that she shewed a flare-up light from the lightship while the *Kanagawa Maru* was passing has perjured himself.

By Captain Roper: The person who has sworn that he did shew the flash light may have been mistaken in the date, but I will swear that I must have lost the use of my eyes had it been shewn while I was looking at the lightship. I had my spectacles on that night, therefore I consider I could see as well as any one on board.

Mr. R. Mackenzie, sworn, stated: I was a first class passenger on board the *Konagawa Maru* on May 22nd, 1875. I remember passing the lightship on that date. I think between 9 and 10 at night. I had been on deck previously about one hour and remained on deck until sighting the beacon light about one hour after passing the lightship. We passed the lightship less than a hundred yards distance. That is my supposition. I heard the steam whistle sounded but I cannot remember if it was before or after passing the lightship; my impression was before. I did not see any flash light before I heard the whistle sound. I saw nothing I could call a flash light either before or after. When within two cable lengths of the lightship I did not see a flare-up light; I mean 400 yards. During that voyage I did not notice any negligence on Capt. Roper's part.

By Mr. Hannen.—I had no conversation with Captain Roper concerning a pilot, but he told me that we were to get the pilot from the outgoing steamer. Pilot Mooney also told me so. When approaching the lightship, and while steering direct for it, and not having met the outgoing Mitsu Bishi steamer, as the night was clear and a fair wind, Capt. Roper said that he could take the ship up without a pilot. I went to bed when the beacon light was in sight.

Mr. J. S. Knowles, sworn, stated: I am in the Harbour Master's office (clerk). I remember in October last I had a conversation with Mr. Edowes, and he said that he had a free passage offered him to Yokohama and back, to give evidence in this case, and that he hoped to get a situation either as steward or purser. Mr. Edowes, to whom I refer, was late second mate of the *Tungsha* lightship. He did not say that he had been promised a place.

Mr. Hannen objected to this evidence.

By Mr. Hannen.—I know nothing against Mr. Edowes's character.

The Court here adjourned to the 1st February.

REUTER'S TELEGRAMS.

LONDON, 3rd April, 1876.

THE BUDGET.

The Revenue for 1875 was £77,125,000.

The Expenditure for 1875 was £76,375,000.

The estimated Revenue for 1876 is £77,250,000, and the estimated Expenditure is £78,000,000.

The income tax is to be increased a penny in the £. and exemptions and deductions increased, giving an estimated surplus of £375,000.

Mr. Cave's report has been published. The Khedive's position respecting finances is critical; everything is pledged: but if the floating debt is converted and revenues properly managed there is sufficient to meet all charges.

LONDON, 1st April, 1876.

The Gazette of Berlin explains that the German Treaty with China was renounced in 1872. The German Envoy was lately instructed to propose negociation revision with the support of the other Powers.

LONDON, 30th March, 1876.

The Queen has arrived at Baden, attended by Lord Derby.

The Porte has postponed the payment of April coupons until July.

The Lords have read the Queen's Title Bill a second time. Lord Shaftesbury moves an address against the Title of Empress.

SENART'S "LEGEND OF BUDDHA."*

(Pall Mall Gazette.)

The story of Buddha's life and teaching has been told so often and with so much wearisome reiteration of legendary details that the title of the book before us is not unlikely to awaken in the mind of the student a feeling of impatience. Should he, however, conquer his repugnance so far as to undertake the serious study of M. Senart's book, we can promise him that he will be well rewarded for his trouble by the fresh and novel interest with which the author, by his mode of treatment, has invested the oft-told tale. The book is written with the object of answering the question, How did the legend of Buddha arise? What were the elements out of which the vast fabric of Buddhist legendary lore gradually shaped itself until it assumed the fixed and well defined form in which we now possess it? M. Senart compares one by one the more prominent Buddhist legends with legends drawn from Hindu literature, and shows that in most cases the correspondence is so great as to involve positive and direct derivation. The inference which he draws is that the legend of Buddha is the offspring of what he happily calls the "popular Brahmmism." He rightly points out that the official Brahmmism of the sacred books is far from giving us a full or accurate picture of the religious condition of ancient India. "It is undeniable," he says, "that under the eyes of the sacerdotal caste there had grown up among the lower classes a whole inheritance of mythological traditions, independent of the authorized systems handed down by the Brahmins; beneath the upper layer of orthodoxy there seethed religious aspirations and ideas which were destined sooner or later to emerge from obscurity. It is equally certain that Buddhism, in spite of its ascetic and disciplinarian tendencies, in spite of its comparative freedom from dogma and entire freedom from polytheism, owed its marvellous success in India to the fact that in a great measure it favoured this national impulse. Hence we find Buddhism embracing elements independent, both by their character and origin, of the narrow limits and tendencies of the orthodox sect. The legend of Buddha is deeply rooted in the soil of that purely popular Hinduism out of which sprang the luxuriant religious vegetation of India."

The particular aspect of Buddhism treated in this bulky volume of 530 pages is one which has hitherto been strangely neglected by scholars. A few valuable hints bearing upon it may be gathered from the writings of Professor Weber; and Burnouf more than thirty years ago raised some of the questions incidental to this subject, without however offering any very definite solution of them. Had he lived there can be little doubt that Burnouf would sooner or later have directed his extraordinary talent and indomitable energy to determining the origin of the legend of Buddha. He died leaving the work unaccomplished, but it has fallen into the hands of a countryman of his who has shown himself competent to deal with it in a masterly manner. After a brief preface the first chapter proceeds to an examination of the Buddhist legend of the Cakravartin or universal monarch, a mysterious personage of superhuman attributes, who, appearing at distant intervals of time rules for a period over the whole globe. M. Senart comes to the conclusion that this mythical being is none other than the Hindu god Vishnu, "but Vishnu viewed in a particular light, and modified in accordance with certain preconceived views." The second chapter deals principally with the 102 personal characteristics with which the Buddhists endow both the Cakravartin and the Buddha, and brings forward a mass of evidence to show that they are drawn from Hindu sources, and are nearly all peculiarities popularly ascribed to several Hindu gods and classes of gods. The two following chapters contain a lengthy but most interesting review of the legendary or miraculous life of Buddha, all the incidents of which, as contained in the "Lalita Vistara" – the incarnation, the miraculous conception, the miraculous nativity, the marriage, the renunciation of the world, and so on to the death and funeral—are subjected to a detailed and searching criticism. The results arrived at are positively startling by their boldness and originality. M. Senart finds in the North Buddhist life of Buddha, not the biography of an historical personage, not even a nucleus of biographical facts encumbered with miraculous additions, but a congeries of popular Hindu legends derived from sources, built up into a systematic narrative, and centring about a being whose very existence may perhaps be called in question. Mayā, the mother of Sākyamuni, is an impersonification of a philosophic idea. The revels of the young Siddhartha before his conversion are but a repetition of the loves of Krishna. The horse Kanthaka is the Brahmanic horse Uchchaissravas transferred to the great Buddhist legend. The war waged by Māra at the foot of the Bo tree is but an echo of the wars of the Devas and Asuras. The Bo tree itself is "the celestial tree familiar to all the Indo-European mythologies." Solar myths, fire myths, Zoroastrian myths, and even Greek myths, are pressed into the service, and one of the most interesting passages in the book is is a comparison between the Greek account of the birth of Apollo and the North Buddhist account of the nativity of Sākyamuni. M. Senart certainly succeeds in showing a striking concidence of detail in the two stories, and his comment is that "in the Buddhist narrative we have a purely mythological scene, handed down from a very early period of legendary development, and amenable to the canons of interpretation supplied to us by the science of comparative mythology.

Nearly a hundred pages are devoted to a study of the Buddhist emblems—the Bo tree, the Wheel, the Nāga, the Stūpa, and so forth. Here the author's researches are to a great extent archæological, and he has shown himself familiar with the works of Fergusson and Thomas, with whose views he is not always in agreement. In an eloquent concluding chapter he sums up the results of his researches, justifies his method, and guards himself against possible misinterpretation. He ends with these words, which contain the keynote of his work:—"The Legend of Buddha is something far better than a collection of fantastic stories and childish fancies: it is a fragment of antiquity, an authentic and valuable witness for the religious history of India."

We have purposely abstained from criticising M. Senart's work, and criticism of a study so special and original, to be effective, must far exceed the limits of our space. Our object will be attained if we succeed in drawing public attention to what is by far the greatest contribution to the literature of Buddhism since the masterpiece of Wassilief appeared, nearly sixteen years ago. It must be remembered that we have here neither a treatise on Buddhism nor a life of Buddha, but a monograph on a particular branch of the great Buddhist question—the origin of the Legend of Buddha; and M. Senart has still further restricted the scope of his inquiries by taking as his basis the North Buddhist version of that legend. That his views will sooner or later meet with opposition we have little doubt; but in the meantime he has done the great service of bringing together with almost exhaustive completeness the data necessary to the solution of this question.

M. Senart is a young but well-trained French philologist who, by a critical edition of Kachchayana's Pali Grammar, published three years ago, won a high place among Orientalists. His new work will more than maintain the reputation thus acquired. We have only to add that he writes with invariable modesty and taste, and with a style which is truly French in grace and transparent clearness.

* "Essai sur la Legende du Buddha, son Caractere et ses Origines." Par E. Senart. (Paris, 1876.)

SHERIDAN KNOWLES ON *MACBETH*.*

(The Saturday Review.)

It is not a little singular that Sheridan Knowles's *Lectures on Dramatic Literature* have never been published. In the quotation from the *Noctes Ambrosianæ* which stands on the title-page of the Lectures now reproduced, Christopher North says, "Knowles is a delightful fellow and a man of true genius." This is a curious instance of the loose way in which the word "genius" is employed by English writers. By the French the title is bestowed with more discrimination, being reserved for the few who tower among their comrades like Saul. With them Sheridan Knowles would rank as a man of true talent, but not of true genius; for there have been many men of equal powers to his. It must be admitted that the precise French demarcation has the advantage over our helter-skelter lavishness of praise. When a man of extraordinary power arises among them, they have his description clear and ready to hand, while we in such a case can only distinguish the supreme from the admirable by a laborious heaping up of epithets. Again, if the title of genius were less carelessly given, it would be less easily usurped. That Sheridan Knowles was not a man of genius in the highest sense of the word is patent from the fact that, although the *Hunchback* is still occasionally performed, none of his plays can be said to have kept the stage. That he was a fine critic, a man who thought well and deeply, and expressed his thoughts in eloquent language, is evident from the *Lectures on Dramatic Literature*, all of which may, we hope, some day be published. Meanwhile, it was no doubt appropriate to select from among them

* *Lectures on Dramatic Literature. Macbeth.* By James Sheridan Knowles. London: Francis Harvey. 1875.

those which treat of the play that has lately commanded special attention.

It is curious that at the very beginning of Sheridan Knowles's work is found almost its only blunder. The historical materials which Shakspeare had for *Macbeth* were, he says, Macbeth's success against the Norwegians, his murder of Duncan at his wife's instigation, his usurpation, and his death by the hand of Macduff. The opportunity given by the remote period for introducing supernatural scenes and persons was inviting and therefore, "the powers of the air, the mysterious, impalpable ministers that wait on nature's mischief, were summoned to his aid; and in all the potency of prophecy, illusion, and charm, appeared at the invocation of the enchanter." It is easy to believe that, had there been originally no mysterious prompting to spur Macbeth to evil deeds, such a motive might have been added by Shakspeare to the narrative which he took to mould into a tragic drama; but the fact is that Holinshed relates among other facts this one, which he chronicles as simply as the rest, that as Macbeth returned from victory he was met by three women of strange and wild attire, "resembling creatures of an elder world," who greeted him by the titles of Cawdor, Glamis, and King, exactly as they do in the tragedy.

Having noted this slip, we may go on to consider Sheridan Knowles's criticism of the play. As a good deal of one kind and another has been lately said and written concerning the character of Macbeth, it may be well to take the author's estimate of this first. On that subject he observes that "this impression (as to the vastness of the tragedy to be unfolded) is improved in the second scene, in which we are partly enlightened as to the character of Macbeth, by the Sergeant and by Macduff" (here is another slip; it should be Rosse, not Macduff,) "who successively describe his prowess to the King, and whose relation tends powerfully to exalt our opinion of the importance of the hero, and to increase our anxiety to see him." This, a good reason enough for not omitting the dialogue between Duncan and the Sergeant, has been dwelt upon by critics of the present day. A yet better reason is given later by Sheridan Knowles. At the end of this scene, it will be remembered, Rosse announces the treason of the Thane of Cawdor whose death Duncan instantly decrees, and in the same breath sends Rosse to greet Macbeth with the title of Cawdor:—

Except for this preparatory step one of the most striking incidents in the following scene would have been deprived of half its force. The fulfilment of the second witch's prophetic "All hail!" without it would have appeared a mere trick of the dramatist, whereas now it falls out naturally. 'Tis by such means, that of all dramatists Shakspeare comes the nearest to nature. 'Tis thus that he gives plausibility even to the supernatural when he has occasion to resort to it.

One should remember this passage in reading another which comes much later on, and concludes with these words:—"Macbeth is the most melodramatic tragedy in the whole range of the drama, and it is to the credit of Shakspeare that it is so." Melodramatic, that is, in the sense that a constant and overpowering succession of incidents and situations is melodramatic. But the events are exalted into the highest regions of poetry by the dramatist, who commands and knits together the passions and the fortunes of his characters, and never presents a circumstance, important or trifling, with insufficient motive or explanation. A melodramatic writer, to use that epithet in its most common sense, would have thought it much finer to bring the announcement of Macbeth's new title to the audience, as well as to him, straight from the lips of the witches, without any forewarning. He would have been blinded to the truer order by the dazzling effect of a moment.

But consideration of these things has led us away from Macbeth himself. Before he appears "he is described to us by his deeds; deeds of prowess almost superhuman. One single arm decides the multitudinous strife of blood, and it is his." When he has been greeted by the weird sisters and observed by Banquo to start, he "cannot, dares not, trust his utterance, but he cannot refrain from betraying what he feels. The remark of Banquo is the officious tongue of Macbeth's thought; it lays open his soul to you to the bottom, as the salutation of the third witch falling upon Macbeth's ear rouses the slumbering demon within him, like a flash of lightning illuminating a cavern, and revealing to you a startled wretch crouching there." From this and from the description of how the witches vanish when they have accomplished the "quick coming of the evil seed that is to shoot up apace and flourish in baleful, irrepressible rankness," it is evident that the writer supposed, as seems to us natural, that there was at least some vague project of usurpation in Macbeth's mind before he met the weird women. He goes on to point out the deep abstraction which possesses Macbeth after the news of his fresh honour is brought to him, under the influence of which he should, according to the writer, address his thanks to Rosse and Angus mechanically, ignorant that they have changed their place and gone apart with Banquo, so that he should bow to empty air, not turn round deliberately to their new position. In the next scene some fine touches are pointed out:—

From what we perceive of Macbeth when he is first introduced to us he is evidently a man whose nature is not exactly attempered to the commission of crime. He can admit the thought of the murder, but he cannot entertain it without shuddering. He wants provocation to nerve his hand for the dagger, and Shakspeare finds it for him in this scene with the advancement of Duncan's eldest son to the principality of Cumberland.

Further than this, the very occasion for carrying out his "black and deep desires" is given in the same scene by Duncan's proposed visit. An instance of the poet's surpassing truth in every lightest word of each of his characters, which might easily pass unnoticed, is dwelt upon. Banquo's answer to Duncan's kindly greeting is short, clear, and evidently heartfelt. Macbeth's is a vapid, but specious, piece of reasoning. In treating of the soliloquy which opens the last scene of the act, the writer points to various passages which show that the Thane had much that was noble in him; he had a moral sense, was jealous of honour, alive to the beauty of virtue, thoughtful of heaven; and was therefore such a man as could only be urged to execute the murder by such an accomplice as his wife. This soliloquy, he further thinks, should be delivered with infinite discomfiture and confusion; by fits and starts; and by no means with an appearance of coolness and self-command. When we pass to the scene of the murder, we find our attention drawn to the powerful leading up by degrees to the deed, which we await with trembling lest it be done, and longing that it be done quickly:—"Where there is interest, there is generally a charm in gradual progression. . . . The long, fluctuating, rumbling roll of the thunder communicates to us the full conception of sublimity; but a single clap, howsoever sudden and loud, affects us little more than the close report of a piece of ordnance, or even a fowling-piece discharged unexpectedly." Thus it is not Macbeth, but Banquo, heavy with forebodings, who first appears; and, when the Thane himself comes on, there is yet delay and expectation before his purpose is put in force.

The opinion of Sheridan Knowles, which will probably be held a conceit by most readers, is to be noted, that the dagger is not, as Macbeth thinks, "a dagger of the mind," but an actual apparition raised by the weird women, and coming and vanishing as they do themselves. We have not space to dwell on or even glance at all the pregnant suggestions which are found in the criticism of this scene; we must content ourselves with touching upon what is said at the end of the part or chapter which treats of it. The writer asserts what, until a short time ago, one would have thought required no urging, that the effect of the scene is rather to denounce than recommend crime:—

Contemplate Macbeth in this act, and recall the image of the man who in the third scene of the first act presented himself to you, flushed with the honest pride of victory achieved in a virtuous cause. What is he now? A livid, nerveless, quaking coward, whose eyes are plucked out, as it were, by the sight of that with which the havoc of a hundred fields has made them familiar and perfectly at home.

The remarks upon the last act, valuable as far they go, are something too brief; and there is scarcely any mention of the banquet scene. Perhaps, in spite of this, we may be allowed to mention a suggestion which seems to us to have some force. It has been the custom to deliver the address to the ghost as though it were inspired merely by terror. Now, taking into consideration the side of the usurper's character which is too often neglected—his overpowering will—it seems tenable that the words "Hence, horrible shadow! unreal mockery, hence!" might rather be an effort overcoming the first horror, and banning the spectre by the mere force of command. The reaction would follow naturally enough afterwards, and in support of the theory it is suggested that the appearance of the Ghost is the last interference of conscience between Macbeth and his crimes. Till then some human scruple has always clung to him; afterwards, no atrocity appals him. That Macbeth did possess a will which may be compared to that of the first Napoleon is evident from the fact of his placing himself on the throne in spite of all suspicions aroused by Duncan's death; and if, with such a power, he had no weakness of hesitation or remorse, he would have been superhuman.

As to Lady Macbeth's character there has been less discussion than as to her husband's:—

The historical fact [says Sheridan Knowles] that Macbeth was instigated by his wife to murder Duncan, suggested to Shakspeare

Digitized by Google

the character of Lady Macbeth. From this single trait he inferred the whole of a character, for fidelity of keeping and force, if not superior to any, at least inferior to none in the wide range of his immortal drama. Here he has, indeed, realized the highest feat of the terrible in romance, by embodying the spirit of a fiend in a human form—a being composed of flesh and blood, and not without the sympathies which result from the living union of such ingredients; but possessing them in utter subserviency to the evil principle. . . . . She takes no more account of blood than if it were water. That from the sight of which unused nature instinctively recoils, though shed for a salutary purpose, under circumstances the most revolting, only serves to furnish her with an image of pleasure—

If he do bleed,
I'll gild the faces of the grooms withal.

She does so, and never hastens to wipe her hands, but brings them reeking, to taunt her pale and quaking husband with their colour.

The writer goes on to speak of Mrs. Siddons's Lady Macbeth. Nothing is so difficult to describe as a fine piece of acting which produces its impression by a gradual harmonious course of effects, some of which, and perhaps among them the touches whose force though the least evident is the greatest, cannot but be slurred in the telling. For this reason anything which conveys so clear a notion to a reader as Sheridan Knowles's writing on this matter is especially valuable. "The Lady Macbeth of Mrs. Siddons," he writes, "was the genius of guilty ambition personified—expressed in form, in feature, motion, speech; an awe invested her. You felt as if there was a consciousness in the very atmosphere that surrounded her, which communicated its thrill to you. There was something absolutely subduing in her presence—an overpowering something, that commanded silence, or, if you spoke, prevented you from speaking above your breath." Every word of the writer's description has weight, but we must be satisfied with quoting that of the sleep-walking scene, leaving readers to find the rest in its own place :—

But the sleeping scene, where she walks and dreams! I could pity a murderess who should look upon that scene. The ghostly group that enter the tent and surround the couch of Richard bring with them not the tithe of the horror that attends that silent woman, Lady Macbeth walking in her sleep. Though pit, gallery, and boxes were crowded to suffocation, the chill of the grave seemed about you while you looked on here; there was the hush and the damp of the charnel-house at midnight; you had a feeling as if you and the medical attendant, and lady in waiting, were alone with her; your flesh crept and your breathing became uneasy; you felt the tenaciousness of the spot which she was trying to rub out upon her hand; while the sigh of her remorse seemed to ascend from an unfathomable abyss of misery and despair.

There is much concerning minor matters in these lectures of which it would be pleasant to speak; but it is enough to say that, if any one wishes to read a fine and eloquent piece of criticism, he cannot do better than go to Sheridan Knowles's *Macbeth*.

THE ROYAL TITLE.

(The Saturday Review.)

In accordance with the precedent established at the time of the Union Mr. Disraeli has brought in a Bill to enable the Queen, not to take a specified title with regard to India, but to take such title as she may think fit. On the present occasion this method of procedure has a great advantage. It enables Parliament to discuss the merits or demerits of the different titles which suggest themselves, without seeming to refuse or question a particular title which it might be supposed the Queen was desirous to obtain. Those who object to the Queen calling herself an Empress can do so frankly and without the painful hesitation which would have been necessarily caused by the knowledge that to be an Empress was what the Queen especially wished. Every one is sure that the Queen only wishes to do what is right. It is not at all in her manner to desire to be a little grander by putting herself on an equality with the Napoleons. There is not the slightest reason to suppose that the Queen will be at all hurt or offended at the meaning of the word Empress being freely discussed. In any case the discussion must do good, as, if the title she assumes is that of Empress, the discussion will help to fix the sense in which she will be called Empress. In one sense the Crown of England has long been an Imperial Crown—that is, the monarch would not allow the supremacy of any other potentate, civil or ecclesiastical. The King entirely denied that the Roman Empire or the Roman See had any jurisdiction over him or his country. The epithet Imperial was thus in some measure relative, and implied independence of others. In this century Emperor has become a word with a new signification. It now merely means a very grand sovereign. Some of these very grand sovereigns have had other sovereigns under them. Napoleon not only had other sovereigns under him, but himself nominated most of his dependent monarchs. The present German Emperor has the several sovereigns of the German States under him. But it cannot be said that this is an essential part of the meaning of the word. The Second Napoleon had no kings under him, neither have the Emperors of Russia and Austria. Some, again, of these very grand sovereigns have been despots. Napoleon was not only a despot, but one of the most wantonly tyrannical despots that ever lived. The Imperial Government of Russia is at this moment despotic. But the Emperors of Germany and Austria are constitutional monarchs. The Queen is a very great sovereign, and in the eyes of Englishmen, and perhaps in the eyes of a not inconsiderable portion of mankind, she is the greatest of all sovereigns. According to modern usage she might properly be called an Empress, even if she were not supposed to have subject princes under her, and although she is the most constitutional of constitutional monarchs. But in England we should excessively dislike her to be called Empress. In the first place, we are accustomed to think that her grandeur is above being augmented by the mere assumption of a grand name. She is the descendant of a long line of kings, and to be King of England is to us as high as earthly grandeur can go. She would be going down instead of going up to call herself Empress here. In the next place, the name of Emperor has an unpleasant sound to us. It has a bad air about. It has been vulgarized by the rococo splendour of the Second French Empire. It associates itself with the ignoble tyranny of the First Napoleon. About the title of Queen we feel that there is nothing of the sham-splendid sort. It expresses in a thousand ways the relation which we wish the monarch to bear to her people.

Whether there should be some addition to the Royal title can hardly be said to be in dispute. India is so very important a part of the Queen's dominions that it seems as if it ought to be recognized in her titles. At least four-fifths of Queen's subjects live there, and if she is Queen of anywhere she must be Queen of the place where four-fifths of her subjects live. When the Crown took over the direct government of India it was discussed whether there should not be an addition made to the Royal title which should mark what had happened. But the transfer took place immediately after the Mutiny, and was immediately due to the Mutiny, and the Ministry of the day rightly judged that it was inexpedient to connect the Royal title too intimately with the memory of a bloody and painful passage in our history. Things are changed now. The rule of England in India is firmly established, and accepted with patient, if not cheerful, acquiescence. It has become securely, and, so far as men can speak of permanence, permanently, a part of the possessions of the Crown. The native princes have cordially acknowledged the Prince of Wales as the son and immediate representative of their Sovereign. England has gradually learnt what the possession of India means. We have interests in it which we must preserve, we have duties towards it which we must discharge. Mr. Lowe has the great merit of daring to say unpopular things, and he ventures to bring forward an argument which must have occurred to many minds, but which no one else perhaps would have had the boldness to use. He urged that we might one day lose India, and that, if this happened, the Sovereign, with a part of his title taken from India, would be in an absurd position, either having to submit to the humiliation of docking his title, or to retain an illusory title like the old misnomer of King of France. The answer to this argument is that the only way to keep India is to proclaim to the world and still more to take it as agreed between ourselves, that we mean to keep it. The addition to the Royal title at the present moment is therefore justified both by the consideration that it expresses the existing relation of the Crown to the princes of India, and that it brings home to Englishmen the intimacy of the connection between England and India. Both these objects have also been served by the very successful visit of the Prince to India; and the occasion of his visit has therefore been chosen as also the occasion of an addition to the Royal title.

These considerations only show that there should be an addition to the Royal title, and not what this title should be. This is purely a matter of sentiment; and the only question is, what weight should be given to conflicting sentiments. Is the Queen to be termed Queen or Empress of India? and is the addition to the title to regard India only, or the Colonies as well as India? It is said that for India Empress is a better word than

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Queen, because Empress is a grander word, and also because there are subject princes in India, and Empress means, in an especial way, the Queen of Kings. This raises the question, what are we to think of these princes? Are they really like sovereigns? Sir George Campbell says positively that they are nothing of the sort. They are, in his view, at the utmost on a level with the Duke of Argyll, chiefs of great clans. Mr. Disraeli urges, on the other hand, that some of them are the descendants of ancestors who were independent princes when Britain was a Roman province. To call the Queen Empress is therefore a tribute to the importance of the native princes. Other speakers added that, if Emperor implies conquest—which it is difficult to see why it should be thought to do, except that the memory of Napoleon is always running in British minds—the truth is that India is a conquered country, and that it is a good thing to express true things. It was also suggested that the natives like personal government, and understand nothing else, and that there is a greater ring of personal government about an Empress than about a Queen. This is an argument from precisely the opposite point of view. There will not be and cannot be, anything in the least like personal government in India, whatever the title of the Sovereign may be; so that in this way the advantage of the title of Empress would be that it would suggest to the untutored native native mind something that was not true. With regard to the Colonies, it was asked by Mr. Lowe and Mr. Forster whether, if an addition to the Royal title was to be made because India was important, the Colonies were not also important, and did not deserve to have their importance marked in the addition? Mr. Disraeli replied that their importance was already marked in a far more significant manner; for, as was expressly decided at the time of the union with Ireland, they are to be regarded as parts of Great Britain and Ireland. An Australina is an Englishman who happens to be in New South Wales, and not in Sussex; and to imply that he was anything else would be to insult him. If this is so, it is obvious that, by an addition to the Royal title referring only to India, a distinction would be set up between the Queen's subjects unfavourable to India At the present moment the Queen's subjects in India must be taken to be included among those persons over whom she rules as Queen of Great Britain and Ireland. To take the Indians out of this class would be, according to Mr. Disraeli, to put them in a separate and lower class. It is quite true that we, in point of fact, do look on the natives of India as a lower class than colonists of English descent, and it is now proposed to record this prepossession. The preference for the title of Empress over that of Queen is quite in accordance with this view. We should think it going down, not going up, if our Queen called herself an Empress. But Empress is thought just good enough for India. It conveys with it a sort of contempt disguised under the show of a compliment. It is supposed to be likely to flatter the vanity of native princes, and it is thought to be calculated to inspire a delusive but pleasing belief in the personal power of the Sovereign, while at the same time it records the fact that India is a conquered country. Empress is in every way a lower title than Queen when applied to India, for it is a word despised by the governing race, and thought specially suited to the governed. When an occasion presents itself for marking the intimate connexion of all the Queen's subjects with each other, it seems scarcely worth while to stamp upon a portion of them this mark of inferiority.

Shipping Intelligence.

ARRIVALS.

Apr. 9, *Belgic*, British steamer, Metcalfe, 2,652, from Hongkong, Apr. 1, Mails and General, to O. & O. Co.

Apr. 10, *Courier*, Russian steamer, Lemasceffsky, 498, from Kobe, Apr. 8, General, to Japanese.

Apr. 10, *Candia*, British steamer, Thomson, 1,342, from Hongkong, Apr. 2, General, to Jardine, Matheson & Co.

April 12, *Cleopatra*, American ship, 1,315, Doane, from New York, Nov. 20. Oil and General, to Kniffler & Co.

April 12, *Mathilde*, German barque, Dan, 221, from Takow, March 23, Sugar, to Chinese.

April 12, *Banda*, British ship, Stelling, from London, Nov. 24, General, to Kniffler & Co.

April 12, *Meiji Maru*, Japanese steamer, Peters, from the N. E. Coast.

Apr. 12, *Harmonia*, German barque, Weller, 408, from Takao, Mar. 24, Sugar, to Chinese.

Apr. 12, *Hiogo Maru*, Japanese steamer, Froome, 690, from Hakodate, Apr. 10, General, to M. B. Co.

Apr. 12, *Palma*, German barque, Binge, 299, from Takao, Sugar, to Jardine, Matheson & Co.

Apr. 12, *Traviata*, German barque, Breckwold, 274, from Takao, Mar. 24, Sugar, to Chinese.

Apr. 13, *Tokio Maru*, Japanese steamer, Dunn, from Shanghai and ports, Apr. 6, Mails & General, to M. B. Co.

Apr. 12, *Willie*, German 3-masted schooner, Bodonoch, 270, from Takao, Mar. 25, Sugar, to F. Knoblauch.

Apr. 14, *Volga*, French steamer, Nondedeu, 960, from Hongkong, Apr. 7, Mails and General, to M. M. Co.

Apr. 15, *Orissa*, British steamer, 1,647, from Shanghai and ports, Mails and General, to P. & O. Co.

Apr 15, *May Queen*, British barque, Nisbett, 285, from Takao, Sugar, to Chinese.

Apr. 15, *Fyen*, Danish barque, Wskjode, 311, from Takao, Sugar, to Chinese.

DEPARTURES.

Apr. 9, *Escort*, American barque, Carver, 630, for Manilla, Ballast, despatched by Captain.

Apr. 9, *Tamaura Maru*, Japanese steamer, Nye, 600, for Hakodate, General, despatched by M. B. Co.

Apr. 10, *Leicester*, British ship, Caddy, 1,324, for London, Rice, despatched by F. B. Watson.

April 10, *Hope* American ship, Hancock, 797, for Iloilo, Ballast, despatched by Captain.

April 11, *Menzaleh*, French steamer, Pasqualini, 1,008, for Hongkong, Mails and General, despatched by M. M. Co.

April 11, *Belgic*, British steamer, Metcalfe, 2,652, for San Francisco, Mails and General, despatched by O. & O. Co.

Apr. 11, *Willard Mudgett*, American barque, Dickey, 875, for Nagasaki, Ballast, despatched by Captain.

April 12, *Ruric*, Russian barque, Bergeland, 800, for London Rice, despatched by Wilkin & Robison.

Apr. 12, *Sunda*, British steamer, Edmonds, 1,704, for Hongkong, Mails and General, despatched by P. & O. Co.

Apr. 13, *Candia*, British steamer, Thomson, 1,342, for Hiogo, General, despatched by Jardine, Matheson & Co.

Apr. 13, *Ullock*, British barque, Rennie, 780, for Hiogo, General, despatched by Kniffler & Co.

Apr. 13, *Lochleven Castle*, British ship, McKechnie, 602, for Manilla, Ballast, despatched by J. C. Fraser & Co.

Apr. 15, *Columbian*, British steamer Alderton, 2,283, for Shanghai and ports, Mails and General, despatched by P. & O. Co.

Apr. 15, *Nagoya Maru*, Japanese steamer, Young, 1,914, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Apr. 15, *Hiogo Maru*, Japanese steamer, Froome, 690, for Hakodate, Mails and General, despatched by M. B. Co.

Apr. 15, *Lunalilo*, American barque, Marston, 473, for Nagasaki, Ballast, despatched by Captain.

PASSENGERS.

Per Steamship *Belgic* from Hongkong.—For Yokohama: Mr. Carl Lutz, Mrs. Carl Lutz, infant and two servants, Mr. C. Wagner, Mr. G. Kitamura and Servant, and 1 European in the steerage. For San Francisco: Mr. and Mrs. Buchanan, and 597 Chinese in the steerage.

Per *Leicester* for London.—Mr. and Mrs. Chapman and family.

Per Steamship *Candia* from Hongkong.—Mr. P. S. Beaters.

Per *Menzaleh*, for Hongkong.—Messrs. Formby, Fermire de Sold, Barelle, Gramer, Louis Favre, Hon. F. Plunkett, Mrs. Plunkett and 2 children, Mr. and Mrs. Reynvaan and 3 children, Mr. and Mrs. Bryant and child, Mr. and Mrs. Caill and child, M. le Comte de Sineby, Messrs. Shiono and Masuda.

Per Steamship *Sunda* for Hongkong.—Messrs. Raud & Symonds.

Per Steamship *Belgic* for San Francisco.—Messrs. A. H. Blundell, Revd. D. McLaren, S. Day, T. D. Marnham, Gridnine, A. W. Scrutton, C. J. Melhuish, Miss Snowden, Mr. and Mrs. C. A. Mc Vean and 3 children, Mr. and Mrs. Scarborough, Madame Leonowa, G. Buchanan, Mrs. Buchanan, Mr. McCullogh, and Dr. Wagener; 579 in the steerage.

Per Steamship *Tokio Maru*, from Shanghai and ports.—Lieut. Col. Wilkinson, Messrs. W. H. Macomber, P. Bigelow, L. Gouillard, Tanabe, Marsh, Griffing, Ullmann, Shann, Tada, Matzuhashi, Koide, Monobe, Sahamoto, Konda, Murase, Toki, Matzuo, Nakana, Tsuda, Kukuchi, Minama, Morita. Mr. and Mrs. Forbes and 2 children, Mr. and Mrs. Kumano and child, Mr. P. V. Grant, Mrs. Mori, Messrs. A. Milsom, Kaneda, Elder, Gittend, Boettiger, Dr. Junker, Miss Asada, Messrs. Gilbert, Wm. Watt, Kufugima, Shimamura, Matzus, Oshino, Kawaguchi, Shibayama, Yetow, Akaba, Arao, Takagi, Miss Miyaki, Mr. and Mrs. Irisawa Messrs. Ohashi, Adachi, Kubo, and 474 Japanese, 14 Chinese, and 5 Foreigners, in the steerage.

Per *Candia*, Messrs. Cobden, Hadley, Richards, Beaton, Newberry, and G. D. Hay.

Per Steamship *Columbian* for Shanghai and ports.—Dr. Hill, Dr. Willis. Marquis of Kildare, Captain Saunders, Mr. Bois, Baron Stillfried, Messrs Benwell, Black, Joseph, Hickling and Daniel.

Per Steamship *Volga* from Hongkong.—Mr. Aramis.

CARGOES.

Per Steamship *Menzaleh* for Hongkong.

Silk for Marseilles	90 bales.
London	10 ,,
Total ...	...100 bales.
Waste silk	**82 bales.**

Per Steamship *Sunda* for Hongkong.—

Silk to London	32 bales.

REPORTS.

The *Leicester* takes away nearly 1,700 tons of rice, but is not loaded down to her full draught.

The Steamship *Belgic* reports. Left Hongkong 3.10 p.m,. Sat. April 1, 1876, with squally weather and heavy thunderstorms, strong N.E. monsoons with occasional violent squalls and thick weather to Yokohama. Lat. 30.35 W. 134. 30. 5. to Rock Island, heavy gales thick and dirty weather and high confused seas. Anchored at 6.15 a.m., 8 April, 1876.

The Steamship *Candia* reports, a strong N.E. monsoon all the way up from Hongkong.

The *Ruric* takes away 1,100 tons of Rice.

The *Mathilde* reports: had variable winds up to Van Dieman Strait; from there experienced strong gales between N.E. and S.E.

The *Cleopatra* reports having made the passage round Australia. Had a run of 98 days to New Caledonia, but was detained near there for 26 days through calms and light winds.

The *Banda* reports very pleasant weather during the most part of the passage. Whilst passing through Timor Strait, encountered some equally weather, during which lost two top-gallant masts, and sprung the topmast head.

The *Harmonia* reports strong N.E. winds and rain all the passage.

The *Ullock* has been detained here since Saturday, on account of some dispute about a claim made for damage to cargo.

The *Candia* leaving for Hiogo on Thursday morning, arrived in Port on the afternoon of the 10th, and since the morning of the 11th has landed upwards of 700 tons of cargo.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics.—Owing in part to the Easter holidays, in part to the dulness which usually characterises this season we are unable to report any business during the closing week, nor do the few transactions which took place afford any criterion of present values. Nominally, therefore, our rates remain as quoted last week.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.90 to $2.20	60 to 64 reed	40 yds.	35 in. nom. per pce. 2.10 to 2.30
8 lbs.	38½ yds.	44 in.	,,	2.20 to 2.50	Turkey Reds	24 yds.	30 in. 2¼—3 lb. per lb. 0.75 to 1.05
8 lbs. 4 to 8 lbs.	38½ ,,	39 in.	,,	2.20 to 2.50	Black Velvets		8.00 to 9.00
9 lbs.	38½ ,,	44 in.	,,	2.50 to 2.90	English Drills	15 lb. 40 yds.	30 in. 3.30 to 3.45
					Taffachelass	12 yds.	43 in. *nom.* 2.00

Yarns.—

No. 16 to 24	per picul	$31.00 to 34.50	No. 38 to 42 per picul $41.00 to 45.00 nom.
No. 28 to 32	per picul	$34.00 to 40.00	Reverse Twist 16-24 ,, $34.00 nom.

Woollens.—The market continues weak as last reported. Transactions are on a small scale and rates must be deemed altogether nominal.

Plain Orleans	40—42 yds.	32 in.	6.50 to 8.00	Figured Mousseline de Laine	30 yds.	30 in.	0.25 to 0.28
Figured Orleans	29—30 yds.	31 in.	4.75 to 5.25	Multicolored ,,	30 yds.	30 in.	0.35 to 0.40
Chimagoro	30 yds.	30 in.	5.25 to 5.75	Cloth, all wool plain or fancy	48 in.	to 52 in.	0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0.25 to 0.33	Presidents	54 in.	to 56 in.	0.60 to 0.70
Camlet Cords	29—30 yds.	32 in.	6.25 to 7.25	Pilots	54 in.	to 56 in.	0.40 to 0.45
Camlets Asstd.	56—58 yds.	31 in	18.50 to 19.00	Union	54 in.	to 56 in.	0.40 to 0.65
Lastings, Japan	22—30 yds.	32 in.	13.00 to 14.50	Blankets, scarlet & green 7 to 8 lbs.		per lb.	0.40 to 0.41
Plain Mousseline de Laine	—30 yds.	30 in,	0.19 to 0.20				

Sugar.—*Formosa* descriptions are nominal at the quotations we give, as there are for the moment no buyers. Stocks have been increased by heavy arrivals, the vessels which came to hand since our last issue having brought 48,000 piculs. *China* descriptions are without change.

Sugar:—Formosa in bag	per picul	3.20 to 3.25	China No. 5 Kong-fun	per picul	4.20 to 4.80
in Basket	,,	3.10 to 3.15	,, No. 6 E-pak	,,	3.30 to 3.50
China No. 1 Ping fah	,,	7.30	Swatow	,,	2.60 to 2.80
,, No. 2 Ching-pak	,,	6.50 to 7.00	Daitong	,,	2.60 to 2.90
,, No. 3 Ke-pak	,,	5.50 to 5.90	Japan Rice	,,	
,, No. 4 Kook-fah	,,	5.00 to 5.30	Kerosine Oil	per case	2.47½

Kerosene Oil.—We have no change to report in nominal quotations, holders continuing firm in their demand for higher prices. Some 35,000 cases are to hand ex *Cleopatra* and only 15,000 are due by the *J. H. Kimball.*

EXPORTS.

Silk.—Since the 7th instant transactions have been quite insignificant and we have no change to report in prices. Arrivals are 56 bales and deliveries about 60 piculs.

The announcement that the produce of the Imperial steam filature of Tomioka has been placed in the open market may be considered as premature, inasmuch as, although sample bales have in one single instance been delivered and sold at prices reported to be $640 to $710, the goods which they represent have not been removed from Tomioka.

So far, therefore, there is no reason to expect that this silk will be diverted from the channel through which it has hitherto been forwarded to Lyons.

		At Exchange 3s. 11½ in London.	*At Exchange 55.0 at 6 m.s. in Lyons.*

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

SUPPLEMENT

TO THE

Japan Weekly Mail.

YOKOHAMA, SATURDAY, APRIL 15, 1876.

ARRIVAL OF THE FRENCH MAIL.

The French Mail Steamer *Volga* arrived this morning from Hongkong with European mails to the 27th February.

We extract from our Indian Exchanges the following summary of telegraphic news :—

Calcutta, March 11th.—In commemoration of the visit of the Prince of Wales to India, the Queen has appointed him Honorary Colonel of the following Native Regiments :—11th Bengal Lancers, 2nd Bengal Native Light Infantry, 2nd Goorkha corps of Guides, Madras Sappers and Miners, 4th Madras Light Cavalry, 3rd Bombay Light Cavalry, and 2nd Bombay Native Infantry. Of the above Regiments the 2nd Bengal Infantry, the Corps of Guides, the Madras Sappers and Miners, and the 3rd Bombay Cavalry also received the designation of Queen's Own. The remainder receive the designation of "Prince of Wales' Own."

Bombay, March 8th.—The steamer *Jowad* has been wrecked. She left Jeddah on the 16th January with upwards of 400 pilgrims. The same night she struck on a reef known as Comptas, and became a total wreck. 390 pilgrims, the Captain, the Chief Officer, two engineers, and 38 of the crew were drowned. Only 13 persons were saved out of 45.

Galle, Monday Morning.—The P. & O. *Bangalore* has not proceeded to Australia. The passengers are alarmed at small-pox, which has appeared on board. They held a consultation and resolved not to proceed. The alarm is greater than there are grounds for; the steamer doctor who is in hospital, is suspected of suffering, but he is reported not to be affected with small-pox. The Health Officer reports this morning all well on board. Of course every precaution has been taken against the spread of the epidemic. The P. & O. Agent awaits instructions.

The Military correspondent of the *Times of India* states upon authority that the Staff Corps will not be abolished. Ninety yearly retirements are to go on for one or two years more when a number of direct appointments as second Lieutenants will be made to native regiments from England.

According to a Parliamentary paper, the commission to be paid to Messrs. Rothschild for their "trouble and risk" in arranging the purchase of the Suez Canal shares amounts to £99,414. This is 2½ per cent, on the amount paid to the Khedive.

Bombay, 13th March, 11 56 p.m.—To-day a deputation from the Bombay Corporation presented a farewell address to the Prince on board the *Serapis* His Royal Highness, in replying, said: "I feel grateful for having been permitted to carry out my purpose of visiting so much of the widely extended Indian Empire. Nothing has impressed me more in this vast population than those described in the address as the patient, industrious, and loyal people of India. The uniform kindliness everywhere received has more than gratified me; it has left many permanent recollections never to be effaced." At 4 o'clock the *Serapis* weighed anchor under a salute from the land battery. As she steamed ahead a Royal salute from all the war ships was poured forth. The *Raleigh* and *Osborne* followed in the wake of the *Serapis*.

Bombay, 11th March.—The Prince of Wales arrived at 11 o'clock at Churchgate station. H. R. H. was received at the Railway Station by the Governor, the Commander-in-Chief, and the principal Government Officers. There was also a guard of honor. The streets were lined with troops and decorated with flags and evergreens. The crowd was small but enthusiastic. There were a few Europeans at the Dockyard, but many are absent from Bombay. A salute was fired by the war ships as the Prince embarked. The Prince dines with the Governor to-night. His Royal Highness looks very well.

Calcutta, 10th March.—Seven actors in the Theatre at Calcutta have been arrested by the Police under the new ordinance affecting dramatic representations.

Cairo, 13th March—Intelligence received here from Massowah states that the Abyssinian troops were routed by the Egyptians on the 9th inst., and that King John was suing for peace. Meanwhile hostilities have been suspended, and negotiations for peace are proceeding.

Calcutta, 16th March.—An influential meeting was held this afternoon with a view of commemorating the services of Lord Napier, Commander-in-Chief, by the erection of a statue at Calcutta. A Committee was appointed to obtain subscriptions for effecting the purpose.

London, 17th March.—After an animated debate which lasted for seven hours, the House of Commons, by 305 against 200 votes, went into Committee on the Queen's Titles bill, thus rejecting the Marquis of Hartington's motion objecting to the title of Empress of India.

SUMMARY.

(London and China Express, February 25.)

France.—The election of Deputies to the new National Assembly have gone largely in favour of the Republicans.

Germany.—Owing to a sudden breakup of the frost floods have occurred in several districts, which it is feared will occasion serious distress.

Russia.—It is expected that the Government, in accordance with a proposal of the Society for the Protection of Trade and Industry, will shortly agree to grant a subsidy to all Russian vessels trading between Black Sea ports and India or China.

Italy.—A Burmese Embassy has has arrived at Naples.

Ceylon.—Sir W. H. Gregory, Governor of Ceylon, is gazetted a Knight Commander of the Order of St. Michael and St. George and Mr. A. N. Birch, Colonial Secretary, and Mr. John Douglas, Auditor and Accountant-General, Companions of the Order.

Parliament.—The Martini Henry Rifle has been the subject of discussion, and it was stated by Lord Cadogan that care was being taken to correct the defects of the weapon. In the House of Commons the debate upon the purchase of the Suez Canal shares ended in the vote being passed without a division, Mr. Whitbread's motion condemnatory of the Government circulars regarding the treatment of fugitive slaves has been rejected, and a resolution was carried to refer the subject to a Royal Commission.

Naval and Military.—The *Nassau* has been ordered to complete the survey of the Straits of Malacca. Lieut.-General Sir Charles Staveley has been appointed to the colonelcy of the 36th Regiment, and Lieut.-General Sir A. Cunynghame to that of the 60th Rifles. Colonel Colley has been appointed Military Secretary at Calcutta. The Army Estimates for the coming year show a net increase of £603,000. The Duke of Edinburgh will commission the ironclad *Sultan* on the 1st April.

Obituary.—The deaths are recorded of Rear-Admiral Beecher, Captain Sawton, R.A., who served in China in 1860, Dr. Gauntlett, an eminent musician, and Miss Cushman, the American actress.

Lieutenant-Colonel Barne, a Conservative, has been elected M.P. for East Suffolk, Mr. W. Beckett Dennison, a Conservative for East Retford, and Mr. Wroughton a Conservative for Berkshire. A deputation has also waited upon the Marquis of Salisbury to advocate a more restricted cultivation of opium in India; but the Marquis held out no hopes of legistation upon the subject. A deputation has also waited upon Lord Salisbury with reference to the import duty upon cotton goods in India.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 18.] YOKOHAMA, SATURDAY, APRIL, 29, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

MARRIAGE.

On the 27th instant, ALBERT CHARLES DU BOUSQUET, Captain of Infantry, attached to the Senate of Japan, Chevalier of the Legion of Honour, to Mademoiselle TANAKA HANA MARIE, daughter of the late Kuróda hei no jiô and of his relict Kuróda Riu, adopted *in heredem* by the late Tanaka kuma ji rô.

DEATHS.

On the 23rd instant, at the Yokohama General Hospital, in the 30th year of his age, ROBERT MOTZ, Interpreter to the Kanagawa Saibansho.

Notes of the Week.

A rather ominous notification was issued a few days ago by the Prime Minister to the effect that the Mikado was about to visit Oshiu and Ushiu. Is it not also possible that His Majesty may bend his steps towards a great province in the South-west of his dominions?

Attention was lately drawn in these columns to a report that the Government was about to spend a large sum of money upon the improvement of the thoroughfares in Tokio. It is also said that some measures are about to be taken in regard to the water supply for the capital. In close connection with these two subjects stands the question of an efficient system of drainage, which is very much wanted and should be applied to the whole city. Cases of typhoid fever are being constantly brought to the notice of foreigners residing in Tokio, and this means either bad drainage or bad water—possibly both. The large sum of money which has been named in connection with the proposed improvement of the roads would go far towards supplying Tokio with these three great essentials, each of which is intimately connected with the other.

It has been said that there is a strong reaction going on in this country in favour of Chinese learning and thought as opposed to those of the West, and that the Government is more or less actively promoting it. The first part of the statement is undoubtedly true; the latter part we see no reason whatever to credit. It is quite true that the ideas in regard to popular rights and liberties which the youth of this nation are gradually acquiring, suggest problems which the Government is well aware it will sooner or later have to solve. But the idea of all the leading Japanese minds—and the Government has been, and, on most questions, is, well in front of the nation—is that the country can only gain the lead it is striving to take in the East, by adopting Western ideas and discarding the fruitless philosophy of China. That there is any real apprehension on the part of any single man in the nation, of the whole circle of European ideas and their relations to each other, may be well doubted; nor, in view of the enormous circumference of that circle, is this any subject for astonishment or censure. But it is certain that the Japanese now know not only that the studies of the European nations are pursued by sound methods, but that a large measure of positive knowledge has been attained, and that the possession of it is a key to power. This key they are anxious to get into their hands, not perhaps because they love the knowledge for its own sake, or derive that pleasure from the pursuit of it which the true philosopher experiences. They want it for the power which it confers, and we must trust the love of it for its own sake will come later. Meanwhile it is to be hoped that the reaction of which we have spoken will soon expend itself.

As it is sometimes questioned how far the advent of foreigners to this country has really been of benefit to the mass of the people, we make the following extract from one of our translations of last week, in order to draw prominent attention to it.

We know not what was the condition of the country or the form of the Government, but we have not yet heard of a single person who was driven by its oppression to oppose the Government (their nerves having been palsied by it). Was not this a state of profound peace and general content? Men had mouths but they could not speak, they had hands but they dared not write. The implements of torture were ever before them, the prison officials stood for ever behind them and nothing could exceed the arbitrary self-will of the Government, (the reason being that no discussion of people's liberties was permitted.) Oppression such as this and complete content should not exist together, and will any one dare to deny that our countrymen are the most long-suffering of people under Heaven when we see that they were so contented under such a Government?

We wish we could see more unequivocal signs of material prosperity resulting from the operation of the treaties, and we are still of opinion that the absence of these signs betokens a condition of affairs demanding the most serious consideration, not only of the Japanese but of the nations commercially allied with them. The trade is in a most unsatisfactory, if not ruinous, condition, and there appears to be a growing feeling among the Japanese, if we may judge by fugitive reports and paragraphs dropped here and there in the translations laid before our readers, that the presence of the foreigner in this country is directly responsible for this condition of affairs. This statement is undoubtedly entirely fallacious, and we firmly believe that the collapse of foreign trade here which would certainly follow the regimen of quackery which the Japanese are being prevailed on to adopt at least in one quarter, would be followed by something very like national bankruptcy. There are many and various causes which help to explain partially the present untoward condition of affairs, but do not suffice to explain it entirely. There must be something wrong, however, when a body takes wholesome and sufficient nourishment and yet seems to decline in size and vigour. Apart from this source of misgiving, the paragraph before us throws some light upon the condition of affairs which existed prior to the advent of foreigners, and if we add to this what we know of the advance of education throughout the country, we must be forced to admit that a great accession of knowledge and great increase of personal liberty have been among the blessings for which the Japanese nation has to thank the foreigners.

Among the many inconveniences or, as we ought to say in this case, dangers, arising in various directions from the recent fall in the price of silver, is one to which the attention of the various governments of the world will certainly be sooner or later called. It is this. The nominal value of silver coins is considerably above their actual value. Twenty shillings will buy as much of any given commodity as a sovereign, up to the point at which silver is a legal tender, viz £5. Not only does the nominal value of the shilling include the expense of coinage—which the sovereign does not—but it gives the Government which makes it a profit besides, that is to say, there is considerably less than a sovereign's worth of silver in twenty shillings. Now the coiners of base money have hitherto used a very poor metal. Their coin has no ring in it when struck, and has a greasy feeling to the touch. A practised eye and finger could detect it readily, though the unwary or careless were often deceived. But the illicit coiner can now afford to make as good silver coins as the Government, and still get a a considerable profit out of the transaction. There is not the slightest guarantee that we know of against an enormous issue of spurious coins from illicit presses. The price at which the British Government issues coined silver is 66d. per ounce, while raw silver can be purchased in a falling market at 53d., —a difference which would amply repay the expense of coining.

A very sensible letter addressed to the *Japan Herald* of yesterday evening shows some of the difficulties which would attend the imposition of quarantine regulations here, and the application of them to the ships bearing Chinese coolies which touch here on their way from Hongkong to San Francisco. Small pox—in a slight form, it is said—appeared on board the *Colorado* on her last voyage from Hongkong, the three men who were attacked were landed here and sent to the small-pox hospital, and the vessel proceeded on her voyage. What else could have been done? The idea of small-pox breaking out in a malignant form on one of these vessels while on her longer voyage, is dreadful indeed. But it is a condition inseparable from the nature of this coolie passenger trade, and can only be met by precautions against the appearance of disease, and skill in dealing with it should it appear. Equally bad would it be if an outbreak of small-pox here were distinctly traceable to infection thus introduced. But there is so much good authority against quarantine measures, and they are productive of so much hardship both to passengers and ship-owners, that the application of them to such a case as that of the *Colorado* would be a policy of very doubtful wisdom and benefit. Why Mrs. Gamp, too, should be in such a "canaries" on the subject, we cannot imagine. Can she have forgotten saying to Betsy Prig—"Wishin' you lots of sickness, my darling creetur, and good places. It won't be long, I hope, afore we works together, off and on, again, Betsy; and may our next meetin' be at a large family's, where they all takes it reg'lar, one from another, turn and turn about, and has it business-like."

It is commonly said of April that it comes in like a lion and goes out like a lamb. It has been very much otherwise here this year. The last few days have been strangely raw and boisterous, and winter seems to have returned to vex us with his storms. A month ago the whole country was one vast camellia garden, and spring, lovely everywhere, makes Japan like Bunyan's land of Beulah—a land of enchantment. The Japanese must be wanting in poetic sensibility if their literature does not abound in odes to nature, for the raw materials, so to speak, of poetry are scattered here in rich profusion. Even in Tokio a Japanese Burns would find a thousand suggestions for sonnets. It would be hard to find a single one in Peking. Considering that the Japanese are certainly a musical people, it is quite conceiveable that if they had our gamut to work with, they would produce something new and characteristic in the form of those *Frühling's* or *Maienlieder* which make Germany as full of sweet sounds as Prospero's island. What would be the Japanese form of "Where the bee sucks," or of "Mann soll hören süsses Singen in den Auen überall"? It was Pitt (we rather think) who said that he cared little who made the nation's laws, if only he could have the making of its ballads. Here we are getting new laws, but the old ballads remain. No improvement in this respect is possible until the European gamut takes root here—which, however, we are confident it must do in the course of this generation.

It is not generally known that a native work which may be expected to throw considerable light upon the political history of Japan during the past two hundred years is now in course of preparation. It is entitled "A History of the fifteen successions of the Tokugawa dynasty" and will, when completed, extend to fifteen volumes of which two only have hitherto been issued. The historian—Mr. Nakai Hôkô—is well known in Japanese literary circles. His style is 'Kanban,' or Chinese, Tacitus-like in a brevity which sometimes betrays him into obscurity.

His work commences with the pedigree and birth of Iyeyas and will end with the downfall of H'totsubashi. Under the Tokugawa *régime* nothing in the shape of political history was allowed to appear, and the present work is—so far as we can learn—the first account ever published of the affairs of Japan from the time of Iyeyasu down to the revolution of 1868. Hence in great measure its interest. The author shows how the feudal lords who rose to power under the earlier *Shoguns* were brought into subjection by Iyeyasu, and the consolidation of the Empire effected by him, bringing about thus a state of affairs which endured for two centuries. In the course of the history interesting notices of the relations between Japan and the Christian Missionaries as well as of the intercourse with foreigners generally may be expected. In a word, the history will show the antecedents of one of the most remarkable revolutions on record—that of 1868—and assist in explaining the real nature of the movement and the remote and proximate causes which led to it.

The news of the defeat of the Yokohama crew at Kobe disappointed all and surprised many. We have no account of the contest beyond the telegram published yesterday morning, and must wait until next week for a more detailed history of it.

A telegram from Kobe gives the following as the list of winners at the Athletic Sports held there yesterday. A large share of the honours, it will be observed, has fallen to the Yokohama representatives.

Vaulting.—Posch.
100 Yards Flat Race.—Jonas.
High Jump.—A. Smith.
Ladies' Purse.—1st, Jonas; 2nd, F. Walker.
300 Yards Hurdle.—Henson.
120 Yards Hurdle.—Henson.
Half Mile Flat.—F. Walker.
Walking Match.—A. Sim.
Single-stick.—Sim.

The British ship "*Eme*" will leave for Shinagawa shortly to load rice for Amoy. The "*Wallace*," will also load there for San Francisco.

Mr. Kitatabake Harafusa late President of the Judicial Court of this *ken* and Mr. Tachiki Kaneyoshi his successor gave a dinner at the Grand Hotel last evening to which several of the Foreign Consuls, the Governor of the *ken* and other officials were invited. Mr. Kitatabake has, we understand, been promoted to one of the superior courts of the capital.

From the "Japan Mail Dail Advertiser."

The second performance of "La Périchole," which took place on Saturday evening, calls for little notice. M. Franque was more at ease in the *Viceroy* and sang with better effect. We cannot avoid noticing, however, that one or two of the ensemble pieces showed the want of practise together, and that the singing was in more than one case painfully flat. The opera was preceded by the "Violoneux," also by Offenbach, which was well received by the audience.

The *Hioron Shimbun* writes: A short time since a number of Yedo policemen out of uniform were sent to various disaffected districts with instructions to arrest such persons as might appear to them to be inciting to rebellion against the State. It is understood that they have succeeded in capturing some twenty individuals. One of these has been already sent to Yedo for trial, the others remaining in gaol in Kioto and elsewhere. They are, for the most part, *samurai* of Choshiu and Tosa. The policemen were despatched secretly and their proceedings made known to the heads of their department only.

At the recent opening of the Government school of Tochigi *Ken* voluntary contributions to the Institution were received from 150 residents of the *Ken*, who presented it with clocks books and other appropriate gifts.

The western school of medicine does not appear to have as yet made much progress in Osaka. The Dôshu Machi in that city is a street lined nearly from end to end with apothecaries shops, whose sales are almost wholly confined to herbs, roots, bark of trees and other vegetable medicines. Of the preparations of the western pharmacopœia they sell but little.

We learn that the necessity for a Pilot Board alluded to in these columns last week, is now under consideration of the Board of Consuls, and that a scheme for its constitution and working will be laid before them in a few days. In all probability, it will be made a penal offence, as in Shanghai, to pilot ships in or out of the Bay without being duly licensed. Whether, however, as in China, the English Minister holds the power of Board of Trade and Commissioner of Customs here, is doubtful, and therefore, probably, any ordinance, even if conjointly assented to by the other Treaty Powers, would require confirmation at home before it became binding on British subjects here, although, until such official sanction should be received, the duly licensed pilots would be in a better position than heretofore.

Odoriferous as are the streets of Tokio in general, of late the choked gutters have exhaled such noisome vapours, that there is every reason to anticipate fever during the hot months. A draught of pure cool water from a street well is almost unknown to the poorer inhabitants, so that as H. M. the Mikado is having the water at the Palace analysed and tested, it were well if the royal care were extended to his humbler subjects and a chance of unpoisoned water and unvitiated air vouchsafed to them.

A disturbance is reported to have occurred in the Awomori *Ken*. No details are, however, to hand.

The *Osaka Nippo* writes that the Superior Court of that city was opened on the 18th instant.

The native papers report that a fall of snow took place in the Nagano *ken* on the 5th instant.

The Revd. J. Goble is now engaged in preparing a Japanese Primer for the use of the Blind. The type adopted is a modification of that know as "sanserif," "gothic," or "Franklin," according to the whim of type-founders, and the characters are readily perceptible to the touch, so that a blind native has learned to distinguish then in an incredibly short space of time. The spelling is of course phonetic. The Gospel of St. John (or a portion of it) has been issued in in somewhat similar manner in Philadephia.

Madame Doriani and Monsieur Pontet gave an entertainment at the Gaiety Theatre last evening, consisting of selections from Offenbach and some miscellaneous music. The house was well filled.—Of *La Vie Parisienne* there is little to be said, the score of the scene presented being as flimsy and wretched as the music of a clever man can well be. We cannot be surprised therefore at the small effect produced by the *artistes* upon their audience, notwithstanding Madame Doriani's best efforts and M Pontet's humour. *La Rose de St. Flour*, too, which closed the performance, however amusing its action, is singularly unattractive in its melodies, and we cannot help thinking the selection unfortunate. Between the operettas Madame Doriani sang the ever charming "*Una Voce*" with good taste and expression and, subsequently, a *pot pourri* of popular dance melodies. Her voice is a of moderate extent soprano and agreeable quality. An amateur possessing a voice of much compass and power was good enough to lend very material support to the entertainment, giving the air from Halévy's *Juive* in a large and broad style and with great effect.

Are we not having an overdose of Offenbach? With two *troupes* in the field, each of them, it must be admitted, enjoying the unexpected patronage of the public, it may not be unreasonable to ask for an occasional change of fare. It is to be hoped that the *répertoire* of the artists will allow of it.

Inouyé Kaworu is said to be entrusted with a special mission to several foreign countries. It is expected that he will leave Japan in June next.

The frightful loss of life at the late fire in the Osaka Theatre is attributed to the fact of the doors having been locked upon the outbreak of the flames. Some minutes elapsed before they could be opened and in the meantime the fire had enveloped the greater part of the theatre. The house was unusually full. Some sixty-three corpses have already been discovered, and a large number of charred bones.

Peace is restored in the Awomori *Ken*. The people were alarmed by a change in the mode of collecting the land tax, but have since been tranquillised by their authorities.

The following from the *Choya Shimbun* appears to require confirmation: The Ministry is said to have requested the U. S. Government to grant them permission to levy such duties as it may deem proper upon articles of American manufacture, imported into this country from the United States and exported thither. The U. S. Government has sanctioned the change.

The *Heiji Shimbun* hears that a water-power mill at Sekiguchi, at present attached to the War Office, has been handed over to the Home Department. It is intended to convert it into a woollen manufactory.

A certain Tarobei, says the *Hochi Shimbun*, has discovered a process by which the fur of rabbits may be woven into cloth. We believe that this has been accomplished without Mr. Tarobei's help elsewhere, the product, however, being found unsatisfactory. Rabbit's hair, it is well-known, forms a considerable article of commerce in Europe, where it is largely employed in the manufacture of felt hats.

A Chinese residing in Yokohama has presented a memorial to the Minister of the Department of Education, recommending that all documents (and books we presume,) written in the old character should be carefully preserved.

A native living near Kioto has been accidentally peppered with shot by a foreigner attached to the Railway Department. The wounds were very slight.

The *Choya Shimbun* intimates the probability of a new school of medicine being opened in Yedo shortly.

The M.M. s.s. *Menzaleh*, which left Hongkong on the 20th instant at 6 p.m., arrived in port at about 5 a.m. this morning, having accomplished the trip in 6 days 11 hours.

The Norwegian barque *Hafresfjord*, which sailed on Thursday, takes to Melbourne about 700 tons of Japanese rice and from 50 to 60 tons of curios and porcelain.

A Japanese newspaper states that the scheme for a railway to connect Kiôto with Tsuruga in Echizen will, in all probability, be abandoned.

The *Hochi* says that Takemoto, a porcelain manufacturer of Takata, near Yedo, began last year to manufacture his wares with foreign appliances. The change, it is found, has materially improved the character of his products, while at the same time allowing of the employment of less highly skilled artisans.

There is a general tone of complaint through the Japanese press that the Government has not caused fitting examinations to be appointed for practitioners in the Law Courts. It is

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

said that there are many who are ready and willing to practise in the Courts, but who are unable to obtain a diploma.

The cadets of the Military College of Toyama will shortly leave for Nikkô.

An official notification has been issued by the Prime Minister announcing that H. M. The Mikado will shortly visit Oshiu and Ushiu.

The following telegram was received yesterday afternoon from Kobé and proclaims the defeat of the representative crew from this port.

"Kobé led starting. Shanghai picked up—were leading three lengths—when bow oar broke 300 yards from post. Kobé passed and won in 11¼m. Yokohama 'nowhere'."

Two unexpected and hasty departures were brought to light yesterday. Mr. Wake, Superintendent of the Cemetery, was found to have sailed secretly in the Norwegian barque *Hafresfiord* for Melbourne, leaving behind him debts and unsatisfied liabilities, and Mr. Clayton, late manager of the Temperance Hall, had embarked in the *Colorado* for America. It is understood that the accounts of the latter person are in a satisfactory state. He was discharged recently for having untruly aspersed the character of another man, and, having enjoyed the confidence of the heads of the Institution, it is inferred that a sense of shame and of his sacrificed position drove him away.

We are pleased to observe that the authorities are at length taking action against the manufacturers and vendors of counterfeit foreign drugs and patent medicines, to whose wretched impostures the *Japan Mail* has more than once called attention. The police descended upon the shop of one Yamada, an apothecary in Honcho, Yedo, a few days since, confiscated his stock of spurious chlorodyne with labels, testimonials and the forged English Revenue stamps and closed his shop. An apothecary in Yokohama has also been arrested on a charge of having on sale a quantity of the perilous stuff which Dr. Collis Browne is made to stand sponsor for, and it would appear as if orders had been issued to make a searching investigation and to sweep all counterfeits from the market. Whether this action has originated in an honest intention to allow fair play to the foreigner, or from a paternal desire to protect the *dura ilia* of the lieges from the nasty stuff intended for them, it is not initiated too soon.

It is intended to plant a large number of cherry trees within the grounds of Uyeno.

An inhabitant of the Ibaraki *ken* has recently dug up from their hiding place some 5,000 Chinese cash of various kinds.

Trouble is brewing in the Wakayama *ken*. Some changes in the mode of levying the land-tax have been made and the farmers and the Governor all now in contention on the subject.

Mr. Fredrick Krebs was entertained at a dinner last evening at the new Seiyoken Hotel, Uyeno, by the Foreign employés of the head office of the Mitsu Bishi M. S. S. Co. at Tokio. They were joined by Messrs. Iwasaki and the Directors of the Company, when a congratulatory address was presented to Mr. Krebs in honour of his attainment to the high position of "Kwanji" in the Company. The grounds were pretty illuminated, the decorations appropriate to the occasion, and a most enjoyable evening was spent by all present.—*Herald*, 26th inst.

At Kakigara chô, in Yedo, a new school has recently been erected, named the Arima Gakko after Arima, a former *daimio*, who feels a warm interest in its success. The building is lofty and spacious and built in the European style. It will be opened on Friday next, 5th instant.

A number of the mercantile companies recently formed in Okayama *Ken* have failed.

A party consisting of some sixteen members of the Imperial family were, says the *Akebono Shimbun*, recently entertained at Mitsui's bank at Fukagawa. Sixteen *geisha* were present and enlivened the entertainment with music and dancing.

The Chinese school of medicine would seem to be in the ascendant in the Okayama *Ken*, the science of the western nations being absolutely unknown there.

The *Akebono Shimbun* hears that the Empress and Empress mother propose to visit the paper mills of Oji on Tuesday next.

A large collection of works of art is now being exhibited at the Tôshôgu temple at Nikko. These have accumulated in the course of years, being the offerings of 280 *daimios* to the tombs of the *Shôgûns*.

IMPERIAL GOVERNMENT RAILWAYS.

Yokohama Station.

Statement of Traffic Receipts, for the week ending Sunday 23rd April, 1876.

Passengers, Parcels, &c.	$7,797.87

Merchandise, &c.	$ 453.78
Total.	$10,273.01

Kobe and Osaka Station.

Statement of Passenger Traffic for the week ending 16th April, 1876.

Passengers, 33,319.	Amount.....	Yen 6,262·95
Luggage and Parcels		,, 145·017
Goods		,, 242·972
Total Amount.....		Yen 6,650·939
Corresponding period last year		Yen 6,441·735

The P. & O. ss. *Sunda* which left this port on the 12th instant carried to Hongkong news of the loss of the well-known coasting steamer *Kwangtung*. She had left Hongkong on Wednesday, the 12th instant, on her usual coasting voyage, and at 1.15 a.m. on Sunday, the 16th instant, ran ashore during a dense fog, on the island of Ockseu, near the landing steps of the lighthouse. For some time after she had gone on shore, minute guns were fired, and these attracted the attention of the *Sunda*. It was then found from the position of the *Kwangtung* and the great damage her hull had sustained—the rocks having driven a large hole into the engine-room—that but little hope could be entertained of getting her off or of floating her. Captain Edmonds of the *Sunda* then took the treasure from the wrecked vessel, and, as it was blowing and dark, he proceeded on his voyage taking with him the Chief Engineer, whom he subsequently put on board the steamer *Amoy*, which proceeded to the wreck to render assistance. It is almost certain, therefore, that a considerable quantity of the cargo will be saved—a fact which will doubtless prove interesting to the Insurance Companies. The Captain and all hands were safe on the island.

The Hong Kong and Shanghai Bank have issued a prospectus inviting subscriptions for the balance of the Eight per Cent. Chinese Loan brought out last year. The amount is for £274,915, which we conclude will be speedily subscribed, the merits of the loan and securities having been already approved by those "who do know something" of China and the resources, upon which the loan is based. *The Times* in noticing it says:—"After the experience which the public have had of such wonderful investments it would be surprising if the money was subscribed here. We know hardly anything regarding China or its finances except that missionary and official reports speak of deficit as the normal condition of the latter." We can only regret that such astounding ignorance should be set forth in the columns of our leading contemporary.—*L. & C. Express.*

TARIFF ALTERATIONS.

A rumour has found its way into the native papers, and from these into the local foreign Press, that the Government of the United States has given its sanction to a proposal from the Japanese Government to assume full control over the Custom's tariff of Japan as far as it affects the United States. A translation which will be found elsewhere mentions and comments upon this rumour, and congratulates the country upon regaining that control of its tariff which it has frequently and bitterly complained that it was unjustly deprived of by the old treaties. The form the rumour has taken in the native papers is curious—so much so indeed that we reproduce it here. It is as follows :—"The news is that our Government has, through a certain foreigner, preferred a request to Mr. GRANT, President of the United States of America, to be granted full control over the Custom's tariff (of Japan) as far it affects the United States, and that the private negotiations for this purpose are already completed."

Now it is probable that this rumour is true. An appeal for what is intended to be a protective tariff is not inappropriately made to a country which manufactures but few commodities which Japan desires to purchase, and which will probably indemnify itself for a concession which practically amounts to nothing, by a demand for the reduction or total abolition of the export duties upon Japan tea, of which it is a considerable and the sole consumer. But, be this as it may, the majority of Americans firmly believe in the doctrine of protection to native industry in spite of the vast injury it has done them, and a Legislature which rather represents the average opinion than the riper wisdom of the nation, will probably consent—presuming the question is referred to it—to a measure which echoes its opinions, costs the nation nothing, and cheapens one of the staples of the breakfast table. The theory that generosity is the sentiment which induces A to give B something out of C's pocket is exemplified by the graceful consent which America will probably give to a measure aimed at the diminution of British trade in this country ; and, as stolen waters are sweet, a peculiar joy will be distilled from the measure inasmuch as it stealthily undermines the policy of united action on the part of the Western powers in this country. So long as the Japanese are taught by irresponsible American advisers that they are merely so many slaves chained to the triumphal commercial car of rapacious and insatiable Britain, their pride will prevent them analysing dispassionately the laws of free trade of which Englishmen have been the principal expositors. To tax the consumer for the benefit of the producer, under the idea that if it is only done for a sufficient length of time the loss which it entails will be converted into a profit, is a doctrine which theologians might almost have adduced to prove that when man's moral nature was ruined, his intellect fell with it. But the fact is that sound theory on the subject of international trade is greatly obscured by the profits yielded even by a trade fettered by unsound restrictions. The great advantage an unfettered foreign trade gives is this, that the countries which pursue it obtain from their united labour and capital a larger quantity of commodities than they would otherwise produce. Each has something which the other wants, and its labour is most efficiently bestowed in producing this. The more it can therefore produce, the greater its advantage ; and presuming that the nation with which it trades acts, as of course it will act, under the same impulse, the extra production stimulated by interchange represents the profit of the trade, which will be equally shared between them. The Japanese are sedulously taught that to buy things at home brings with it a national benefit ; to buy them abroad, a national loss. It is obvious, however, that the importation of foreign commodities can only begin and go on if it is, economically speaking, a national good. It enables people to buy at a lower price that which they or their fellow-countrymen can only produce at a higher price, and the gain to the nation is the difference between those two prices. Similarly, if, by imposing duties, the importation of such commodities is prohibited, the country which thus acts loses the difference between what it might have cost to purchase them abroad and the higher price at which it can itself produce them. It is needless to tell any student of political economy that all this delusion about protective duties has its root in the restrictive and prohibitory policy arising out of what was known as the Mercantile System, the root-error of which was that the paramount object of trade was to bring money into the country, money being at that time universally considered as the only true form of wealth. This delusion has disappeared from the minds of all enlightened governments and educated men, and the wisdom of commercial legislation may be almost certainly measured by the greater or less proportion in which this doctrine is seen to enter into, or to be excluded from it.

Nothing can be more erroneous than to imagine, as the native writer on whose views we are commenting seems to do, that the Japanese were terrified by foreigners into accepting the Custom's tariff. Mr. TOWNSHEND HARRIS, then living alone at Simoda, was engaged for a great length of time in negotiating it, and commercial treaties all the world over are supplemented by tariffs fixing rates of duties which can be altered by neither party until the time for revising them arrives. Such foreign trade as exists in this country would long ago have been ruined had the tariff been open to constant revision, and the germs of trades which we trust will eventurally enrich Japan would have been killed before they had time to take root, much less to bear fruit.

The writer of the article to which we have referred seems to think that because the Americans have granted to the Japanese the full control of the tariff, as regards articles of American manufacture, England will follow her example as regards articles of English manufacture. England has far too large an interest in seeing Japan prosperous to do anything of the kind. She believes that, under a moderate tariff, such trade as the country can carry on will thrive and prove of advantage to it ; and knowing, as she does, that growing trades are most certainly killed by injudicious tariff changes, she will not consent to jeopardize her own interests by a course which is certain to impoverish her customers. Japan may beg never so hard for the liberty of ruining herself, and Britannia like a good, wiser and elder sister, will say to her, "My dear, I really cannot permit you to do anything of the kind."

Journalistic enterprise is not yet dead in Shanghai, for it is commonly reported that we may expect to see ere long another morning paper adorning our breakfast tables. We heard of the project some time ago, but now it is apparently no longer a secret. The sinews of war are said to be plentiful and strong, and the promoters have not decided to commence their literary structure without counting the cost. We have not heard what particular policy the new journal is to advocate ; but it is reasonable to suppose that there is some such specific object in view, the attainment of which renders it worth somebody's while to invest time and money in what appears to us must prove so very serious an undertaking.—*Courier.*

THE TRAVELLING TAX.

IF the question raised by the imposition of the tax on native travellers by the P. & O. Company's coasting steamers merely touched the special case of the opposition recently established, we could only object to it on economic grounds, as we did in our article on the subject of the 25th ultimo. But it goes much further. It seems to have two separate bearings besides its economic bearing. In the first place it does, by indirect means, and for alleged reasons which constitute a mere subterfuge, so far interfere with a treaty right that the share in the Treaty-port carrying trade which foreigners have always hitherto enjoyed unquestioned, is taken from them without reference to their Representatives. It is quite clear that any provision in the treaty or tariff might be evaded by similar indirect means if adapted to the special emergency, and evasions of this nature, when attempted, do not conduce to the better reputation of the offending nation, or an improvement of the relations between itself and those with which it is associated by treaties demanding intelligent as well as honourable interpretation. For instance, it is clearly not an intelligent view of the clause in a treaty intended to regulate the carrying trade between two treaty ports to say that such transportation refers to goods alone and not to passengers also, when every one must know that a goods trade and a passenger trade depend upon and mutually support each other. Similarly, it is not just to pass a measure as one of police which is a fiscal measure *pur et simple*—not a measure, be it observed, having incidentally a fiscal bearing, but a measure disguised as one of police having only one object, and, practically one result, viz, to monopolize a traffic hitherto shared at least by foreigners without the slightest question ever having been raised to their right to such share. It is not creditable to the foreigners in the service of the Government, or their partisans, that they should supply the defence for an act which cannot be regarded as free from reproach, and so long as the Japanese are taught that they have been unjustly defrauded of their rights by the old treaties, we fear they will better the lesson by oriental methods of evading or attempting to evade them. It would be more to the advantage of this country were all its foreign advisers of a class sufficiently familiar with the motives of honourable men to be assured that into whatever mistakes the early negotiators of the treaties may have fallen, they were for the most part high-minded gentlemen wholly incapable of imposing upon a nation ignorant of ordinary international relations, and as little likely to perpetrate a deliberate fraud upon their host for the time being as to carry off his plate. They certainly made stipulations in the treaties which are not usual with nations of a cognate civilization, that of extra-territorial jurisdiction, for example, and the attachment of the tariff to the treaties. But this was done because under no other condition could the treaties have been made to work satisfactorily. It was not to be expected that the nation which holds India more by *prestige* than by force, would submit to the conditions imposed of old at Desima, and Mr. HARRIS who was Lord ELGIN'S forerunner sketched out and ultimately negotiated a treaty which has precisely the same outlines as that which Americans are now perpetually engaged in vilifying to the Japanese as a monument of the rapacious spirit of England.

The second point which deserves attention in connection with this question is that the imposition of the tax practically deprives not alone the P. & O. Company's vessels of a share of the interportal carrying trade, but all foreign vessels. The object of the 9th and 11th clauses of the Convention was to leave the Japanese as free to trade with foreigners as with each other. The new Regulation certainly establishes an invidious distinction between foreign and Japanese shipping, which has not heretofore existed in the limited arena of the Treaty Ports, the only field in which foreign competition is admitted. The Japanese have still the coast trade in their own hands and abundance of opportunity for making for themselves and employing a merchant fleet without running off every foreign line of steamers that may engage in the trade between Yokohama and Shanghai, touching at the intermedial ports. It is not only the vessels of the P. & O. Company which might run on this line, but those of other associations, and it is greatly to the interest both of foreigners and Japanese that they should be able to do so. Monopoly will assuredly lead to inefficiency, and for one Japanese who will be benefited by the larger dividend the Mitsu Bishi may earn when unopposed, hundreds would be benefited by the cheaper carriage which competition would produce. It is the consumer of "carriage"—the shipper—for whose interests we are solicitous. At his back are all those trades and interests which will be fostered by the low freights resulting from a healthy competition. We should be glad to see the Mitsu Bishi Company successful, but the essence of all efficiency and the mainspring of improvement is competition. The late Regulation imposing the travelling tax seems a small thing at first sight. But it is as fatal to competition as Mercutio's wound was to him:—"No, 'tis not so deep as a well, nor so wide as a church-door; but 'tis enough, 'twill serve; ask for me to-morrow and you shall find me a grave man." If these Regulations stand, the P. & O. may say—so far as this trade is concerned—

They have made worm's meat of me.

SPIRIT OF THE JAPANESE PRESS.

TARIFF ALTERATIONS.

(*Choya Shimbun—April* 25 1876)

Japanese writers, in view of the injury which their country suffers from her not yet being vested with the two prerogatives of power of trial and control of the customs tariff, have been long bewailing the fact that she is not yet completely independent nor fully mistress of herself. The time for the revision of the Treaties is already past, notwithstanding which the Government, as though there were any reasons for hesitation, has as yet failed to bring about such revision. Writers in still greater sorrow on this account are incessantly conjecturing as to what the reasons therefor may be, and the delay justifies them in publishing articles expressive of their grief and anger. We are prevented by our ignorance of the reasons for this indecision on the part of the Government from publishing any decided opinions on the subject, and nothing is left for us but in common with other writers to nurse our doubts as to (the wisdom of) this policy.

We have, however, lately heard in the streets an unexpected piece of good news, which will make our country rejoice greatly, and upon which it is to be warmly congratulated. We cannot of course guarantee its truth, but should it prove to be well founded, the independence and self command of our country, which are now incompiete, will at last be fully established. We therefore purpose briefly to make known to our country the good news which we have heard and the incalculable profundity of the policy of the Government to other writers.

The news is that our Government has through a certain foreigner preferred a request to Mr. Grant, President of the United States of America, to be granted full control over the Customs Tariff (of Japan) as far as it affects the United States, and that the private negotiations for this purpose are already completed.

We cannot guarantee the truth of this street report, but we should not wonder if the existence of the report in the streets proves to be the harbinger of the actual reality. Should such turn out to be the case our joy will be great and the wrinkles on

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

our brow be smoothed, our country must be congratulated and the far-seeing policy of the Government regarded with awe.

When Japan commenced her intercourse with foreign countries she was as yet unacquainted with their customs and laws, and our ministers at the time, either on this account or owing to their being terrified by the foreigners or being constrained by them in the unexpected juncture, knew not what course to adopt in the perplexities which beset them, the final result being that immense advantage was derived by the foreigners and our status as an independent country impaired and difficulties brewed for us by the deprivation of the two prerogatives of trial and command of the tariff.

The laws of Asiatic countries are very different from those of Europe, and hence the latter could not entrust the power of trial to the former and submit their countrymen to its jurisdiction with any feeling of security. This is fully explained in the work called "International Law." Now this of course tells to the disadvantage of Asiatic countries, and, while they have the name of being independent, prevents them enjoying the full reality thereof, but it must be admitted that, owing to the differences that prevail between Europeans and Asiatics in their manners and customs, in the degrees of severity and leniency in their laws, and in their ideas of justice, it is unavoidable that such should be the case. The right, however, of levying taxes is one which is in no way affected by differences in laws and justice or in manners and customs of the people: it is a right which, irrespective of any such difference, a country should be allowed to possess and apply to its own use as it pleases, and with which no outside country should presume to interfere. It is not stated in International Law that any limitations should be placed upon this right except in the case of subject provinces, and yet excessive limitations of this kind are imposed on such a country as ours. Alas, we must say that Europeans always carry to the furthest point the idea that a country less civilized than their own is to be looked upon as a prize.

According, however, to the present street rumours America is taking the lead in recognizing these wrongs, and in its respect for justice seems to be anxious to repair its errors. We have heard that it is in a country governed by a republic that justice is always most highly reverenced and uprightness respected, and though we would not affirm this is invariably true, we will, in case this street rumour should in the end prove to be well founded, say that it is true of America. If the eagle of America shows such shame of its greed, such respect for uprightness and reverence for justice, the old lion of England cannot but look to itself and feel shame in like way. When once these two have recognized the wrongfulness of their conduct and have amended the same, there will be no doubt that all other countries will do likewise. In that case the restoration to us of one portion of our incomplete independence will soon take place.

We briefly publish this good news now, but we are looking forward with strained neck and on tiptoe with expectation until we have the reward of publishing definite information to the country.

THE TRAVELLING TAX.

(Choya Shimbun, March 24th, 1876.)

The Japanese patriot in great glee on account of the notification by the Prime Minister on the 18th instant, of the "Rules for passengers by foreign vessels," says, "My anxiety ever since the commencement of this second rivalry between the two steamship "Companies has been incessant and I have been unable to devise "any good plan for securing the victory to our side. On the morning however that I saw this notification not only was all the "great anxiety that I had so long entertained scattered to the "clouds but anticipations were roused in my mind of the speedy "driving of these foreign rivals to far beyond our seas and the investment of the entire control (of the coasting trade) in our own "hands."

On the other hand he who entertains gloomy forebodings on account of this Notification will say, "As it has been issued with "the view of securing the control of our seas I must not find "fault with it. I should not however at all wonder if, as the "Mitsu Bishi Company will derive great advantage from it and "the P. & O. Company on the other hand incur great loss, the latter addressed a complaint to their Minister, Sir Harry Parkes, "on account of the interferences caused to their trade by it. Sir "Harry Parkes, if he considers this complaint just, will, I presume, "argue it with the Japanese Government on the grounds that "there is a clause in the Treaty which provides that the Japanese "Government will not interfere with the trade of foreigners. In "such a case it is needless to say that a by no means easy question "is aroused and (in anticipation of it) I cannot now very readily "rejoice on account of the present notification."

A foreigner again when he hears of it will express his ideas in respect to it in this way. "The intention of the Japanese Govern-"ment in issuing it has been to prevent their countrymen tra-"velling by foreign vessels, but, as they could not openly forbid "this, they have endeavored to do so in an underhand way by the "issue of these rules. Not only, however, will the rules fail to "prove of the smallest profit either to the Japanese Government "or the Japanese people, but they will bring about the decline of "foreign shipping in Japan which has been one of the chief sources "of the advancement and prosperity of the country. The Govern-"ment by issuing a Notification of this kind can only be said to be "inviting its own ruin."

While the respective opinions of foreigners and Japanese in respect to these rules present such differences, we are inclined to adopt that of the Japanese first mentioned above and to rejoice along with him. If the mere justice of the matter be argued upon, it would seem proper to allow people to travel without interference by either the Japanese or foreign steamers as they pleased, and unjust to force them to attend at the embarkation office, to receive their travelling certificate and to pay the fee of 25 cents. A full consideration however of the circumstances will show the clear necessity that existed for these rules. All Japanese must desire the increase of their country's wealth, and, if they do so, who among them will instead of availing themselves of the chance of travelling by the cheap and fast Japanese steamers, choose the expensive foreign ones and thus increase the sources of the out go of the country's money which causes so much embarrassment at present? There are however some Japanese so regardless of what patriotism enjoins that they avoid their own cheap and fast steamers and instead use the foreign ones leaving port on the same day and hour (we administered a reproof to these in our article of the 20th instant). No penalties however heavy would be sufficient punishment for the disregard of patriotism shown by such fellows as these, and the aim of the rules now notified by our Government is to secure the supervision of passengers by foreign vessels, the charge of 25 cents being merely the fee for the issue of the certificate and certainly not to be looked upon as a penalty. We cannot therefore consider that the rules are in any way unjust.

As to the argument of him who gives vent to the gloomy forebodings referred to above we cannot now readily say whether these forebodings will prove true or not.

If, however, Sir Harry Parkes does press the matter our answer to him shall not be wanting in reason. The rules have been established for the control of Japanese who are subject to the Japanese Government and they cause no direct interference with foreign trade.

As to the foreigner's argument that the rules are determined to our own advancement and prosperity, he seems to us to have regard in this argument only to his own interest (Lit. to think only of the irrigation of his own rice field). The merchandize that might be shipped by foreign vessels can be shipped just as easily by Japanese, and we should not like to say that there is any difference between the two companies as to the skill of their respective Captains, the efficiency of the crews, or the strength of the vessels. The mere differences of the names of English and Japanese will plainly not make any difference as to the difficulty or otherwise of transporting merchandize.

This Notification gives new strength to the Mitsubishi Company, enables it to exert all its energy for the security of its own stability, and will be the means of the overthrow of its rivals, the P. & O. Company. Along with the patriot before alluded to we will eagerly look forward to the appearance of these good results.

A MEMORIAL UPON THE PRESS-LAWS.

(Hiogon Shimbun.)

The following is a memorial laid before the Government by Mr. Nishimura Shigeki, formerly a tutor of His Majesty the Mikado, on the subject of the Press-Laws and Law-of-Libel. It has been forwarded to us and we therefore publish it.

"Since the issue of the Press-Laws and the Law of Libel there has been much dissatisfaction among the people. The operation of the newspapers upon the Government may be small, but it is great upon the minds of the people, and no one who is anxious for the preservation of order and tranquillity in the nation should now be silent.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The present Law of Libel as well as that affecting the Newspaper Press has been adopted from the codes of civilized countries, and may be appropriate to them. But I cannot think that they should be brought into sudden operation in Japan. In these more civilized countries there are national, provincial and urban assemblies of representatives of the people, so that the field for the expression of opinion being very wide, a Law of Libel may be necessary and salutary. It should also be observed that these laws are not made by the arbitrary power of the Government, but by the representatives of the people.

Now we have none of these representative institutions in Japan, and, under these circumstances, I cannot think it well that these laws should have been suddenly enforced. To use an illustration, I should compare the respective positions to those of two families, one in the West, the other in the East. The former has means for the punishment of the children, but these children have been so thoroughly instructed in their duty that it is not unjust to punish them even for minor misdeeds. The Eastern family, however, in imitation of that of the West, has adopted the same methods for the punishment of the children. But these children have never been similarly trained to do right. Under these circumstances does it appear just to employ the same system of punishments?

Slander consists in pourtraying a person as bad who is not really so, or in describing a person as guilty of some act of which he is innocent and thus injuring his character, and this constitutes a libel. But if a bad man is pourtrayed as bad, and a guilty man as guilty, I am not of opinion that this could be deemed a slander, as a corrupt and guilty person has no character to injure and thus he could not be degraded by such imputations.

It is said by some that the laws of libel only protect the living and not the dead. But, looking at the matter from this point of view, it seems obviously unjust that if a man's character is proted up to the last moment when he has breath in his body, the protection should cense the moment he is dead. Yet, again, were we to argue that a statement against any men's character whether true or false constitutes a slander or libel, and insist that this law should protect him after death, all veracious and impartial historians must be convicted of this crime, and thus we are placed between the horns of a dilemma and are wrong whichever we may choose.

These two laws indeed exist in civilized countries; but if we examine their historical literature we find that the writers are thoroughly outspoken and veil nothing. In Japan, however, a writer must be ever on his guard not to infringe these laws, and we are not allowed to state events as they actually occurred from fear of punishment. Now it is important that posterity should be informed of things as they actually happened, and it were better to have no histories at all than untruthful ones. The reason we know that Washington was a wise and virtuous man is that the memorials of what he wrote, said and did during his lifetime have come down to us; and for the same reason we know that Louis the Fourteenth was cruel and tyrannical. Had these laws of libel, however, been in operation, the wrong doings of men could not have been recorded and this would have produced a falsification of history. If the misdeeds of Louis the Fourteenth had not been recorded we should know of no difference between him and Washington, and had historians been always thus fettered we could not now distinguish between the characters of men in by-gone ages.

Education is not yet diffused among the people of Japan, and the spirit of former days is not yet extinct, so that if men of high rank or birth act in an unseemly manner they may easily corrupt those who are below them in station. Their exalted position places them above the spoken rebuke of the people, but if their misconduct be published in the newspapers, they may by this means be obliged to reform their lives. This is not only good for such men, but it is also good for the nation; and, indeed, I have already heard of men whom the exposure and reproaches of the press have brought to better conduct. But if none were allowed to make these exposures of which I have spoken, these men would probably become worse and worse and imagine that they were acting in a wise and civilized manner, and the less educated classes, thinking that the conduct of these exalted personages must be correct, would intimate them. In this manner the morals of society might be greatly corrupted and degraded. It is of course not an agreeable task to point out the misdeeds of other men, but I think that under certain circumstances it may be done without injury to character and with great advantage to the public.

Confucius said "Reiko of Ei is a tyrant," and Mencius said "Reio of Rio was a cruel man." Were we to try these two sages by our present laws, it would be impossible to pronounce them innocent.

Some people say that the Pres-Laws and the Law of Libel do not prevent the free expression of opinion, and that there is ample room within their limits for discussing all questions. I am of a contrary opinion, and think that these laws rather resemble traps set at the corners of streets to catch people. Although the trap will not close unless it be touched, men keep as far away from it as possible, and it comes to this at last that people avoid such streets altogether, their fear being greatly increased because they know that the judges can make the penalties light or heavy as it may happen to please them.

If we examine the question of popular rights in Europe, we find they resemble a great tree with an enormous trunk and many branches, so that even if a large branch or two were lopped off, this would not materially injure the tree. But popular rights in Japan are little more than germs, liable to be killed with a mere touch. This is a vast disadvantage to the nation, yet such is the actual state of the case.

Laws which are in thorough harmony with the mind of a nation will be respected and observed, otherwise the people are kept in a perpetual condition of antagonism to the Government. Under the laws of the present Government criminals have not been punished with so much cruel severity as formerly, and this constitutes an improvement in our judicial system. But we are afraid that the Press-laws are not in harmony with the feelings of the people or with our other laws. I will endeavour to prove this. Mr. Tsukahara, the editor of the *Mainichi Shimbun* of Yokohama, published an article against the Press-laws and thus transgressed them. Mr. Yamashina, a *shizoku* of the Kioto *Fu* schemed to have all the high officials of the *Fu* dismissed, and went to the princes *(sic)* to consult them about it. Now it was the universal opinion that the offence of Mr. Yamashina was far greater than that of Mr. Tsukahara, but to the surprise of every one the former was sentenced to pay a fine of five *yen* while the other was fined one hundred *yen* besides being condemned to a term of two month's imprisonment. This is quite enough to show that the Newspaper Press-laws are not in harmony with other laws.

Since the time of the Restoration many new laws have been issued by the Government, but not one of these has been so often broken and so ill spoken of as these laws. Thus there is no injustice in saying that they are too severe. Not only I, but all those whose duty compels them to write, lament this excessive severity.

I therefore entreat the Government that, although these laws may be fit for, and may be observed in, more civilized countries, they may be abolished in this country until representative institutions are established. I am of opinion that this delay would not dangerous. But if this be judged impossible, I hope they may be laid before the *Genro-In*, and if it still be found impossible to repeal them because they have been incorporated into the laws of the nation, I trust that the sections which are too severe may be abolished. As the Law of Libel now stands, punishment is awarded "whether statements be true or false." This should be changed to "when statements are intrinsically false." Then, the heavy penalties should be abolished which are enforced by these laws alone (*i. e.* which are unknown in other Japanese laws); and slanders directed against the Imperial authority, or writings which are calculated to cause sedition, should be punished with the heavier penalties of the criminal law, and all other offences against clauses of Press and Libel Laws with lighter penalties. This would not only be beneficial to the Government, but to the people also.

Toleration.

(Somo Zasshi.)

It is impossible to rely implicitly upon the correctness of public opinion, and, for this reason, we ought not to disparage the opinions of individuals, which are often regarded as foolish by their contemporaries, but are ultimately ratified by time. For example, we may take the case of Galileo, who was the first to declare that the earth is in motion, and who was condemned by current popular opinion for leading the minds of the people astray and imprisoned. We may also cite the case of the great Greek philosopher Sokrates. He founded a new school of philosophy, but was accused of inflaming the people's minds with pernicious follies, and was forced to take poison. After their death, these men have been honoured by the world, and men have learned to acknowledge the virtue of their conduct and the wisdom of their teaching. What had formerly been deemed folly was

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

perceived to be sound reason, and those who were accused as being the misleaders of the nation proved to be benefactors to the whole world. And when we see that such mistakes have been made in every age and throughout the world, how much more liable to error is any single country or *kuni*!

It was said by one of the ancients, "The feet of no two people are exactly alike, how much more then are their minds likely to differ?" This means that the opinions of men will differ widely. Some argue for an increase of the power of the ruler, while some attach themselves more warmly to the cause of people's rights and liberties. Some uphold Christianity, others Buddhism, and so wide are their differences that it is impossible to reconcile them. Those who uphold the power of the ruler are anxious to silence the advocates of the popular cause, and wish that every one should be compelled to coincide in their opinions. The Buddhists wish the Christians silenced and that all the world should accept Buddhism. But all this is impossible. It were as easy to make one boot which would fit the whole world.

We think, however, that this desire to suppress the opinions of others does not proceed from bad feeling. It arises rather from the fear that certain opinions may inflame the minds of individuals and thus prove detrimental to the national welfare. The origin of it may therefore be a very pure patriotism, and the holders of it are not to be condemned as bad. On the contrary, indeed, some of them are admirable men. But were they to be allowed to have entirely their own way no advance of truth would be possible, and the civilization of a country would be obstructed, for truth is the result of the conflict of adverse opinions and can only be attained by exhaustive discussion. If only such men as these were to be found, we should remain in the dark condition of our ancestors. Patriotism of this kind does more harm than good to a country, so that this question demands our fullest attention.

OMANO TORU.

THE SITUATION.

(Nichi Nichi Shimbun.)

In what state is our country considered to be by those who are interested in politics? This is surely not the time when men should be making efforts to gain wealth or reputation by efforts which their powers do not permit them to sustain.

Speaking upon this question with the limited knowledge I possess, I lay myself open to be upbraided for folly. Let it be so, I care not.

A country has no true foundation whose people possess neither wealth nor independent spirit. Now, it is only by an increase of trade and manufactures that either or both of these desiderata can be acquired, and no single instance can be cited of a wealthy country which does not possess both. But the majority of our people being ignorant of this fact do not regard the increase of our productions as anything of importance. They cling tenaciously to their old methods, and do not see that as times change trades must change with them. Some of them indeed seem to realize this, and are trying to make black tea and to improve the quality of our native silk. Others prefer manufactures, but as their schemes are always far more extensive than their means to carry them out, most of them have failed, and their establishments been assigned to their creditors. Unfortunately, too, those who cling to the old customs see that others who throw themselves into novel enterprises nearly always become bankrupt, and this confirms them in their conservatism. Again, cunning merchants adulterate the commodities they send to foreign countries, and this impairs our good name and contributes to the dulness of trade. Our associations called *Kaishas* (companies) are generally looked upon as certain to fail, for during the past few years thousands of them, as well as manufacturing establishments, have sprung up, while those which still remain in existence may be counted upon the fingers. Thus, the circulation of money has ceased, business stagnates, merchants and manufacturers are daily closing their establishments, and many of the *shidzoku* are on the brink of starvation. Meanwhile the officials revel in degrading pleasures, and the learned men have got their heads stuffed full of foreign ideas and declaim lustily about the rights and liberties of the people, while their wives and children are starving at home because they themselves are marched off to prison. Such is present state of this country.

Now everything must have a foundation, but the Japansse are always looking far into futurity instead of laying this foundation. The officials are bent on raising the pitch of civilization among the people, but are heedless of their sufferings; the merchants and manufacturers are trying to carry on large establishments without the necessary means or the necessary knowledge; while the learned men are clamouring about popular rights which nineteen-twentieths of the people never heard of. Such a condition of affairs cannot last long!

TRAINING NOTES.

Up to this point there has been little to attract those who rise early in the morning with the hope of seeing the ponies exercised, as few owners, until immediately before the entries, get beyond the usual preliminary slow work, and many train in the afternoon or on the Rifle Range, which still further detracts from the morning amusement. The *habitués* of the Race Course, however, are loud in their praises of the morning training time, and many declare that the actual Races do not afford them half the pleasure. But these are a minority. Most of us probably are willing to take this enjoyment for granted and, withal unused to the

Cock's shrill clarion or the echoing horn,

require that our world should be well aired for us before we venture into it. For such as these a few remarks upon the preparations being made for their amusement at the aproaching Spring Meeting may not be without a passing interest.

The programme has met with a good deal of adverse criticism, and is doubtless somewhat hard on many, but only a few who thrive on hard words denounce it entirely. It has been very carefully studied, and it is evident that the Committee have done what they could to bring all the ponies together, a fact supported by the unusually numerous entries. Let us glance at the stables.

The Mystery, have imported a new China pony, *Doncaster*; he is a griffin and is much admired for his good looks. He also goes well for a short distance and being most forward in condition of any of the griffins is at present the general favorite. Of the old ponies *Dibs* looks and moves as well as formerly; *Favori*, on the other hand, is very backward, and *Gladiateur* is reported to be "groggy" which necessitates his being trained very quietly on the Rifle Range. In Japanese ponies besides *Tim Whiffler*—who seems scarcely up to his old form,—this stable have three griffins, one, *Doctor*, is a native of the place, and *Oyama* and *Kagoshima*, two southern importations, have only just arrived. The "native" appears to have both pace and staying power, but the winner of the griffins must be looked for elsewhere.

The *Cherry and Black*. The "magnificent" owners having dispensed with the services of their coloured adviser, and their good genius Mr. Radley having also departed from the scene, the remaining talent seems unable to engineer the stable properly as the poor condition of their ponies testifies. *Picayune* is all but utterly broken down; as much may be said of *Black Thorn*, and *Piastre*, although a long time in training, appears hardly the better for the care bestowed on him. They also possess a Japan griffin of little promise and not at all like *Typhoon*.

The *Tartan* stable have an unusually long string, especially of China ponies, strengthened by two fresh importations, viz: *Tallapoosa* of Shanghai and Hong Kong celebrity and a griffin named *Lintie*. The former is in excellent condition, and the latter is now doing strong work, and—what is rare in a griffin—looks as if able to stay. Both will doubtless make their mark. Of the old ponies *Braemar* looks and goes as well as formerly; *Black Rod* has filled out and withal apparently improved in staying power; and as for *Monymusk* and *Andante* both are in the category of "doubtfuls,"—the former is reported to be in hospital and the latter does not seem to improve much with his work. In Japanese ponies this stable is weak, as *Dash* is of very little use except as a trial pony, and neither of the additions, *Dambrod* and *Discard*, are good enough to win in good company.

"The Doctor" after semi-weekly trials ever since last meeting, has at last succeeded in getting a likely griffin in *Sandboy* who did 90 seconds on his first trial for the five furlongs, but good feeding, although it has added to his general appearance, and increased his weight by 40 lbs., is reported to have also increased his time by six

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

seconds. *Sirius* and the non-weight carrying *Stalemate* will gain no honors on the Race Course.

The Russo-Mexican Imperial Japanese Stable having the run of the Government stables and availing themselves of official influence, have obtained three likely griffins, of which *Moh-nai* is the best and first favorite for the griffin's race, with *Moh-ichido* and *Moh-skoshi* next in the order named. Of the old ponies *Moh-stats* is going as well as usual in his quiet training gallops. *Lodi* has been so pampered with slops and feather-beds that it is doubtful whether he will even win the "Solace Cup" for which he is likely to be reserved. *Moonshine* may be passed over as he never will make a race. On the other hand *Moscou* has much improved since last meeting and is a "moral" for the "Fujiyama Cup." This is also doubtless the opinion of his trainer, who, by the bye, appears to have changed his mind since the first publication of the programme.

The Mongolian Stable consists entirely of China griffins, some of which are likely-looking enough, but but they are all at present so backward that it is extremely doubtful if they can be got condition for this meeting; as to "which is wh'ch" or "who is who," it is verily believed the owners themselves are sometimes too perplexed to answer.

The French Combination Stable have, beside *Dixie* and *Lord Harry*, two China griffins viz: *The Judge* and *The Minister*, neither of which will however do any good at this meeting. The latter is the better pony, probably indeed the best of all the new importations; but his training having been somewhat peculiar, and having—if the account of one of his owners may be trusted—come by some accident to his "hock on the near fore-leg," he will scarcely get a fair trial this time.

Number One Stable consists of *Bonito* and *Cyclone*, old ponies, and a fresh arrival from Hongkong in the shape of *Grey Friar*. This stable's jockey seems really unfortunate in having fractious mounts, these three ponies being all more or less untractable. *Grey Friar* is probably the best in the stable; *Bonito* is almost fit to run and will prove a dangerous competitor, but *Cyclone* seems to have gone off somewhat. In Japanese ponies neither their griffin *Bawbee* nor their Kobe pony *Finale* will bring many honors to the stable.

In the smaller stables first comes *Grasshopper* who, if his owner is to be believed, dislocates his shoulder once a week, but nevertheless makes 2 min: 25 sec: for once round, and barring accident is still good enough to beat *Braemar* over his favorite distance. The owner of *Up-a-Tree*, goes about anxiously enquiring for a new set of legs for his Rosinante. During the late favorable weather and the Easter Holidays *Ivanhoe*, *Crusader*, *Drizzle*, *Tsuji-Ura*, *Sirocco*, *All Jams*, and company did good work at picnics and look as well as can be expected under the circumstances.

A JAPANESE SERMON.

(*Taken from the "Shingakudōka:" Fifth volume, 2nd part.*)

Confucius has said "Ye know not yet life:—how can ye then know death?"

This again is an important matter which each one of us should carefully consider, and Kiro, the pupil of Confucius mentioned in my last discourse, made it the subject of enquiry of his instructor. "What is death"? asked he.

Now the meaning of this question was "Whence comes it that man dies? When dead what becomes of him?" And this is what we should each and all lose no time in looking into.

That man who but yesterday was seen wrestling on the high road, fell dead this morning with his breakfast dish in his hand:—that man who but yesterday was deep in business, abacus in hand, buying here and selling there, fell down dead to-day as he was sticking the godown key in his girdle. Alas! it's but a brittle world this, and there's no mistake but sooner or later each and all of us must die. Therefore must we distinctly apprehend what this thing called Death is. There have been many people in the world, but those who have tried to grasp this meaning have, from of old until now, been apparently but very few.

To quote the verse composed by his Reverence Honen

"That all must die each one,
"To know pretends—yet knows not." (1)

Although we all look so wise, the most of us miss the mark in the long run.

But if I prate thus but of a future state some foolish persons will say—"Ah yes, that's it; I too, when dead, will go to heaven," or "I shan't go to hell," or "There's no fear of my being tortured by the demons," hauling out what they have heard and seen for years from their memories like so much rubbish from a dust-heap; and so saying they weep and pray, but for all that there are none who really wish to know what this future state is. So we see that from of old there are but very few who have honestly raised any doubts as to the accepted doctrine of life and death.

But Kiro, on the other hand, appears to have been actuated by honest motives when he asked of Confucius as to the future state. And the reply was:—"Ye know not yet life:—how then can yet know death?" This now is a blessed teaching, and fraught with deep meaning. And why? Rather than enquire into a future state, just take thought of how it is we exist at this present moment. A man who attains forty years of age this year was not in the world forty-one years back:—the one who has attained fifty years was not in the world fifty-one years ago. Now how is it that these men came to be born into, and how is it they now exist in the world? There's where we must begin. Whence comes it that we were born and are as we see ourselves? Not knowing even this, how is it possible to know about a future state, was the reply of the great master.

Now the meaning of this reply was that life and death are virtually one and the same thing—like day and night—like sleeping and waking—that there is really no difference between being born into and dying out of the world.

Still the silly and ignorant one thinks there is somehow or other a difference between the state before birth and that after death, and that being born into and dying out of the world are two different matters. But it is a great misapprehension for all that. And the Buddhist version of the error is that they make use in their teaching of the phrase the 'three worlds'—calling the state previous to birth the 'former world,' the state of existence on the earth the 'present world,' and that after death the 'future world,' (2) just as if, forsooth, the sun and moon were divided into three parts, each doing duty in a separate world—and such like nonsense. And our old men and women are most strongly impregnated with this erroneous doctrine.

But all this again is what the saints and founders of old out of very zeal made use of as a pious fraud, in order, they said, though they deceived in so doing, to guide by hook or crook foolish man into the way of truth. In this righteous wish lay its origin, but, say what one will, men's hearts are in such darkness that they lay hold of the name or the simile only—deceiving their own selves. This truly is burdening the burdened one—seeing a dream in a dream. Oh! that each one of you may perceive the true meaning—that between this living and dying there is in reality no difference, for in knowing this the pain of death is eased—its terror lost. Confucius has also said "At morn to hear the truth, at even to die—such death is sweet." To him who knows his own heart and the true path death is peaceful at any time, at morn or evening.

"But," say the foolish, "here is my body, born into the world, and this body will without doubt die—and yet, say you, there is no such thing as birth and death:—I can't see it at all."

Now, that's just what they say who don't grasp the real meaning of the matter. Their calculation extends only to the body. But now we're on the subject, suppose we just see of what this body is composed. I, therefore, representing all of you, will try and place it before you.

In the first instance, to take the Confucian view of the

(1) *Mina hito no shirigao ni shite*
Shiranu koto
Kanaredzu shiraru narai ari to wa.
(2) *Zense, Gense* and *Raise.*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

case :—Each one of our bodies is composed of the male and female principles of nature, heat and cold—and of the five elements in the firmament of the heavens: thus they contain, each of them, portions of wood, fire, earth, metal and water—these five. That is to say that the temporary combination of these five elements forms this body of ours. Thus it is that the Buddhists call the interval of time while we have being—"this transient world."—Old men and women often say of it, "Ah, this is a short and transient world." "And why a transient world?" say you :—"Well, I don't know, but somehow it is transient" is the reply. Well, the fact is that it is these component parts we borrow from nature that are transient. To look carefully into this. In the first place the heat of the body is the fire borrowed from nature. The blood, saliva, perspiration and tears represent the water. The sinews, bones, nails, and teeth are the metallic substance. The hair of the head and beard are the wood, and the flesh, skin and internal organs are the earth of this temporary system of ours. And the Buddhists, too, call the five elements earth, water, fire, wind and space, 'this temporary body.' Thus if you look at the wooden tablets over graves, you find inscribed on them the characters representing these five elements. And again in the case of the Shingon sect the equivalents of these are written in Sanscrit on the front of the tablet; and, immediately at the back of that, a character which, if looked at from the left side, has the appearance of a man naked, standing upright, with his hands joined straight out in front of him, and this is meant by the Hindoos to represent the human body, I believe. And these words are inscribed on the wooden tablets in order to remind us that what we are in the habit of terming our own bodies, is nought but the combination of the elements which these characters represent. Thus in the Canon we find the words "*Ikken Sotoba Yōri San akudō*"—which signifies that if we but look once upon those wooden tablets one escapes the pains of the three hells. (3) Therefore is there no difference between nature and ourselves—between space and this body of ours. By way of an example let us take ice and water :—it is just like these. By the process of freezing, water changes its name to ice, and its appearance is altered, but still it is nought but water. And when the ice melts again it becomes water, and though it go on freezing and melting again, still it is the same water it was at the first. And so it is with mankind.

Birth and death are no more than names applied to our change of state—the component parts of our bodies remain as they ever were—there is no birth and death to them. While living and dying they still, as it were, neither live nor die. So in the Buddhist Canon called Hanniya Shinkiyo we found this meaning conveyed in the words, "nor living nor dying, neither increasing nor abating."

Then as to this rapid changing of the integral parts of the body at death—it is quicker than the twinkling of an eye. And this is not to be wondered at when we consider the never-ending progress of nature, carrying with it all and every thing earthy in its progression. Now this is exactly what we have already said—that there is no difference between nature and ourselves—between our bodies and space. Confucius, also, when gazing on the waters of a river, once said :—"Do not the dead thus onward go perchance—day and night unceasing."

Then as to being brought into the world, the Buddhists say there is none who shall escape the four pains of birth, age, sickness and death. Take now this article of dress as an example. When this garment is made it may be said to be born—this is 'birth' then. And as it gets old and shabby-looking it attains to 'age.' After that, when the skirts get ragged, and the shoulder torn it may be said to have arrived at the 'sickness' stage. Then Osandon, the maid, patches and sews and washes it ever so often, trying various methods of treatment, till at length in spite of all efforts the garment is nought but rags. Then there's no help for it but to pop it into the rag box :—this then is the 'death' of the garment. But though dead as an article of apparel, from the rags point of view it has but just been born. Thus we see that life and death are after all the same principle. Then when the arrow speeds from the bow it may be called dead, but to the target it is but newly born. That is, it does not return the way it came, but while dead in one sense it is alive again in another.

Hence it was that Confucius taught his pupil saying, "How would ye, knowing not life, yet seek to know death."

Then these rags aforesaid, being put in a rag bag, are shut up in a godown along with scraps of shirts or bits of girdle, and many other rags of the same kind and each relates his experience to the other, as the verse says :—

Nor knowing day from night
The tattered shred
Each to his fellow doth rehearse
The story of his life—and hope
One day again to see the light.
How sad a fate!—(4)

But the world after all ought not to be abused—for, see, when the time comes, the heap of rags is drawn forth from the bin and becomes a duster. Then again from the rag's point of view they are dead, but as a duster they have new life. And from constant use age steals upon the duster also—anon he is declared useless and is thrown into the ash-pit. This is in effect the death and burial of the duster as a duster, but on the other hand he is born into the ashpit. Then the farmers take the rubbish and use it as manure for their rice fields and vegetable gardens, and as the rubbish decays there the crops of rice and wheat live and flourish, so that the grain is none other than our duster reborn. And we mortals who live, move and speak, do so by virtue of the grain, and owe it all neither more nor less than to the duster. Then mankind beget children, and these also owe their birth alike to this duster.

But as these examples are all such as have shape and are visible to the eye, so are the four pains of life, age, sickness and death, to which they are liable, also apparent. But neither are such things as are not visible exempt from the four pains. Take for instance sound or smell.

The sound from yon temple bell tolls out go-o-o: this is the birth of the sound. Then it continues o-o-n :—which signifies age ;—and becoming faint sounds w-a-a-a-n—sickness—and while you yet listen, it ceases—death.

In this way we see how rapid are the transitions of nature, and how the world and all that belongs to it is borne on along with it. And it was only to inculcate this that the four lines said to have been recited to Shaka Niyorai in the mountain by the gods are carved on temple bells.

All things are transient,
They must be born, must die,
And being born are dead,
And being dead are glad
To be at rest. (5)

Every twelve hours they toll out gora-a-a-n—"thus roll we on—thus fade we away"—they seem to say to us.

The meaning of the first line is that there is nothing in this world which can remain at rest. And indeed so it is. While we think 'tis spring, summer is upon us—or while we think 'tis yet summer, lo, autumn is upon us: we think the day has but dawned—it is already sunset. We think we are yet going and we are already returning; that we are yet standing, when we are seated; that we are yet speaking when we are already silent. There is not one thing in this universe which remains at rest, and this is nought but the transition of nature and the laws of life and death, which is explained in the second line.

But, somehow or other, foolish man thinks if you but say birth you mean something that happened some two or three years past, or if you speak of death that you allude to a period long distant, when the human frame totters and fails, and they cannot fathom the fact that those laws are acting now at this present time—that while we are in life, we are in death.

THE GRATEFUL CRANE,

OR THE ORIGIN OF JAPANESE CALICO.

(From "*The Story of the Fox.*" Book iv, section 1.)

KAKU SHO SHU was the name of the dress which now enveloped the lovely creature into whose form the Fox had migrated, her body swaying freely as the bending willow, her features of the cherry-blossom hue as she burst upon the sight of the enraptured Hansoku. Though the legend says that when he played upon his *Shichiriki*, the lark descended in silent rapture and the very dust became mobile, he had never heard such dulcet sounds as issued from her throat. But who was she, and what is Kaku sho shu?

The meaning of this last word is—a cloth woven from the white down of a crane. At this time it was like gossamer, and people thought but one existed in the world, and this is how it came to be made.

Musanokichi, a poor husbandman—who, though he possessed not riches, and had much ado to meet the claims of tax-gatherer and of feu-holder, yet never failed to labour or in yielding loving obedience to his mother—was one day plashing with naked legs in the ooze of his paddy-field, patiently yet listlessly looking forward to the time when the accruing crop should yield his labour a scanty dole, when a plaintive croak aroused him from his musing mood, and he perceived, within a short distance, a wounded crane lying on the bank, an arrow embedd ed in its back. When he approached it, no attempt at flight indicated a fear of man, but the bird bent down its neck in mute submission. In pity, he plucked out the dart, and the crane, after some feeble flutters of its wings, rose from the earth, circled around its benefactor as though to thank him, and flew off towards the mountain.

Days passed on in the old routine of life, until one evening, returning before the sun was fully set, he found seated with his mother a charming girl, who welcomed him with grace in spite of his despicable appearance, after the day's toil in mire.

"Who is she? How comes she in this wretched hut?" asked he, as he made ready for the bath.

"Though you are now a man, my son," replied his mother, "you have as yet no wife. Your virtues of filial reverence, fidelity and politeness are known, and hence this fair damsel is not unwilling to become your wife. But without your consent I could not answer her proposal. What do you think about it?"

This leap-year wooing the young farmer did not feel averse to; but, thought he:—

"Daintily bred, perhaps noble, as she is, if I gratify her desire, how shall it be when she endures our poverty to which we are inured? Will she be patient, or shall we be separated, and the promised love and happiness last but a while only to leave gloom and sorrow behind them?"

As the cloud is driven by the wind, so passed away his fears when again in presence of the damsel he watched her loving reverence for his mother, her self-denial and patience. So, after a while, he married her.

Alas! that year misfortune overtook the household. Their crop was destroyed, and starvation loomed before them. When in the direst distress,

"I can spin," said the wife, "such cloth as never yet has been seen in this province; but I cannot do so in this room, nor weave the web into its intricacies of pattern except in silence and alone. Build me a room, and money will come in."

A doubting heart was that of Musanokichi as the poles rose, and wattle was bedaubed and thatch staked on the place his wife demanded; but his mistrust and his mother's half reproachful sighs were changed for admiring exclamation, when after some weary days, his wife joined the family hearth, bearing in her hand a glorious stuff, of glossy sheen, new snow white,—but with here and there a crimson thread that intensified the whiteness.

"How is it called?" he asked.

"There is none other in the world," she said. "It has no name."

"But I must take it to the Daimio, and he won't buy it if he doesn't know how it is called."

"Then tell him its name is Kaku sho shu."

With the thousand pieces of coin which the Governor gave him for the rarity (which enchanted Her Majesty herself when presented) the family lived in clover, until the husband considered it desirable that his wife's talent should again be put in requisition. She consented.

The spirit of prying impertinence, born of greed and tyranny, may not then have existed in loved Dai Nippon, but curiosity did, and Musanokichi possessed his share of it. Speculating on what the woman possibly could want to be in there all alone for, when his talk might as well chime with the clack of the wheel, and he might learn some art worth informing his lord of, he put down his pipe, and well oiling a sharp knife gently scraped away the mud from a portion of the wall and peeped into his wife's chamber, to see—

Bending over his wife's spinning wheel a great white crane, from whose breast the silky down was twining and twisting into the finest thread that mortal eyes have ever beheld—that would have tried the eyes of a fairy to sew with, but, ah! here and there reddened with a drop of the hearts' blood of the lovely creature who produced it. Astounded, his eye remained glued to the wall, until an exclamation escaped him on hearing his mother call him. Startled by this, the crane turned her head and saw the sparkle of his eye. With a shrill scream, she angrily moved to the door, and, taking flight, was for ever lost to view, leaving her husband a wiser—but, it *is* said, not a better man.

[NOTE.—The family likeness of this tale, from one of the oldest of the native romances, to others of the kind in Europe, is quite as striking as in some of the others quoted in the Journal of the Asiatic Society. The story of the Fox taken throughout is worthy of entire translation by such as have time and means to study international folk-lore. The commencement of the chapter, which is omitted, sets India down as a western province of China, and the reference to the musical power of Prince Hansoku indicates traditionary knowledge of the story of Orpheus.]

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Asiatic Society was held in Tokio on Wednesday, the 19th instant, Dr. Faulds in the chair. Notes for a paper "On the Musical Notation of the Chinese with its counterpart in Japan" were read and enlarged on by the Revd E. W. Syle.

At the conclusion Professor Ayrton brought to the notice of the Society various experiments that had been made in his Laboratory by Mr. Takamine, one of the senior students of the *Kogakuriyo* on the methods of tuning employed with the *Samisen*, *Koto* and *Gucking*. At the commencement of the experiments Mr. Takamine's attention was not drawn to the exhaustive paper of Dr. Müller on Japanese music, in order to obtain independent results. The *Samisen* was tuned successively in accordance with each of the six standard methods, the first string, instead of being stretched by a peg as usual, being, however, passed over a small pulley let into the neck of the *Samisen* and strained by means of a weight to ascertain the relative number of vibrations in any one of the six modes of tuning; additional weights were added to No. 1 string to make it sound first in unison with No. 2 string and afterwards with No. 3 string. Then, since the number of vibrations of a stretched string is proportional to the square root of the tension, the relative number of vibrations in any of the six methods of tuning could be ascertained. The *Honchioshi*, *Niagari* and *San-san-gari* gave the same results as those obtained by Dr. Müller. The *San-sagari*, however, instead of giving the 2nd, 5th and octave as stated by Dr. Müller gave the 1st, 4th and flat 7th. Now this is what might be expected, since *San-sagari*, which means lowering the third string, ought to be obtainable from the fundamental, or *Honchioshi*, by flattening the third. It is true that the second, fifth and octave bear nearly the same relation to each other that the 1st, 4th and flat 7th do, nevertheless, the second mode of tuning is considered by Japanese the better. Similar remarks apply to the *Ichi-sagari* (printed by mistake in the *Japan Mail* Itoi-sagari,) and which means lowering the first. This method gives flat 1st, 4th and octave and not as Dr. Müller states prime 5th and 9th. One other method, the *Ichi-sagari*, which gives octave, 4th and prime, the reverse of the *Honchioshi*, and which method of tuning is invariably employed by the orchestra at the theatre when actors are playing on the *Koto* in consequence of the *Samisen* so tuned having a resemblance to

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

to the *Koto*, is not mentioned by Dr. Müller. All the results above mentioned were afterwards verified by employing tuning forks and by subdividing the string of a sonometer.

The *Gu-king*, which he had brought for the inspection of the Society, resembled the *Biwa* in having few strings and about the same size, but it differed from the *Biwa* in the mode of tuning, in its body being circular and not pear-shaped, and in the *batchi* with which the strings were struck. The 1st and 2nd string of the *Gu-king* were both tuned to unison with the second string of a *Samisen*, tuned according to the *Honchoshi* method. The 3rd und 4th strings of the *Gu-king* were *both* tuned to unison with the 3rd string of a similarly tuned *Samisen*. The instrument practically therefore had only two notes when using the full length of the strings. It was considered, however, that two strings tuned to unison produced a sweeter note than a single string. The *batchi* was a small piece of tortoise-shell, about two inches long. The *Gu-king* which was originally brought to this country from China was a favourite instrument of the Japanese fifteen years ago.

The *San-no Koto*, or thirteen stringed *Koto*, when tuned according to *Hira-choshi*, reproduced the results given by Dr. Müller, with the exception that the four sharps mentioned by him turned out to be flats. There were also two other methods of tuning the *Koto*, the *Kumoi-no-choshi* ("high up in the clouds") and the *Han-Kumoi-no-choshi* ("half up in the clouds"), which Mr Takamine is at present experimentally investigating. These two latter methods of tuning were not nearly as common as the *Honchoshi*, and could only be employed after payment of a sum of money to the *Kengio* or company of blind.

The speaker disagreed with Dr. Müller in regard to the unimportance of the *Koto* having a small number of strings, remarking that the two-stringed *Koto*, being taught at music schools in Tokio, could not be regarded as a plaything. In this instrument the length of the strings was determined by an ivory or bone thimble, worn on the left hand, the strings being plucked by a similar thimble worn on the right hand. Besides the simple notes thus produced gliding sounds were obtained by sliding the left hand thimble along the string at the moment of removal.

A vote of thanks was tendered to the Revd. Mr. Syle for his interesting remarks and the Meeting separated.

THE SPRING MEETING.

The following are the entries for the Spring Meeting:—

FIRST DAY.—WEDNESDAY, 17th MAY.

1. THE TRIAL PLATE.—For China Ponies that have never won a first Race here. Weight for inches. Entrance, $5. Once round.

Favori, Doncaster, Blackthorn, Piastre, Taliapoosa, Lintie, Bonito, Grey Friar, The Judge, The Minister, North Mongolian, South Mongolian, East Mongolian, West Mongolian.

2. THE GRIFFINS' PLATE.—Value $150, with Entrance Fees added. For Japan Ponies *bona fide* Griffins. Weight for inches. Entrance, $10. Five Furlongs, First Pony to receive 70 per cent., Second 20 per cent., and Third 10 per cent.

Doctor, Oyama, Kagoshima, Peasant Boy, Dambrod, Discard, Sandboy, Moh-nai, Moh-ichido, Moh-skoshi, Bawbee.

3. THE CELESTIAL CUP.—For all Ponies. Weights as per scale. Entrance, $5. Three-quarters of a Mile.

Dibs, Doncaster, Blackthorn, Piastre, Braemar, Tallapoosa, Andante, Moh-stotz, Lodi, Bonita, Grey Friar, Grasshopper, The Judge, North Mongolian, South Mongolian, East Mongolian, West Mongolian.

4. THE UCHIYATA CUP.—For Japan Ponies. Winners of two Races at last meeting excluded. Weight for inches. Entrance, $5. Five Furlongs.

Tim Whiffler, Typhoon, Dash, Dambrod, Discard, Sirius, Moscou, Drizzle, Tsuji-Ura, Finale.

5. THE CHALLENGE CUP.—Value $150. For China Ponies. Weight for inches. Entrance, $5. One mile and three-quarters.

Gladiateur, Dibs, Braemar, Tallapoosa, Black Rod, Cyclone, Gray Friar, Grasshopper, Dixie.

6. THE STAND CUP.—Presented. For Japan Ponies that never won an open Race. Winner of the Fujiyama Cup excluded. Weight for inches. Entrance, $5. Half a mile.

Oyama, Peasant Boy, Dash, Dambrod, Discard, Sandboy, Moh-nai, Moh-skoshi, Moscou, All Jams.

7. THE PROFESSIONAL CUP.—Presented. For China Ponies. Winners at this meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

Gladiateur, Dibs, Braemar, Tallapoosa, Monymusk, Black Rod, Crusader, Cyclone, Bonito, Grasshopper, North Mongolian, South Mongolian, East Mongolian, West Mongolian, Mid Mongolian.

8. THE SPRING STAKES.—For Japan Ponies. Winner of the Fujiyama Cup, and Winners of any open Race at or previous to this meeting 10lbs. extra. Weight for inches. Entrance, $5. Three-quarters of a mile.

Doctor, Typhoon, Sirius, Stalemate, Lodi, Mohstotz, Moscou, Moh-ichido, Drizzle, Finale.

9. THE LEDGER CUP.—Presented. For China Ponies. Winners in China or of two Races here during 1875, and Winners at this meeting excluded. Weight for inches. Entrance, $5. Once round.

Doncaster, Piastre, Ivanhoe, Monymusk, Lintie, Kuo-pü-chu, Bonito, Dixie, The Judge, The Minister, Lord Harry, North Mongolian, South Mongolian, East Mongolian, West Mongolian, Mid Mongolian.

SECOND DAY.—THURSDAY, 18TH MAY.

1. THE MITSU BISHI CUP.—Presented by the Mitsu Bishi Company. For all Ponies. Winner of the Celestial Cup or Winners of two Races at the meeting. 7lbs. extra. Weight as per scale Entrance, $5. Once round.

Favori, Gladiateur, Dibs, Piastre, Braemar, Tallapoosa, Andante, Moh-stotz, Moh-ichido, Moh-nai, Bonito, Cyclone, Grasshopper, The Judge, The Minister, North Mongolian, South Mongolian, East Mongolian, West Mongolian.

2 THE KANAGAWA CUP.—(THE MAIDEN STAKES.) Presented by the Kencho, Saibansho, and Customs. For Japan Ponies that never won a Race. Weight for inches. Entrance, $5. Half a mile.

Cupbearer, Doctor, Oyama, Kagoshima, Peasant Boy, Sirocco, Dambrod, Discard, Stalemate, Sandboy, Moonshine, Moh-skoshi, Moh-nai, Moh-ichido, Drizzle, All Jams, Finale.

3. THE LADIES' PURSE,—Presented by the Ladies of Yokohama. For all Ponies. Winner of the Mitsu Bishi Cup, or of any Race under a mile, and winner of two races at the meeting, 7lbs. extra. Winners of more than two Races excluded. Weight as per scale. Entrance, $5. Half a mile.

Doncaster, Gladiateur, Picayune, Blackthorn, Tallapoosa, Andante, Lintie, Lodi, Moh-nai, Moh-skoshi, Grey Friar, Bonito, Grasshopper, The Judge, The Minister, Lord Harry, North Mongolian, South Mongolian, East Mongolian, West Mongolian.

4. THE TEA CUP.—Presented. For Japan Ponies that never won an open race. Winners of the Fujiyama Cup and Stand Cup excluded; other winners, 7lbs. extra. Weight for inches. Entrance $5. Five Furlongs.

Doctor, Peasant Boy, Dash, Dambrod, Discard, Sandboy, Moh-ichido, Moscou, Moh-nai, All Jams, Finale.

3. THE VISITORS' CUP.—Presented. For China Ponies. Winners of One Race at the meeting 7lbs; of Two Races, 10lbs. extra. Winner of more than two races excluded. Weight for inches. Entrance, $5. One Mile and a half.

Dibs, Gladiateur, Piastre, Braemar, Tallapoosa, Black Rod, Monymusk, Crusader, Cyclone, Grasshopper, The Judge, The Minister, Dixie.

6. THE CLUB CUP.—For Japan Ponies. Winners of mixed races, and winner of the Spring Stakes excluded. Winners of any open races at or previous to this meeting, 10lbs. extra. Weight for inches. Entrance $5. Three-quarters of a mile.

Doctor, Typhoon, Sirius, Stalemate, Moh-ichido, Moscou, Drizzle, Tsuji Ura, Finale.

7. THE ITO CUP.—For China Ponies. Winners at the meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

Dibs, Favori, Gladiateur, Piastre, Braemar, Tallapoosa, Black Rod, Monymusk, Crusader, Kuo-pü-chu, Bonito, Grey Friar, Grasshopper, The Judge, The Minister, Dixie, North Mongolian, South Mongolian, East Mongolian, West Mongolian, Mid Mongolian.

8. THE YOKOHAMA PLATE.—For Japan Ponies. Winners at meeting excluded. Weight for inches. Entrance, $5. Three-quarters of a mile.

Doctor, Oyama, Kagoshima, Typhoon, Sirius, Stalemate, Moh-stotz, Moh-ichido, Moscou, Tsuji Ura, All Jams, Finale.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

9. THE CRITERION STAKES.—For China Ponies. A forced entry for all Ponies that have run at the meeting. Winners of one race, 10lbs.; of two races, 14lbs. extra. Ponies that have run twice, and have not been placed, allowed 7lbs. Weight for inches. Entrance, $5. One Mile and a quarter.

THIRD DAY.—FRIDAY, 19TH MAY.

1. THE HURDLE RACE.—Value, $75. For all Ponies. Over Six (6) Hurdles. China Ponies, 10st. 7lbs.; Japan Ponies, 10st. Entrance, $5. Once round and a distance.

Snob, Dibs, Tim Whiffler, Ivanhoe, Andante, Monymusk, Crusader, Dixie, North Mongolian, South Mongolian, Mid Mongolian.

2. THE MERCHANTS' CUP.—Presented. A Handicap for all China Pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, $5, *compulsory*. Open also to beaten Ponies at the meeting. One Mile and a quarter.

3. THE NIPPON CHAMPION HANDICAP.—A Handicap for all Japan pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, $5, *compulsory*. Open also to beaten ponies at the meeting. Once round.

4. THE SCURRY STAKES.—For all Ponies. Weight as per scale. Entrance, $5. Three furlongs.

Doncaster, Oyama, Picayune, Blackthorn, Tallapoosa, Andante, Lottie, Moh-nai, Lodi, Grey Friar, Grasshopper, The Judge, The Minister, North Mongolian, South Mongolian, East Mongolian, West Mongolian.

5 THE SOLACE CUP.—For all beaten Japan ponies at the meeting. Weight for inches. Entrance, $5. Five furlongs.

Cupbearer, Doctor, Tim Whiffler, Oyama, Kagoshima, Peasant Boy, Typhoon, Sirocco, Dash, Dambrod, Discard, Sirius, Stalemate, Sandboy, Lodi, Moh-ichido, Moh-stotz, Moscou, Drizzle, Tsuji Ura, All Jams, Finale, Bawbee.

6 THE CONSOLATION PLATE.—For all beaten China ponies at the meeting. Weight for inches. Entrance, $5. Once round and a distance.

Doncaster, Gladiateur, Dibs, Favori, Piastre, Blackthorn, Ivanhoe, Braemar, Tallapoosa, Andante, Kuo-pü-chu, Grey Friar, Cyclone, Bonito, Grasshopper, Dixie, The Judge, The Minister, North Mongolian, South Mongolian, East Mongolian, West Mongolian, Mid Mongolian.

7. THE SAYONARA STAKES.—A Handicap for all ponies. To be handicapped by the Stewards at the close of the second day's racing, when entries will be received. Winner of the Merchants' Cup excluded. Winner of the Nippon Champion Handicap, 7lbs., and winners of any other race after the publication of the handicap, 3lbs. extra. Entrance, $10 Once round.

Law & Police

IN H. B. M.'s CONSULAR COURT.

Before R. ROBERTSON, Esq., Consul.

Monday, 24th April, 1876.

Hugh Shields, seaman of the British ship *Emu*, was charged with drunkenness.

Sentenced to pay costs, and to be sent on board ship.

Thursday, April 27th, 1876.

McLEOD *vs.* STEWART.

This was a claim for $50, amount of a promissory note.

Defendant pleaded inability to pay, but acknowledged the debt. He said he would pay if he could get employment.

Judgment for plaintiff, with costs.

Saturday, 29th April, 1876.

MENDOZA *vs.* JOSE.

In this case defendant was summoned to show cause why he had not complied with a judgment passed in December last, ordering him to pay plaintiff $25.

Mr White appeared for plaintiff; defendant appeared personally.

Defendant stated that he lost his former employment by being summoned for debt by plaintiff in December last. He is now employed at the Coal Depot of the Pacific Mail Company at $35 a month.

Ordered to pay by monthly instalments of $8.33 cents.

REUTER'S TELEGRAMS.

London, 13th April.—There is a semi-panic on the Stock Exchange caused by the default of Egypt in not paying the April and May bonds.

Alarming reports have been received from Bosnia and Servia.

A committee of ways and means has been appointed by Congress for the purpose of framing a new tariff, and it has been agreed to leave tea free.

General Dana's nomination has been rejected on account of an unproved charge of literary piracy.

The Czar's retirement has been denied.

M. Gambetta has been elected President of the Budget Committee.

London, 14th April.—An Indian Loan of four millions sterling has been issued in London.

The Title of Empress has been approved by Russia.

The *Surat* has been towed into Lisbon with a damaged shaft. The *Australia* has been despatched to tranship the mails, cargo and passengers. The Brindisi mail has been postponed until the 21st April.

"THE ECONOMY AND SIMPLICITY OF OUR FOREFATHERS."

(The Nation.)

The fall of Mr. Belknap is generally ascribed, and with considerable appearance of truth, to his wife's desire, and doubtless also his own, to live handsomely. She was what is called a "leader of fashion" in that remarkable portion of human society called "Administration circles," and required considerably more money than her husband's income to reach the standard of gentility in the matter of meat, drink, clothing, and carriages set up by the people among whom she sought to shine; and she got it out of the sutlers, and they out of the soldiers and settlers on the Plains. Whether this is an accurate statement of the case or not, it is the one generally accepted by the public, and the moral drawn from it, by a somewhat sweeping generalization, is that extravagance in living is the main source of our political corruption, and that if we would reform the Government we must go back to the simplicity of food and attire and the accompanying personal integrity supposed to have been common in the year 1776 or thereabouts. We confess there is to us something almost as depressing in this kind of talk as in the practice in which many of our newspapers indulge, of drawing consolation for the present corruption of this Republic from the reflection that the corruption of the English monarchy one hundred and fifty years ago was just as great; because both one and the other have a tendency to turn people's minds away from real remedies and throw them back on quackery.

There is, in the first place, always something childish in calling out in times of public danger and distress for things which are clearly unattainable, and nothing is more clearly unattainable than a return to the manners and customs of another age. This would be true even if it were certain that there was any necessary connection between the plain living of the early Americans and their good morals. There is no such connection. No man or woman is kept from knavery by wearing homespun and living on pork and molasses. If we had only to change men's clothes and put them on short commons in order to make them good, we might dispense with religion and law, and the saints of every community would be found in the penitentiary. It may be said, too, with confidence that the people of every age have lived about as well as they could afford. The men and women of the last century wore plainer clothes than we do, and ate plainer fare, because fine clothes and rich diet were harder to get, because, in short, they had less to offer in exchange for them. The steam-engine and the power-loom and the spinning-jenny had not been invented, and nearly everybody had to trust to the produce of his farm for a livelihood, and the difficulties of travel and the absence of periodical literature kept his imagination in a state of virtuous quiescence. He wore homespun, then, not because he was good, but because he could not help it. "Plain living and high thinking" even in our time often go together, but the thinking is not high because the living is plain; more generally the living is plain because the thinking is high. In order to go back to the manners of 1776, we should have to get rid of all the material progress which separates this year from that—that is, all the industry, art, and means of locomotion which the discoveries and inventions of the last century have placed at our disposal. In order to get very much advantage from living like the forefathers, we should have

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

to reduce the number and power of our temptations to the level of theirs. If we dressed all modern legislators in serge, and fed them on grits and hominy, it would profit us nothing as long as we allowed Jay Gould to assail them with thousand dollar bills or railroad stock or bonds.

There are, however, some characteristics of the men of the last century which we can imitate and restore, and which in our present plight may do us much political service. First and foremost among these is their thorough practicalness, and freedom from the kindergarten tendency to shape in your own mind the way you would like things to be, and then to make your arrangements as if that was the way they would be. The Rousseau whey had not made its way into their veins. If we look through their speeches, debates, political treatises, and constitutions, we find that the animal they are thinking about and working for is man as they know him and see him, and not man as they would like to see him and as it would be convenient to have him. Jefferson had some of the true Red dreams about the probable effect on human nature of certain political contrivances or material conditions, but on the whole his contemporaries were politicians of the true Anglo-Saxon type, who saw no visions, and did not expect from human nature any extraordinary displays of self-denial in the ordinary work of life. If we run through the volume which is perhaps on the whole the best example of the political thinking of that day, the 'Federalist,' we find the writers occupied anxiously from first to last in the construction of a government which should put the least possible strain on human nature, and offer it fewest temptations, and take most account of its weaknesses. They tried to set up, not something to which truly good men would do well to adapt themselves, but something which the average man—a being who is neither saint nor devil—would find it easy to live under. For instance, when they were fixing the salaries of the high officers of the Government, they did not, as we do now, evolve from their own moral consciousness the sum which an ideal President *ought* to need annually. On the contrary, they found out what the Presidents of Congress under the old Confederation had spent in the year, and they made such additions to it as they thought the new President would require to enable him to live with ease and dignity. In like manner, when they came to fix the salaries of the judges of the Supreme Court, they did not thrust one hand under their coat-tails, and and the other through their hair, and pour forth a stream of blatherskite about the way an ideal judge *ought* to live, and about the smallness of the sum for which good lawyers of their own acquaintance could be got to fill the place. They said: "The Supreme Court ought to contain the best lawyers in the country, and in choosing the judges for it we ought not to be restricted to men of accumulated fortunes. Therefore, to get the best lawyers we must pay as much annually as the leading lawyers actually earn in the centres of the largest practice." Having ascertained that this was about $3,000, they fixed the salary of the Chief-Justice at $4,000 a year, and that of the associate Justices at $3,500. They followed a similar course with regard to all the other offices of the Government. They offered, in short, such salaries as would in the market of that day command the best labor of the kind the public service required, and made absolutely no extraordinary demand on the virtue of the candidates. They no more thought of treating the public service as a monastery, and exacting a vow of poverty from those entering it, than private bankers thought of it. They knew that men would serve the Government from ordinary motives; that good men would need good pay, and security, and the chance of living in the same style as the people with whom they naturally associated in other callings, and they acted accordingly.

Since that period Congress has raised the pay of the Supreme Court judges only one hundred and fifty per cent., although the remuneration of leading lawyers in active practice has increased five or six hundred per cent.; and the very same policy (we have no space for illustrative details) has been pursued through all branches of the service. The rate of pay has been kept far below the market rate, and the result is that in most of them we get the refuse of the market for Government work—that is, the helpless, the dissolute, the sickly, the lazy, the incompetent, and the knavish, and when they steal and cheat we implore them "to return to the economy and simplicity of their forefathers"; and when they refuse, we begin to weep and wail, and ask what is going to become of the country, and what would Washington say if he could see Belknap. There could probably be no better illustration of the darkened state of the public mind about the causes of our present political disease than the approbation with which the present rage for cutting down the salaries of public officers is regarded as a measure of economy. Far from being a measure of economy, it is one more step in the process by which a middle wall of partition has been erected between the honesty, capacity and energy of the American people and the Government which it dearly loves and would fain be proud of.

THE QUEEN'S TITLES.

(Pall Mall Gazette.)

All questions in which the Queen's pleasure is involved are exposed to one danger—the danger, namely, of the suppression of public feeling, the silencing of public opinion. But just as the people are loyal to the Queen, so the Queen is and has always been loyal to the people; and it can be no pain to her to know what they feel and what they think on all matters whatsoever; still less in matters where she herself is personally concerned. Therefore we take leave to say that what the English people have so far heard about the change in her Majesty's titles gives them little pleasure; and their pleasure will be less when they learn what happened in the House of Commons on Tuesday.

We all know—to our disquiet—that the Bill which is to give her Majesty some addition to her present titles does not state what the change is to be. Accordingly Mr. Samuelson asked Mr. Disraeli last night "whether he was now prepared to state what was the addition to the Royal titles which her Majesty's Ministers will advise in the event of the passing of the Royal Titles Bill;" and Mr. Disraeli having replied that he was not prepared to make the desired statement, Mr. Samuelson gave notice that on the second reading of the Bill he would move that the House should not be asked to read the Bill a second time "until the addition proposed to be made to the Royal titles shall have been stated by her Majesty's Ministers, and until full opportunity shall have been given for the consideration of such addition." We regret that it should be necessary for any member of the House to bring forward a motion of this kind; but the propriety of the step which Mr. Samuelson has taken seems to us undeniable. The mystery in which the Government have enveloped the matter is surely unwise; and we trust that Mr. Disraeli will anticipate the motion of which notice has been given by voluntarily taking the House into his confidence. If the contemplated addition to her Majesty's titles is that of the word "Empress," the extent to which that title is to apply should at least be publicly stated. If it is to be strictly confined to her sovereignty over her possessions in India, that at any rate should at once be placed beyond doubt, in order to remove certain apprehensions which have already, it seems, obtained a hold upon the public mind. Even as thus restricted, the country has a strong dislike to the title. The style of "Empress," and still more that of "Emperor"—for there is a real difference of idea and association between the two—is wholly foreign to the tastes, the temper, and the traditions of this country. Whether the assumption of the title will be acceptable to the people of India is another question; but even that is a question upon which incredulity is very prevalent and very reasonable. At the best, we imagine, the "people of India" would view the change with indifference. Any supposed feeling in favour of it in India must have its origin (one of very doubtful sincerity) among those Indian princes who would really be only too glad to rid both of the name of empire and the thing. But, however this may be, we see no reason at all why the deeply rooted and most natural preferences of the English people should be sacrificed to an Indian idea. "King" and "Queen" are the ancient and time-honoured names of the Sovereigns of England; and if her Majesty is to make any addition to her present title (which we should greatly regret) it should be made clear at least that, as it is done solely for the sake of her faithful subjects in India, the application of the new title is to have no extension beyond the borders of the country for the supposed benefit of which it is to be assumed. Upon this point the Government cannot speak out too early or too plainly; for it is here that misgiving is so serious. The question, no doubt, is one of sentiment alone; but a Minister takes but a narrow view of the functions of Government, and a perilously incomplete view of the materials with which he has to deal, who does not see that the most important questions of policy may turn upon matters of so-called "sentiment." Nor is the sentiment with which the Government have to reckon in the matter a purely English one—that is, one which begins and ends within the limits of the United Kingdom. The feeling of the colonies on the subject ought not to be overlooked; and the addition of a title which should in any way appear to postpone the claims of the Queen's subjects of English blood to those of the natives of a foreign country won and held by the sword, would be a false step, and one not easily remedied. To us

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

it seems, and we believe to nearly all Englishmen, that if the existing titles of the Queen are not thought to bring the English Crown close enough to all who owe allegiance to it, the colonies have the first claim to be considered in any proposed addition to her dignities.

CARGOES.

Per Steamship *Malacca* for Hongkong.—

Silk for London	61 bales.
France	32 ,,
Total...	93 bales.

REPORTS.

The *Tamesa*, after leaving London, had a good run down channel; since then has experienced light winds and calms throughout, passed through Allas Strait, and met with fine weather in the Pacific; arrived yesterday, 145 days from port to port.

The *Naples* reports strong N E winds during the passage.

[It is elsewhere reported that the *Naples* passed the *City of Peking* off O-osima on the 23rd If by O-osima is meant Vries Island, about 18 miles from Cape Sagami at the entrance of the Gulf of Yedo, the *Naples* must have taken 24 hours to come that short distance; while if O-osima at the entrance of the Kii channel is intended the *City of Peking* has certainly sailed much faster than on her trip from San Francisco, having left Yokohama at daylight on the 23d.]

The *Genetif* reports stormy weather outside.

The *Portia* reports a rough stormy passage, the sea running very cross but the wind not so heavy.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics.—The market continues to exhibit languor. There is but a slight inclination to buy on the part of the native trade, the rates now offered by purchasers being progressively lower. Quotations are therefore easier than at the date of our last issue.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.87½ to $2.15	60 to 64 reed 40 yds. 35 in. nom.	per pce.	2.10 to 2.30

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE COVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

MANUFACTURERS and Patentees of the IMPROVED-BREECH, STEEL RIFLED ORDNANCE, largely adopted in Europe and America: Inventors of the new Star ring artillery shell.

The Broadwell System is now applied to the Krupp Cannon.

The undersigned are prepared to receive orders and undertake contracts, on behalf of the Company, for ORDNANCE of any calibre, at the Company's tariff.

EDWARD FISCHER & CO.,

d. w. & m. SOLE AGENTS FOR JAPAN.

THE FOLLOWING

IS AN

EXTRACT FROM A LETTER

NORTON'S PILLS

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,
To the Proprietors of L. S.

NORTON'S CAMOMILE PILLS, London.

JOSEPH GILLOTT'S
CELEBRATED
STEEL PENS.

Sold by all Dealers throughout the World.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 19.] YOKOHAMA, SATURDAY, MAY 6, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its efluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

In confessing a wish to see the coming assembly of local governors, wherever it may meet, allowed a wider range of subjects for discussion than that allotted to them last year, we are animated by no spirit of distrust of the present administration, nor by any doctrinaire crotchets concerning representative institutions. The assembly of over sixty eminent magistrates who last year in the middle of a summer heat, as trying to the temper as relaxing to the constitution, discussed with so much moderation and assiduity the few financial measures submitted to them for their advice, can in no sense be regarded as representative as that term is understood by Europeans or Americans. The members were dependent on the pleasure of the Government for the tenure of their offices, and any expression of unpalatable opinions could have been check-mated by early removal from office; just as, in fact the converse course was taken by advancing to higher posts those members who made themselves prominent by their advocacy of what were known to be the Government views, in the direction of increased centralization. From such an assembly it would be too much to expect a reflection of the opinions which the governed masses may hold on matters affecting their interests. Such a deliberative assembly is, indeed, incalculably better than none at all; but it would be indefinitely improved by the adoption of a suggestion made, we believe, by one of the members last year, that each member should be allowed to bring with him to the sittings of the body a man elected of the people under his jurisdiction, for the express purpose of assisting the governor by his experience and counsel. If the day of popular freedom is ever to dawn upon Japan, it could surely begin to break with no more gentle aurora than this.

There are not wanting plenty of signs that the people are keeping a close eye on the administration in order to discover how it intends to shape its course in respect of the Deliberative Assembly. It is high time that some indication should be given by the Mikado's Councillors of the extent to which they are prepared to submit to intelligent criticism their management of the national interests committed to their charge. In spite of the restricted margin allowed the press for political comments of any kind, it is no secret that there is a general impression abroad that the Government would gladly shirk, if it could do so with any show of decent excuse, even the small measure of oversight involved by the meeting of the provincial governors. The treatment which that body received last year at the hands of the executive was in all conscience illiberal enough, and the stinging sarcasm lately launched by one of the Yedo journals on the subject was, we think, richly merited. It is reported, says this writer, that the *Chiho-kuan Kuaigi* is not to meet this year in consequence of the assembly-room having to be given up to the expected Corean embassy. We have no fear that in giving extended publicity to the joke we may be bringing trouble on the author of it; for it is one of these shafts of wit which no press-law or libel-law ever framed could guard against or provide for. Despotic authority is powerful in many things, but it is just as little likely to be successful in Japan as in other countries, in finding a device by which to protect itself from being assailed by epigram.

Some eighteen months since the Swamp land-renters sought through the intervention of their respective Consuls for some abatement of the least tolerable nuisances to which the dwellers in that district are exposed. Gutters that do not run, streets without side walks, and an atmosphere to which the habits of the Chinese residents contributed every possible combination of evil odours furnished the *gravamen* of the complaint of which some alleviation was sought, and it was hoped that a remedy was not far distant. But notwithstanding that the Japanese authorities professed their desire to remove the grievances which their tenants endure, and which they fully recognise, there is, we are sorry to learn, no appearance of any action on their part to justify the hope that another summer will not find them unredressed, and, it may be, a source of danger and infection to the Settlement. The renters have addressed the Chamber of Commerce on the subject, and now threaten to cease the payment of ground rent until justice be done to them. We should be sorry to find this extreme measure necessary. It is understood that some $6,000 or $7,000 will amply cover the necessary outlay upon the drains. Stringent regulations to enforce domestic cleanliness upon the Chinese will do the rest. It is inconceivable that for want of so small a sum of money and of so little good management a respectable body of tenants should be wronged, decency and good order offended and the invasion sooner or later of some terrible malady invited and precipitated. We hope that it may be unnecessary for us to recur to the subject.

The question has been raised how far the rights of the entire foreign community to the Race course are represented by the Race Club. At the present moment admission to the Club is the condition on which the use of the Course can be enjoyed, and such admission is restricted, as is usual, by that kind of consensus which has a purely social basis, The question has been brought to an issue, and will be tried before a court of law, and it is well to settle it on such authority. But it has been suggested, and we think with good reason, that no steps should be taken to try the case until the Spring Meeting is over. More or less warmth of partisanship undoubtedly surrounds the arguments *pro* and *con*, and might give rise to incidents compromising the whole character of our sports were its presence to pervade the coming meeting.

The Japanese Government may be interested in hearing what is being done in other parts of the world regarding duties on imports, and the manner in which they are regarded by high financial authority. The following note in the *Economist* of the 4th March regarding the Indian tariff contains a definite expression of opinion on the subject.

The real reason, however, for objecting to the duties, and seeking to abolish them, is that they are injurious to the people of India themselves. It is not for the interest of our subjects there that native manufacturers should be protected in any way, and a tax thereby levied on the whole population, the proceeds of which do not go into the Exchequer, but give an artificial stimulus to native production. This is the error which is now being committed in India, and although English manufacturers have an interest in bringing the matter before the Indian Government, the latter ought always to remember that they are called upon by their duty to the millions of India, whom we govern absolutely, to abolish such duties, and that consideration for the English manufacturer need not affect their decision at all. We hope that under a settled Government, and with so many natural advantages in its favour, Indian manufacturing will go on increasing, but we must not do our Indian subjects the immense disservice of fostering their manufactures artificially, and so twisting and stunting their growth, as protection has done in all other countries where it has yet been tried.

In Canada, too, a struggle is taking place on the gronnd of protectionism, and the Government of the Dominion is strongly pressed to depart from the more enlightened policy it has for some time been acting upon. The *Economist* writes as follows on this subject.

CANADIAN FINANCE.—We noticed a few months ago the state of Canadian finance, on the occasion of the issue of a new loan for 2,500,000/ in our market. Since then affairs have changed for the worse—at any rate, for the present—and the change is of a kind that, though probably only temporary, deserves some notice both for our interest in Canada and on account of a side question which it has become necessary for Canadian statesmen to deal with. The change is a conversion of the Canadian surplus into a deficit mainly through a falling off of the customs duties, and the political difficulty arising is occasioned by the Protectionists seizing the opportunity to urge the imposition of protective duties, both to fill up the deficit and, as they say, to restore prosperity to the country by encouraging native manufactures. We understand that a strong Protectionist campaign is being organised, and though it may be hoped the Canadian leaders will have enough sense and influence to see through and beat the Protectionists, the situation is none the less interesting as illustrating the vitality of economic error. Although the Canadians have before them the visible evidence of what the United States have lost by Protection, the cry is raised that the Canadian manufacturer is being ruined by the American, and ought to be protected; and as the United States in their folly tax Canadian raw materials, the cry is supported by a good deal of natural irritation. So far, the present Canadian Government is entitled to all praise in dealing with this cry. The Finance Minister, instead of imposing new duties, has done a great deal to fill up the breach in the Treasury by cutting down expenditure to the extent of about 500,000/, which is no small reduction for a State like Canada. The plea for new taxation is thus being successfully evaded, and the advocates of Protection will consequently be forced to argue that question on its merits. That they have no case is, of course, plain, because it certainly will not enrich the Canadian agriculturists to make them pay higher for what they consume, merely that these few manufacturers may receive the price; and this is what the Protectionists propose. It would be much cheaper to vote a subsidy to the weak manufacturers at once, but to propose taxes avowedly for such a purpose would not of course go down. There is fair reason to hope then that the Canadian Government will not be forced to yield to the Protectionist cry. The reduction of customs, it may be added, shows a liability to fluctuation to which we have been unaccustomed in this country, because our tariff is both limited to a few articles of general consumption, and has none but specific duties. In Canada, on the other hand, the tariff is *ad valorem*, and on a great many miscellaneous articles, and the great fall in prices during the last two years consequently means a corresponding reduction of the customs receipts. It is not so much that Canada imports less, though it has had a commercial crisis of some severity, as that the quantities of imports are valued at less amounts. When things turn round again Canadian financiers should keep the lesson in mind, and seek both to make the tariff specific, and to limit it as much as possible to leading articles of consumption.

Some of our shorter translations this week will interest all who are anxious to see Christianity take root in this country. One of them is remarkable as an illustration of the practical effects of our faith on the life of one who declares frankly and bravely how completely it has changed the whole tenour of his character and who calls on his countrymen to follow his example. Another translation speaks of repressive measures being used in Osaka against the native Christian teachers. The Japanese cannot expect to gain the position of equality among nations for which we are striving, without granting a full toleration to Christianity. It is clear that they have now nothing to fear from it, and the translation above referred to shows how much they may legitimately hope for from it. A religion which tends to make men both virtuous and loyal has claims on the attention of a wise ruler who wishes to elevate the morals and secure the obedience of his subjects.

A writer in the *Choya Shimbun* dilates upon the "Importance of the North," and seems to think that schools alone are wanted to bring Yezo into a condition in which it would be a source of wealth and pride to the Empire. But schools bring no wealth, and this is what is first wanted. There must be hard work, industrious habits, and such sound fiscal legislation regarding the fisheries as to develope and not to stifle the resources of the island. Yezo ought to have an enormous fishing industry, for its coasts swarm with life. De Jongh's cod-liver oil should be driven out of consumption, and no herrings, sardines or salmon but those of Yezo, should be known east of the Cape. By the way, it seems strange that the Emperor, who is going up northward as far as Hakodate, is not to go to Sapporo. After an expenditure of some five or ten millions of dollars on the island, there ought to be something to see at the new capital.

Among the most serious labours which have engaged and are still engaging the attention of the Government, is the revision and reconstruction of all the departmental machinery of the State. We have already published some translations showing ample evidence of this, and our readers will find others of the same nature among our translations of to-day.

In our late review of the contents of the last volume of the German Asiatic Society's Transactions, we omitted to mention the second part of a translation from the Chinese entitled "Das Schöne Mädchen von Pao," which forms a supplement to the volume. The original work doubtless has some historical value which compensates the translator for his labour. But he will hardly be displeased or surprised to hear that it excites but a languid interest in the average reader.

Reference was made in our last issue to a work now passing through the native press entitled 'The Fifteen Successions of the Tokugawa Dynasty.' We are authorized to state that a translation of this work has been undertaken by Mr. F. V. Dickins, and will be published in successive parts as the volumes of the original work appear.

The tax of 25 *sen* imposed on native passengers by foreign steamers on the Coast and China lines has been reduced to 10 *sen*.

The performance of "La Belle Hélène" by the Opera Bouffe Company, advertised to take place this evening, has been postponed to Wednesday next the 10th instant.

A telegram has been received from Dr. J. F. Elmore, *Chargé d'Affaires* of Peru for China and Japan, announcing his intention to return to Yokohama by the *City of Peking* which will leave Hongkong on the 15th instant.

We have received from a correspondent an account of the Kobe Regatta and Athletic Sports, but regret to say that it arrived too late for insertion in this issue.

From the "Japan Mail Daily Advertiser."

A curtailed version of *Barbe Bleue* was performed at the Gaiety Theatre on Saturday evening last to a moderately well-filled house, the chief parts being taken by Madame Dorlia and M. Legros with their accustomed spirit and vivacity. Notwithstanding some awkwardness which betrayed a want of care or practise the music was fairly well sung and was highly appreciated by an audience too eager to be amused to be critical. A scene from the "Grande Duchesse" by the same composer succeeded, "Le Sabre de mon père" and "Dites Lui" being very pleasingly rendered by Madame Dorlia.

Original from UNIVERSITY OF CALIFORNIA

The *Nichi Nichi Shimbun* says that it is understood that the Mikado will entertain the representatives of the foreign powers at Uyeno to-day.

The Honble. Mr. Saumarez, Second Secretary of H. B. M. Legation in Japan, arrived this morning by the P. & O. steamship *Sunda*.

Although the *Samurai* of the Sakata *Ken* have obeyed the recent proclamation forbidding the wearing of swords, they have not, it would seem, altogether dispensed with weapons of defence and attack. Some of them have adopted walking canes, and it is by no means unusual to find clubs, six feet in length, in the hands of many.

A correspondent of the *Akebono Shimbun* points out that changes in the *personnel* of the staff of the *Nichi Nichi* and *Hioron* newspapers are far from infrequent. In the case of the former, however, a fat appointment rewards the supporter of the Government, who is soon able to set up his carriage, while the latter only leave their employment to endure the hardship of prison life. The correspondent sagaciously adds that there must be some good reason for these very opposite consequences of newspaper writing, but that he is not at liberty to disclose it.

A theatrical representation of a novel character will take place to-morrow and the next day at Shiba, being the *matsuri* of Benten. The piece to be performed will represent some of the more salient events of the day as related by the newspapers.

The community will learn with satisfaction that a tax of 50 *sen* is about to be levied upon all native-owned dogs in Yokohama. By another regulation, it is ordered, that in consequence of their liability to catch fire, all wooden and thatch roofs shall be removed and replaced with tiles. This order has greatly troubled the poorer class of householders.

The *Akebono Shimbun* says that since his retirement from official life Mr. Goto Shojiro has devoted his leisure hours to study. His liabilities are undoubtedly large, it adds, but his friends have come forward to his assistance and have undertaken to arrange them. For this reason his various foreign creditors abstain from pressing their claims.

Mr. Arinori Mori, Japanese Minister to Peking, is said by the *Eiri Shimbun* to have received a leave of absence of two months from his post, in order to enable him to visit his mother who is seriously indisposed.

The Prime Minister has issued a Notification reducing the tax on steamboat passengers by foreign vessels from 25 to 10 *sen*.

We learn from the *Yokohama Daily News* that the Vice-Governor of Kanagawa *ken* proceeded to Odawara on the 30th ultimo to receive over charge of the affairs of the Ashigara *ken*, which has lately been united with the Kanagawa *ken*.

Mr. Henry von Siebold threw open to inspection his collection of ancient Japanese curiosities at his house at Meguro, near Yedo on Sunday last. Many of the high officials and nobility availed themselves of the opportunity afforded of inspecting them.

The *Osaka Nippo* reports a collision to have taken place between the steamships *Kairiu Maru* and *Yashima Maru* on the 23d ulto., when the former was on her way to Okayama from Kobé. The latter vessel was injured, but no loss of life is reported.

The exhibitition buildings at Yamashita, Tokio were entered by thieves on the 28 ulto. who succeeded in carrying off some of the scales and onaments of gold from the head of the image of a sword fish, which had been brought to Tokio from the castle tower at Nagoya in the province of Owari.

The *Mezamachi Shimbun* attributes to the increased vigilance of the police the fact that on the 27th and 28th of last month but three or four houses were burglariously entered by thieves in Yedo.

The barque *Truth*, which put in here dismasted some six weeks since, has now completed her repairs and will resume her voyage to San Francisco, with her original cargo from Java, in a few days. During her stay here she has received new main and mizen masts, all her yards have been renewed and new rigging has been supplied. The necessary repairs to her bottom have also been effected by the renewal of about two hundred sheets of copper, which had been injured by the wreckage of her masts during the heavy gale she encountered. Her repairs have been carried out in a thoroughly tradesman like manner and reflect credit upon the contractors.

The *Nichi Nichi* says that the journey of His Majesty northward will be begun on the 1st of next month. This, however, will depend to some extent upon the late of arrival of the Corean Embassy.

The Embassy from Corea is expected to arrive at Yedo on the 24th or 25th of this month.

According to the *Akebono Shimbun* several officials of the Treasury meet at a private house in Yedo each afternoon, and devote some hours to the study of the French code.

We acknowledge the receipt of the Official Race Book, published by authority of the Race Committee by the *Japan Herald* office.

The *Akebono* summarises the chief news from Kioto as follows. There are 65 Government schools in the city and 5,000 *jinrikishas*. All the *shidzoku* who invested their commuted pensions in trade have failed.

The Messageries Maritimes Company's s.s. *Tibre* will leave Hong Kong 10 a.m., this morning with European mails to 26th March.

The Opera Bouffe Company repeated *Barbe Bleue* and the scene from the *Grande Duchesse* at the Gaiety Theatre last evening. The audience was small.

The *Choya Shimbun* gives the intelligence, received by telegram, that the *Bosho Kan*, man-of-war, which has been stationed at Fusan Kai in Corea, would leave that port for Yedo on the 3rd instant.

During the month of April 2,590 Japanese arrived in Yokohama by the steam-boats of the Mitsu-Bishi and P. & O. Companies.

H. M. the Mikado will visit the Uyeno Gardens on the 8th instant.

H. M. the Empress and Empress Mother visited the paper mills at Oji yesterday.

The *Yokahoma Daily News* announces a grand display of "Gymnastics" (wrestling presumably) at Ise Cho, Nogé Hill.

The former *yashiki* of Imagawa, at Kanda in Yedo, has been assigned as a residence to the Corean Embassy during their stay in the capital.

The Governor of the Niigata *ken* has, says the *Akebono Shimbun*, arrived in Yedo. His visit to the capital is said to be occasioned by a difficulty which has arisen with some foreign resident within his jurisdiction.

A person at Odawara purposes, we learn, to run a small steamer between Yedo and Atami during the summer months, stopping to take in passengers at Yokohama and Odawarra. If well managed the service will no doubt obtain support from foreigners and natives.

Several of the foreign representatives were entertained at dinner by H.E. Iwakura on the 2nd instant.

The Government of Japan sent to-day a letter to the French Consulate with a present of 300 *rios* for the estate of Mr. Motz, deceased, in acknowledgment of the efficient way in which he had attended to his duties as interpreter at the Kanagawa Saibansho.—*Japan Herald.*

The U. S. sloop of war *Saco* having the undergone the requisite repairs at Yokoska will resume her voyage to San Francisco to-morrow. We learn that the examination failed

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

to discover the cause of the excessive leak which rendered her return to port necessary.

After a submersion of some few years the wreck of the *America* has at last been recovered by the energy of Captain Carst and his co-partners. The wreck has been towed on shore may now be seen at Kanagawa.

His Majesty will visit the residence of Seikuanin-no-Miya, to-day to witness the performance of the *No* dances. This lady, who is his aunt, is mother by adoption of the ex-Tycoon Hitotsbashi.

We understand that Inouyé Kaworu, late Vice-Ambassador to Corea, will leave for Osaka and Choshiu on the 5th instant. On his return from the provinces he will proceed to Europe through America.

The theatre proprietors of Kiôto and Osaka have, since the late calamity, adopted the precaution of causing additional doors to be made for use in case of fire.

The *Akebono Shimbun* is informed that numerous offers of service are daily made at the office of the *Hioron Shimbun* by individuals who are desirous to become writers on the staff of that journal. As the first qualification is supposed to be a capacity for tolerating long confinement and prison fare, the postulants for office are careful to apprise the proprietors of the journal—or such of them as remain at large—that punishment for conscience sake and for press offences would be rather agreeable to them than otherwise.

It has been decided by the authorities of the Tokio *Fu* to grant licenses to sell rabbits to only three auctioneers within its jurisdiction. This would appear to indicate a renewed movement in this form of speculation.

The *samurai* of the Ishikawa *Ken* having been deprived of the privilege of wearing their swords have recently adopted the use of large clubs.

A Christian mission in Yokohama has, says the *Choya Shimbun*, adopted the plan of issuing tickets to those who attend its ministrations. When a certain number of such tickets has accumulated in the hands of the holder he is presented with some small gift to mark the regularity of his attendance. Another mission requires that those who attend service should contribute to the support of the mission. But it is discovered that while the congregation of the first mentioned increases that of the latter barely maintains its numbers.

The *Choya Shimbun* writes: The Superior Court of Yedo took fire on the 3rd instant, at 11 p.m., and was burning until 12 o'clock. Both this building and the *Saibansho* were destroyed.

Elsewhere a fire is reported to have occurred at Hakodate, by which 100 houses were destroyed on the 28th instant.

The commercial success of the elephant lately brought from Singapore has inflamed the cupidity of speculators. Acting upon a jocular suggestion a Japanese broker has been enquiring at what price a "well-nourished" specimen of a mastodon or megalosaurus can be laid down in this port. The New Zealand dinornis is also asked for.

According to a usually well informed native journal the Government, having brought its dissensions with Corea to a close, is now turning its attention to the subject of the privileged classes, the *kadzoku* and *shidzoku*. The abolition of the wearing of swords initiated a new course of action, and the general question of the pensions is now under the consideration of the Cabinet. It is understood that a suggestion that the allowances shall be paid in the form of transferable bonds is likely to find acceptance.

The opening of the Public Gardens of Uyeno in Yedo, will take place on Monday, the 8th instant at 9 a.m., in the presence of H. M. the Mikado. It is understood that the representatives of the Foreign Powers and the high officials of the Imperial Government will also be present. Among other amusements there will be horse racing, under—the *Hochi Shimbun* adds—the auspices of the Minister for Italy.

Although present appearances are somewhat unfavourable for the sports of the Tokio Amateur Athletic Association they will, should the weather not absolutely forbid them, be held on the Parade Ground Tsukidji, Yedo, to-day, at one o'clock.

The *Akebono Shimbun* says that a fire broke out a few nights since in one of the theatres at Hongo in Yedo, but, fortunately, was discovered early enough to allow of its being promptly extinguished. The theatre was crowded at the time.

The sittings of the Supreme Court at Yedo, postponed on account of the recent fire, will be resumed to-day.

His Excellency Uyeno, the Japanese Minister in London, will shortly visit the capitals of Spain and Portugal, and present letters from the Mikado.—*L. & C. Express.*

A Reuter's telegram from Berlin states that it is officially announced that the German squadron in Asia will be reinforced in order to suppress piracy in Chinese waters. The *Hertha*, *Ariadne*, and *Cyclop*, which were to have returned home are now to remain on the station, and will be joined towards the month of May by the *Vineta* and *Louise*. The German squadron will then commence operations in concert with British and Chinese men-of-war, and those of other nations. The gunboat *Nautilus* will also leave Germany for China before the end of the present month. It will be a matter of much satisfaction to the large number of German traders in China that at last their Government is about to take steps the protection of their commerce—a measure which has been long felt by them to be urgently required. We fear, however that the announcement is far in excess of the facts or intentions of the German Government.—*L. & C. Express.*

THE PRESS PROSECUTIONS.

THE Government of Japan is in serious danger at this moment of producing upon the mind of Europe and America the same kind of unfavourable impression as it produced by the persecution of the native Christians five years ago, and we would ask, in all seriousness and earnestness, whether the policy which conduces to so lamentable a result can be a sound one. We do not wish to appeal merely to that desire of standing well abroad which has been more or less of a force in urging the Japanese to progress and reform. The defensive pride which lies at the root of so many of the virtues is satisfied to do right as right, "were wisdom in the scorn of consequence," and this must fulfil its own duty. But the desire to stand well in the general opinion of the Western world, provided the object be not secured by good professions subsequently belied by bad deeds, can hardly lead the Japanese far astray. The opinion of Europe is clear enough now-a-days upon the great principles of good government. No one argues for despotism, for persecution, for intolerance of opinion, for cruelty, for the love of strife, for official insolence, for military oppression, for religious restriction, for perpetuating ignorance, corruption and fraud, for sedition and conspiracy. Thanks to the qualities which seem to have inhered in our race from the earliest days in which history mentions it, thanks to the benignant influence of that religion which easily subdued us by reason of our possession of those qualities —the one having a natural affinity for the other—and to the generally sound body of opinion developed by our social and political institutions, there is no danger that those who seek our good opinion will be led in any erroneous direction by their efforts to deserve it. If the Japanese produce in us the conviction that they are acting on sound principles, it can hardly be otherwise—cannot indeed be otherwise—than that they are casting off the despotic character of oriental formulæ and methods of government, and bringing their system more into conformity with that body of principles which has done so much for ourselves. And, *vice versâ*, if they are flying in the face of those principles and violating their spirit at every move, they will not only forfeit our good opinion, —with which, indeed, they may, if they will, dispense— but they will be pursuing methods of government fatal to their rise as a nation, fatal to their legitimate ambitions, and to the fair promise they have given to the world.

We have spoken of the bad effect upon European opinion of their persecution of the native Christians some years ago. The distinguished and able man who is now— if we mistake not—the second in rank of the MIKADO'S Councillors, must be fully aware of the adverse influence produced upon the minds of European statesmen by the accounts of this persecution which preceded him in his mission to the West. Were not representations on the subject made to him, first in America, then in England, then on the Continent of Europe, and not only in official quarters, but from those Societies which watch over and protect in the great centres of European opinion the progress and welfare of our faith and the liberty which is bound up with it? If rumour speak truly, the illustrious Lady whom Englishmen love so well and the world respects so highly, and whose forty years reign of wise constitutional government has done more than all the teaching of statesmen and ecclesiastics to impress the nations with a sense of the paramount value of free monarchical institutions, spoke to Mr. IWAKURA on the subject, and expressed a hope that these persecutions might be discontinued. The Japanese ENVOY felt the full force of all these remonstrances. The imprisoned native Christians were released and joyfully went back to their homes. A great public and world-wide scandal was stopped, wholesome public opinion did its work, the Japanese nation effaced a dishonouring blot from its shield, a new and salutary principle was added to the mainspring of its polity, the State took no injury, while the people were endowed with a fresh privilege.

There is no special Japanese Mission now in Europe, and there are few of those special objects to gain which the Mission of IWAKURA had more or less in view. But the accounts of the Press Prosecutions which have lately left this country will produce almost if not quite as bad an impression abroad as did the former persecutions of the Christians. The necessity for the Press-laws will be generally granted. Public opinion elsewhere has largely admitted this. But the spirit in which they have been administered, the harshness and cruelty of the Judges, the ignominy to which the public writers have been exposed, the tyrannical and oppressive nature of the proceedings, the severity of the sentences and the vindictive character of the whole line of conduct of the Government on this question, have already produced a most unfavourable influence upon public opinion, and have revealed—perhaps opportunely—the real character of the administration of criminal justice in this Empire.

Yet, what is the darling wish of Japanese statesmen at this moment? What has been the prime motive power in half their reforms of the jurisprudence of the realm? Why have they adopted an alien code of laws, set their scholars to translate it, their youth to study and practice it, and their Judges to incorporate its principles into their modes of procedure and decisions? There is but one answer: The desire to obtain jurisdiction over foreigners. But do they imagine that the foreign Powers will hand over their subjects to a jurisdiction which betrays such a spirit as that betrayed by these Press Prosecutions? The laws of the more advanced nations of Europe are like a beautiful instrument every part of which reveals not only a consummate adaptative skill in the constructing mechanician, but a perfect apprehension of the eternal principles of harmony—principles, which, like those of geometry, are necessary truths, because they possess a mathematical basis. These laws, for the most part, are, in like manner, the outcome of principles, so far as is yet known to us, which permit of the freest expansion of the individual mind and character, compatible with the cohesion necessary for the stability of society. By means of our system of free discussion, the ideas which prove their right to exist, by surviving the conflict of opposing ideas, find their way into our legislation, and thus a constructive and reparative process is constantly going on which represents the conclusions of the wisest, and gradually moulds and reinforces the minds of those who are their intellectual inferiors. Liberty, admitted as a regulating and controlling power at the very source of our laws, and finding a place in every compensating, corrective and adjusting part of the mechanism, brings with her a reforming power

which never sleeps and which nothing escapes, and thus it is that we flourish and go on ever improving—an effect not produced by our Government, but springing from ourselves.

Now this beneficent spirit of liberty, the source of all this security and perpetual improvement, is looked upon by this Government with worse than distaste—with positive aversion. Far from regarding it as a good thing, to be encouraged as far as the present immature knowledge of its operation permits, it is regarded as a bad thing, inevitable perhaps, yet to be repressed by every possible means. Thus, the Japanese, far from travelling on the same lines as ourselves, though behind us in point of time, are travelling in an almost diametrically opposite direction, certainly on widely divergent lines. The principle we worship, they detest ; our fair is their foul ; our Ormuzd is their Ahriman. They may claim that they must not look aside from principles necessary for the good government of the Empire even for so great an object as the acquisition of jurisdiction over us. We, on the other hand say, that if their new polity is moulded by or permeated with these principles, they have no chance of ever being entrusted with such jurisdiction. And we claim further that these principles are not good and not necessary; that, on the contrary, they are bad and utterly destructive.

Put the matter to a practical test. If foreigners were placed under Japanese jurisdiction, the foreign Press would become subject to its control. Knowing this, and seeing the spirit in which the Japanese are administering these Press laws, what will inevitably be the attitude of that Press relative to the question. One, assuredly, of the bitterest animosity, so incessant, so implacable, so biting, as to act most adversely in any attempted approximation to the desired end. Be the fruition of these hopes on the part of the Japanese nearer or further off, on the assumption of their moulding their laws and methods of procedure upon our own, it will be indefinitely delayed so long as the spirit which actuates the Government in these Press Prosecutions is apparent. The point is absolutely vital and representative, because as liberty is the life-blood of our whole system, the abstraction of it involves the paralysis of the heart, and the foreign Governments will never expose their subjects or citizens to this. So long as the administration of Japanese law recognizes a certain spirit of liberty, we can always hope that antiquated edicts can be abolished for more modern ones, and bad methods of procedure can be corrected. But animosity shewn to liberty is fatal to and disqualifying for the concession of jurisdiction. It alienates willing partisans and well-wishers ; converts friends into foes, dries up the springs of admiring enthusiasm, and curdles all the generous sympathies from which nations in their mutual relations gain so much. Yet it does worse than this. These results are only effects produced external to the nation so governed. But the nation itself cannot rise among the orders of the human race. A corrupt despotism must dominate a feeble race of slaves, chained, lashed and cowed into degrading subserviency. Where there is no liberty there is no true light or life, and a race in so artificial a condition gradually disappears before the advancing tide of the freer men who are covering the earth.

If we have any claim to be heard in this matter, we would earnestly hope that some relaxation of the attitude of the Government towards the Press will soon take place. We would deprecate in the strongest manner the truly retrograde position the Government is now taking in regard to a matter vitally affecting the life of the nation. Remember what the steps of this proceeding have been. First, a Press wholly free—or practically so. (Whether this was quite wise or not is another question: it showed at all events a desire to let the people find means of expressing their opinions and feelings.) Then, the Press-laws ; of no undue severity perhaps, yet restrictive of this power of free expression, and embodying one thoroughly bad clause by which all discussion of a law of the Empire was prohibited. Lastly, harsh, cruel, and, we would almost say, vindictive prosecutions of the public journals, with every accompaniment of humiliation and rigour at the trials, and issuing in sentences of fearful severity. There have been days of similar persecution in Europe, but they are now regarded with shame and aversion. More than this ; they obstructed the progress of the nations whose rulers acted thus, brought lasting disgrace on their Governments, and not only failed to effect their real object, but made the popular triumph all the greater in the end.

If Japan is wise she will take warning from our history. Both our failures and successes, and the causes of both, are before her. At present, her efforts, at least in this matter, seem certain to ensure the former, and these alone.

SPIRIT OF THE JAPANESE PRESS.

Initiation and Imitation.

(Choya Shimbun.)

If we cast our eyes over the world we see that most of the states of Europe are in a condition of high enlightenment, while those of the East are but semi-civilized ; that the minds of the people of the West are active, while those of the orientals are indolent ; that the Westerns are jealous of the rights and liberties of the people, while the orientals are indifferent to them ; that the former are daily making new inventions or improving old contrivances and methods of production, while the latter think only of imitating them. The difference between these two conditions of mind is great—as wide indeed as the distance between heaven and earth. Now this difference is not due to the original Creative Power. It does not arise from geographical position or climatic condition. It has its root in the differences between the objects aimed at in the Eastern and Western systems of education. These differences may have been slight at first, but every succeeding year made the divergence greater, and a wide gap now exists between the two systems. It is on this question that we desire to say a few words.

The Chinese think that in the period of the Emperor Gio of the To dynasty, and Shun of the Gu dynasty (about the time of Noah), China was in the highest state of civilization, and that the period during the three succeeding dynasties, the Ka, In and Shu (a period of about 1,800 years) enjoyed a civilization inferior only to that of the preceding age of the To and Gu* dynasty. During the succeding dynasties, the Jiu and Kan, the Chinese say that they declined in civilization, and believe that each successive age was worse than that which preceded it. There is a classical work in Chinese called the *Shosho*, or the biography of the Emperors Gio and Shun of the To and Gu dynasties, and Bun and Bu of the Shu dynasty and so on. This book is revered by the Chinese as the Bible is by the Christians. Confucius constantly spoke of these Emperors Gio, Shun, Bun and Bu in his discourses, and this shows how Chinese men of learning always looked back with reverence to the ancients, to the disregard of

* Is it frivolous to say that the European reader cannot, for his life, take any interest in dynasties called *To* and *Gu* and *Shu* and in Emperors called *Bun* and *Bu*? How can people brought up to believe in Plantagenets and Guelphs, Hohenzollerns, Bourbons, Romanoffs, Hapsburgs, and Wittelsbachs connect serious history with *Tos* and *Gus*, and *Buns* and *Bus*? There surely is something in a name.

everything that was new. Thus, then, their system of education has pointed always to the past. The sages of China since the time of Mencius have always made the teachings of Confucius their theme, a fact which may be observed by any reader of Chinese literature. The first Emperor of the Jiu dynasty, Yu by name, collected an account of the sayings and doings of his predecessors Gio and Shun, and made them models for perpetual imitation. To, the first Emperor of the In dynasty, made Yu his model, and the Emperors Bun and Bu of the Succeeding Shu dynasty made To their object of imitation. This being the case, all the regulation of the administration, the code of society, morals and customs were modelled on those of ancient times and mere imitations of them. So such an excess was this spirit carried that though the Throne was sometimes usurped by an intruder he would always say that he derived it from his predecessor, simply because the Emperor Gio was said to have ceded his Throne to Shun, and this shows the honour in which precedents and antiquity are held. We do not speak of corrupt Emperors and officials, but all Rulers who were reasonably good desired to act on the model of their predecessors, and the officials under them in like manner. The learned also read, thought and wrote much regarding the administration of affairs, but their highest ambition was to resemble Confucius and Mencius. Thus the minds of these three classes were, and still are, directed towards the past, and never towards the present or future. And thus it is that the orientals cannot invent: they can only imitate.

Europe and America are diametrically different in this respect. They honour and revere freedom, and detest oppression and subservience. They love their rights above all things, and do not cherish absurd notions regarding antiquity. They are not satisfied with the present nor with the condition of civilization they have so far attained. They advance daily, and are continually beginning to know something never previously known by man, and inventing something never previously invented. Thus they are attempting to raise themselves to the greatest attainable height of civilization, and it must be allowed that a wide gap exists between people like this and those who merely advance by imitation.

All men have their natural instincts and habits, and it is sometimes difficult to analyse these. But it is impossible to say that the orientals have become so ignoble and slavish in obedience to their instincts, and, without doubt, the desire in the Western nations for freedom, their indifference to antiquity, and their desire to attain a higher civilization to that in which they now find themselves have their origin in the mental habits of the people, and these habits again have their rise in the education which prevails in the country. Japan is situated in the East, and its education has heretofore largely consisted in the teachings of Confucius, Mencius and such like Chinese philosophers. Its religion has been that of Sakya Mouni, and there is another branch of learning called *Wagaku*, but this deals only with the ancient language spoken in Japan, so that it is unworthy of notice here. Now all the learned men took Confucius and Mencius as their models, and all the priests took Sakya Mouni as theirs. The teaching of these at first formed the mental habits of the people, and finally they moulded the mind of the whole nation, so that our ideas did not differ very widely from those of the Chinese, and this condition of things lasted until the late civil war.

Since the civil war we have begun to carry on freer intercourse with foreigners, and seeing how wealthy, powerful and enlightened the European states are, we have been anxious to become so likewise. Many of our most wealthy and powerful men have entirely changed their habits of mind. The laws and methods of administration have been changed, the *daimios* have been abolished, and a constitutional form of government will be granted by the Emperor. In fact, our system of education, manufactures and dress, our habitations, and even our food are becoming like those of European countries, and even young children have begun to study European books. Some among our people have acquired a knowledge of the more useful sciences, of laws and political institutions, and most of them have been struck with wonder and admiration at the wisdom of foreign writers and try to imitate them. This cannot be deemed the perfect acquisition of European ideas, because if any one is actually imbued with these, he need not attempt to imitate them—they become the parents of other ideas similarly European. If we try to rival the Europeans and Americans simply by imitating them, it is doubtful whether we shall make any solid progress.

The Ancient Military system of Japan.

The mythological epoch of our history is very obscure, and little is known about it. But this may be regarded as certain, that the starting of Jimmu Tennô's expedition towards the north-east, with a number of men and vessels, was the origin of our Army and Navy. In those days there were troops of both sexes, for the army is said to have been composed of both men and women, and their weapons consisted of swords, bows and arrows and spears.

Under the reign of Sujin Tenno, (570 years after Jimmu Tenno and about 896 years B.C.) the office of Shidô Shogûn was established, and consisted of four generals whose duty it was to take command, in case of disturbance, of the four districts into which the country was divided.

In the reign of Jingo Kogo, about A. D. 201, the use of flags, drums and bells was first introduced into the army.

In the 18th year of Yuriaku Tenno, or about A. D. 473, the *Sayemon* (guards of the left gate) and *Uyemon* (guards of the right gate) were established.

In the reign of Keitai Tenno, (about A. D. 52), the office of *Tai-Shogûn* (Generalissimo) was the first time instituted. These are the leading outlines of our military administration in ancient times.

Kotoku Tenno, A. D. 649, instituted eight great departments of the administration, one of which was the War Department, and at this time there was no distinction of a military and an agricultural class. Young men were examined in each of the several provinces, and one-fourth of them were enrolled on the army list and put under drill.

From the time of Monmu Tennô, A. D. 695, for about a hundred years, the Imperial guards were divided into six companies, and one superior officer administered the affairs of each of these companies. At this time, a custom obtained that horses were given to the Government as taxes, and about this date the cavalry was divided into two bodies, each having its own superior officer.

When a hundred or more men were assembled in a district they formed a body called a *Dan*, and one *Daiki* and two *Shôki* were placed in command of them. When the number of men reached 500 but was below 1,000 they were commanded by one *Daiki* and one *Shôki*; and when less than 500, by a single *Shôki*. Every 200 men were placed under a *Koi*, every 100 under a *Risshi*, and every 50 under a *Taisoi*. Ten men formed a *Kwa*, and five men a *Go*. Thus two *Go* of five men formed one *Kwa* (10 men); five *Kwa* formed one *Tai* (50 men); two *Tai* one *Rio* (100 men), and ten *Rio* one *Dan* (1,000 men).

Those who became skilful in riding and archery were put into the cavalry, the remainder were infantry.

The troops kept in the capital were called 'guards,' those quartered on the coast 'defenders.' Among those quartered at Kioto were 600 men who formed the right and left body-guard, while there were 1,200 right and left gate guards, besides 800 other guards.

In time of war when there were more than 10,000 embodied troops, one *Shogûn*, two Vice *Shogûns*, and two generals of brigade were placed in command. When the troops exceeded 30,000 in number a *Tai Shogûn* or generalissimo was placed in command. This *Tai Shogûn* had the power of punishing all officers under the rank of *Daiki* in any manner he pleased, short of death.

There was also a corps of heavy troops called the *Kenji* which were under the orders of the War Department.

From the times of Saga Tenno, about A.D. 810, the office of Prime Minister was kept in the family of Fujiwara family, and the Genji and Heiki retained the command of the army. The eight provinces of *Kwanto*, and the provinces of Mutzu and Dewa were governed by these two families, and the division of the military and agricultural classes had commenced about this time. The former were termed *Bushi* or *Samurai*, those who held large domains were called *Daimio*, and smaller holders *Shomio* or *To*. The families of Genji and Heiki had many partisans and retainers among these two classes.

In the reign of Yotoba Tenno, Yoritomo, of the Genji family, was made at his own request Tzuihoshi of the whole nation, that is the leader of troops against any who rose to defy the Imperial authority, and thus he got the whole military power of the nation into his own hands. His authority extended so far as the appointment and dismissal of the *Shugo* (governors) and *Jitô* (vice governors) of the various provinces or districts. At this time the agricultural and military classes became quite distinct, and feudal institutions came into being and took shape. This system prevailed through the times of Ota, Nobunaga, Toyotomi Taikô, and the Tokugawa dynasty, with but slight changes affecting only the private retainers of the *Daimios*.

The Mikado had no military power until the time of the late

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Restoration, when all the powers of the state reverted to his hands, including, of course, the command of the Army and Navy.

As I am desirous of saying something about military and naval affairs, I have thought it well to mention the ancient condition of these services.

The Importance of the North.

Choya Shimbun, April 11, 1876.

The northern part of Japan which borders on the territory of Russia is a place of primary importance and it has therefore been long called the "lock of the north gate." Owing to the non-definition of the exact boundary which marked the territories of the two countries—Russia and Japan the north of Karafuto (Saghalin) the Tycoon's Government frequently despatched embassies (to the former) with the desire of bringing about such a settlement, but these embassies did not succeed in effecting their object as the Russians had for years entertained the idea of absorbing the whole island and had planned making themselves entire masters thereof. Owing to great domestic troubles our country was unable for several years to being about a final settlement of the question, and the Russians availed themselves of the opportunity that was thus afforded them to develop the resources of the island, and by gradually opening it up, to make preparations for absorbing the whole of it. His Majesty's Government, after the revolution, established the Kaitakushi and divided Yezo into eleven provinces, these again being sub-divided into over eighty districts. The head office of the department was established at Sapporo, a branch being stationed far off in Karafuto and it was intended by means of this branch to effect the opening up of the island. The disputes of many years could not however be put an end to, and, as it could not be judged when an entanglement would not take place between the two countries, owing to the hardships that were inflicted by the Russians on our people there, our Government took steps beforehand to prevent such by giving Karafuto to Russia in exchange for the Kurile Islands, thus finally settling the boundary line between the two countries. This policy must be highly commended, but as this subject is one of vital importance to the whole Empire, all persons of intelligence whether they be in town or country must give their careful attention to it.

Russia in pursuit of the plan and policy that were bequeathed to her years ago by the Emperor Peter the Great exchanges the unimportant for the important, money for land, and, by spreading her religion, secretly gains over to her persons living far away. This is the profound policy of the Greek Church, to plant Russian subjects secretly in the midst of hostile countries. Her Missionaries are all clergymen of high standing in their own country while those who learn from them in Japan are all unintelligible, uneducated rustics, destitute alike of shame and patriotism. If we enquire into the teaching of these Missionaries we shall find that they are entirely confined to enjoining virtue and propriety, the rights of liberty and personal freedom. This teaching should be highly approved of, but still if we examine the hearts of the teachers we shall find them to be as much worthy of fear as devils or serpents. As to their disciples they look to foreigners for all the daily necessaries of life and the more earnest among them entrust their very existence to them, reverence the teachers as being angels, and their inability to make any decided inquiry as to the doctrines which they hear, prevents them entertaining doubts thereof (which the might otherwise do) and all the teacher's instructions are submitted to. This conduct must be reprobated, but on the other hand we cannot but pity the state of mind in which these persons are. Their placing their dependence on foreigners for their livelihood is owing to the darkness of their minds which prevents them knowing themselves. This is the policy which is pursued everywhere by Russia, and if the impregnating of these doctrines is continued for any long time it is impossible to tell what misfortunes may not result therefrom. It is to me a subject of great dread and I therefore think that the rendering our northern territory secure is a matter of primary importance.

Two or three years ago the Kaitakushi transferred a member of northern merchants to Sapporo, giving them money for building and other purposes and caused them to carry on business there. A crowd of persons who were destitute of means of daily livelihood was thus collected together there, and accordingly not one of them remained for any length of time. A number of allotments of land have now been made to yeomanry, stipends for the period of three years being granted to them, and they have been set to work to effect the development of the place. Is it not to be feared that when the three years are up they will follow the example that has already been set to them by the merchants who were previously transferred thither? Ought we not therefore speedily to establish a system for encouraging one good form of instruction and learning among them, for teaching them to know what shame is and stirring up patriotic spirit in them, and for developing their intelligence and mental powers. This is a matter of first importance at the present day and is one not to be neglected even for a short time. There are many talented persons among us who are regarding the north with feelings of grief and who earnestly discuss the subject of dealing with it, but whether it is owing to their abilities not being sufficient for the task or that they have no scheme for warding off the evils, (that threaten) there are few who do not thrust aside the subject of the development of the place. Again it is the habit of some of those who discuss it to say that owing to the great cold and snow that prevails there and also in view of the strength and size of Russia nothing can be done. When I hear of such remarks as these, my tears gush forth and I am struck with sorrow. Yezo lies between 41° and 45° N. Latitude, and the coldest point to which the thermometer falls is about 5 degrees, a degree of cold which is unknown in the main island. To defend ourselves against the cold is, however, a very easy matter and it is only the defence of Russia which is difficult. Learned men may say that there is no means of doing so, but I on the other hand persist there is. As I have already said the way to open up the northern part of the empire is to develop the intelligence of the people and encourage feelings of shame in them, and these results cannot be attained without instruction and learning. Such a work as the development of the country depends upon the strength of mind which the people give to it, and the result of the instruction which I have described, if really persevered in for any length of time, will be that the minds of the people in the North will become assimilated to those of the people in the mainland. Mr. Mitsukuri says that people who live in cold regions have great powers of endurance while on the other hand those who live in hot regions are feeble and nerveless. If therefore learning and instruction are caused to spread among the people in the region of which we are now speaking, who knows but that at some future day an illustrious and eminent people may be generated there; and for these reasons I think that the instruction of the people is of main importance as regards the north at the present day. This article of mine may be derided as its subject matter is one that has been long known, but the anxiety which I have long felt in regard to it has caused me to produce it stupid though it be, and I am anxious to hear through your journal the opinions of learned on the subject and also the plans which they have for the development of that region.

(Signed) Shina Miki,
of Sarui in Fukagawa, Yedo.

Penalties for Officials.

("Nichi Nichi Shimbun" of April 15th, 1876.)

No. 34.—The following list of penalties for officials having lately been determined is hereby under known.

April 14th, 1876. (Signed) Sanjō Saneyoshi,
Prime Minister.

Rule I.—For the future all offences committed by officials in respect to their duties,—the same not being private offences,—shall be punished by the chief of the Department to which such officials belong.

Rule II.—The penalties shall be three in number;—firstly, reprimand,—secondly, confiscation of pay,—thirdly, dismissal from office.

Rule III.—Reprimand is the mildest form of punishment, a lecture of censure being given from the Chief of Department.

Rule IV.—Confiscation of pay consists of deprivation of salary for a period not less than half a month and not exceeding three months. In carrying this out, there shall be confiscated every month, half of the salary for that month, which shall be sent into the Board of Finance when the total sum is complete.

Rule V.—As regards a person to be punished with dismissal, there shall in the case of a *Shi-nin* official,* be sent in (to the Government), upon the desire of the Chief of the Department, a written detail of the circumstances, after which the said official shall be dismissed, and his certificate of rank restored to the Government.

Note.—In the case of an official to be dismissed, the same, however, being not as a punishment, the Chief of the Department shall explain the matter and cause such official himself to send in a petition to be allowed to resign, after which he shall be dismissed.

* *I.e.*—One appointed by the Mikado on the recommendation of the Chief of the Department.

Original from UNIVERSITY OF CALIFORNIA

Rule VI.—The several Chiefs of Departments shall inflict the penalties upon their respective subordinates, both *Sōnin* and *Hannin*† officials.

Rule VII.—*Sōnin* officials of the *Fu* and *Ken* shall be punished by the Prime Minister; and *Hannin* officials of the *Fu* or *Ken*, or of the Police Department shall be punished by their chiefs.

Rule VIII.—*Hanji* (Judges) of the 4th rank and downwards shall be punished by the Head of the Judicial Department. Those officials of the *Fu* or *Ken* who hold the additional office of *Hanji* shall punish their subordinate *Hannin* officials after having consulted on the matter with some other official of the *Fu* or *Ken* who is of *Sōnin*, or higher, rank.

Rule IX.—When the Chief of a *Fu*, a *Ken*, or of the Police Department shall punish a subordinate *Hannin* official otherwise than by reprimand, he shall take the steps that he may think good for effecting the confiscation of pay or the dismissal from office, and shall at once report the same to the Minister of the Home Department.

When *Fu* or *Ken* officials who hold the additional office of *Hanji* punish their subordinate *Hannin* officials by confiscation of pay or by dismissal from office, they shall take the steps that they may think good, and shall at once report the same to the Minister of the Judicial Department.

Rule X.—Those officials who may be guilty of intentional private offences shall, even though they may have committed those offences in their public capacity, be handed over to the Judicial authorities, and their superior Chief shall not have power to deal with them.

No 35.

To *In*, *Shō*, *Shi*, *Chō*, *Fu*, and *Ken*.

In connection with the recently determined penalties for officials, the following instructions showing the method of the administration of punishments by the Chiefs of Departments, are to be observed.

April 14th, 1876.

(Signed) SANJO SANEYOSHI,
Prime Minister.

INSTRUCTIONS TO BE OBSERVED BY CHIEFS OF DEPARTMENTS IN THE ADMINISTRATION OF PUNISHMENTS.

I.—The several Chiefs of Departments shall always look after their subordinates, and in case of any faults being committed by the latter, shall deal with them according to the rules relating to penalties.

II.—By "faults" are meant those results caused by errors, inadvertence, or negligence. The results of dilatoriness are also considered "faults." Those persons, too, who by not regulating well their general behaviour bring discredit upon the name of officials shall also be considered guilty of a fault and be subjected to punishment.

III.—Those faults that occasion evil results shall be considered as being grave;—but those which even though they occasion evil results, still can be rectified, or those which do not cause any evil results shall be considered as being lighter.

Note.—It is, however, left to the discretion of the Chief to determine the lightness or the gravity of the fault, according to the circumstances of the case.

IV.—In the case of several officials of the same Department uniting in the commission of some fault, the responsibility of the same shall rest with their immediate superior,—as, in a Department, with the Chief of Department;—in an office, with the Head of Office;—in a (police) Bureau, with the Superintendent of the same;—and in all minor offices with the official charged with their supervision. The official next to the Chief, and those coming after him shall also be proportionately dealt with. In the case of subordinate officials who have received the consent of their Superior to carry out some matter in accordance with their own ideas, the responsibility shall rest with both the Superior and the subordinates alike. In the case of subordinates who (commit faults while) in the execution of matters within the extent of their duty or powers, their Superior is not responsible, But those subordinates who exceed their duty or powers and act according to their own ideas, shall be deemed to be guilty in a graver degree.

V.—In case of subordinate officials themselves detecting their own errors and sending in an enquiry as to whether they shall or shall not tender their resignation in consequence, their chief shall institute enquiries into the matter, and shall deal in accordance with the Rules, with those who have merely been guilty of an unintentional fault: those wilful and intentional offenders, however, who ought to be delivered up to the Judicial Authorities, shall be handed over to the latter by their Chief, in accordance with Rule X of the scale of penalties, either to the Head of the Judicial Department, or else to the *Kenji*, or, in places where there is not a *Kenji* stationed, to the *Hanji*. Should the Judicial Authorities ascertain clearly that the offence was not intentionally committed, or again, that it has nothing to do with the Penal Code, the offenders shall be returned to their Chief of Department, who shall then deal with them according to the scale of penalties.

VI.—It is not permitted to re-employ persons who have been dismissed as a punishment, unless after the expiration of a period of two years or more.

VII.—Whenever it is desired to employ, at some other Government Department, any one who has previously been dismissed from office,—whether as a punishment or otherwise,—reference must in each case be made to his former Chief of Department, and enquiry made of the latter as to his opinion of the person to be engaged.

VIII.—In the case of an official being dismissed, but not as a punishment, his chief shall explain the matter and cause him to send in his resignation. Those, however, who do not accept these directions, and refuse to send in their resignation, may at once be dismissed.

IX.—In the case of those persons who have during some former office committed faults which came to light after such persons have been appointed to another office,—or of those who themselves confess their own errors, reference shall be made to the Chief of the Department to which they formerly belonged and punishment shall then be inflicted by their new Chief.

† Approved by the Chief himself at will.

THE IMPERIAL JOURNEY.

(Nichi Nichi Shimbun, May 2nd, 1876.)

It is said that the arrival of the Corean embassy in Yedo will take place about the 24th or 25th instant.

It is believed that it is His Majesty's intention to start for Oshiu and Dewa on the 1st proximo, but if the above embassy arrives earlier than the date mentioned the start may according to circumstances be made at the end of the present month. The nobles in the suite accompanying His Majesty will be as follows. Iwakura and Kido, Ministers: Hijikata and Kune-i-Secretaries: One Sangi whose name is not yet known: Tokudaijo-minister of the Household: Higashi Kuze, Lord-chamberlain: Suge, Vice-minister of the Household: Kagawa: Kodama: Tsutsumi: Takasaki: Yoneda: Iwasa.

His Majesty will proceed to Hakodate, but we understand it is not the intention to extend the journey into Yezo. The inhabitants of Yezo will greatly regret this.

The Minister of the Interior will, it is reported, start beforehand on the 10th inst for the purpose of examining the royal route.

PRECIS OF LETTER TO THE *Choya Shimbun* FROM TETSUKA ARATA —A COMMONER RESIDENT IN YEDO—REPROVING PERSONS WHO ARE ADDICTED TO WINE AND DROWNED IN LUST.

There is a proverb that wine is the best of all medicines and it is true that it drowns sorrow and increases joy. This is, however, the language of tipplers, used by them in their own defence, and so far from wine drinking being to the good of the body, it is the direct reverse. From ancient times down to the present there have been numerous examples of princes who have been rendered silly by it, of persons in authority who have been led by it to abuse their power, of officials who have been led to regard only their own interests to the neglect of the public ones, of old and young men and women who have been ruined by it. Even now the newspapers contain numerous instances that prove this. By it dissipated persons are led into debauchery and to neglect their families. If we inquire as to the persons who give way to this vice, we shall find that they are middle class men who have always civilization and enlightenment in their mouths and who understand what is right and proper. But while such practices are in vogue civilization cannot advance, and when I think that this is so my tears fall.

When ages ago God created man, he fixed the great relationship of husband and wife, but men disregarding this, reduce themselves to the level of beasts by giving themselves over to lust and debauchery. God punishes them therefore by the infliction of such plagues as syphilis and the like diseases. Those who give themselves up to wine and women defend themselves by saying that it is the custom of the world, but let them be never so high in rank or so distinguished for learning I shall still think them only savages. If they were in reality only savages I might pass by their conduct without notice, but it is inexcusable to see high officers and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

learned men, who know well what is right, behave in such a way.

I myself was formerly given over to wine and women, and both my health and reputation suffered in consequence. I induced numbers of friends to follow my example and deserved both human and divine punishment. The true God was however so kind as not to forsake, but to extend his mercy to me and reform me. I was cleansed in the redeeming and true blood of Jesus Christ, and owing to the teaching which I have received from Him I am to-day living in accordance with the divine law. Changed from my former feelings, I now yearn for what is good and loathe what is wrong, and I cannot endure to see my brethren pursuing now the same wicked course as I did formerly. I therefore, though I am a person destitute of learning and ability, publish this letter, and I beg my brethren to learn their own and their country's value, to reverence God, and esteem their Saviour, and appreciate the doctrine for which we should be grateful. By so doing their intelligence will be increased, they will become truly civilized, defend themselves against the contempt of foreigners and ensure the everlasting safety of their Imperial country.

Is it So?

(Nichi Nichi Shimbun of April 28th 1876.)

In a letter which we have received from Mr. Homma Shigeyoshi of Kioto, that gentleman says :—

"The remark in the description of the state of things at Kioto "which appears in your journal to the effect that the preaching of "Christianity by the *Doshi* (like-minded) Society is being pushed "on with more and more vigour, is quite mistaken. I am one of "the students of the present schools and also a servant of Jesus, "and as I am therefore well acquainted with the facts, I beg leave "to say a few words. They are of course desirous with their whole "hearts to instruct those in the school who are wandering in "darkness in the way of salvation, but as this is strictly prohibited "by the Local Government here, they refrain from teaching, much "though they regret to have to do so. Mr. Niishima, however, a "gentleman who returned from America a few years ago, with "some other teachers and believers have greatly exerted themselves, "and meetings are held every Sunday at the teachers' houses at "which the Holy Scriptures are explained. The number of hear-"ers has increased and at present about one hundred persons "attend every meeting. We listen in the glad hope that the time "is not far distant when we shall be able to hold public meetings "as well. These are probably the facts which have led to your "error."

Under the tyrannous rule of the Tokugawa family, it (the Christian Religion) was long prohibited by law, and none might either teach or learn it, but at present it is as good as tolerated by the Government, and we do not believe that there is any probability whatever that the Holy * Religion of Jesus will be suppressed by the State. We therefore believe that our previous statements are not incorrect.

Easter Day.

(Choya Shimbun, 21, April.)

We understand that the 16th was the day on which Christ returned to life. On the evening of the 15th the great gate of the house of the Russian missionary Nikolai at Surugadai was opened and great lanterns suspended around it. All the rooms were illuminated and about five hundred men and women assembled therein. The figure of a cross was made in cakes and fruit, and dyed eggs were piled up like a mountain. Flags with the figure of the cross on them were fixed in a back room. The service commenced at 12 o'clock. Mr. Nikolai wore a golden head dress. At his right stood a Russian priest and on his left a Japanese. These three preached in turns in Russian, Greek, and Japanese and the service lasted over two hours. When it was over the three priests displayed their affection to the disciples by kissing them all, old and young, men and women alike, after which the disciples all kissed and took each others' hands. They then joyfully eat fruit and drank tea and all went away about dawn.

It is Not So.

(Choya Shimbun, May 4th, 1876.)

A small ticket is given every day to each of those persons who come to hear the doctrine of Christ preached in Yokohama. It is said that rewards are given at the end of the month in proportion to the number of these tickets (held by each person) and consequently the number of those who come to hear the preaching is very large.

[We have submitted this report to one of the leading local Protestant missionaries, who entirely denies it, and we have little doubt that the Fathers of the Apostolic Mission can do the same. Ed. J. W. M.]

Competition.

(Choya Shimbun.)

Since the Government began to give large subsidies to the Mitzu Bishi Company the native coast line has flourished greatly, and it is doing now what no Company could do without the aid of the State. But latterly, the P. & O. Company has been running an opposition line and the Mitzu Bishi has in consequence lowered its rates of freight and passenger-money in order not to be beaten, so that it would appear that had rates been more moderate at first there would have been no opposition. The Government surely does not give these large subsidies to the Mitzu Bishi Company for the purpose of carrying on a competition when opposition is started, but in order to promote the general convenience of the people.

Now it may be observed that the line towards the south-west and China is very cheap and the people are greatly benefited by it. For the small sum of five *yen* they can go to Kobe and back, and for ten *yen* they can go to Shanghai and back. But the rates to Hakodate and Oshu are very high ; they have not been reduced and remain two or three times as high as those on the southern branch. So much is this the case, that when intending travellers are informed of them, they prefer to go by land.

It would thus seem as if the above Company were not acting in accordance with the object the Government is desirous to promote, and the public, forgetful of the benevolence of the Government, is beginning to hope that foreigners will start an opposition in other directions.

A Popular Assembly.

("Hochi Shimbun" of April 22nd, 1876.)

We have hard that in a certain Ken, name unknown, a People's Assembly was opened on the 6th of March last, and that a similar meeting took place on the 6th instant also. Mr. District Superintendent acted as President, and the Mayors formed the members; and thus, somehow or other, it came to much the same as the former gatherings, in the various villages, of Heads of five to talk about sowing seed. No *Shidzuoku* being present, but some 300 or so farmers having attended, it came to pass that although, at the first, careful attention was given to what was said, matters gradually grew worse. Quiet talk branched off to extraneous affairs, and these branches, again, bore fruit, so that the point under discussion, and the replies or explanations regarding it disappeared no one knew whither. One person shouted out, "Mr. "so and so, of such a village, has unfortunately had every single "one of his potatoes rooted up by a wild-boar!" Another gave the news that "some time back, on such and such a mountain "a wolf had come out of a manure-tub, and on being pursued, "climbed up a tree and so escaped!" Just as these wondrous tales began to come pouring forth, the signal was given with the clapper, and the meeting was happily closed!

NOTES UPON JAPANESE MUSIC.

By Dr. Muller, late of the Imperial Medical College.

(Translated by permission from the Transactions of the "Deutsche Gesellschaft für Natur und Völkerkunde Ostasiens.")

I must ask the readers of this paper to bear with me if I have again to begin my essay with some corrections of my preceding papers. I feel assured, however, that all who have endeavoured to collect information upon such subjects in Japan will not reproach me with my occasional inexactitude. So vague and superficial, indeed, is the knowledge of even those best informed upon the subject, that it is only by collating the details obtained from a variety of sources, and from close personal observation that it has been at all possible to obtain accurate and trustworthy results. I am not a scientific musician, and I have only attempted this series of essays upon a hitherto little known subject with a view to open the road, as it were, to its study, and to stimulate further enquiry, but without any pretension to form an exact or conclusive study of the subject.

* A space is left before "Holy Religion of Jesus" in the same way as in speaking of the Mikado by way of honour.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

A slight error has also slipped into my description of the *wanggong*. The Empress in whose reign the six strings were arranged together was named Dsing go koku. The general who ordered this mode of arrangement was named Takeno Udshi no Sukune. The warrior's name is, however, unknown.

I will here add a few historical notes, for which I am indebted to an eminent Japanese *savant* and archæologist, Mr. Ninagawa.

The *wanggong* has been known in this country for about 1,500 years; the *Kanguro fuye* and *Biwa* for some 1,200; the *Musumé no Kôto* (or girl's harp,) differing only from the thirteen-stringed *Sono-kôto* in the thickness of its strings, 500; the *Samisen*, 300 and, finally, the *Kokiu* about 160 years. The true origin of the *Shaku-bioshi* was the following. In ancient times the nobility, when appearing before the Emperor, were compelled to hold before their breasts, with both hands, a long and flat board of prescribed shape known as *shaku*, and also used for the purpose of inscribing notifications, addresses and such purposes. After being used these boards were sawn through lengthwise, and the two sections employed for the purpose of marking time, besides serving as a certificate, pass-port or means of recognition. The custom obtains to the present day, when any one appears at Court in native dress, and seems to have been known in China, where it is alluded to as being in existence as early as more than 2,000 years B. C. According to the sacred book Chonking it served to enable the nobles to conceal their countenances in all humility in the presence of their monarch. It was styled *Kouei*, and varied in shape according to the rank of the person using it, being decorated with different symbols. The Emperor was furnished with three descriptions of *Kouei*, which he used to conceal his features when granting an audience, the largest employed being some three feet in length. In the year 2,042 B.C., the nobility appeared at court with black *Koueis* for the purpose of making known the fear which recent inundations had occasioned among the people.—Finally, and as a great antiquarian curiosity, I was made acquainted with the *Ishibuye*, or stone flute, of which until recently a specimen might have been seen in one of the temples of Yedo, but which, having incomprehensibly disappeared, I have only been able to obtain a close description of. It would appear to resemble the clarionet more closely than the flute, being about two feet long, four-fifths of an inch in diameter and formed of a single stone, bored out in the same manner as the tube of a cannon. One side was cut off sharply and slanting, resembling a fife, and forming a mouth-piece through which the instrument was blown, and on the other side of the cylinder were several finger-holes.

The position of the pipes on the *Shô* which I examined was not given correctly. The following will describe their order more accurately.

1st	Pipe.....	*fis‴* *
2nd	„	*g″*
3rd	„	*fis″*
4th	„	*e″*
5th	„	*cis″*
6th	„	*gis″*
7th	„	*h′*
8th	„	*e‴*
9th	„	blind
10th	„	*cis‴*
11th	„	*h″*
12th	„	*a″*
13th	„	*d‴*
14th	„	*d″*
15th	„	*a′*
16th	„	blind
17th	„	*c″*

* We have here followed the nomenclature of the German gamut in which *es* affixed to the letter indicating a note, signifies its flat, and *is* its sharp. Thus with *G*, *ges* is *G* flat; with *D*, *des* is *D* flat. *Fis* is *F* sharp, *Cis*, *C* sharp, and so on. *H* is our *B*, and *B* our *B* flat. The small marks (′) to the right of the letters indicating the notes, indicate the octave to which those notes belong. Thus *a*, *b*, *c*, without any mark, would be the *a*, *b*, *c*, of what is called the first octave, viz that between our bass *C* and tenor *C*. The same letters with one mark (′) would be in the octave above; with two marks (″) in the octave above that; and with three marks (‴) in the octave again above that.

The fifth pipe is closed with the right not with the left thumb, the middle, or ring finger, being occasionally used for the fourteenth or fifteenth. In giving the mode of tuning, also, I observe that some errors have slipped in. The month of the third string of the *Koscho toshi* should be July, May (*g*) being assigned to the seventh and twelfth strings in place of April, (*ges*).

The tuning of the *Kino-koto* should read as follows:

1st	string.....	*a*
2nd	„	*h*
3rd	„	*d′*
4th	„	*e′*
5th	„	*ges′*
6th	„	*a′*
7th	„	*h′*

I will now describe the *Gagaku*, its constitution, instruments, mode of notation &c. This, as I have already said, is an Institution to which the State has since the earliest times confided the study and charge of the ancient sacred and secular music introduced from Corea. It is, indeed, the only institution in which this music—which is now lost to China and Corea—has been preserved, or in which it is possible to obtain any information upon the subject. Here, too, the passion for novelty which has seized this nation has at length begun to manifest itself among the younger musicians, who exhibit a susceptibility to the influence of the European school, and it is therefore all the more desirable to record, as precisely as may be, all that may be gathered upon so interesting a subject ere it be too late.

The professors in the *Gagakku* are paid by the State and give no instruction elsewhere; the number of their pupils is at this moment forty. Instruction is only given here in ancient music, partly with vocal accompaniment. In former times the greater number of pieces, if not all, had vocal parts; now, however, in many cases the parts, or more strictly speaking the text, has been lost, the melody however, which is in unison with the *Shô*, being preserved in the orchestra. The newest piece of music performed by the band is some five centuries old.

The mode of instruction is as follows. The pupil, being furnished with the notes and general plan of the melody, studies it at leisure at his own home through the medium of the *katakana* symbols. When he has thoroughly committed it to memory the instrument is placed in his hands, and he is instructed in the fingering and mode of playing the particular *morceau*, which must always be performed without the assistance of notes. It will thus be perceived that the art is purely mechanical: the fact, also, that very few performers, even in the *Gagakku*, are able to give any conclusive information upon the subject of their own profession is thus rendered easy of comprehension. The ancient and precious instruments committed to the charge of the band are undoubtedly of great interest. Of their great antiquity there cannot, I conceive, be the smallest doubt. They are all richly lacquered, ornamented with coats of arms, and carefully wrapped up in silk bags and numerous outer boxes. They are preserved with the most jealous care and are seldom used.

The orchestra is thus arranged.

1st is the human voice. There is but one singer who marks the time with the *Shakubioshi*, or, in full orchestra, several voices in unison but with only one *Shaku bioshi*, the other instruments of percussion being omitted. The voice is always in unison with the *Shô*. To our ears the effect of the frequent, half-suppressed guttural sounds—a sort of impure shake, I should perhaps better call it a bleat,—emitted by the singer is eminently distressing although highly pleasing to the tutored ears of a native listener. The vocal part exists only in true Japanese music—the *Saibara* for instance, which is then known by the words with which it begins—there being no vocal part to the Chinese and Corean sacred music.

2nd. The *Shô* which leads the melody. In Chinese music harmonies insupportable to our ears are given, but in Japanese pieces a single note only is sounded.

3rd. The *Hitschiriki*, which as I have already said is calculated to spoil an otherwise acceptable composition by its shrill and impure notes.

4th. The *Ohteki*, a flute of agreeable tone but frequently impure. These three instruments are always pre-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

sent in an orchestra in equal number. Five or more is the number *de rigueur* for a complete band, which is then named accordingly ; thus, for instance, a five-flute orchestra is spoken of. To five of each sort of wind instrument two of every stringed instrument and one of each instrument of percussion is assigned.

5th. The *Biwa* is used only at the beginning of a bar, its collective strings being rapidly swept with the *batshi*. Single strings only are sometimes struck. This instrument resembles our guitar, though from its being made of a solid, dense wood its sound, though full and round, is somewhat heavy.

6th. Like the preceding, the *Koto* is used to mark the commencement of a bar as well as to execute *fioriture*. These embellishments retain the same character and style throughout such pieces as are found in the *repertoire* of the *Gagakku*. Both of the preceding instruments possess an extremely agreeable and sonorous quality of tone, and, together with the *Shô*, would meet with much approval from *connoisseurs* in Europe.

7th. The *wanggong* is now only occasionally used instead of the much richer *Koto*.

8th. The *Kakko* which should, in theory, be tuned in accordance with the fundamental note. Practically however this is not always the case. There are eight modes of beating recognised, the three most frequently used are indicated in the accompanying piece.

9. There is no especial mode of tuning the *Taiko*. It possesses a full tone and would, in many cases, advantageously replace our big drum, especially in theatres, where the small space it requires and the elegance of its decoration would be much in its favour. There are ten modes of playing this instrument, consisting, however, chiefly of piano, forte, double stroke and single stroke in 2, 4 and 8 time. I have listened to a piece in which the *Taiko* and *Kakko* executed throughout a description of duet while the other instruments were playing. No Chinese or Japanese drum or kettle-drum is furnished with strings running over the surface of the parchment.

10th. The *Shôko* has no particular mode of tuning. It has a feeble sound, and as I sat at some distance from the performer, I can only judge of its merits from what I could observe.

The left stick with which all these instruments are struck is known as the *Mebatshi*, which, with the exception of the roll executed by it on the *Kakko*, is used softly. The right, known as the *Obatshi* (or male), is, on the contrary, played with force and vigour.

11th. The *Yôko* is used in playing certain Corean pieces and also on festive occasions.

12.—The *Shaku-bioshi* occasionally, and especially in pieces accompanied by vocal music, took the place of the three instruments of percussion.

As I have already remarked, the foregoing observations refer to the *Gagakku* which executes, for the most part, only music of Chinese or Corean origin. The ancient Japanese music, such, for instance, as that accompanying the *No* dances, requires only the *Kangura fuye*, *Wanggong* and *Shaku-bioshi* with the vocal part. I have only had one opportunity of studying the music exactly, and, in this instance, a man and a woman sang the slow monotonous music of the piece in unison, the man marking the first note of each bar by striking the two halves of the *Shaku bioshi* together. At the close of each bar the note was struck with a brisk *sforzando*, the *Kangura fuye* accompanying meanwhile chiefly in unison, its impure notes being only too perceptible. The *wanggong* was not used. When played, the strings are swept sharply by the player with the *kotosangi*, five of them being stopped with the fingers of the left hand while the sixth is left free to accompany the voice.

To return to the *Gagakku*. The instruments I have named may be combined in many varying arrangements. I possess, for instance, a collection of melodies adapted for *Sho* and *Taiko* alone. On examining closely the pieces collected in the *Go Dshioh Raku* I found the following arrangement.

1st piece. Two singers, one of whom played the *Shaku bioshi*. In unison with them were: one *Hidschiriki*, one *Ohteki*, two *Biwa*. Two *Koto* marked the time and performed the ornamental passages or *fioriture*.

2nd piece. Three each of *Sho*, *Ohteki* and *Hidschiriki*. One each of *Biwa*, *Koto*, *Taiko*, *Kakko* and *Shôko*.

3rd piece. Wind Instruments, six of each ; stringed instruments three of each; instruments of percussion one of each. In all twenty-seven musicians. The *morceau* ended in a solo performance by the leading artists, with one *Hidschiriki*, one *Biwa* and three *Koto*. All of these pieces ended on the fifth, the fundamental note being afterwards added ; and all instruments were played in unison. Formerly it was usual to play in various parts, but this is no longer customary.

There is no special arrangement of the orchestra. On certain public performances instruments of the same description are placed together, and when the *Gagakku* perform they are usually seated in horseshoe form, the open side being presented to the spectator. The players of each instrument sit in such manner as to enable them to overlook or follow each other. There is no band-master or director. In pieces in which a *Shaku-bioshi* is played its performer is usually looked upon as giving the time. In other cases the various performers follow the leading instrument. The uniform playing of the instruments of each description is singularly accurate. There is no full score, the single parts of each instrument being alone written.

The following are the symbols of the notes of the various instruments.

No. 1, The *Sho*. The accompanying diagrams represent the symbols in their order thus :

„	16	„	*Mo*	„	—	—	
„	17	„	*Ili*	„	October	„ „	*c''*

The notes have been corrected in accordance with the latest Parisian tuning-fork

In the performance of Japanese music the single note alone is sounded. In the Chinese, on the other hand, the full chord of five or six notes is given as follows :

To	*á*	as	key	note	belong	*a''*,	*h''*,	*e'''*,	*h'*,	*fis'''*
„	*cis''*	„	„	„	„	*a''*,	*h''*,	*gis''*,	*d''*,	*e''*.
„	*e''*	„	„	„	„	*a''*.	*h''*,	*d'''*,	*e'''*,	*fis''*
„	*g''*	„	„	„	„	*a''*,	*h''*,	*d''*,		*fis'''*
„	*a''*	„	„	„	„	*h''*,	*d'''*,	*e'''*,		*fis'''*
„	*h'*	„	„	„	„	*a''*,	*h''*,	*d''*,	*e''*,	*fis'''*
„	*d''*	„	„	„	„	*a''*,	*h''*,	*e'''*,	*e''*,	*fis''*
„	*fis''*	„	„	„	„	*a''*,	*h''*,	*gis''*,	*d'''*	*fis'''*
„	*gis''*	„	„	„	„	*a''*,	*h''*,	*d'''*,	*e'''*,	*fis''*
„	*e''*	„	„	„	„	*a''*,	*h''*,	*d'''*,	*e'''*	*fis''*

By what law these harmonies have been so determined I have been unable to discover, though it may be probably arrived at by calculation. I first thought it probable that only one or two of these sub-notes was used to support the fundamental, but I was set right by the player who assured me that all the six notes were simultaneously sounded. As however neither I nor two musical amateurs who accompanied me were able to hear the discordant effects of the combination I must conclude that these were silenced by the more agreeable harmonies, a fact all the more intelligible when we remember that the principal note of the melody is supported by the other

* A short time ago I have the opportunity of satisfying myself how much our music displeases the Japanese. There were in Yedo two excellent professional Italian singers, and when, after their concert, asked a highly cultivated Japanese for his judgment upon their performances, he said that a good and well sung Japanese song was vastly preferable.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

instruments. The symbol *Shiku* indicates a prolongation of the note through the following bar, and a junction of two notes by a red stroke shows the first of the two to be an *appoggiatura*.

2nd. The *Hidschiriki*. In order to read the symbols correctly the diagram must be so placed that the mouthpiece shall be on the right side, the seven holes above and the single hole on the lower side, counting these from right to left.

The 1st	hole is named	*Gch*	& belongs to	July, our	*a'*
„	lower „	„	*Dioh*	„	„	June „	*g''*
„	2nd „	„	*Itchi*	„	„	April „	*fis''*
„	3rd „	„	*Shi*	„	„	Febr. „	*e''*
„	4th „	„	*Roku*	„	„	Decb. „	*d''*
„	5th „	„	*Bo*	„	„	Oct. „	*c''*
„	6th „	„	*Ku*	„	„	Sept. „	*h'*
„	7th „	„	*Go*	„	„	July „	*as'*
	—		*Setzu*	„	„	June „	*g'*

Where a note is placed a little above another an *appoggiatura* is indicated. *Udzu*, a symbol used for this instrument, means that the note should be sharply sounded.

3rd. The notation of the *Ohteki* is similar to the preceding. The symbols for the finger-holes which should remain uncovered are alone given.

The 1st	hole named	*Roku*	is used for	Dec. or our	*d''*
„	2nd „	„	*Tschinh*	„	„	Sept. „	*h'*
„	3rd „	„	*Saku*	„	„	July „	*a'*
„	4th „	„	*Djoh*	„	„	June „	*g'*
„	5th „	„	*Go*	„	„	April „	*fis'*
„	6th „	„	*Kang*	„	„	Feb. „	*e'*
„	7th „	„	*Shi*	„	„	Jan. „	*dis'*

Between the first and second hole there is yet another symbol named *Gch*, which corresponds to October (*c'*) and indicates that the first and third holes should be stopped and the second left open. As I have already said each hole will produce three octaves, according to the force with which it is sounded; the selection of the octave is left to the discretion of the player in all cases where it is not specially prescribed by the notation. There are also other symbols in use for the *Ohteki*:—(*a*) *Udzu* indicates a rapid movement of the finger; (*b*) *Shiku*, shows that the note should be prolonged; and (*c*) *Kuri* signifies a rapid passage to the following note, resembling an *appoggiatura*.

4. The red points used in the notation for the *Kakko* are written in the middle. The seven upper symbols represent rolls *(Rai)*. Those to the reader's right are struck with his right and those to the left with his left hand. The three first points indicate a roll by both hands. After the fifth and seventh this is performed with the left hand alone, beginning slowly and gradually continuing *accelerando*. To the right of the fourth point is the symbol for a short beat *(Sai)*. Eight various modes of beating are recognised according to the force and rapidity of the passages or, custom, but these are not specially indicated, being left to the taste of the player where not prescribed by tradition.

5. The various modes of beating the *Taiko* are indicated by thick red dots. Two are recognised: The first are double dots, joined by a red stroke, the left of which is somewhat smaller and is placed higher than the other. The left of these indicates the left, or female, drumstick with which a low beat is given about half a bar in advance; the right, or thicker dot, indicates the right, or male, drum stick with which a smart stroke is given at the beginning of the bar.

In the second a single dot indicates the right stick, a sharp single blow.

6. The *Shaku hioshi* has a notation resembling that of the *Taiko*, but with black in place of red dots.

7. The symbol for the *Shiko* is known as *Kin*, and is written right and left of the dots as in the case of the *Kakko*, showing whether the vigorous *Obatshi* or the gentler *Mebatshi* is to be employed by the player. Rolls and such like are not performed upon this instrument. Where a sign is placed on either side of the dot an *appoggiatura* is indicated for the *Mebatshi*.

8. The notation of the *Biwa* varies with the mode of tuning. The following are the names and notes.

THE YOKOHAMA CRICKET CLUB.

A special general meeting of this Club took place at the Grand Hotel on the afternoon of the 4th instant.

Mr. E. J. Fraser was called to the chair.

Mr. Montague Kirkwood, the Hon. Secretary, read the minutes of the last meeting, which were confirmed. He then stated that, in conformity with the resolutions passed at the last meeting, he had written to the Lawn Tennis Club, and to the Football Club, to ascertain their willingness to contribute towards the expenses of the cricket ground. The Lawn Tennis Club had replied that it was willing to contribute $150 annually; and the Football Club had offered to pay $30 for the use of the ground during last winter, and declared its willingness to forward a yearly donation according to the state of its exchequer.

It was then proposed by Mr. Kirkwood, and seconded by Mr Hutchison—"That the committee accept the donation of $30 from the Football Club for the use of the ground during last season, and that they place the ground at the disposal of such Club on such occasions, and in such manner as they may think fit for the coming season, in consideration of such further donation as that Club may be willing and able to give."

This was carried unanimously.

Mr. Kirkwood then proposed, and Mr. Fraser seconded —"That the Lawn Tennis Club, in consideration of a yearly sum of $150, payably quarterly in advance, be allowed use of a part of the cricket ground on three days weekly during the months May to October, and on four days during the remainder of the year, except when the ground be required for matches, or it be closed to all games as unfit for play, and of which due notice is to be given to that Club. This arrangement to commence from the 1st of this month, and to remain in force for twelve months."

Carried *nem. con.*

The Hon. Secretary next read a letter from Mr. R. Robertson, soliciting the Club to contribute towards the maintenance of the public garden, in consideration of their own gratuitous enjoyment of the cricket ground, and stated that the committee had replied that the matter would be laid before the next meeting of the Club, of whose willingness to contribute the committee entertained no doubt, although the Club might not for the moment be in a position to afford any substantial aid.

It was proposed by Mr. Fraser, seconded by Mr. Hall—"That the Hon. Sec. be empowered to communicate with H. B. M.'s Consul, in reply to his letter requesting the consideration of the Cricket Club in the matter of aid towards the monthly expenses of the Public Gardens, and to express the willingness of the members of the Cricket Club to contribute, if necessary, such an amount, either in the form of a monthly or yearly subscription, as the state of the funds will admit."

Mr. Kirkwood then proposed, as an amendment, and Mr. Henley seconded—"That the Hon Sec. communicate with H. B. M.'s Consul, confirming his previous letter, and that he further inform him that the matter will be taken into consideration at the next general meeting."

On being put to the vote, the original resolution was lost, and the amendment was then carried.

The Hon. Secretary next observed that the cricket ground sadly wanted a covered place where members might dress have a meal, &c.; that it has been proposed to invite private subscriptions from members of the various Clubs using the ground, for building an ornamental pavilion, which would cost $500. There was a prospect of obtaining the building place from the Japanese.

This, being put as a resolution, was carried, and the meeting, after a vote of thanks to the Chairman, broke up.

THE KOBE REGATTA.

(Hiogo News.)

If there be one thing on which Kobe people pride themselves more than another it is their climate.. Not that they have necessarily anything to do in producing it—but then people oftener boast, perhaps, about natural gifts and lucky accidents than about their actual acquirements, and permitting, therefore, the form of speech, the boast is a just one. But for once in a way the fates have been adverse on a Kobe holiday—a holiday, too, which was to be an extraordinarily important one, and be altogether a time to talk over in years to come. Interport gatherings had been held elsewhere, but never before here, and three ports were to be represented which had never before met on any water. At Yokohama in 1871 Kobe, with a crew avowedly not of first-class materials, and hastily go together, had been beaten, and at Nagasaki last Spring she had met and beaten, in addition to a local crew, a picked crew sent over from Shanghai. The present meeting here was therefore looked forward to with much interest, for though it was considered Kobe could turn out a better crew at home and certainly on this occasion a better trained one, still it was quite a mystery how good the Yokohama crew might be and it was known that the available material at Shanghai was very fine, and that at Nagasaki the Shanghai boat was of an inferior model, added to which there was no doubt in the minds of judges that the China port would not be slow to see that a more sweeping style of stroke and more careful training were necessary for salt water harbors. Of the sports on water and land contemplated in this gathering, the postponements necessitated by the weather have at the moment of writing enabled only some of the races to be rowed, so that to them we must for the present confine ourselves. Of the appearance of the two strange crews we spoke in our last. Everyone who knew the temper of Shanghai people were aware that no stone would be left unturned to turn the tables, and as soon as the crew were seen in their boat, their power, swing and condition at once installed them in high favor. The Yokohama crew, on the other hand, did not please, their style being considered stiff and the stroke not well pulled through. The result showed how nearly public judgment was correct. After six weeks of weather during which at some period of nearly every day and often during all the afternoon the water was suitable for racing boats, Wednesday morning, the day appointed for the Regatta, opened dull and threatening, and by one o'clock, the time fixed for the opening event, rain was falling hard and an East wind was bringing up a sea that outriggers could not face. This was but the beginning of a most wretched afternoon, and during the next four hours the ladies and as many spectators as could obtain sitting or standing room were huddled under the shed adjoining the pavilion. Desultory attempts were made by some to eat something in the refreshment tent, but as that had only a mat roof, everything on the table was more or less sodden.

The first race on the programme, a race for two-oared Dingies, was started somewhere about two o'clock and resulted as follows:—

Mr. J. K. Taylor's.....1
Messrs. Carroll & Co.'s.....2
,, Board & Co.'s.....3

The Comprador's race was next started. Messrs. Nachtigal & Co.'s and Tillson & Co.'s boats were entered, and a tolerably fair start was effected. At the second stroke, however, the handle of one of the sculls of Tillson's boat broke. The men hailed the other boat to wait, and the latter obeyed them at first, but seeing that Tillson's boat did not follow at once, they again went on, and finally "walked over" the course; their opponents coming back.

Messrs. Nachtigal & Co.....1
,, Tillson & Co.....0

The Gig race for Japanese was also started and resulted in an

Digitized by Google
UNIVERSITY OF CALIFORNIA

other "walkover." The two boats which started belonged to H. B.M.'s Consulate and the I. G. Railway. The course lay round two vessels at the extreme western end of the bay, off the Railway Works, with instructions which would have kept the vessels (as is usual) on the starboard hand. "Railway's" coxswain thought that it mattered little which way the course was taken so long as he covered the distance, and took the wrong ship first. His opponent split the difference by pulling in between the two vessels and taking up the running when the other came up to him. Both were of course disqualified, and seeing the superior power and build of the Railway boat, the other refused to pull again. The "Railway" accordingly pulled over the course in the wet and took the prize.

The wind after a while veered round to the North-West, and the rain having to a considerable extent laid the sea, the course was inspected, and it was announced that an effort to bring off the interport four-oared race would be made at 4 o'clock. With laudable obstinacy most of the spectators sat on, but when the appointed time came the wind had veered to the Southward, and was developing an additional independent swell from that direction. An effort, however, was made, the Shanghai and Kobe crews getting afloat and the Yokohama crew starting in a steam launch with their boat in tow. By this time it was 5 o'clock, and it becoming obvious before the boats got to the starting place that to row the race then was out of the question, the boats returned, and a general adjournment was ordered till next day.

Thursday again broke dull, but the threats of rain were not fulfilled and 1 o'clock saw a goodly muster on the premises of the K. R. & A. C. A breeze had come on from the South-East, but no particular swell being as yet apparent, an immediate start was ordered for the great race. Shanghai and Kobe paddled all the way to the post, but Yokohama, as on the previous day, towed their boat for about a mile of the distance. It was 2 o'clock before the boats took up their positions, Yokohama nearest the shore and Shanghai outside,—and not a moment too soon, for the breeze was freshening and the sea increasing. About 10 minutes past 2 the report of the starter's gun dismissed them on their journey, and the first thing evident was the comparative slowness of the Yokohama boat in getting up any pace. Of the other two, Kobe may have had an advantage of a few feet, but if so, she did not retain it long, for Shanghai had soon a slight lead, which she gradually increased for three quarters of a mile, rowing in the rough water with a steadiness which surpassed even that of the Kobe boat, though it was thought the latter would have shewn to the greater advantage under the circumstances. What was the greatest distance by which the Shanghai boat led during the race it is not easy exactly to say. At the outside there was probably never a clear length between them and about a quarter of a mile from home the Kobe boat crept up till the gap was nearly closed up, when, at some two hundred and fifty yards from the winning post, No. 1 in the Shanghai boat broke his oar inside the leather, and to make matters as bad as they could be, the oar jammed in the rowlock and could not be released. Kobe of course drew level directly, and her opponents then ceasing to persevere, she shot ahead and won. Yokohama seemed quite unable all the way through to get on terms with the other boats and was never in the slightest degree dangerous. Universal sympathy was felt for the Shanghai crew, for though Kobe had undoubtedly improved her position before the accident occurred, it is scarcely conceivable that at that period of the race anything short of some such mishap as did occur could have prevented Shanghai from winning. She was certainly the best crew on the day, and we attribute the fact principally to the advantage which the superior physical strength and weight of her crew gave her in the rough water in point of steadiness :—

3 F. G. Davidson	12st.	4lbs.
H. C. Litchfield, stroke	11st.	9lbs.
J. Hodgkins, cox	9st.	7lbs.

The two compradores crews who had raced on the previous day having arranged to try their skill again "for love," were started by the Club for a race from a starting point off the Home stake boat, round *Cathcart* and then round a stake boat off the Kobe Iron Works and home. The two boats behaved very fairly all the way out to the *Cathcart* especially when we consider that it is a custom of their rules of racing to foul or otherwise disable an opponent if you possibly can. When rounding the bows of the ship, however, the outer boat (Tillson's) ran *perhaps* accidentally but probably the reverse into the starboard quarter of her opponent, carrying away the aftermost pintle on that side. Nachtigal's men were much enraged; some of them jumped into the other boat and, after securing the two together, commenced a vociferous argument in favor of towing her home. The steam-launch carrying the starter and two or three officers of the Club went up to interfere, in the expectation that the foreigners might be hurt, but seeing that the Japanese confined their attention solely to amusing themselves and abusing each other amongst their own set, they retired—such amenities not being unusual in these races. After finally separating, Tillson's boat went round the remainder of the course and Nachtigal's boat came on shore at the landing stage and after sundry bad language, the crew stood ready for a renewal of the courtesies on the arrival of the others. Tillson's boatmen, however, thought that the affray might just as well be postponed, and pulled past the stage, amidst the execrations of their opponents. It is but fair,—not only to the compradores whose names are attached to the boats, but also to the Europeans who are nominally in charge whilst racing,—to point out to outsiders the fact (well known by residents) that in Japan the boatmen equal only the stablemen in their venom, and though in other countries other trades occasionally indulge in the amusement of head-breaking, the above two are here particularly lawless. In the above affair the European would have probably had an involuntary bath had he interfered.

By the time the first pair of crews were ready for the Club Fours, the sea was too rough to make the race under the original conditions possible, but the wind having gradually somewhat moderated, the captains of the crews consented, rather than cause any further delay in the proceedings, to row a three quarter mile course from the beach at Shindin to Board's Point, and the following crews proceeded to take up their positions:—

Sylvia.—Blue and White.....1

1 B. H. Burns	10st.	11lbs.
2 B. A. Valentine	12st.	7lbs.
3 H. J. Gorman	12st.	0lbs.
T. C. Thornicraft, stroke	10st.	12lbs.
C. R. Simpson, cox	8st.	13lbs.

Leven.—Red and White 2

1 A. W. Gillingham	9st.	0lbs.
2 G. H. Pole	9st.	12lbs.
3 W. S. Lockhart	11st.	0lbs.
W. F. Page, stroke	10st.	6lbs.
J. Gillingham, cox	9st.	4lbs.

Thornicraft's crew had an immense advantage in the matter of boats, as they had theirs to practice in, while the *Leven*, being "bottled up" for the interport race for fear of accidents, Page's crew were unable to sit her comfortably in the lumpy water or feel at home with the unfamiliar oars. The result was a crab and a beating of four lengths. The following second pair then occupied the thwarts :—

Sylvia.—Yellow and Black 1

1 W G. Skipworth	10st.	11lbs.
2 R. G. Walsh	10st.	4lbs.
3 F. Upton	11st.	5lbs.
F. Walsh, stroke	13st.	0lbs.
M. Sangster, cox	7st.	12lbs.

Leven.—Red and Black.....2

1 E. Bonger	11st.	7lbs.
2 H. J. Titjen	9st.	4lbs.
3 A Oestmann	11st.	2lbs.
C. F. Walsh, stroke	15st.	0lbs.
A. Vivanti, cox	8st.	5lb.

The result was the same as in the last race, and had been fully foreseen in both cases, which of course, deprived the race of much interest. The crew of the *Leven* were figuratively as well as literally at sea and their opponents went immediately a length ahead. A lurch buried the stroke's oar (of the *Leven*) close up to the leather and in recovering it the button slipped through the rowlock. The result was the loss of four or five strokes and ultimately the race by about two lengths.

The sea having sufficiently subsided to allow of the proper mile course being taken for the deciding heat, Thornicraft and F. Walsh then drew for boats and got the *Sylvia* and *Leven* respectively. The *Sylvia* had the best of the start and despite the efforts

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

of the *Leven* maintained the lead throughout, winning by something over two lengths. This race requires little comment.

Sylvia.—Thornicraft's Crew.....1
Leven.—F. Walsh's Crew.....2

We are far from saying that the best crew on the day did not win, but they themselves will be the first to admit that the circumstances of their opponents were disadvantageous.

This was all that was possible that afternoon, everyone being too much "played out" to think of attempting to bring off the canoe race, which accordingly stands over.

In taking temporary leave of the aquatic sports we are sure that we have the Club and the community entirely with us in expressing their sense of the great obligation they are under to E. C. Kirby, Esq., and the Kobe Iron Works Company for placing at their service both on many previous occasions a steam launch and again this week supplementing the gift by the use of another decked launch, which was placed at the service of the ladies.

A notice posted at the dressing room informed the public that fencing, &c., would take place in the Gymnasium at half past eight in the evening, and accordingly those on sport intent mustered in considerable strength. Vaulting opened the proceedings, and remarkably good vaulting it was, as the following return will show:—

W. Posch, Kobe, 5ft. 9in.....1
A. J. Smith, Yokohama.....2
P. S. Symes, Kobe.....3
F. Vivanti, Yokohama.....0

This was a fair and well earned victory for Kobe and was succeeded by Singlestick. F. Vivanti came forward on behalf of the visitors and was confronted by A. C. Sim, our versatile and well tried local champion. The first twenty-one hits were to win, and Sim succeeded in scoring them to his opponent's six. No visitor coming forward to fence, P. Roulez had a bout with Sim, which ended in favor of the latter, and some rounds with the gloves closed the proceedings.

Friday, April 28th, 1876.

Those who were longing for favorable weather on Friday for the Athletic Sports on the bund felt their spirits fall at the appearance of the morning, but the sky, which continued to threaten rain all day, never got beyond bestowing a few scattered drops in the middle of the day and the proceedings were never interfered with. Publishing our report so soon after the occurrences, we cannot review at any length the performances, and must content ourselves with the remarks appended to each event. Almost the only remark which it is necessary to make is that the quality of the performances, almost equally on the part of visitors and residents, suffered from the previous training for the interport boat race, it being almost an impossibility for any man to prepare himself equally well for more than one kind of athletics at the same time. It was also unfortunate for Kobe that Mr. Macpherson had injured his ancle, as in one or two of the things that he most excels in he could scarcely have failed to score a win if in any form at all. On the other hand there are the gratifying facts that although we could not offer Yokohama a cinder path she well and honestly won three of the principals events, and made one of the finest fights ever seen for that severe trial, the two-mile walking race; that "the hammer" was won by the longest throw ever scored in Kobe; "the shot" by a griffin with the remarkable throw of 37 feet 3 inches; and the mile race in splendid style by another "young beginnner," who is certainly entitled to rank as one of the best "distance" men on the Club books Mr. Lockhart, Mr. Upton and Mr. Symes (long jump) are three as promising men in their respective "walks" as we remember to have appeared at one meeting for years past. Many ladies were kind enough to grace the stand by their presence, and express themselves much gratified with the sport, and there is now no doubt whatever that the plan of utilising the bund on this occasion has been—with the one unfortunate exception of throwing the cricket ball, when two Japanese children were hurt,—a most complete success.

1.—Compradores' Cup.—Flat Race—100 yards.—(Club Handicap). Two Prizes.

J. Gillingham (10 yds.).....1
A. C. Sim (9 yds.).....2
J. Henson (scratch).....3
W. Sharp (3 yds.).....0
H. J. Gorman (7 yds.).....0
J. J. Cowderoy (10 yds.).....0
A. Vivanti (12 yds.).....0

Sim was quickest on his legs and soon got the lead, but was passed before half the distance was run by Gillingham, who kept the lead till the finish, winning by two yards. Henson about the same distance behind Sim. Time, 10⅔ sec.

2.—Putting the Shot.—(Interport and Handicap). Two Prizes.

F. Upton (scratch) 37ft. 3in.....1
H. J. Gorman (3ft.) 34ft. 2in.....2
R. Mackenzie (scratch) 34ft. 2in.....3
G. H. Pole (4ft.) 33ft. 6in.....0
A. C. Sim (scratch) 33ft.....0
A. Wilson (scratch) 30ft. 11in.....0
P. S. Symes (3ft.) 29ft.....0
W. S. Lockhart (4ft.) 30ft. 11in.....0

Sim was not up to his usual form, and the winner's performance was the best Kobe has yet seen. Gorman took the Handicap prize.

3.—Consular Cup.—Flat Race—100 yards.—(Interport).

F. M. Jonas, Yokohama.....1
J. Henson, Kobe.....2
H. J. Gorman, Kobe.....3
A. C. Sim, Kobe.....4

Jonas took the lead immediately and, increasing his advantage, won by two yards. The same distance between Henson and Gorman, who was three yards in front of Sim. Time, 10⅔ sec.

4.—Bankers' Cup.—High Jump.—(Interport and Handicap). Two Prizes.

A. J. Smith, Yokohama (scratch) 4ft. 11in.....1
A. H. Groom, Kobe (2in.) 4ft. 11in.....2
G. H. Pole (3in.) 4ft. 7in.....0
A. C. Sim (5in.) 4ft. 8in.....0
H. J. Gorman (5in.) 4ft. 9in.....0
W. Sharp (5in.) 4ft. 10in.....0
A. W. Gillingham (6in.) 4ft. 9in.....0

Smith and Groom both stuck at 4ft. 9in. but they cleared it after a fresh start. Groom failed at 4ft. 10 in. and Smith then got over 4ft. 11in., scoring the second win for Yokohama. The handicap fell to Groom.

5.—Tossing the Caber.—(Interport).

After a considerable time was wasted over this without any satisfactory result, it was decided to postpone it till a future occasion.

6.—Ladies' Purse.—Flat Race—¼ mile.—(Interport)

F. M. Jonas, Yokohama.....1
J. Henson, Kobe.....2
F. Walker Yokohama.....3

Won by 3 yards, with 2 feet between second and third. A good race, though the time—58 seconds—was the slowest at any sports here.

7.—Throwing the Cricket Ball.—(Club Handicap).

Owing to the crowd of native spectators, this event had to be postponed, but unfortunately not before two children had received severe blows.

8.—The Merchants' Cup.—Hurdle Race—300 yards, 12 Flights.—(Interport).

J. Henson, Kobe.....1
H. J. Snow, Yokohama.....0
A. C. Sim, Kobe.....0

Henson and Snow kept together for about half way, Henson holding a slight lead, which he increased to the finish. Sim gave up about half way, and Snow about 10 yards from home. Time, 45¾ secs.

9.—Hurdle Race—120 yards, 9 Flights—(Club Handicap). Two Prizes.

A. H. Groom (10 yds.).....1
W. Sharp (9 yds.).....2
A. W. Gillingham (15 yds).....3
G. H. Pole (8 yds.).....4

A very fine race between the first two. Won by half a yard. Time, 18¼ secs.

10.—Chaaszee Cup.—Long Jump.—(Club Handicap). Two Prizes.

P. S. Symes (scratch) 16ft. 6in.....1
J. Gillingham (scratch) 15ft. 7in.....2
A. C. Sim (scratch) 15ft. 4in.....3
W. Sharp (scratch) 15ft. 3in.....0
J. J. Quin (scratch) 14ft. 7in.....0
A. W. Gillingham (1ft.) 14ft. 4in.....0
H. J. Gorman (scratch) 14ft. 2in.....0

11.—Osaka Cup.—Hurdle Race—120 yards, 9 Flights.—(Interport)

J. Henson, Kobe.....1
A. J. Smith, Yokohama.....2
A. C. Sim, Kobe.....3

A good race. Henson had slightly the best of it all the way and won by a yard. Time 18 sec.

12.—Flat Race—150 yards.—Married Men. (Club Handicap).

J. Gillingham (18 yds.).....1
R. Hughes (scratch).....2

Won by the distance given. Time, 15¾ secs.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

13.—THROWING THE HAMMER 16 lbs.—(Interport and Handicap).

A. Wilson (scratch) 89ft. 6in. 1
M. T. B. Macpherson (10ft.) 84ft. 2
F. Upton (6ft.) 82ft. 6in. 3
A. C. Sim (scratch) 82ft. 4in. 0
H. J. Gorman (8ft.) 78ft. 10in. 0
W. S. Lockhart (10ft.) 76ft. 4in. 0
F. Walsh (5ft.) 70ft. 0

This was an easy win for Wilson, whose throw has not been equalled at any previous sports in Kobe; the stiffish breeze blowing at the time, however, was something in his favor.

14.—KOBE CUP. FLAT RACE ½ mile. (Interport).

F. Walker, Yokohama 1
H. J. Gorman, Kobe 0
J. Henson, Kobe 0
A. C. Sim, Kobe 0

Henson and Walker soon drew away in front, the former leading. Sim gave up at about 400 yards and Henson at about 500 Gorman did not persevere to the finish and Walker came in alone in 2 m. 21 secs.

15.—RAILWAY CUP.—WALKING MATCH.—2 miles. (Interport).

A. C. Sim, Kobe 1
C. Esdale, Yokohama 2
F. Walsh, Kobe 3
A. Wilson, Kobe 0

Esdale led at a hot pace, with Wilson and Walsh close up, Sim lying behind. At the end of half a mile they were about equal distances apart in the order named, but after a mile had been traversed Wilson fell back to fourth place and Sim began to close up. Before long he had caught Esdale and taken a lead which he maintained till close to the end, when Esdale drew level and a magnificent race ensued to the finish, Sim winning by a foot. Time, 18m., 10½ secs.

16.—MERCHANTS' CUP.—Flat Race 1 mile.—(Interport).

W. S. Lockhart, Kobe 1
F. Walker, Yokohama 2
A. C. Sim, Kobe 0
J. Henson, Kobe 0

This race requires very little description. Henson and Sim soon gave up and Lockhart and Walker ran together till the last lap, when Lockhart came away and won in 5 m. 3 secs.

In the evening about a Hundred of the Club and their guests sat down at the Hiogo Hotel, under the able presidency of H. St. J. BROWNE Esq., President of the Club for the year. A very good dinner having been done justice to, the following toasts were proposed: "The Queen and the Rulers of our respective countries," by the Chair; "Our Visitors," by the Chair—acknowledged by J. Le Kie, Esq.; "The Losing Crews," by the Chair—acknowledged by H. C. Litchfield, Esq.; "Prosperity to the K. R. & A. C." by C. Dowdall, Esqr acknowledged by the Chairman; "The Press," by C. Richersby, Esq.—acknowledged by C. F. Walsh, Esq.; "The Ladies," by E. Byrne, Esq.—acknowledged by D. Hay, Esq. Several good songs having been sung and various other toasts proposed—among them "Our Entertainers," by J. Hodgkins, Esq., replied to by H. St. J. Browne, Esq. on behalf of the Club the company broke up after a very pleasant evening, to meet again on the Bund this afternoon, when it is to be hoped that the weather will permit of the few remaining events being decided.

Law & Police

IN H. B. M.'S COUNSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, 1st May, 1867.

Robiallay, an Indian, was charged with being drunk last night and breaking the door of a Japanese house at No. 157, thereby causing damage to the extent of 25 cents.

A Japanese woman corroborated the charge.

Prisoner stated that he had hitherto been living in Tokio and was now on his way to Shanghai. Last night he got in company with three or four Japanese, whom he treated with *saké*. He got drunk, and then they robbed him of his money and gave him in charge of the police.

Sentenced to 48 hours' imprisonment with hard labour, and to pay 25 cents.

Tuesday, May 2, 1876.

Curnow & Co. *vs.* the Captain of the British steamer *Flintshire*.

This was a claim for $240 for short delivery of cargo, consisting of sherry shipped in London in the steamer *Flintshire* for plaintiffs.

Mr. A. Mitchell appeared for the plaintiffs; Mr. C. H. Cobden, representing the firm of Jardine, Matheson & Co., for defendants.

Mr. Mitchell, sworn: Four casks of sherry were shipped to us in London, in good order and condition, in the *Flintshire*, and only two were received here. I have had a survey of the two other casks, but I have not got the survey report. Of these casks, one was entirely empty, and the other broken, was in fact landed in staves. I saw the empty cask the day it was landed. The captain said he had extended a protest about the empty casks. I had no notice of the casks being damaged.

Mr. Bayne, sworn: I was asked by Mr. Mitchell to go to the Hatoba and inspect two damaged casks. I do not remember the date. One of them was entirely empty, and the other about half empty. In the empty cask one stave was broken, and it leaked out of the head. The damage appeared to me to be due to improper stowage. On the half empty cask one of the hoops was missing, and it was leaking too. This, however, Mr Mitchell took delivery of. A third cask was perfectly sound. The fourth cask I did not see.

To Mr. Mitchell: I do not think it customary to give any special notice to the consignees of cargo when their cargo is damaged. There is generally no further notice given than that consignees are, by an advertisement, called upon to take delivery from the ship.

Mr. Cobden handed in a protest extended by the captain of the *Flintshire*. It is there stated that, after leaving Singapore, the ship was badly beaten about, and its boats carried away in a gale, in which also the cargo shifted, and the steamer was obliged to slacken speed in order to right the cargo. The captain does not deny that one cask was entirely empty, and another landed in staves, but he pleads non-liability for damage due to the perils of the sea. The captain objects to the amount claimed, as it is considerably in excess of the invoice price.

Mr. Mitchell contended that there must have been bad stowage from the commencement, or the bad weather experienced since leaving Singapore could not have so entirely deranged the cargo.

Mr. Cobden called as witness

Captain D. Scott, sworn: I examined the casks in the hold of the steamer.

Mr. Mitchell: You have given a certificate that the damage was due to the perils of the sea; how do you know that?

Capt. Scott: If bad stowage had been the cause the casks would have been out of place, but they were not out of place.

Mr. Mitchell: How do you account for one cask going to pieces?

Capt. Scott: That is due to the strain of the ship.

Mr. Mitchell: You are employed to land cargo; have you ever given a report against a ship?

Capt. Scott: Yes, I have; but I do not remember the name of any such ship.

Mr. Mitchell: Don't you think the consignees of cargo should have been given an opportunity also to survey the cargo in the hold.

Capt. Scott: I don't think so.

To the Court: As far as I did observe three of the casks were empty, and one of these three was stove in.

Judgment reserved.

IN THE U. S. CONSULAR-GENERAL COURT.

Before Gen. T. B. VAN BUREN, Consul General

Friday, May 5th, 1876.

THE PEOPLE OF UNITED STATES *vs.* W. A. WOOD

This was a complaint by the Custom authorities against Mr. W. A. Wood for alleged assault upon two tide waiters during the night of the 25th March last.

Ariaki Seizo stated that he was a tide waiter. On the night in question four foreigners, Mr. Wood included, came to the Eastern Hatoba. A package was carried either by a jinriksha man or a servant of No. 18 (International Hotel). I told the man to carry it into the Hatoba, when the owner came up and said it belonged to him. Mr. Sakamoto, another customs' officer, was present, and Mr. Wood shoved both him and me away, took the package and went to the boat. I told him he could not leave with the package. Up to that time nothing had been said by either Wood or the owner of paying duty. Before the owner went to the boat he said if he could pay the duty on the Hatoba he would do so. I attempted to stop the boat by putting my hand on it. Wood then struck me with his open hand on the face, and then he stood up in the boat with the cross bar of the boat in his hand threatening to strike me with it. Afterwards they paid the duty. Morino came up to assist me, and then Wood jumped out of the boat on the Hatoba and struck Morino with his fist in the breast. This was about half past ten at night, and the night was dark, but there were many lanterns, and I was not

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

standing more than six feet apart from Morino. After the owner had offered to pay duty Wood took the package away from the servant and into the boat. The package had not been put into the Hatoba shed.

Morino Nagatado: I went to the assistance of Ariaki. I had been told by Sakamoto that there was some trouble. When I came up to Wood he struck me with his fist in the chest and knocked me down. Ariaki came up and Wood struck him and went into the boat. Then the owner of the package paid the duty, and was allowed to go. No one laid hold of Wood or struck him.

Takemoto, third class tide waiter: On the night of the 25th March at 10 p.m. I was on duty at the Eastern Hatoba when Wood and others brought goods to be examined. I told them there was one package upon which duty had not been paid, and then went up to Kato and asked if it was an article upon which duty should be paid. Kato said duty must be paid at the Western Hatoba. I told Wood he could not take the package unless duty were paid. Then Wood shoved me aside. I then said to Ariaki, I think he will not pay, so I will bring some one else. I then brought another Custom house officer, Morino, and a Japanese policeman. I then saw Mr. Wood strike both Morino and Ariaki. I was standing about 6 feet from them.

Mr. W. A. Wood, sworn: I remember the time spoken of by the last witness. I was in the employ of the International Hotel. It was part of my duties to assist passengers off with their luggage and see the same through the Custom House. On the day in question I had passed some luggage through the Custom House and paid duty thereon. When we arrived at the Hatoba, I think the jinrikishaman held the package in his hand and at the request of the owner, I asked the tidewaiter to receive duty thereon. The tidewaiter refused, and referred me to the Custom House. I told the owner so, who said that he did not think he had time to go to the Custom House as the steamer was to go at 12 o'clock. Somebody, not I, took the package and placed it inside the house in the boat. I went down the Hatoba, the tide was running out very fast, leaving the boat dry on the steps. It was very dark and I had no lantern, and while I was standing about half way down the steps a Japanese came up, seized my arm and told me I could not go off. I pushed him away without striking him and jumped into the boat, but some of the Japanese seized the rope and detained the boat. I then jumped out of the boat, took hold of the rope and putting my shoulder to the boat I pushed it out and jumped in. The owner was standing at the top of the steps and settled the duty there. I did not take the package into the boat, nor was the package mine. I only wanted to go to the steamer and had no contraband about me. The former witness told me that I had struck him; I told him, I had not, but that if I had I was very sorry. I did not strike anybody with my fist, I only pushed and shoved them away from me. I knew none of them, and had no intent to injure any of them. I am now in the employ of Mr. Douglas.

Fined $3, and sentenced to pay costs of the prosecution; payment to be made within 5 days, or to be confined for 5 days,

IN THE FRENCH COURT OF COMMERCE AND MARINE.

President: E. Kraetzer, Esq., Acting-Consul of France.

Judges: M. Pasqualini, Commander of the M. M. steamer *Menzaleh*; M. Hurtel, Lieutenant, and M. Signon Boatswain of the same ship, and M. Fourcade, Merchant.

Friday, May 5, 1876.

Norbert Pascal, seaman on board the M. M. Co.'s steamer *Tanais*, was charged with having deserted his ship 24 hours before its departure, and having been arrested at the moment he tried to engage himself on board another ship. This was his third case of desertion in this year.

Prisoner stated that he left the ship last Saturday, but that he, on Tuesday, the 3rd instant, gave himself up at the Police Station.

Police Constable Toms stated that it was known in the station that prisoner was in No. 133, and the inhabitants were told by the police to bring the man.

SENTENCE.

Considering that the prisoner Norbert Pascal has been unlawfully absent during 48 hours, that he has missed the departure of the ship, that he has already been convicted of similar offences, and that there are no extenuating circumstances that speak in his favour.

He is, in conformity with Art. 35 and 66 in the Act dated 24th of March, 1802, unanimously sentenced to undergo one month's prison and one year's service on board a man-of-war on two-thirds pay.

IN THE KANAGAWA SAIBANSHO.

Before Mr. Asaina Kansui, Vice-President

E. Antoine *vs.* Yasuoka Kihaichi and Kataoka Koichiro.

Saturday, May 6th, 1876.

This case being a claim for $74.000 for breach of contract, which was adjourned on the 14th of February last, was resumed to-day.

Mr. Antoine handed in different documents as vouchers and explained how the amount of damages originally demanded by him had naturally increased, partly by interest accruing, partly by the expenses of his living in Yokohama for the last two years, during which he was prosecuting the present claim, and whereof the charge ought properly to fall on defendants. Of these expenses he promised to forward a specified account.

Asked by the Court to produce his contract with Yasuoka o June, 1873, Mr. Antoine stated that he was not in possession of the same. After he had signed it Yasuoka took it away, and he, plaintiff, received from the government permission to go into the interior and work the copper mines, and with the conditions of this permission he has complied.

Asked for detailed account of the expenses of his voyages during 1873 and 1874, of which he has only given the sum total, plaintiff promised to forward the same.

With regard to an item of $1,680 in gold, which figures as a loan from the plaintiff to defendants, plaintiff explained that when he left the mines he was anxious that all the employés should receive what was due to them. He consequently paid them, and the sum paid, exceeded by the above amount, what he had in hand for defendants. This excess came out of plaintiff's own pocket, and he naturally claimed to be reimbursed by defendants. The workmen's receipts for wages are among the vouchers.

As to the engagement of Mr. Francois Mangard at a monthly salary of $150, plaintiff stated that the Government had only given permission for two foreigners to go to the mine, viz., himself and an engineer. The engineer he had engaged did not wish to quit Kobe, and with the consent of Yasuoka he engaged Mr. Mangard, who is by profession a miner, to superintend the mining operations.

As to his being sick as alleged by defendants, plaintiff stated that he was certainly morally sick because he was left at the mine without money, but bodily sick he was not. He engaged Dr. Massais, but that was for the mine, not for his own personal cure. With regard to the contract of 1st May, 1873, he contended that it has never been more than a project, it was returned to him after being signed, because the Government refused to approve of it.

The Court adjourned *sine die*.

ARRIVAL OF THE ENGLISH MAIL.

We extract from our Indian Exchanges the following summary of Telegraphic news.

London, April, 1.—There was a panic in London yesterday, the partial cause of which originated through unfounded rumours of a change in the Eastern policy of Russia, and partly to a rumour of a difference between Count Andrassy and Count de Novikow, the Russian Ambassador at Vienna. The panic has now subsided.

April 3rd.—The Chancellor of Exchequer made his annual financial statement this evening. The public revenue for 1875 was £77,125,000 and the expenditure £76,375,000. The estimated revenue for 1876 is £77,-250.000 and the estimated expenditure £78,000,000. Sir Stafford Northcote recommends the increase of a penny in the income tax, exempting incomes that are under £150 and he would allow a deduction of £120 from incomes under £400. The Chancellor estimates that this will give a surplus of £375,000.—The Honourable Mr. Cave's report on Egyptian finances has been printed and distributed. It states that the finances of Egypt are in a critical state. Everything is pledged, but if the floating debt becomes converted and the revenues properly managed there would be sufficient to meet all charges.—After a long debate this evening, Lord Shaftesbury's motion for an address to the Crown was rejected by 137 against 91 votes, and the Titles Bill passed into Committee.

Paris 5th April.—Consequent upon a vote of the Chamber of Deputies Marshal Macmahon has issued a decree for the abolition of the state of Siege in Paris, Lyons, and Marseilles.—A Universal Exhibition is fixed to take place here in May, 1878.

Bombay, 7th April.—Lord Lytton, accompanied by Lady Lytton and children, landed punctually at the ap-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

pointed hour. The usual salutes were fired. His Lordship was met by Lord Napier, Sir Charles Staveley, General Haines, Lady Haines being also present, and the Honorables Messrs Rogers and Gibbs, the Members, of the Legislative Council, the Judges, Sir Jamsetjee Jeejeebhoy, Sir Salar Jung, and others.

Cairo, 5th April.—Latest advices received from Massowah state that the war between Abyssinia and Egypt has terminated, but that peace parleying continues. Prince Hassan Pasha is returning to Egypt.

St. Petersburg, 5th April.—The Czar has issued a decree conferring full civil rights on the inhabitants of Khokand.

Cairo, 7th April.—The French Cabinet, responding to an appeal from the Khedive, is actively supporting a company of French financiers to launch an Egyptian loan with the object of converting the floating debt, and it is still hoped that English financiers will cooperate.

London, April 7.—The Royal Titles Bill was read this evening in the House of Lords a third time. No amendments were introduced. The bill passed without division

The trial of Captain Kuhn, of the steamer *Franconia*, has resulted in a verdict of manslaughter. The sentence was deferred. Captain Kuhn contested the jurisdiction of theCourt on the ground that the *Franconia* at the time of the collision was bound on a foreign voyage.

A FEW LAST WORDS ON CHARLES KINGSLEY.

No "life" has yet been published of Charles Kingsley, and there is, we suppose, little chance now that one ever will be issued. We rather regret this, for though Charles Kingsley will be remembered chiefly by his works and not by his deeds, still he was the centre of a group whose memory will last many years, and the life, though not the soul, of a movement which has greatly influenced the progress of the country. His life was at least as eventful as Sydney Smith's, he must have left behind him many unpublished letters, and his talk, though it lacked the racy humourousness of the monologues which the Canon of St. Paul's used to pour out, had in it much of that power of making others cheerful and energetic which is the characteristic of his book. It is vain, however, to regret, even if we are in the right in regretting, the absence of such a work, and we must content ourselves with the prefatory memoir which Mr. T. Hughes has prefixed to a new edition of "Alton Locke." It is devoted almost entirely to what may be called the political life of Canon Kingsley, the period from 1848 during which he became conspicuous as an advocate of the "Charter and something more," of the Christian Socialism which was at that time such a bugbear to society, and its main interest in our eyes is the new proof it affords of the accuracy of the view published last year of the Canon's intellectual character. There never was a man who was less of a "Red," as all men on the Continent and most Englishmen understand that epithet, who had less wish to confiscate property or upset the Church, or even disturb the English order of society, At the very time when he was hottest, when he was supposed to be preaching Socialism, and arguing for the levelling of all ranks and for elevating gamekeepers and tailors into regenerators of society, and was in consequence denounced in the newspapers as a firebrand and "cut" by his own class as a renegade, he was, what he remained to the end of his life, essentially an English squire, given to fishing and field-sports, proud and even vain of his prowess as a hunter, full of admiration for courge, eneragy, beauty and all the physical side of humanity, and firmly convinced not only that there must be government, but that there must be "gentry," if England was to be a happy land. As Mr. Hughes says,—"He was by nature and education an aristocrat in the best sense of the word, believed that a landed aristocracy was a blessing to the country, and that no country would gain the highest liberty without such a class, holding its own position firmly, but in sympathy with the people. He liked their habits and keenly enjoyed their society;" or as Kingsley himself says:—"A true democracy, such as you and I should wish to see, is impossible without a Church and Queen and, as I believe, without a gentry. On the conduct of statesmen it will depend whether we are gradually and harmoniously to develope England on her ancient foundations, or whether we are to have fresh paralytic governments succeeding each other in doing nothing, while the workmen and the Manchester School fight out the real questions of the day in ignorance and fury, till the '*culbute generale*' comes, and gentlemen of ancient family, like your humble servant, betake themselves to Canada, to escape, not the Amalgamated Engineers, but their 'master,' and the slop-working savages whom their masters' system has created, and will by that time have multiplied tenfold." There is the very spirit not only of a squire in that, but of a particular kind of Tory squire—the Sir Harry Inglis or Sir Tatton Sykes kind—which likes the people well enough, and wishes them well, but has at heart a grudge againt and suspicion of the capitalist whose "plant" is not the land. Mr. Kingsley had even deep in him the squire's dislike of the unusual or unconventional, the feeling that a human being with a respectable character had no business to be *outré* or singular in outward ways and appearance. Nothing can be more characteristic of his permanent state of feeling or more delightfully comic than this account of his aversion to beards and oddities in dress:—"In a new social movement, such as that of association as it took shape in 1849-50, there is certain to be great attraction for restless and eccentric persons, and in point of fact many such joined it. The Beard movement was then in its infancy, and any man except a dragoon who wore hair on his face was regarded as a dangerous character, with whom it was compromising to be seen in any public place,—a person in sympathy with *sans-culottes*, and and who would dispense with trousers but for his fear of the police. Now, whenever Kingsley attended a meeting of the promoters of association in London, he was sure to find himself in the midst of bearded men, vegetarians, and other eccentric persons, and the contact was very grievous to him. 'As if we shall not be abused enough,' he used to say, 'for what we must say and do, without being saddled with mischievous nonsense of this kind.' To less sensitive men the effect of eccentricity upon him was almost comic, as when on one occasion he was quite upset and silenced by the appearance of a bearded member of Council at an important deputation in a straw-hat and blue-plush gloves. He did not recover from the depression produced by those gloves for days."

Charles Kingsley, who seemed to his readers sometimes so wilfully defiant of other men's opinion, had even a doubt whether separateness, even when quite honest, was quite right, and in a remarkable letter to his friend, Mr. J. M. Ludlow, who believed in separateness and individualism to a rather inconvenient extent, pleads that a man who listens only for the voice of God within him is very apt to forget the voice of God without him, and losing his sympathy with men, to lose also his tenderness for men. until he makes his own conscience the standard for God, and his own character the standard for men—that most widely-diffused of all blunderings—and ultimately becomes an undeveloped Inquisitor. He should not, he says, teach his children to believe the watch-word, "Never mind what people say." "On the contrary, I shall teach them that there are plenty of good people in the world; that public opinion has pretty surely an under-current of the water of life, below all its froth and garbage; and that in a Christian country like this, where, with all faults, man (sooner or later) has fair-play and a fair hearing. the esteem of good men, and the blessings of the poor, will be a pretty sure sign that they have the blessing of God also; and I shall tell them, when they grow older, that ere they feel called on to become martyrs, in defending the light within them against all the world, they must first have taken care most patiently, and with all self-distrust and humility, to make full use of the light which is around them, and has been here for ages before them, and would be here still, though they had never been born or thought of." If that is not the governing thought of the best kind of Tory squire, though expressed in literary language, we entirely fail to understand the species. Where Kingsley differed from most of them was not in reverence for the conventional—he had too much of it—but in a passionate humanitarianism, a hatred of dishonour to human beings, which he gratified, not by an effort to throw down anybody—unless, indeed, he was a strict game-preserver, a character for whom Kingsley had no more respect than Cooper's Natty Bumppo would have had, being hunter to the heart of him—but to raise in the lowly the passion of self-respect. That, expressed in a hundred forms, sometimes with rushing eloquence, sometimes with Biblical fire, sometimes in "high-falutin'," windy epigrams about God, the Devil, and Man, was the secret of Charles Kingsley's method. He did not believe in the gospel of getting on. He did not believe in equality one jot. We doubt whether he believed strongly in civilisation as understood in England, at all, whether the sympathy in his blood was not with an earlier, ruder, and less conscious life; but what he did believe in was self-respect, the right and duty of the lowest to be, in his function, king of himself, free, self-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

assured, and daring. Snip was to be a man by the consent of all, his own consent coming first, and then snip on manfully. He hated drunkennesss, not as teetotallers seem to do, because it causes crime or wastefulness, but because it interferes with self-respect; and he worshipped courage and self-will even in some brutal manifestations of those qualities, mainly, we believe, because he thought—indeed, Sandy Mackaye, whom he calls, in a letter to Mr. Hughes, the real hero of "Alton Locke," is made to say so—that while those qualities remain, the capacity of self-respect does not die out. He was right in his method, particularly when he regarded it from the religious side of his mind—and he had a deeply religious side to his mind, had even his trace of superstition—but he pushed it somewhat far, till he doubted whether ambition was moral, and forgot how difficult self-respect is made by excessive differences of caste, tastes, and culture. His self-respecting ploughman is quite possible, but a self-respecting night-soil man is perhaps not so easy. Anyhow, this was his panacea, described sometimes in the oddest way; it is the secret of "Alton Locke," of his cult of the flesh—he holding that self-respect can never be perfect while man holds his body to be evil—and we think, of his abhorrence of creeds which, like Calvinism and Romanism, are based on self-contempt, on a conviction of the hopelessness of man without external, granted, supernatural help. He was as far from a Leveller as it is posible for man to be, and latterly became, as he avows, an optimist of a rather too contented school. In 1856, he said to his friend:—"The long and short of it is, I am becoming an optimist. All men, worth anything, old men especially, have strong fits of optimism—even Carlyle has—because they can't help hoping, and sometimes feeling, that the world is going right, and will go right, not your way, or my way, but its own way. Yes; we've all tried our Holloway's Pills, Tom, to cure all the ills of all the world—and we've all found out, I hope, by this time that the tough old world has more in its inside than any Holloway's Pills will clear out."

We noticed incidentally last year Kingsley's deficiency of humour. There is but one humourist in all his books, old Sandy Mackaye, the bookseller in "Alton Locke," and the fun of the "Water-babies" is rather gently satirical than truly humorous. It is necessary, however, in order to justify this remark, to draw a distinction. Kingsley lacked the keen perception of the incongruous which Sydney Smith possessed, and which is the foundation of humour, as distinguished alike from wit and from satire, and there is in this memoir a letter (page lvi.) which displays this peculiarity in what is to us a painful way; but he had in him that possibility of humour which is always in any man who has the power, without strain on himself, of perfect *abandon*, of letting his mind act for itself, and twizzle the kalcidoscope without control from the will. When really content, he used to do this in conversation, and sometimes in his letters, and there is a metrical note in this memoir which is a perfect specimen. We would extract it, but that we want to quote nearly entire the best thing in the little monograph, and as far as we can remember, the only genuinely humorous copy of verses of any length the Canon ever wrote:—

"Come away with me, Tom,
Term and talk is done;
My poor lads are reaping,
Busy every one.
Curates mind the parish,
Sweepers mind the Court,
We'll away to Snowdon
For our ten days' sport,
Fish the August evening
Till the eve is past,
Whoop like boys at pounders
Fairly played and grassed,
When they cease to dimple,
Lunge, and swerve, and leap,
Then up over Siabod
Choose our nest, and sleep.
Up a thousand feet, Tom,
Round the lion's head,
Find soft stones to leeward
And make up our bed.
Eat our bread and bacon,
Smoke the pipe of peace,
And ere we be drowsy,
Give our boots a grease.
Homer's heroes did so,
Why not such as we?
What are sheets and servants?
Superfluity.
Pray for wives and children
Safe in slumber curled,
Then to chat till midnight
O'er this babbling world.
Of the workmen's college,
Of the price of grain,
Of the tree of knowledge,
Of the chance of rain;
If Sir A. goes Romeward,
If Miss B. sings true,
If the fleet comes homeward,
If the mare will do,—
Any thing and everything,—
Up there in the sky
Angels understand us,
And no 'saints' are by.
Down, and bathe at day-dawn,
Tramp from lake to lake,
Washing brain and heart clean
Every step we take.
Leave to Robert Browning
Beggars, fleas, and vines;
Leave to mournful Ruskin
Popish Apennines,
Dirty stones of Venice
And his Gas-lamps Seven;
We've the stones of Snowdon
And the lamps of heaven.
Where's the mighty credit
In admiring Alps?
Any goose sees 'glory'
In their 'snowy scarps.'
Leave such signs and wonders
For the dullard brain,
As æsthetic brandy,
Opium, and cayenne;
Give me Bramshill Common
(St. John's harriers by),
Or the Vale of Windsor,
England's golden eye.
Show me life and progress,
Beauty, health and man;
Houses fair, trim gardens,
Turn where'er I can.
. . . . . .
Tho' we earn our bread, Tom,
By the dirty pen,
What we can we will be,
Honest Englishmen.
Do the work that's nearest.
Though it's dull at whiles;
Helping, when we meet them,
Lame dogs over stiles;
See in every hedge-row
Marks of angels' feet,
Epies in each pebble
Underneath our feet;
Once-a-year, like schoolboys,
Robin-Hooding go,
Leaving fogs and fogies
A thousand feet below."

MISCELLANEOUS.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—The business done during the closing week has been exceedingly small, even yarns participating in the general stagnation. We have also to report a further decline in the prices of certain goods. We quote.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce....	$1.87½ to $2.15	60 to 64 reed 40 yds. 35 in. nom.	per pce. ...	2.10 to 2.30
8 lbs.	38½ yds.	44 in.	,, ...	2.20 to 2.50	Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb...	0.75 to 1.05
8 lbs. 4 to 8 lbs.	38½ ,,	39 in.	,, ...	2.17½ to 2.50	Black Velvets	*nom.*	8.00 to 9.00
9 lbs.	38½ ,,	44 in.	,, ...	2.45 to 2.80	English Drills 15 lb. 40 yds, 30 in....		3.25 to 3.40
					Taffachelass 12 yds, 43 in....	*nom.*	2.00

Yarns.—

No. 16 to 24 ... ...per picul...	$30.50 to 34.00	No. 38 to 42 ... ...per picul...	$41.00 to 45.00 nom
No. 28 to 32 ... ...per picul...	$33.50 to 39.00	Reverse Twist ... 16-24 ... ,, ...	——

Woollens generally remain very quiet; transactions continue on a very limited scale at previously quoted rates. There has been some enquiry for printed *Mousselines de Laine* but at prices showing a further decline, whilst *plain Mousselines* continue neglected.

Plain Orleans	40—42 yds. 32 in....	6.50 to 7.50	Figured Mousseline de Laine...	30 yds. 30 in...	0.25 to 0.28
Figured Orleans	29—30 yds. 31 in....	4.75 to 5.25	Multicolored ,, ...	30 yds. 30 in...	0.32 to 0.35
Chimagoro	30 yds. 30 in....	5.25 to 5.75	Cloth, all wool plain or fancy...	48 in. to 52 in...	0.80 to 1.20
Italian Cloth	—30 yds. 32 in....	0.25 to 0.33	Presidents	54 in. to 56 in...	0.60 to 0.70
Camlet Cords	29—30 yds. 32 in....	6.25 to 7 25	Pilots	54 in. to 56 in...	0.40 to 0.45
Camlets Asstd.	56—58 yds. 31 in ...	18 50 to 19.00	Union	54 in. to 56 in...	0.40 to 0.65
Lastings, Japan...	22—30 yds. 32 in....	13.00 to 14.50	Blankets, scarlet & green 7 to 8 lbs....	per lb...	0.40 to 0.41
Plain Mousseline de Laine	—30 yds. 30 in,...	0.18 to 0.20			

Sugar.—The market for Formosa descriptions continues very quiet at last week's quotations. A sale of 11,000 piculs at $3.08 is reported, but the quality is said to be of inferior Taiwanfoo in bags. China descriptions remain without change.

Sugar:—Formosa in bag ... ...per picul....	3.15 to 3.20	China No. 5 Kong-fun ... ...per picul ...	4.20 to 4.80
in Basket ... ... ,, ...	3.05 to 3.10	,, No. 6 E-pak ... ... ,, ...	3.30 to 3.50
China No. 1 Ping fah ... ... ,, ...	7.30	Swatow ... . ,, ...	2.60 to 2.80
,, No. 2 Ching-pak ... ... ,, ...	6.50 to 7.00	Daitong ... ... ,, ...	2 60 to 2.90
,, No. 3 Ke-pak ... ... ,, ...	5.50 to 5 90	Japan Rice ... ... ,, ...	
,, No. 4 Kook-fah... ... ... ,, ...	5.00 to 5 30	Kerosene Oil ... ... per case ...	2.52

Kerosene Oil has improved, being now quotable at $2·52. At this price, however, importers still show a disinclination to sell.

EXPORTS.

Silk.—Since the 22nd instant, arrivals are 200 bales, and deliveries 25 piculs, nearly one half of which was, owing to the inferiority of the assortment, rejected after inspection.—Thus, settlements are about 160 bales of Oshiu and 20 of Hanks. Under these circumstances our quotations for Hanks, common and inferior excepted, are nominal. For Oshiu sorts prices are unchanged.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to look up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 20.] YOKOHAMA, SATURDAY, MAY 13, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

In view of the accounts given in history of the extravagance, the cruelty, the extortion and oppression which have constantly characterized the progresses of oriental monarchs through their dominions, the instructions which will be found elsewhere, issued to the different *ken* along the road, relative to the Mikado's intended journey northward, present a model of benevolent simplicity and considerateness. Nothing can be more admirable than the spirit in which these instructions have been conceived and drawn up, and we venture to think that they will strengthen the excellent impression which already exists abroad of the good sense and kindly feeling of the Imperial Family. It is clear that His Majesty's object is to see for himself something of the condition of his people, and to strengthen their feeling of loyalty and devotion to his person. As the old superstitions in regard to his descent are vanishing before the light of education and enquiry, he is wisely appealing to the affections of his subjects, and, so far as his own personal influence is concerned, he can hardly do so more effectually than by showing himself among them as their father and protector, jealous of adding to, and bent, as far as may be, upon lightening, their burdens, solicitous to help, encourage and reward. Such a document as that now laid before our readers, will touch the hearts of the people, and of many in distant lands whose interest in this country, however warm, can never be gratified by personal experience of it. There is not only good feeling, but great wisdom in this simple record of instructions, and we trust that His Majesty's journey may be as conducive to his own health and pleasure as it can hardly fail to be to the welfare and increased devotion of his subjects.

It may fairly be hoped that the journey of His Majesty the Mikado into the northern part of his dominions will draw the attention of the Ministers who accompany him to three important points which force themselves upon the notice of every traveller in this country:—

The insufficiency and badness of the roads;

The large amount of waste land, and the room it affords for increased industry on the part of the people; and

The absence of sheep and cattle.

We had occasion last week to refer to hopes of a different order in connection with the progress of this country, viz. an entire toleration of Christianity, and the introduction of the European gamut. Let as see whether these two cannot be bracketed together with the points above referred to.

How long, then, must it be before a Japanese musician, stirred by the picture presented to him by one of the lovely scenes of his own country, and with mind and heart alive to the beauties of the poetry of the 'sweet singer of Israel', shall write an anthem according to the rules of European muscial composition, with the following text for his subject:—

"The pastures are clothed with flocks, the valleys also are covered with corn; they shout for joy, they also sing?"

The *Nichi Nichi Shimbun* has got its teeth closed in the very throat of the Press-laws, as will be seen from one of our translations this week. The case treated is that of Mr. Seki which we brought prominently forward on the 22nd of last month, and to this case is added that of Messrs. Suwada and Kumana, who as principal and accessory to the same offence were convicted in different Courts and under different clauses of the Press-laws, as shewn in our article above referred to. The position of the *Nichi Nichi Shimbun* is wholly impregnable, while that of the Government resembles the position of a King on his own square, hemmed in by pieces right, left and in front, and attacked by a pawn which he cannot take. This is check-mate.

The discrepancy between the rulings of the two Judges who have condemned Messrs. Sawada and Kusama, the one in Tokio under the 13th clause of the Press-laws, and the other in Ehimé under the 12th clause, both having been concerned in the same offence, is like one of those accidents in warfare which, small in itself, multiplies enormously the forces on one side and paralyses those on the other. The public writers make the most of it—as, of course, it is quite natural they should—and are executing a laughing chorus (though in their sleeves) at the expense of the Government. The accident will be useful if only in showing how extremely difficult it is to apply to one country laws made in and for another, and not, so to speak, the outcome of the legal mind of the importing country. The Press-laws are undoubtedly taken bodily from the French code, and being placed in the hands of the Judges cause them as much embarrassment as a musician would feel if compelled to perform on an instrument hitherto unknown to him. A story is told of a landsman, who had seen only so much of ship-life as to catch up a few nautical terms, shipping as a seaman. Being ordered to go into the chains and heave the lead, after the first cast he sang out, in the usual cadence, something which the captain could not understand. "Bless your heart, Sir," cried the skipper, "why don't you speak plain, I can't make out a word you say." "All's one for that," returned the man, "I know nothing about the words, all I have learnt is *the tune*." The Judges in like manner seem to have taken lessons in the tune they are expected to play, but care little about the words. The readers of the finest novel in the English language may remember the following passage:—"Mrs. Western said, 'She knew the law much better; that she had known servants very severely punished for affronting their masters,' and then named a certain justice of the peace in London, 'who,' she said, 'would commit a servant to Bridewell at any time when a master or mistress desired it.' 'Like enough,' cries the Squire, it may be so in London; but the law is different in the country.' And apparently the law is

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

one thing in Tokio, and another thing in the Ehimé *Ken*. Mr. Ogi, the Minister of Justice, must be tearing his hair in secret at this embarrassing miscarriage of justice. He has put his new code into the hands of the Judges, and one reads it in one way and the other in another. Handel once engaged a new chorus singer, who told him he could sing at sight, but who went hopelessly wrong before the end of the first line. "Vat for, Sir, you did tell me," cried Handel in a fury, "you could sing at sight"! "Please, Sir," answered the delinquent, "I never said I could sing at *first* sight." The Japanese Judges are in much the same plight with their new Press-laws.

The cause which the Temperance Hall was established to promote is so excellent a one, that the proceedings of the institution well deserve the sympathetic attention of the public. A record of such an entertainment as was given there on Thursday evening is not only a just tribute to the spirit which animates the committee of management, but assists in bringing the institution to the notice of those whom it was intended to benefit, as well as of those who are entrusted with their temporary guardianship. These institutions are a real godsend to the commanders of ships and their officers. They afford the sailor a place of amusement and recreation, where he is entertained, body and mind, at small expense, and kept from haunts where he incurs serious dangers, if not always from his own excesses, at least from the vile compounds too often supplied to him. We do not care to dwell on more important advantages still—the mental and moral improvement and elevation among seamen which these institutions are calculated to promote. We take them on the lowest ground, and even on this, they demand the support and sympathy of the whole community. Some months ago we devoted an article to the subject of this institution, showing the aims of its conductors, the benefits it had conferred on sailors visiting the port, and the claims it had upon the good will of the foreign community. Our appeal was responded to in the generous and liberal spirit which two or three successive years of commercial depression and disaster have failed to extinguish, much as they have impaired its power. A sum of $1,200 was raised and devoted towards the more pressing necessities of the Hall, the conductors of which feel that they cannot, yet-a-while at least, again trespass on the bounty of the community. If they have now to turn towards more distant quarters for assistance, it is with no shadow of forgetfulness of what has been done for them here, or of reproach that enough has not been done. The fund applicable to purposes of this nature has been steadily drawn upon, but not as steadily replenished. Trade has been cruelly unremunerative, and be the disposition to give never so active, it must have the wherewithal to display itself. Our daily issue of yesterday morning gave a short account of the entertainment of the previous evening, and there is no need to enlarge upon this. It is not from an æsthetical point of view that these entertainments must be judged, though some of the performances of Thursday evening would bear the test with credit. It is rather from the great stand-point that, in some real sense, each of us is his brother's keeper, bound to use his influence, his means and his talents, be they never so small, in the service of those who may be benefited by them. It is a true source of gratification to assist in producing such a sense of pleasure as was expressed by the plaudits of Thursday evening, and nothing but advantage to the frequenters of the Hall can arise from such efforts as were made on that occasion for their entertainment.

The destruction of wealth in this country through the agency of fire seems to demand more attention from the Government than, so far as we know, it seems to receive. Hardly a day passes that the native papers do not record the destruction of a large number of houses in this manner, and it may safely be inferred that many serious fires occur of which we hear nothing. The reports published in our morning issue of occurrences of this nature are taken very promiscuously from the native papers—possibly only from a section of them—and it is equally possible that if there are paragraphs of greater interest, the record of a fire is passed over by our translator in their favour. But a rough estimate of the number of houses reported to have been destroyed by fire during the month of April last places it at 1,200, and probably the actual number is not less than 2,000. In some months it may be more, in some less, but we shall hardly be very wrong if we assume that some 20,000 houses, with the contents of ten per cent of them, are destroyed every year in this country. The number cannot very well be less; it may easily be very much greater; but let it be assumed at this. We shall not be far wrong if we estimate the value of these houses with the contents of ten per cent of them, at $150 each, and we then have the value of three millions of dollars yearly destroyed by fire. No one of course expects that thirty-three millions of people can live in a vast number of villages and towns without fires breaking out among them. But it is certain that in proportion to the number of houses in this country and its accumulated wealth, the destruction of that wealth by fire is vastly greater than in European countries. There are perhaps more houses in Japan than in Great Britain, which contains about the same population. But it is certain that there are not five thousand houses destroyed yearly by fire in Great Britain—probably the number is very much smaller indeed. We doubt whether the Chinese suffer nearly as much from this source as the Japanese, one cause of which is that they use bricks much more largely in building, and another that they make fire-resisting brick partitions between their blocks of houses. Is not this question worthy of some serious consideration at the monthly meetings of the *kuchō* and *kochō* which it is understood are now to be held throughout the country?

The fine grounds of Uyeno were officially opened to the public by the Mikado on Tuesday morning last. His Majesty, accompanied by the Empress and the Princes of the Imperial family, arrived on the ground at about 9 o'clock under escort of a squadron of the Household Cavalry and were received by the Chief Ministers of State. They were driven through the park and subsequently visited the Shinto temple. After a brief stroll through the grounds, which were thronged with many thousands of their subjects, their Majesties partook of refreshments and returned to the Imperial Palace. At a later hour of the day the grounds were visited by a number of foreign residents of the capital, for whom refreshments were provided at the Seiyoken restaurant. Two military bands enlivened the scene with a selection of popular music, and an agreeable afternoon was passed by the guests of the day.

We publish in our present issue the remaining portion of Dr. Müller's notes upon Japanese music published in the journal of the German Asiatic Society, which will be found to embrace some interesting remarks upon Chinese music and musical instruments. The original is accompanied by numerous diagrams, without which indeed a perfect comprehension of the subject is scarcely attainable—and to this we must refer our readers for further information, as also for the notes of the three pieces of Chinese music which have been communicated by Mr. Stein.

Those of us who may remember the remarkable talent for humorous drawing possessed by Dr. Scanlan, of H. M. 10th Regt., quartered here some time back, will be pleased to hear that he has brought some excellent examples of it before the public. In "A to Z, being Twenty-six notes on a Soldier's Trumpet,"* Dr. Scanlan's object, according to the *Army and Navy Gazette*, "has been to hit off the peculiarities of the different arms of the Service, and very successfully he has done it. A is represented by an Adjutant, B by a Brigadier, and so on throughout the alphabet. The cartoons are splendidly drawn and the colouring is executed with due regard to the official Dress Regulations of the Army." The notices of the work in the London papers leave no room for doubt that it is very cleverly conceived throughout and as cleverly executed.

* Houghton and Son and Hatchard's, London.

A distressing accident occurred on board the ship *J. H. Kimball* on entering the bay yesterday morning. A young Norwegian named Olsen fell from the foretopgallant yard on to the forecastle. He survived the accident only two hours.

From the "Japan Mail Daily Advertiser."

Monday, 8th.

We read in the *Hioron Shimbun* that on learning that Shimadzu Saburô had decided to return to his native province Saigo Kichinosuke at once disappeared. He has been sought for in vain throughout the 124 castle towns of Satsuma. Referring to this event Torii Masakata remarks, It is impossible for me to decide what may be Saigo's motive for concealing himself, but it is currently believed that when he retires troubles are sure to arise in Satsuma, their duration depending upon the length of his seclusion. True, in these piping pipes of peace, there would appear to be little to excite our apprehensions, but it has ever been so.

Komatzu Masatane also professes himself unable to explain the cause of Saigo's movements. But, he adds, I may assure the nation thus much, that Saigo will never return to office under the present Government, nor be indebted to their favour. At the same time, so patriotic is the spirit which animates his soul, that when the country is really in danger and troubles menace the State, Saigo will leave his obscurity, will take the question into his own hands and will settle it.

An examination of the police constables has taken place recently at Yedo with the view to discover the men most skilful in the use of the spear. It would appear that a number of men are to be attached to Okubo Toshimitchi, who proceeds to Oshiu on the 10th instant for the purpose of making preparations for His Majesty's forthcoming visit, and it is thought desirable that they should understand the use of that weapon.

The two newspapers of Kioto, the *Shimbun* and *Shinpo*, have ceased to exist. The Governor would seem to have ordered the examination of their contents before publication, and this has proved a fatal difficulty.

The Department of Justice is about to enlarge the prisons.

A change in the military uniform is at present under consideration.

Tuesday, 9th.

We are authorised to say that the P. & O. Company's Directors have sent instructions to their Shanghai Agent to keep the Shanghai and Japan line running. The *Orissa* and *Columbian* will continue to run.

The *Kôriu Maru* which left port on the 3rd instant, having on board certain officials of the Foreign Office, has gone to Corea. She will bring back the Embassy from that country.

A party of *Samurai* from Saga have come to the Capital in all haste. The journey is thought to betoken approaching troubles in that Ken and the *quidnuncs* of Yedo are on the alert to obtain further news.

Mr. Makajima, lately of the *Hioron Shimbun*, has just been liberated from confinement. Prison life, he announces, has furnished him with both leisure and matter for reflection and study, and he purposes, at an early date, to resume his contributions to the journal he is connected with.

Mr. Atkinson, a missionary we believe, and two Japanese *samurai* have recently been preaching Christianity at Matzayama in Yehime *Ken*. This has led to representations being made to the Buddhist Bishop, who referred the question as to how far the promulgation of the Christian faith was lawful in the Interior to the department of public worship. A reply has been sent to the effect that, though the preaching of Christian doctrines may be permitted at the open ports, it cannot at present be sanctioned in the Interior.

The *Athenæum* has the following paragraph among its Literary Gossip:—"A recent decree of the Mikado gives "complete freedom of postage to journalists, each of whom "is now allowed to send whatever communication he may "think fit from one part of the empire to the other, free "of expense. Japanese journalists must be a favoured "race."

We had not heard of this exception to the advantage of journalists. We had believed the favour of the authorities to be limited to the free lodging and maintenance to which a large number of the press writers appear to have recently entitled themselves.

Small-pox is said to have broken out in the province of Awa in Shikoku.

Gion Machi in Kioto was lighted with gas for the first time on the 1st instant.

The *Hochi* says: Mr. Marutomi has been appointed Vice-Consul to the Russian settlement at Kamtschatka and will leave for his post on or about the 20th instant.

Wednesday, 10th.

A representation of *La Fille de Madame Angot*, by Lecoq, half the proceeds of which are to be devoted to the General Hospital, will be given at the Gaiety Theatre on Saturday evening next. The great acceptance which this lively opera has had in all quarters of the globe is the best guarantee of its attractive nature, and we hope a full house will be present to enjoy it. The performance will terminate about half-past eleven.

It was supposed that Mr. W.J.S. Cannon, lately Assistant-Paymaster of H. M. ship *Vigilant* had taken passage for this port in the *Gaelic*, which was accordingly boarded by the British Consular constables on her arrival yesterday morning. A strict search was made, but failed to discover the deserter.

Mr. Nakakji, one of the Secretaries of the Japanese Legation in London, returned to Yedo on the 7th instant.

The *Hochi Shimbun* notices some attempts that are about to be made to raise the wreck of the Messageries steamship *Nil*, which was lost off the coast of Idzu some two years ago. Several of the officers of the Home Department are now on the scene of the wreck, and fourteen skilled divers arrived there from Amakusa a few days since for the purpose of conducting the necessary operations.

A shock of earthquake was felt at 12.40 a.m. this morning.

Mume no miya, H. I. Majesty's daughter, is said to be suffering from illness for some days past.

Monsieur de Struve returned from his visit to Nagasaki in the Imperial Russian corvette *Haydamack* yesterday.

That the solitary hours of prison life tend to develop and strengthen the poetical faculty is a fact which the dungeon walls of the Tower of London, the Bastille and, it is said by Fielding, the condemned cell of old Newgate have amply testified in the past. Our readers will therefore learn without astonishment that the state prisons of this country would seem to have proved a "meet nurse" for her poetic children, and to have stimulated to some extent the exercise of their powers. We learn, for example, that Nakajima, of the *Hioron* paper, whose liberation from confinement we announced a few days since, has presented the editor of the *Akebono Shimbun* with sixteen verses of poetry composed by himself and co-editors in prison. The lines are said to be of considerable beauty and to bear evidence of polish in their composition.

The editor of the *Hioron Shimbun* has been ordered imprisonment for one month. The same penalty was adjudged to another writer for this journal who is already in prison for a previous offence.

The *Nichi Nichi* has heard that the Corean Embassy will be composed of eighteen members. They are expected to arrive in the Capital on or about the 15th instant.

Thursday, 11th.

"La Belle Hélène," a little Comic Opera of Offenbach's founded on classical story, was given last night at the Gaiety Theatre by the *troupe* of M. Launay-Céphas, with the assis-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

tance of a few amateurs. Madame Dorlia took the part of the frail queen, M. Legros that of Paris, M. Emanuel played Menelaus, while the part of Calchas was assumed by "Mr. X." Every one did their best for the little piece, M. Launay-Céphas playing the accompaniments with his usual zeal and assiduity. We regret to say that the attendance was exceedingly small.

A fire broke out at about 11.15 last evening in the premises No. 70, in the occupation of Messrs. Lohmann, Kuchmeister & Co., outfitters, &c. We have been unable to learn its supposed origin at the moment of writing, but it would appear to have been confined to the outbuildings and tailor's shop which are altogether destroyed.

Another effect of cheap silver and, we may add, of the leisure forced upon Silk Inspectors by quiet times.

New "Japan Silk Tables" have just been issued from the press in the shape of a neat little pocket-book. They run from $350 to $800, at exchange from 3.6 (*absit omen*!) to 4/10, and 4.45 to 6.09. The method adopted for calculating the cost of silk laid down and sold in London and in Lyons is fully and clearly explained in the preface. The little work recommends itself to all merchants by its timely appearance, accuracy and portable form.

An exhibition of the various products of the island of Yezzo was opened at the Kaitakushi, Yedo, on Tuesday last.

It is now arranged that the Corean Envoys shall leave Corea on the 18th instant, arriving at Kobe on the 21st and at Yedo on either the 23rd or 24th instant.

A commission, we read in the *Hochi Shimbun*, has been appointed to consider the reforms necessary to be made in the criminal laws of this country. Among the officials nominated for the purpose are Ito, *Sangi*, Minister of Public Works, and Ogi, *Sangi*, Minister of Justice.

Disturbances are said to be threatening among the farmers in the Wakayama *Ken* in consequence of the late readjustment of the land tax. The *Nichi Nichi Shimbun* hears that troops have been sent from Osaka to act in case of need.

Friday, 12th.

An entertainment was given yesterday evening at the Temperance Hall to the men of the U. F. Flag-ship *Tennessee*, towards which, however, they themselves largely contributed. The proceedings were opened with a substantial meal, after which, in such order as was most fitting, came a short address from Dr. Maclay, followed by music and recitations, with all which a crowded audience seemed extremely gratified. Selections of instrumental music were played by the Band, and a few of the resident ladies, desirous of promoting the excellent objects furthered by this institution, lent a special grace to the evening by assisting in some beautiful four-part vocal music. An excellent delivery of Sullivan's fine song from "Cox and Box," "Rataplan," produced enthusiastic applause and the audience demanded and redemanded a repetition of it. It is needless to enumerate all the various items of the entertainment; suffice it, that it was extremely successful, and in every way, worthy of the cause it was designed to assist. The meeting broke up after a few words from the Secretary in acknowledgement of the assistance given by those who had contributed in various ways towards the the success of the evening.

We are informed by the agent of the Great Northern Telegraph Company that communication between Shanghai, Amoy and Hongkong has been re-established.

The following, for which we are indebted to the *Eiri Shimbun*, is an amusing illustration of the internal economy of the Capital. The Tokio *Fu* has recently made some alterations in the mode of regulating the traffic in rabbits, and has notified that henceforth purchases or sales shall be made known to the authorities by dealers within three days of their occurrence. It is ordered that any increase by births or diminution by deaths must be intimated to the ward officers within three days. The Tokio *Fu* would appear to be alarmed by indications of a return of the seductive *furore* which led to so much gambliug three years ago.

The first public "spelling bee" in Yokohama will be held we understand at the Temperance Hall after the conclusion of the forthcoming races. Due notice by advertisement will be given.

Messrs. Whitfield and Dowson, of the Yokohama Iron and Engineering works, have shipped to the order of a San Francisco firm by the *Gaelic*, a pair of diagonal steam-launch engines, of 5½ inch cylinders with propeller and shafting complete. We understand that this firm is in a position to compete successfully in the production of engines of this class with American machinists.

Alexander McLean, a seaman of the British ship *Eme* now undergoing imprisonment in the British Consular gaol, made an attempt to destroy himself yesterday morning. Fortunately, his suspenders, by which he attempted to hang himself to an iron window-bar, gave way and he fell to the ground. He is now doing well.

The ship *Cleopatra* is about to proceed to Shinagawa to load with rice for a foreign market.

The disturbances in the Wakayama Ken appear to have created some little apprehension in the south. The *Osaka Nippo* learns that the insurgents are led by a former official of the Home Office and that the *Kencho* show themselves much perplexed us to how they shall deal with the revolt. Troops have been asked for and have been despatched.

It is intended, says the *Hochi Shimbun*, to present each of the officials in the *suite* of His Majesty on his approaching journey northward with a map of the northern provinces.

Saturday, 13th.

On the 8th instant a notification was issued to the various *Fu* and *Ken* by the *Naimusho* to the following effect.

A great portion of the drugs used in Japan are of native preparation and, notwithstanding the prejudice existing in favour of medicines imported from foreign countries, are really superior to them in purity. The faith in foreign drugs is, however, considerable and unprincipled dealers do not hesitate to avail themselves of it to import large and increasing quantities of impure and sophisticated medicines to the great injury of those who may employ them. Henceforth, therefore, it has been determined to examine all chemicals of native manufacture and to grant certificates of character to such as may be found equal to the test. Chemists, whether engaged in the preparations of drugs for healing, or chemicals for manufacturing and scientific purposes, must henceforth present specimens of the same to the authorities for examination, with a statement according to the form which has been prepared, when, if found admissible, they will receive certificates allowing of their sale.

The manufacture of opium will be permitted for the present under terms of the Notification No. 156 of last year.

The insurgents in the Wakayama *Ken* are seemingly gathering power; a *Kucho* is said to have been killed.

Mr. E. Blancheton, in the service of the proprietors of the Grand Hotel, died suddenly on Thursday night from rupture of the abdominal aorta.

The Committee of the General Hospital acknowledge in our advertising columns the gift of One Hundred Dollars to the Hospital Funds by Count Desfours.

Messrs. Fukuchi and Numa intend to deliver a lecture at Mashi-ten-cho Yedo this afternoon on European history and jurisprudence.

SPIRIT OF THE JAPANESE PRESS.

The Mikado's Journey.

Chōya Shimbun, May 12, 1876.

With reference to His Majesty's visit to Oshiu and Dewa the following instructions have, it is said, been issued to the different *ken* along the road. They are of a very simple nature.

Item. When His Majesty is passing through the *ken* the police are to be turned out and one or two officials not more—are to proceed in advance of His Majesty.

Item. It is unnecessary to erect a bamboo railing along the sides of the road, to erect temporary bridges where there are ferries, to hide the gates of Buddhist temples, or to cover up unclean things. (This does not apply to the sweeping of the roads.)

Item. The procession may be viewed with pleasure. No check need be placed on persons passing to and fro. The people are to continue their occupations as usual.

Item. Presents to His Majesty are altogether forbidden.

Item. Suitable resting and sojourning places are to be selected, but no extraordinary expenses need be made.

Item. Officials from those of Government appointment upwards may come to the resting and sojourning places to inquire as to His Majesty's health. They are however to wear undress.

Item. One officer of Departmental appointment is to be stationed at each resting and sojourning place.

Item. An inquiry is to be made in respect to filial children, devoted servants, faithful wives, and other meritorious persons, as to their conduct, and any rewards that may have been hitherto conferred, and the result of the inquiry is to be submitted to His Majesty on his arrival at the Kencho.

Item. A map of the Ken and also a table of the statistics are to be prepared and submitted to His Majesty.

Item. A collection of the antiquities, pictures, productions, etc., that happen to be in the vicinity is to be made and submitted to His Majesty.

Item. As mess furniture, chairs, tables, bath, etc., will be brought along with His Majesty no preparations in this respect need be made. Steps are to be taken after consultation with the officials of the Kunaisho to provide bath rooms.

Item. The lodgings for the officials accompanying His Majesty are to be selected from places not separated from him, and except in the inns occupied by His Majesty no interference is to be caused to travellers resting or sojourning.

Item. An inquiry is to be made as to the full names of all persons aged eight years or more in the Ken.

Besides the above it is reported that instructions have been given that one day's allowance of the best white rice, consisting of three measures, is to be prepared at the sojourning places, and also specimens of the best qualities of wine, soy, eggs, fish, fowl, vegetables, &c.

These instructions are simplicity itself. The purpose of His Majesty, to see whether there is distress among his people, is sufficient to provoke tears of gratitude. Consider what was the case so recently as eight or nine years ago whenever the Shogun was pleased to make a progress. From the previous night it was forbidden to light fires (Literally—smoke was forbidden) along the line of road, the windows were closed, shutters affixed to them and paper pasted on the interstices. Did a sick man groan or a child cry they were immediately reproved for it. A kitchen contained in innumerable large cases was carried along with the party, and not to speak of fish and vegetables, even the very drinking water was also brought with them. In the words of the proverb food was cooked in each of the seven furnaces of the Tycoon three times in each day even while on the road, making in all twenty-one. Ought we not then to be grateful for the simplicity of the present day?

Changes in the Ministry.

(Precis.)

("Chōya Shimbun" May 9, 1676.)

If asked what is that on which the spread of enlightenment in our Empire depends at the present day I would say on the administration of the Government by our enlightened Ministry, and if asked on whom the administration of the Government depends, I would say on the Prime Minister and Councillors of State. If asked who is pre-eminent among those latter I should answer that all of them are the pick of the Japanese people and all understand the state of the times, but, at the same time, street conversation invariably gives the highest honor in this respect to Kido and Okubo. And there are good reasons for specially esteeming these two Ministers as being the mainstay of the Government and the good servants of the people, for they are the only ones who, through all the many changes that have taken place in the cabinet, ever since the restoration of order in the country down to the present time, have continued to remain in it, not indiscriminately retiring from it and entering it, and who have, regardless of clamour, made the development of the country their chief object. In talking of them one might reasonably compare them as regards their share in the promotion of the civilization of the country to the two wheels of a carriage, and I have therefore (in view of their merits) been long praying in secret that every blessing and prosperity might attend them. When I heard recently that Kido had resigned his position as a Councillor of State and had been appointed 'adviser' I was greatly astounded, sorry for the sake of the two ministers and grieved for the sake of the country.

What were the reasons that influenced Kido's resignation, whether a difference with Okubo or another reason it is impossible to divine, or whether there is any connection in the duties of 'Adviser' and Councillor of State I know not. By his resignation, however, and consequent release from his previous duties his authority will be very different from what it previously was, and Okubo will therefore become the most influential man in the Government. His well known firmness and talents will however prevent his being perverted by popular clamor and will enable him to attend easily to the promotion of the country's enlightenment.

Whenever I read the history of the Sung dynasty in China my grief is aroused by seeing men of such pre eminent merit as Kojien, Kingaku, Oo, Riyo, Kang, Hang, Fu, and Shiba unable when they took up the administration of the Government to unite their minds and strength therein, and the country instead of profiting by their talents falling into decay on account of them. The reason of this was that on every change of ministry those who had chief charge of the administration were changed at the same time. Nor were these changes confined merely to the administrators, the policy that they had pursued being also altered. The changes in our Government though resembling those of the Sung dynasty in reality differ from them. In the latter case great changes of policy were produced by the changes of ministers, the result being that not only the advancement of the country was retarded but even its decline brought about. As regards our country the case is different, as, during the nine years which have elapsed since the revolution, the two ministers who have had the chief direction of the Government have not either entered into or withdrawn from office unless actuated by grave reasons, and no change has been made in their policy. Hence the high development which our civilisation has attained to-day, and the non-attendance on the changes of the Government of the ill effects that followed those under the Sung Dynasty.

I have thus far spoken of the uniformity that has been hitherto observed in the administration of our Government. When I consider the future it seems that one of the two ministers whom I have called the wheels of the Government having ceased to be connected with it, the discharge of all matters will be thrown upon Okubo alone, and the excessive anxiety attendant thereon may make him ill and necessitate him giving up his high commission and retiring for the benefit of his health. In such a case if his high powers be conferred on some other person it is not impossible that the mode of the administration of the Government may be altered and the possibility of such an event causes me great distress. For this reason I am to-day contemplating the future with great anxiety on Okubo's account. Though, should it unfortunately come to pass that at a future day a change should take place in the Minister who exercises chief influence in our Government, I am certain that such change would not be attended with the same ill results as were those under the Sung dynasty in China. I cannot say whether a change in the form of administration would prove to the country's good or the reverse.

I have given this lengthened expression of my views on the subject of Kido's retirement and I ask for the opinions of writers in general in respect to it.

When I thought, having gone thus far, to have concluded this letter, I heard a strange piece of street news, to wit, that the Prime Minister, Sanjo, is about to visit Europe. Although this, being merely street rumour, is unworthy of acceptation, there may, in view of its being so widely reported, be some foundation for it. One person says that owing to Kido's retirement great disputes have taken place in the cabinet and that it is Sanjo's deep design to separate himself from these by making an excursion to the far West. Another says that it is the intention to make extensive reforms in the Government, and the Prime Minister is therefore about to visit the several countries of Europe and America with a view of gleaning what may be

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

worthy of adoption in the systems of Government of each. Such reports as these convince me that the rumour of Sanjo's intended visit is unfounded. Is it likely that the splendid Minister who has administered the Government ever since the revolution would on appearance of trouble lay himself open to a charge of cowardice by making an excursion beyond the seas at such a time? A report of this kind is certainly untrue. Again, if our Prime Minister wished to investigate the customs of other countries and glean therefrom whatever was worthy of adoption, it would be unnecessary for him to proceed in person to those countries, as he might despatch one or two officers for that purpose. This again shows the untruth of the above report. Although I am thus firmly persuaded of its falsences, I cannot think that the prevalence of such baseless rumours at the present time is a matter to be pleased at, and the anxiety which I feel on account of Kido's resignation is increased by such a rumour as that which I have alluded to. I am forced therefore to add this to what I had written in respect to Kido and to request the opinions of writers upon it.

(Sd.) HIGASHIYAWA TAKIKATA,
Madman in the West.

THE SENTENCES AGAINST MESSRS. SEKI, SAWADA AND KUSAMA, FOR VIOLATIONS OF THE PRESS-LAWS.

(Nichi Nichi Shimbun.)

The unwillingness of foreigners to place themselves under our jurisdiction has set them casting about for reasons to justify it. And they have found ample arguments in the recent trial of Mr. Seki, the former editor of the *Hioron Shimbun*, and at present editor of the *Osaka Nippô*: in the judgments given against Mr. Sawada, the editor of the *Choya Shimbun*, and against Kusama, the writer of a letter and article which appeared in the *Akebono Shimbun* of the 21st April. The *Japan Mail* of last Saturday has already taken the question in hand and discussed it. Had this taken place before the issue of the Press-laws, we should have translated the article for the benefit of the public and appended our own ideas to it, but as this would now constitute an offence against the 9th Article of the Press-laws, we are reluctantly restrained from doing so.

The three events to which we have referred have not only confounded the public writers, but have produced great general misgiving. We will now briefly state the grounds of this misgiving, though the public is doubtless already acquainted with them.

The *Akebono Shimbun* says that Mr. Seki, together with Messrs. Yokose, Mitzuki and Tanaka of the *Hioron Shimbun*, has been punished for publishing in the *Hioron Shimbun* an article translated by Mr. Mitzukuri and published in the *Bankoku Sowa*, a journal edited by Mr. Yoshida, to which article they appended their own opinions, and it goes on to question the reason why Messrs. Mitzukuri and Yoshida were not punished. We hold it to be utterly impossible to furnish any such reason. Were we forced, however, to make some answer, we should say that, to our mind, there was no offence in the publication of the article, but that the *Hioron Shimbun* had transgressed the law by appending the opinions expressed regarding it. We should be glad to carry the subject further, but from the fear of being bound in ropes we say no more.

In its issue No. 84, the *Hioron Shimbun* publishes an account of the trial of Mr. Seki Shingo, copied from the *Osaka Nippô*. Now if that account of the trial is correct, and if Judge Kiyoka actually said "This country is an Empire, and no man in this "whole Empire should say that the people have any concern in the "Government. All the officials in the Empire from the Daijodaijin "to the lowest officer of the lowest rank are the servants of His "Majesty the Mikado, and the people have not the slightest "concern with them. You have become intoxicated with foreign "ideas about the rights and liberties of the people; you have "forgotten our customs and this is treason"*—: If, we say, the Judge said this, and these words are upheld as containing sound doctrine, we then say that this doctrine is directly contrary to that contained in the Decree of His Majesty the Mikado, of the 14th April 1875, in which he expressed a desire to bring about gradually a constitutional form of government. Yet, in the face of this, Mr. Seki has been sent to undergo imprisonment for a year and a half, Messrs. Mitzuki and Yokose for three months, besides being fined 20 *yen* each, and Mr. Tanaka for one month. It is impossible to answer this.

* Vide *Japan Weekly Mail*, 22nd April.

Mr. Sawada, the editor of the *Choya Shimbun*, has been ordered to undergo imprisonment for one year for breaking Article XIII of the Press-Laws, while Mr. Kusama, tried at the Saibansho of the Ehimé *ken*, was punished for writing this very letter, by imprisonment for two months and a fine of 10 *yen* for violating Article XII of the same laws. Mr. Sawada was regarded as principal and Mr. Kusawa as an accessory. But if one is principal and the other accessory, how can they be found guilty of violating *different* articles of the Press-Laws, the crime in which they were implicated being one and the same? Is the writer supposed to have written his letter with one feeling, and the editor to have published it with another? And are the judges to decide cases according to what they imagine to be the feelings of those whom they try?

All this overwhelms us with doubt, and how much more shall it produce this effect upon foreigners! We cannot say that *The Mail* has treated the subject with the slightest injustice.

It is impossible for us to give any explanation of these two contradictory acts, and we must leave them to be explained by those who have a larger knowledge of law than ourselves.

THE SAME.

(Hioron Shimbun.)

I observe that Mr. Seki Shingo, the former Editor of the *Hioron Shimbun* has been convicted of a violation of the 13th clause of the Press-laws for having published an article on the overthrow of the Government which had already appeared in the *Bankoku Sowa*, and appending to it his own remarks, and has been sentenced to imprisonment for a year and a half. I observe, too, that Messrs. Yokose, Mitzuki and Tanaka of the same newspaper have been punished for the same act. But I also observe that Mr. Mitzukuri, who translated the article, and Mr. Yoshida, the Editor of the *Bankoku Sowa*, in whose paper the article originally appeared, have not been punished in the smallest degree. What is the explanation of this? The people generally are thrown into a state of doubt by it, and so am I.

I must now express a hope that this question will be thoroughly sifted in order that the truth may be arrived at and all doubts dissipated.

AWOYAGI EDAMORI.

Hioron Shimbun.

I, Torii Masakoto, of the *Hioron Shimbun*, say: That the matter referred to above has also been the subject of great misgiving to me, and I have never been able to arrive at any conclusion by which that misgiving could be dispelled. The first publisher and the translator of the article may not have been punished because it was of world-wide application and did not specially concern any individual country. But were we to imagine that this plea would suffice to secure immunity from prosecution under the Press-laws we should be greatly mistaken. When Mr. Oka, the Editor of the *Hochi Shimbun* was being examined, the Judge picked out the word "rulers" from the article for which he had been placed on his trial, and remarked that as the Mikado of Japan is one of the rulers of the world, Mr. Oka was guilty of slander against him, and thereupon passed a severe sentence upon him.

While Mr. Yokose, the editor of the *Hioron Shimbun*, was undergoing his trial for having contended that an oppressive government should be overthrown, the Judge asked him what special object he had in writing thus. Mr. Yokose replied that he had no special object, but wrote regarding oppressive governments generally in all countries. The Judge then said that Japan being a country, it was comprehended within the meaning of the term 'countries in general,' and thereupon passed upon him a most severe sentence. It is mostly in this way that all the public writers have been convicted, i. e., for indirect arguments.

We ourselves republished that article from the *Bankoku Sowa* in a condensed form, but without in the smallest degree altering its meaning, and I fail to see why one person should be punished for doing this and another not punished.

While Messrs. Yokose and Tanaka of our staff were being examined, Judge Tzuda Hironiehi said to them that Mr. Mitzukuri, the translator, would in all probability be punished also. But since the publication of the article by the *Bankoku Sowa*, some eight months have elapsed and no steps have yet been taken in that direction. Why is this?

We hear that the Kenji have said that Mr. Mitzukuri should be put under examination, but Mr. Ogi, the Minister of Justice is reported to have opposed this step and it was therefore abandoned. Now our own view is, that if any one has done anything for which he may justly be put on his trial, he should be tried, and that the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Minister of Justice ought surely not to object to Mr. Mitzukuri's being examined, or to detend him in an arbitrary manner simply because he is an official of rank in his department. But we see that he has acted thus, and there must be some reason which we cannot understand for a Minister of Justice having done so. Mr. Ogi, however, evidently does understand the reason, and it must be for this reason that he holds his position and is liked by the people.

THE SAME.

I, Komotsu Masatane, of the *Hiogo Shimbun*, say that I have heard that Mr. Mitzukuri, the present *Dochi* of the Judicial Department, whilst he held the position of a translator in the *Sei-in*, translated the French Press laws into Japanese, and this translation became the foundation of the present newspaper-laws, and further that Mr. Mitzukuri now holds an office in which he is called on to decide difficult cases brought from the various *Saibanshos* in the country. Now the article which we published in our paper is a translation by the very person who translated the Press-laws, so the article itself is, beyond all doubt, not punishable under the Press-laws. But we did not alter the meaning of the article in the smallest degree, and as it is impossible that an article can be an offence in one paper and no offence in another, it would appear as if the members of our staff were punished solely for the few words which were appended to the article. At all events it is certain that Mr. Mitzukuri is very clever for having evaded punishment, and Messrs. Seki, Yokose, Mitzuki and Tanaka are great fools for having incurred it.

DISTANT THUNDER.

(Hiogo Shimbun.)

It is in the nature of men to love safety and avoid danger. Yet there are times when they become indifferent to danger, and though such occasions are extraordinary, they still occur.

I have recently read in the work of a European writer that moderate laws will be generally obeyed, while laws of excessive severity will be constantly transgressed. Now, rigid laws are terrible to the people, and it is difficult at first sight to understand why men should break them. Why, then, do men refuse their obedience to such laws, and deem it no disgrace to be punished under them? If they are men of virtue, learning and intelligence, they cannot surely be without shame. Yet if not shameless, they could not be indifferent to being punished as the violators of the law, knowing as they must, that the world will then regard them as men of bad character and look down on them with contempt. Yet though the fact that they are incurring punishment is known to them beforehand, they are continually breaking these laws, and thus provisions made for the punishment of offences only become instruments for increasing them. Penalties intended to bring contempt upon those on whom they are visited, and to warn others against crime, only tend in these cases to make the world respect such men with admiration, and thus they acquire honour and others are encouraged to commit the same offences. When the judgment pronounced against any man for an offence is regarded by the nation as fair and just, the offender himself feels a sense of shame and others are warned against a similar course of action. But when a man feels that he has been unjustly punished and the public thinks so too, such punishment neither tends to warn others nor to make the person so treated ashamed of his conduct. On the contrary, indeed, he does, under certain circumstances, acquire the admiration and esteem of others.

Whether laws of this character deserve rather to be called laws or the roots of great evils, it is impossible for us to decide. Regarded with the eyes of learned men who respect the rights and liberties of the people, they seem utterly detestable. Yet tyrannical officials regard them as excellent things by means of which they can bring their own arbitrary views into action.

From the most remote times much injury has been done to mankind under the name of law. Look, for instance, at the execrable Inquisition which existed in Europe during the Middle Ages. By this tribunal all who did not believe in the doctrines of the Romish Church were arrested and tortured in every imaginable manner—put into dungeons and starved or burned to death. In the year A.D., 1806, certain of the Sovereigns of Europe formed themselves into what was called The Holy Alliance, and when men spoke of their rights and liberties they were imprisoned or killed, and even the military power was called in to suppress such views. But those who resisted became ever stronger and stronger, and finally ceased altogether to fear these laws. All this proceeded from their inherent injustice, and people at last were quite prepared to sacrifice their lives to show their sense of the injustice of the laws. When this is the case, it is a sign that laws are bad and ought to be reformed. If rulers fail to realize this, it will be in vain to try to keep the people down by actions of tyrannical cruelty. Such actions become causes whereby their own powers are eventually lost.

About the time of the termination of the Tokugawa Dynasty, the Government treated those who adversely criticised its action with great severity, and laws and regulations were made by means of which the judges and officials acted with the greatest arbitrariness, and finally the Dynasty fell. Now had the former Government been sagacious enough to see that this arbitrary course of action was thoroughly unsound, it would, in all probability, not have have met this fate—at all events not when it did. And it is for this reason that we say that if punishment is to be efficacious it must be recognized as just by him who is convicted and by those who surround him, and he and they must be impressed with the shame attending it. If, on the other hand, the punishment of any person by the Government tends to advance him in the estimation of the people, the Government is disgraced in the face of the whole world. In this condition of affairs all feeling of obstinacy should be dropped and the necessary reforms at once made. If a different course is pursued not only is a sign-board hung over Japan which will bring her into scorn among all other countries, but some terrible yet unavoidable calamity may overtake her.

FIRST AND SECOND CAUSES.

(The following is the *gist* of a (very diffuse) letter of Mr. Tedzuka Arita which appeared in the *Chuge Shimbun*.)

Brothers and sisters, go up to the altar of Jehovah with burning incense, and with true hearts render thanksgiving unto the Lord, for the Corean trouble has been settled by the Envoys who were sent to Corea. "O, clap your hands, all ye people, shout unto God with the voice of triumph." "O, come ye and behold the works of the Lord, what destruction he hath wrought upon the earth. He maketh wars to cease in all the world, he breaketh the bow and knappeth the spear in sunder, and burneth the chariots in the fire".

Now I hope to be listened to with attention. Since the time when trouble arose between us and Corea, it seemed as though war were unavoidable if the Envoys made a single false step, and very general anxiety was the consequence. All that was within my power was to pray to Heaven, and when I heard the glad tidings of peace I was profoundly happy. This blessed result may be said to have been achieved through the virtue of the Emperor and the zeal of our Envoys; but in reality it was the work of God.

Yet when we glance around us we see that there are none who recognize that it *was* the work of God, and, thinking that it was the work of men, they omit to praise Him. It is for this reason that I now write, although I am afflicted with my pen, and I trust that the people, convinced of the truth of what I have said, will believe in Jehovah and render thanks to Him.

REPLY TO THE ABOVE.

(Chuge Shimbun.)

In No. 785 of the *Chuge Shimbun*, a person named Tedzuka, rejoicing in the peaceful settlement of the Corean question and the negotiation of a treaty of amity by our Envoys, tells his brethren to render thanks to Jehovah. He says that it is through the mercy of God that the late Corean trouble has been peacefully settled. He seems to talk much as the missionaries do, and, taking extracts from the Bible, speaks as if he were the only person who knew anything about the Bible and tries to induce people to believe it.

Now, so far as I have heard, Jehovah is the Ruler over the whole earth, and as the Bible says that war is wrong, it must be wrong everywhere—without reference to any special place or country, but generally, in respect of all countries. When, then, the peaceful settlement of the Corean affair is claimed as specially the act of God, we find that it is not exactly thus. The believers in Christ in this country are but a small number, while in France, Prussia and America Christianity prevails almost universally. Yet in the late Franco-Prussian war, and in the civil war in America thousands have fallen. Now, can Mr. Tedzuka inform me why God in his mercy did not prevent these wars among people who so faithfully trust in him, and why he stepped in to prevent war among the Coreans who hardly ever even heard of His name? And what is the amount of faith in Him in Japan that he should bestow upon us these blessings?

Mr. Tedzuka is very probably only stating what he has heard from others, but this is not in accordance with the reason of the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

present day. I desire, therefore, to inform him that we were saved from war with Corea and negotiated a peaceful treaty with her by means of the virtue of our Mikado and the skill of our Envoys. The reason why so many people fell in the Franco-Prussian war is that Napoleon acted with excessive haughtiness. And the civil war of America with its enormous attendant loss of life originated in the Slave Question, and in the violation of natural laws involved in slavery.

If Mr. Tedzuka thinks otherwise, he is at liberty to defend himself, not, however, by texts from the Bible, but by arguments from reason.

NANA FUNSHITZU,
of Shimasa.

THE MODERN MARTYRS.

(Akebono Shimbun.)

It has been currently rumoured that numerous applications are made daily at the office of the *Hioron Shimbun* for admission upon the staff of that journal, by men who declare an entire indifference to imprisonment. We have discovered that this rumour is perfectly true. Some people on hearing it may say that the applicants must be poor students, who, being pressed by their creditors, can no longer remain in the schools, and have therefore applied to the newspapers for the honour of being admitted among the writers for the Press. But it is not so. These men are men of both European and Chinese learning, and we do not believe that students, however poor, would, for the sake of a mere subsistence, become newspaper writers and subject themselves to be imprisoned like thieves or other criminals, to be disgraced and looked down upon with contempt by the whole world. When, however, men of learning voluntarily place themselves within the reach of punishment and imprisonment by becoming writers for the Press, they must deem it an honour to undergo punishment for the sake of the Press. The laws of a nation should be observed by all, and those who violate them should be regarded as disgraced. Yet there are now numbers of men who deem it no disgrace to be punished for violations of the Press-laws. There must be some good reason for this, and that reason is that a vast and radical difference of opinion exists between the Government and the people on this subject. We should be glad to argue the whole question more fully, but the fear of one thing prevents our doing so.

NOTES UPON JAPANESE MUSIC.

BY DR. MULLER, LATE OF THE IMPERIAL MEDICAL COLLEGE.

(Translated by permission from the Transactions of the "Deutsche Gesellschaft für Natur und Völkerkunde Ostasiens.")

(Continued from J. W. M., May 6th.)

In playing the *biwa*, the first finger of the left hand is placed upon the first fret, the second finger upon the second, the third finger upon the third and the little finger upon the fourth. The thumb is only used for the second fret of the third string. A *biwa* note indicates that the strings are to be swept more or less rapidly backwards by the *batshi* from the note indicated, the upper strings remaining in their full length. Two notes of equal size and connected by a red tie indicate that both of these are to be struck, the remaining strings remaining in their full length. If, on the other hand, the notes are smaller, as, for example, g' *fis'* g', the *batshi* is passed over g' and c'', then *fis'* instead of g' is sharply struck, returning to g' without touching the string again. A small red half-circle indicates that the movement over the strings is to be made from below upwards in place of from above downwards, as is more common. The chords on the *biwa* are always played in *arpeggios*.

9. Each separate string of the *Koto* is numbered, the three last only being indicated by symbols other than the usual cyphers. In whatever mode the instrument may be tuned, the sign of the string to be struck remains the same, so that it is impossible to give the special signs of certain notes.

10. The mode of notation for the *Wanggong* is precisely similar to that employed for the *Koto*, only in an exactly opposite direction. Thus, the string which on the *Wanggong* lies at the greatest distance from the player is nearest to him on the *Koto*.

11. The *Kagura-fuye* has special names for each hole, which are used to indicate the notes.

The following also require consideration.

TIME. The distinctions made are:

Haya, or fast, which is chiefly employed in short pieces.

Nobe, or slow, used in longer or festive performances. I have attempted to arrive at some exact mode of determining this by metronome, but abandoned the attempt as hopeless. Having caused the *Haya* to be counted to me I found it to amount to 92 quavers in the minute. I then timed the performance of the instruments separately, and found that the time varied between 60 and 80. Later on, when they played together, I found that in the same piece it varied from 40 to 60. A precise time is not observed, for as a prolonged note upon the wind instruments is highly esteemed, the time is necessarily dependent upon the long-windedness of the performer. Hence, too, it follows that in the same piece the time is slower in the beginning than towards its close. It may also be remarked that time and notation in the case of wind-instruments are alike for old men and children.

The time is indicated in two ways. Small red dots signify in every case the beginning of a bar, each of these being divided into four equal parts. These last, however, are not specially indicated in the notation, but are marked by the student while he is preparing the piece by clapping the hands together vertically at the beginning of the bar and bringing them close together in rhythm at each of the following quavers. In secular music I have sometimes heard 2 4 or 2 8 time. In the *Gagakku*, however, only 4 4 time is employed.

Besides these dots, small black circles are placed between the notes at regular intervals of two or four bars, which serve merely to guide the performers. For the *Ohteki* these are replaced by short strokes. They are not used for the *Koto* or instruments of percussion.

In addition to this division by the help of dots, another mode of sub-division by larger dots exists. These are used for all instruments and recur at regular periods. They are either red, and indicate a beat of the *Taiko* with the *Obatshi*, or black and prescribe a clapping together of the *Shaku-bioshi*. Beats on the *Taiko* may also be indicated, as, for instance, in the final repetition of the second part of the piece. They must however recur at some exact place, the piece being then named accordingly. The piece given as an example is called "eight part" from the *Taiko* being used regularly at every eighth bar. There is a yet further subdivision, in *Go-dshio-raku*, for instance, consisting of two parts with sixteen bars. The symbol indicating repetition, the *Nikaishi*, is placed after each part. As the beat of the *Taiko* occurs for the first time at the third bar, three bars must also follow its repetition—eight bars later—before the part is finished and the *Nikaishi* symbol can be employed. This is also repeated in the second part.

The instruments begin after each other in order, and do not cease simultaneously, so that the first part is played as it is written only on being executed for the second time, and the second in like manner on being first played. In the European notation I have marked the points at which the various instruments begin with E. and their suspension with a pause, but there is no mode of indicating this in the Japanese system of notation, and it is accordingly relegated to the notes, or commentary which accompanies each piece. It is also employed to signify that the piece may be played *ad libitum* after the last beat of the *Taiko*, though the order of the instruments' cessation must be strictly adhered to. There is also a symbol (*Kwairu*) signifying that on a second repetition beats on the *Taiko* and *Shôko* are to be interpolated. The score of the piece then reads as follows: The part of each instrument is separately written. The title and red dots, large and small, being alike for each, the appropriate notes may be easily discovered. It is unnecessary to add that the various parts—like all Japanese and Chinese writing—must be read from above downwards and from right to left.

I will now proceed to describe more closely the mode of notation in use for the *Shô*, referring particularly to the accompanying diagram. The uppermost symbol (*Shô*) indicates the instrument for which the part is written. To the left of this are two letters, the upper meaning *Hiodsho* or key, and the lower *Taisoku* or

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

February, being the key of *e* minor.* The three upper symbols of the third row are known as *Goodshio-raku* the name of the piece ; I have been unable to discover their meaning. The fourth symbol is known as *Kiu*. In each piece this is either *Dsio*, which does not specify the time, *Ha* a long piece, or *Kiu*, a short one. The symbols following are *Shokioku*, a short piece ; *Haya*, quick time ; *Hoshi hachi*, indicating that a part is formed of eight bars ; or *Kwairu* which refers to the instruments of percussion.

The title is repeated for each instrument's part, with a change of course of the first symbol. The notes now follow in the order of the several bars, written on the left side of the red dots, the thick red dot used for the *Taiko* being repeated for each instrument. *(Here follow references to the diagrams which accompany the original text.)*

I must add a few further remarks on the *Koto*. When two notes are joined together by a red line they are played as indicated on the score. The fourth string is first struck with the first finger and held for a quarter bar. The second finger then passes over the third and fourth strings and glides rapidly over the fifth, the first finger and thumb then striking the sixth and eighth strings simultaneously. The seventh is not sounded. In order to indicate this more precisely, it is usual to describe a red vertical line and to write the leading and subordinate notes in small characters on either side of it. This, however, is not incorporated with the ordinary notation, but finds a place in the accompanying commentary.

As I have already said, the students do not commit the music to memory from these notes. They use the parts of which I have given an illustration in the accompanying table, for *Hidchiriki* and *Ohteki*. The bars are indicated in the usual manner. Then follow on the left the ordinary Japanese *Katakana* symbols (one form of the seventy-two Japanese written characters), and, to the left of these again and smaller, the proper notes, as may be easily seen by comparison. The sounds of these *Katakana* symbols for the *Hidchiriki* as far as the first *Taiko* note are as follows : *Fe, e rû, ré, e, ta, â, re e ;* the comma in every case signifying the red dot. These sounds are sung before the pupil, the hands indicating the time in the manner already described, and he studies them at home until he has fully committed them to memory.

The correct notes are properly speaking intended only as a guide to the teacher. For the *Ohteki* a row of *Katakana* symbols is first written, the first bar being *ti i ra a* &c. instead of *tô ô rô hô*, signifying that for the first time these notes should be taken an octave higher.

Having now explained as far as has been possible the Sacred Music, I purpose to add a list of the Chinese instruments employed in war or in religious ceremonies, closing my paper with an abstract from the ancient Sacred Chinese book compiled by Confucius, the *Chouking*†.

Instruments used in War.

The *Dzin daiko*, a drum held in the hand and beaten with a stick. Also another description beaten upon the back.

Dzin gane ; a metal gong.

Dzin-gai ; a large conch-shell with a mouth-piece of metal ; yields a loud noise on being blown.

All the foregoing instruments are employed to summon the soldiers together, as well as for signals, which consist of long-drawn, rhythmical notes. These are systematically written, but I have failed to procure a specimen of their notation.

The drums and shells are used on the march. The metal instrument on the cessation of the fighting.

Instruments for Secular Music.

The *Shaku Hachi* (*i.e.* one foot, eight inches) is a description of clarionet, though without a mouth-piece. It is made of bamboo cut from the lower part of the stem on account of the position of the knots and retaining its natural curve. The *Nito-nogiri* (or single-knot flute) is exactly similar to this, though without the curve.

The *Shime-daiko* (or drums bound together), is beaten with two drum-sticks.

Instruments used in Buddha-worship.

It is to be remarked that the number of instruments played by the priests is regulated by the amount of their salary. A slenderly remunerated bonze performs generally on two or three instruments.

The *Han Sho* (or half-bell) is the small bell which is suspended behind the temple and is used to summon the priests. It is also used at burials when the coffin is brought into the temple, the soul being supposed to leave its earthly habitation on the first notes being struck and to belong thenceforth to the other world.

The *Dora* is the Chinese cymbals

Wani gutsi (fishes' mouth) is an instrument which is hung up at the entrance to temples. It is beaten with the long stick, which hangs from it, to summon the god's attendance.

Smaller drums, known also as *Taiko*, are used in the temples to accompany Buddhist rites. They are employed to recall the souls of the departed from purgatory.

The *Hioshigi* is used like the *Shaku bioshi*, but in faster time.

The *Nio hashi* is a metal vessel which rests upon a cushion placed on a wooden settle. The clapper is covered with leather.

The *Shôko* is laid flat and used as in the *Gagakku*, a different form of stick being however employed.

The *Lin* is the *Nio hashi* in reduced proportions for domestic use. The clapper is attached to it to avoid the possibility of loss.

A small *Shôko* is also used by pilgrims and for domestic purposes.

Rei is a bell used by pilgrims in their ascents of Fujiyama.

Bangi is a wooden platter employed to summon the priests.

The *Tsuri gane* is a large bell suspended in a specially constructed scaffolding and sounded by means of a heavy wooden beam. In some of the temples in Yedo and Kioto these bells are of enormous dimensions They are employed to mark the time. At the close of the year each bell is struck 108 times.‡

Instead of the *bangi* a fish of wood or metal is used.

The *Yu* is a recumbent tiger in metal. The sound is given by a bamboo drawn backwards and forwards over the wrinkles of the back. The bamboo is brush-shaped.

The *Ke* is properly speaking of stone, but occasionally also of bronze.

The *Mokugio* is a fish-shaped instrument, the scales being marked by carved work in gold or green lacquer, while the remainder of the instrument is commonly coloured red. It is hollow within, the joints being concealed by means of lacquer. The *Batsi* used is covered with leather.

---

* The Japanese and Chinese are ignorant of the major keys, a fact upon which the paper of Dr. Wagner on the origin of the first five tones—touching necessarily upon the minor scale—has thrown much light.

† Le *Chouking*, un des livres sacrés des Chinois, qui renferme les principes de leur gouvernement et de leur morale ; ouvrage recueilli par Confucius, traduit par le pere Gaubil, missionaire en Chine, revu et corrigé sur le texte Chinois par M. de Guignes, Paris, Tilliard, 1770.

‡ Up to January 1873 the Japanese mode of reckoning time was in use. From sunset to sunrise, and from sunrise to sunset respectively, the time was divided into six equal parts, or *toki*. At the equinoxes each *toki* was of the length of two hours, varying somewhat each 14 days as their period approached. The time was given in the following manner. First three strokes were sounded as notice, the first two being slow and the last quick. To these followed from three to eight slow strokes, the last of these somewhat quicker than the others.

Thus at noon	9	strokes	were	given.	
,, 2	8	,,	,,	,,	
,, 4	7	,,	,,	,,	
,, 6	6	,,	,,	,,	
,, 8	5	,,	,,	,,	
,, 10	4	,,	,,	,,	

not counting the first, or warning strokes, and so on *da capo*.

The European mode of reckoning time was adopted in 187?. The three preliminary strokes are now first given followed by the European hours. The last stroke is always quickly given. The beam hangs in a scaffolding of woodwork, fastened with four cords, and is set in motion by a priest appointed to that end, the number of the movements between each two strokes, or rather pushes, regulating the time.

Shaku dzŭ are wooden [illegible] and rattled together. They are [illegible]

In Satsuma [illegible] *Sudzu*, a [illegible]

The following [illegible] owing to the [illegible] country they are now [illegible] performances.

The *Yamisen* [illegible] but with round [illegible] skin in place of [illegible] used for this purpose. [illegible] group, the [illegible] fingers without *Bats*.

The *Koto*.—The [illegible] of wood, the [illegible] underneath; a [illegible] strings of the [illegible] cover to the [illegible] the bow and [illegible] strument is [illegible] and the strings, [illegible] tuned in six, [illegible] second and [illegible] of the bow is used. A [illegible] upper part of the [illegible] during his performance the [illegible] bow. Lively [illegible] for instance a piece by the name *Gi-ryu* [illegible] however is somewhat [illegible] have seen an old instrument [illegible] consisting of a thick bamboo [illegible] piece was inserted. One [illegible] the other was closed by the natural knot of the bamboo which was pierced. It had no pegs.

The *Biwa* known in Japan by the Chinese name perfect form of the Japanese [illegible] are precisely [illegible] others are [illegible] of the volume of sound.

The *Teshiuca* [illegible] mouthpiece. Below it is [illegible] allowing of [illegible]

The *Rara* in its body resembles the *Hidzchiriki*, with the exception that it is furnished with metal orifices above and below. The mouthpiece is similar to that of the *Hidzchiriki*, but much smaller and is tied in the middle with a thread. It is made of a thin reed. There is another form of *Malagin* used, which is not lacquered and is employed by merchants to attract the attention of passers-by.

The *Yangking*, or western *Koto*, is only played by the daughters of illustrious houses, and hence it is difficult to procure much information about it. The body of the instrument resembles a zither, the strings being of steel; two circumstances which, taken in connexion with its name, would seem to indicate a western origin. The strings are fastened upon pegs which are turned with a tuning hammer. Two long bridges, pierced with holes, are fixed upon the sounding board, the strings running alternately through a hole in one bridge and over the top of the other in such manner that they cross each other in the middle of the board. One of the lower and thicker and two of the upper strings produce a note. The instrument is so placed as to present its broadest side to the player. The Chinaman, (a person of low social condition), who explained the use of the instrument to me, informed me that the middle only was used for the low and single stringed, the left division for the upper, notes. This, however, would seem to me incorrect, as I have had an opportunity of examining a *Yanking*, the moveable bridges on which were so placed that the two parts of the lower strings to the right and left of the bridges differed by about two octaves, those of the upper about a fourth, so that twenty-eight different notes could have been produced. The tuning as explained to me by the Chinaman was D E F G A H *c* (*sic*) for the lower strings and *g a h b d', dis', g'* for the upper. It is played with two small hammers, made of bamboo or tortoise-shell.

The *Tsuzu* and *Hanko* belong to the same class of instrument. They are wooden drums, covered with skin and tuned in fourths, yielding upon being beaten a clatter-[illegible]. They rest [illegible] made of six bamboos [illegible] They are beaten with bamboo [illegible]

The *Shakuhachi*, or tenor [illegible] which may be [illegible] each other [illegible] to escape if necessary. It [illegible] for announcing proclamations and by mandarins' [illegible] and yields a shrill note.

The *Daiko* is a flat parchment drum, suspended by three [illegible] and beaten with a bamboo drum-stick.

I must not omit to add some observations upon the *Gekin*. This instrument consists altogether of wood. A [illegible] which is passed obliquely through the body, one end [illegible] moved to swing loose. This wire imparts a more metallic quality to the sound of the instrument and lends support to the bleating shake of the vocalist. It is furnished with two pairs of strings, one of these tuned a fifth higher than the other, and is played with a small *batshi*. I have noted, as specimen, a piece "Manpan Rinsiu", which is played first by two *Gekins* and accompanied on repetition by a *Koto*.

Before closing my list of the instruments of the Far East, I must not omit to add the one peculiar to the Ainos of Yezo, a sort of Jews' harp. This is a thin piece of wood, about four inches long and two in breadth. In the middle there is fixed a pointed wooden tongue, about one line wide and fifteen in length, grooved on three sides and resembling the metal tongues of the *Shō*. The wood is held before the mouth and the tongue set in vibration by the breath and singing. I have also seen an iron instrument of this sort in the possession of the Ainos. It resembles our Jews' harp, with the exception that the outer bow is closed in front of the tongue and has not like it a free end. Nevertheless, I am inclined to believe the instrument to be of western origin.

I now propose to add a brief epitome from the sacred work *Chouking*, to which I have already referred, which I think likely to throw some light upon the origin and nature of the old Chinese music, closing my paper with some remarks on the relations of Chinese and Japanese music which, together with three specimens, have been communicated by Mr. Stein.

The Chinese entertain a very exalted opinion of the old music of which they have now lost all traces. They name it *Yo*, believing it to have originated in the remote and mythological period of their history. One of their Kings named Teho Yang, who reigned long before Foki (about 3000 B. C.; the dates vary between 2952 and 3,300) was so captivated by the song of birds that he composed music whose harmonies penetrated every heart, soothed the spirits and calmed the passions of men. Their faculties were rendered perfect, the humours of the body brought to fitting proportions and their lives prolonged. This music was known as *Tsuven*, or proportion and grace. Its chief aim was the harmony of all the proper virtues. This was brought to perfection by the relations of body and soul and the subjection of the passions to the voice of reason. It was joined to the spirit of courtesy. That, say they, which is manifested outwards must come from within. This harmony, which reposes in the heart, should spread its spirit outwards. The Chinese speak commonly of their ancient music as the Greeks did of that of Orpheus and of the lyre of Mercury (?). They had certain officials, whose duty it was to teach the sacred music employed to accompany the rites of the religious festivals.

The Abbé Arnaud, who has had the opportunity of examining a treatise upon ancient classical Chinese music, from which he has made the copious extracts published in his "Variétés Littéraires", observes that it rests upon the same foundations as that of Pythagoras and the Egyptians. "The chief aim of music, say all the Pythago-"reans, is to modify the strength of the passions, to "inform the understanding and to lead to the love and "practise of virtue." To preserve an equal mind, to be modest and upright, conscientious and constant, to love ones' fellow-beings—and, above all, those to whom one owes life itself,—these, say the Chinese, are the virtues to which music leads and which we must above all things seek for if we would deserve the name of musician. Such are the high ideas which the Chinese and Pythagoreans have in their day formed of music.

This pure and perfect form, however, soon degenerated, and we read in the *Chouking* that music is blamed for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

having hastened the corruption of morals.* No doubt the words which this music illustrated may have had some such effect.

The Chinese have at present an instrument named *Pepang*, consisting of several slips of hard wood, a foot in length, four fingers wide, and narrower towards the top where they are bound together. They use them like our castagnettes for marking time.

Of the instrument named *Kin*, the discovery of which is attributed to Fohi, wonderful things are related. It is said of this prince that he first fixed the laws of music, and that after having organised fishing he composed a song for the fishermen. Thus *Chin-mong*, the inventor of the plough, is said to have composed a song for the husbandmen. *Fohi* took a piece of the wood known as *Tong*, hollowed it and fashioned from it the *Kin* of seven feet two inches in length. The strings, twenty-seven in number, were of silk. He named this instrument *Li*.

The Chinese are not unanimous as to the number of its strings. Some say that they numbered twenty-seven, others twenty-five, twenty, ten and some even five. Again its length is variously stated at seven feet two inches, and three feet, six inches and six lines. Its upper surface was, it was said, round like the heavens, its lower part flat like the earth; that the sea of the *Tong* or dragon (a part of the instrument) measured eight inches so as to correspond with the eight winds, and the sea of the *Fong* or phœnix, four inches in order to represent the four seasons. Those who maintained the existence of only five strings supposed these to represent the five planets. Fohi imparted a celestial tone to this lyre, and played a piece named *Kia-pien* in praise of the beneficence of the intelligent spirit and in order to bring heaven and men more closely together. Others say that the instrument dispelled evil enchantments and drove away impure thoughts from the heart.

The Chinese disagree as much as to the form and inventors' names of the following instruments as of the origin and shape of the *Kin*. The strings, I have already said, were made of silk, and to the present day no other material is used for stringed instruments‡ in China. There is, however, a great variety of these. Those, it is maintained, are by far the best which come from silk worms fed with the leaves of a tree named *Uchi*, the strings having a fuller and rounder volume. This tree resembles the mulberry and bears fruit of the size of a nut. The shell is black, the flesh white and edible. The tree is employed by dyers to produce orange-tawny.

The tree used by Fohi was the *Tong*. There are several descriptions known, the black alone bearing no fruit and both leaves and branches being of blackish hue. The white *Pe-tong*, with white leaves, bears yellow and violet flowers in the beginning of spring; the leaves appear only at the Equinox. The flowers and leaves are employed in medicine. There are also other descriptions whose leaves and bark are gray, and which bear a fruit of the size of a peach, from which an oil is made used in dying. Its fruit is not edible. There are also other varieties with green leaves and bark and with edible fruit of the size of a hazel-nut. Some have blossoms without fruit, others fruit without blossoms.

A tree named *Ye*, called by the Chinese the King of Trees, is used for the same purpose.

The *Se*† is another instrument attributed to Fohi. He is said to have formed it from a wood named *Sang*, and to have furnished it with thirty-six strings. It served to render men more virtuous and just. Some writers maintain that this instrument had originally fifty strings, and that Hoang Ti made one of twenty-five as Fohi's instrument produced too mournful a sound. Others again allege that Fohi's wife, Niu-va, undertook its reduction, whereupon everything in the universe was brought into order. The instrument was eight feet one inch long and one foot eight inches wide.

The *Ming-Kieou*, or simple *Kieou*, was a three-cornered instrument, though sometimes round, both forms being mentioned in Chinese books. It was made of stone and yielded harmonious sounds. It is referred to in the chapter *Yu-tsi* of the *Chou king*.§ This was hung within a frame in the manner shown in the diagram. In the *Lo-king-tou*, or catalogue of the sacred books, these instruments are represented carrying two rows of eight such stones in triangular form. It was called *Pien-King*.

There is also another and much larger instrument known as *Ta King*.

The Chinese possessed many varieties of flute. The simplest, known as *yo*, had only three holes and was held diagonally like our flute.

The *Tchong* was also a description of fife or trumpet, for it is difficult to distinguish between these instruments. It was made of metal and was pierced with five holes on the one side and one on the other. Tchong was also the name of an old musician whose brother Pe was equally versed in the art. The united names Tchong-Pe thus became as symbolical as those of the brothers Castor and Pollux.

The *Tie* was another flute which was similarly played and had five holes.

The *Kuon* was a double flute, each with six holes.

The *Tchi* was a flute, made like all the preceding from reed. There were two descriptions, the larger being 16 inches long and 3 inches in circumference, and the smaller 14 inches long. Some believe them to have had eight holes and others only seven.

The instrument named *Siao* consisted of twenty-three pipes and was four feet in length. There was a smaller one with only sixteen pipes and fourteen inches in length. The sound of this instrument, it is said, resembled the song of the Fong Hoang,‖ and the form its wings.

The *Seng* was a description of portable organ, four feet in height and respectively of nineteen and thirteen pipes. Its invention is attributed to Niuva, wife of Fohi, who is said to have played it on the hills and waters. It is said to have possessed a very delicate tone.

---

* This is constantly repeated in the *Chouking*. A considerable number of the good Emperors invented meritorious music, while the bad rulers are reproached with having corrupted the art or persecuted its professors. The Emperor Chon (2255 B.C.) invented music which tamed wild beasts. This was called *Tachao*.

A similar importance is attributed to the connexion between music and dancing. Lo-pi says that the life of man depends upon the union of heaven and earth and of the use of all created matter. The *fine matter* (also called spirit or vapour) circulates in our bodies. If the body be not kept in motion the matter does not flow but collects, and hence sickness which invariably proceeds from obstructions. Under a peaceful government we observe no sickness (in the body politic); under a bad king everything is in disorder. Thence, says the *Liki*, one of the sacred books, we may judge of the condition of a country from its ordinary dances. It is also said that we may judge of a man's morality by observing the manner in which he performs on the *Se*. This dancing is a movement of the body which is also in relation with the state of the Government precisely as this music.

‡ The *Yanking* with steel strings would not appear to have been known at that time.

† Lopi (between 954 and 1279 B.C., under the Sang dynasty) in his history of the Emperor Tchusiangchi, (before Fohi), says that Se Koui was ordered to make a *Se* with five strings, in order to adjust the harmony of the universe which was disturbed by storms and the irregularity of the seasons. This is the earliest musical instrument mentioned. Lopi here remarks that music is only the agreement of the two principles *Yang*, or active, and *Yin*, or passive, upon which the preservation of the visible world rests. The beautiful order of the universe is indeed harmonious, and whether we consider the physical world, that is to say heaven and earth, or the moral world, that is to say men, or the political world, or all of these together, we invariably encounter these principles which must agree or harmony is impossible. Lopi adds: the wise man brings the discords of the *Yin* and *Yang* into agreement and harmony, and discovers instruments to express their unity. The *Kin* and *Se* are the instruments to which he chiefly refers as being present in this harmonious concert. The first rules the active, the latter the passive principle. The monarch possesses both. The tributary princes have only the *Se* and may not possess the *Kin*. The *Kin* is prominent in life and hence provokes joy; the *Se* governs death and hence raises sorrow and commission.

§ This chapter treats of the period 2253—2049 B.C. The Emperor *Yu* says: When I wish to hear music, its five tones and eight modulations, I look into my good and evil conduct and wish that I may hear the songs that are adapted to the five tones. The Minister, named Kouei, who regulated the music, says: When the *Ming-kieou* is sounded, or the *Kin* or *Se* are played, accompanied with songs, then come father and grandfather (*i.e.* the dead take part in the festival. Yu's guest (the dead Emperor Tantchou) takes his place: all the tributary princes take their places. Amid the sound of flutes and small drums (*tao-kou*) begin and end simultaneously the *tchou* (a description of *shuh-hi-chih*, and the *yu* (a description of castagnettes). The bells and organs peal in turn, and the Foang-Loang (a fabulous bird) flaps his wings with joy on hearing the nine chords of the *Siao-Chao*. When I strike my stone (*Kieou*) even the wild beasts jump for joy.

‖ A fabled bird which previous to the adoption of the dragon was the symbol of the Emperor and, later, of the Empress.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The *Yu* was also an organ, with thirty-six pipes of four feet two inches in length.

The *Taoku* was a little drum employed in religious festivals. Besides this the Chinese had many other descriptions of drum, used in making offerings to the spirits or gods to whom the festival was dedicated. They were:

The *Feng-ku* or *Fuen-ku*, used in military expeditions. It was eight feet long and hung in a frame.

The *Hui-ku*, or thunder drum, had eight sides which were beaten. It was used at the festivals of the superior gods, called *Chin*.

The *Lu-ku* was another drum, having four sides and employed at the festivals of the *Kuei*, or lesser Gods and ancestors.

The *Ling Ku* had six sides and served for all secular festivals. Like all the preceding drums it was hung in a frame.

There were also several drums used for ordinary purposes and borne by men. One of them was the *Tong-Leao*, a description of tambourine.

The *Tcho* was a lacquered wooden vessel whose inner wall was beaten with the *tchi*. This instrument was used on the first introduction of music.

The *Yu* was another instrument resembling a recumbent tiger in bronze. The hairs of the back were moderately high and formed a sort of keyboard¶ which was struck with a wooden clapper a foot in length. It was played shortly before the close of the performance. There was also an instrument known as *Hien*, or *Hiuen*, which was employed in ancient music and attributed to Fohi. It resembled a shell and was pierced with six holes.

Another instrument, the *Ting*, invented by Fohi for offerings to the Gods (*Kiao-chen* or *Fong chen*) is made the subject of a special dissertation by Lopi. This instrument, he contends, is the origin of all harmony. When the orifice is underneath, the instrument resembles the bell, the basis and foundation of all music; when above, it becomes a vessel fitted for offerings. The three feet are the emblem of the Trinity.

The *Yong*, or *Tchong*, is a bell. A double row of these, each consisting of eight bells, was hung together and the instrument was then known as *Pientchong*.

The *Po* was a description of small bell. Similar bells were fastened to the drums, such as the *Tcho, Chao* and *To*.

The clappers of the bells were called *Che*, tongue; bells with wooden clappers were *Mota*, or if of metal *Kin-to*.

I have observed that the bell is everywhere spoken of in the *Chouking* as the oldest instrument. Ling Lung took a piece of reed in the valley of Hiaki, cut holes and breathed into it so as to imitate the sounds of the bell. He distinguished between the different notes from which six *liu* and six *lu* are named and with these imitated the song of the *Fong-hoang*.

The Minister Yong Yueng invented twelve bells having relation to the twelve months. As the five tones harmonised the seasons were divided.

It is related of Kiu (1900 B.C.) that he played western music, but I have been unable to discover any particulars.

¶ This explanation differs from that which I have given under the head of instruments in use in Buddha-worship. I, however, believe mine to be the more accurate of the two, as it is still in use and seems to correspond better with the form of the instrument.

A COMPARISON BETWEEN CHINESE AND JAPANESE MUSIC.

(By Mr. Stein. Translated from the Transactions of the German Asiatic Society.)

In several contributions to the German Asiatic Society the subject of Japanese Music has been treated with much fulness of detail. As a pendant to the melodies which have been reduced into our notation by Mr. Holtz I would offer the following three Chinese pieces, the last of which has probably given offence to the ears of many of my readers. I desire permission at the same time to make a few comparisons between Chinese and Japanese music.

Although the music of the Chinese is the mother of that of the Japanese—as indeed we find that the greatest similarity exists between the industries, arts and sciences of the two nations,—it is observable that in this, as in other departments, the mother has been outstripped by the daughter. Although the barbarous element is common to the music of both nations in the drum, clapper, bell, and instruments of percussion, and each appears anxious to rival the other in the size of their kettle-drums and cymbals, still Japanese music has the more earnest and sustained tone. In one of the contributions of Mr. Holtz there is especially a Spring-song "Haru-no-uta" which has a very pleasing melody, whereas in the generality of Chinese music melody will be sought entirely in vain. The theory of Chinese music, with its mystical and speculative relations and combinations (the Japanese analogues of which are very fully detailed by Dr. Müller in the VIth volume of the "Transactions") embraces indeed the twelve semitones of the octaves; but the practical application of them is hardly reducible to a theory, and much more do the few sounds which assume any prominence amidst the noise of a full orchestra appear perfectly arbitrary and devoid of all coherence. This is intelligible enough among a people so absolutely destitute of fancy as the Chinese, as they found for their melodies no such prototypes in nature as for their lacquer paintings, ivory carvings and similar elegant ornamentative works.

At Chinese new-year, I heard some orchestral music in Shanghai composed for nine noise-instruments,* a vase-shaped drum, small drums and kettle-drums, gongs, cymbals, clappers and bells, and, as the only instrument capable of yielding a melody, a small flute. The latter was only sounded when the big drum had a bar's rest, and the whole constituted a heathenish hubbub which seemed intended to thrown even their wooden idols into agony and terror.

An approximative idea of Chinese vocal melody may be obtained from hearing a Chinese read or relate anything in the mandarin dialect, the chief difference being that the sounds in speaking are less extended and less sharp. The speech moves constantly in a scale of about an octave up and down, and the observance of the correct tone is so important that a word of two syllables which, for example, would be pronounced between the notes D and G, might have an entirely different meaning if sounded between G and F. When I first heard on my travels a long narration made by a Chinese lady to her husband, I thought it was intended for singing, but I was set right by the steward, who said. "This no belong Sing-song, this belong Talky-talky."

The three following pieces are melodies for the violin; the most popular of them I took down from my servant while in Hongkong. I afterwards often heard it in Shanghai, and even in Yokohama it has caught my ear while passing by some of the Chinese houses on the so-called Swamp. It is remarkable as showing the constitution of their sense of sound, that so soon as this servant heard his favourite air played in single notes on the piano, he recognized it at once, but denied any relation with the original when I harmonized it or even played it only with thirds and fifths. I have noticed the same thing among the Japanese. The Haru-no-uta, which is known to every child, is never recognized if fully harmonized or even played in thirds, while the added octave finds immediate recognition. Even after they have heard it played with harmonies several times, and can hear the melody distinctly through the harmonies, the hearers

* *Lärminstrumente.* It is impossible to give the force of this combination in English.

invariably express their conclusion that it sounds far better in single notes.

With this apparent total absence of all perception of harmony it seems paradoxical that two Japanese musicians of the Imperial Band, who had only been under their English instructor for three years and a half, were instructed, and naïvely accepted the commission, to put together, instruct, and conduct, upon European principles, an orchestra for the Imperial Court.

The Japanese are certainly not wanting in a power of imagination, they can themselves do in wonderfully short time all, and even more than all, that their former teachers can do—so the Band master above referred to assured me.†

THE KOBE REGATTA.

(From a Correspondent.)

More than ordinary interest was felt in the Kobe Regatta and Athletic Sports this year owing to the fact that, both afloat and ashore, several events are down on the programme for which visitors from other ports could compete. The principle event was, of course, the Interport Boat Race for Four-oared Canton Cutters, to compete for which Shanghai and Yokohama had both sent a crew. Previous to the arrival of the Shanghai crew they had been held rather cheaply by their Kobe rivals, probably on account of their easy last year defeat at Nagasaki; but their superior strength and weight, combined with the excellent style of their rowing, changed public opinion as soon as the blue and gold appeared on the Kobe course; and the good opinion then gained was fairly maintained until the day of the race, though the Kobe people had, I am bound to say, full faith in their own crew.

The Yokohama Crew laboured under the disadvantage of arriving at Kobe on the 24th April, only two days before the race, and that after a very rough and disagreeable passage. Their first appearance was looked for with interest, but after that they caused no anxiety to their opponents from either of the other ports.

Wednesday was a dull day, and just about one o'clock rain began to fall, but yet proceedings were opened with a race for two-oared Dinghies and a Compradores Boat race, which excited little interest. The great race of the day was defered until four o'clock, and then finally postponed until next day as the state of the water would not allow of it being rowed.

Thursday was again a wretchedly dull day but the rain luckily kept off, and the attendance at the pavilion of the K. R. & A.C. was every bit as good as it had been on the previous day; many ladies again being present. About two o'clock Shanghai and Kobe paddled to the starting post, Yokohama being towed by the Committee's steam launch. The water was lumpy a fact which was supposed to be an advantage to Yokohama and Kobe but a disadvantage to Shanghai. After a short delay a start was effected, Yokohama being inshore, Kobe in the middle and Shanghai outside. Kobe got away with a good lead rowing 20½ strokes for the first half minute. Shanghai was impeded at the start by bow "catching a crab," but the crew soon settled down to their work in good style, rowing 18½ strokes for the first half minute, while Yokohama seemed unaccountably slow in getting away and was almost at once left hopelessly behind, rowing only 16½ strokes for the first half minute. After the first burst the rate of both the Kobe and Shanghai stroke fell to 18 strokes per half minute, at which it was kept up nearly throughout the race, while Yokohama increased the rate to 17. Shanghai speedily challenged Kobe for the lead, and, rowing in excellent form, obtained it at the mile stake boat. The Kobe crew were by no means so steady as Shanghai though they rowed very well. On three different occasions one of their oars got buried by a wave rolling up to the rowlock of the boat, which had all the bad effect of a "crab." Shanghai gradually increased the lead, being at Board's Point, about 300 yards from the winning post, at least two clear lengths ahead, when at this point Kobe put on a fresh spurt and considerably lessened the gap. What would have been the ultimate result of the race had no accident happened is of course impossible to say with certainty, but there is every reason to believe that it would have been favourable to the Shanghai boat. Her crew were rowing well within themselves, and could doubtless have met any dangerous spurt on the part of their opponents with an equally telling one on their side. Just when the bow of the Kobe boat was drawing to a line with the stern of the Shanghai boat, the bow in the latter, perhaps through over eagerness to make sure of the race, caught a "crab" or got his oar buried in a wave. Be the cause what it may the effect was that the necessary recovery was not made, but the rowlock twisted out of shape and the oar snapped inside the button and under the leather. For some time it was jammed inextricably in the rowlock, impeding the boat in its course and No. 3 in his stroke. Immediately this mishap took place everything was in favour of the Kobe boat, which shot ahead in a few strokes and won. Yokohama, strange to say, was never in the race, which resolved itself into a splendid contest between the other ports. It was impossible not to sympathize with the Shanghai crew on account of the misfortune which had deprived them of the race. They were received with consolatory cheers; and the Kobe and Yokohama crews, the ladies, the committee, visitors and residents vied in expressing heart felt regrets at their mishap. The time, 11 m. 25 sec. was not fast, but considering the lumpy state of the water was as good as could be expected.

KOBE.—Red, White and Blue		1

2 M. T. B. Macpherson	10st.	13lbs.
3 J. W. Henderson	10st.	13lbs.
A. C. Sim, stroke	11st.	1lb.
A. Vivanti, cox.	8st.	5lbs.
SHANGHAI.—Blue and Gold		2
1 O. M. Wyatt	11st.	9lbs.
2 J. Andrew	13st.	4lbs.
3 R. Mackenzie	13st.	4lbs.
D. Glass, stroke	11st.	6lbs.
C. Dowdall, cox.	9st.	4lbs.
YOKOHAMA.—Red and Black		3
1 H. J. Snow	11st.	8lbs.
2 W. F. Towse	11st.	13lbs.
3 F. G. Davidson	12st.	4½lbs.
H. C. Litchfield, stroke	11st.	9lbs.
J. Hodgkins cox	9st.	7lbs.

A race for Club Fours, in heats, followed which resulted in favour of Thornicraft's crew. Two other events on the programme were looked forward to with much interest, viz.: a Single Sculls race, over a mile course, for the Ladies' Purse, and a Double Sculls race, also over a mile course, for the Kobe Cup. For the former Wyatt of Shanghai was to contend against Sim of Kobe, and for the latter Glass and Wyatt of Shanghai against Sim and Henderson of Kobe. On account of the rather unsatisfactory result of the Interport fours race the above two events excited more than ordinary interest, as the result would more decidedly have shown which port had the superiority over the other. The excuse of rough water was the cause assigned for not rowing either of the races in question, but it is to be much regretted that strenuous efforts were not made to carry out the programme for the sake of the ladies, who so patiently sat through the bad weather to witness the races, if for no other reason.

Full particulars of the Athletic Sports having already appeared in your columns, recapitulation is needless, but it may be as well to point out that, out of the thirteen interport events contended for, Kobe won nine and Yokohama four. Of course it was to be expected that the majority would fall to Kobe, as that port was naturally better represented than the others. It was thought that Henson would carry off the 100 yards and and quarter mile races; and he probably would have done so if he had been in his usual form, which was, however, much interfered with on account of the training he had to undergo for the interport Boat Race. As it is, it must be borne in kind that on previous occasions Henson's time never exceeded 10¾ for the 100 yards, and in 1874 he did that distance in 10¼ seconds, whereas it was run this year in 10¾ sec. The quarter of a mile time, 58 sec., was not good, it having been done in 1874 by Eaton in 53 sec. and in 1875 by Henson in 52 sec. Kobe was at a decided disadvantage in that Macpherson was unable, through a sprained ancle, to compete, as he can jump 5ft. 2in. and is a most formidable antagonist for the half mile and mile. These remarks are made in no disparagement of Yokohama Athletes, but only to advise them not to rely for the future on what has been done this time, but to try and excel it, or they may find that on another occasion Kobe may score more wins then even now. The Walking Match was especially well contested, being won by Sim only by a foot, and the mile was run in the good time of 5min. 3sec. by a Griffin.

Saturday was devoted to such of the Club events which had not

† If we mistake not, there is an intentional ambiguity here in the original, which is cleverly managed so that the reader shall be left in doubt whether the Japanese are credited with extraordinary conceit or extraordinary aptitude. The original is as follows, and our readers must judge for themselves. "*Eine grosse Einbildungskraft fehlt den Japanern sicher nicht, sie können Alles in wunderbar kurzer Zeit selbst machen, wo möglich besser als ihre früheren Lehrer—so erzählte mir der betr. Capellmeister.*"

taken place, and wound up with the Tug of War between Kobe and visitors, which resulted in an easy victory for Kobe, notwithstanding the great weight of obligation the visitors had on their side for the great kindness, hospitality and attention which they had received from the residents of that delightful little watering place of Kobe.

AMATEUR ATHLETIC ASSOCIATION.

Yesterday was everything that could be wished as regards weather. A strong wind had, luckily, dried up the running path and so done away with the disadvantage which might have been expected from the heavy rain which fell on the previous day; the course being in a favourable condition for running. There were fewer spectators on the ground than usual, although the grand stand was well filled with ladies. All that was wanted was the attendance of a band to while away the tedium of the unavoidable intervals between the races.

100 YARDS FLAT: HANDICAP. TWO PRIZES.

1ST HEAT.

F. M. Jonas, scratch 1
D. Scott, jun., 7 yards 2

Jonas at once took the lead and won easily in 11¼ sec.

2ND HEAT.

J. Y. Henderson, 7 yards 1
A. T. Waston, scratch 2
A. Brooke, 10 yards 3

Watson could never catch Henderson who won with plenty to spare, time 11¼ sec.

3RD HEAT.

F. Walker, 7 yards 1
H. J. Snow, 8 yards 2
J. J. Dare, 4 yards 3

The result was in favour of Walker by a full yard; the time being a little better than the previous heats—11 sec.

THROWING AT WICKETS. ONE PRIZE.

D. Scott, jur 1
W. J. Hancock 0
F. J. Smith 0
T. R. H. MacClatchie 0
A. H. Dare 0
J. Y. Henderson 0
T. G. Richmond 0
J. J. Dare 0
C. H. Cobden 0
C. P. Hall 0
F. M. Jonas 0
H. J. Snow 0
C. Esdale 0
F. Walker 0

Scott won this in the throw off for ties by two hits out of three.

150 YARDS FLAT: HANDICAP. TWO PRIZES.

1ST. HEAT.

H. J. Snow, 12 yards 1
W. J. Hancock, 11 yards 0

Only two started, and as Hancock gave up Snow finished as he liked. Time 17½ sec.

2ND HEAT.

F. Walker, 10 yards 1
A. T. Watson, 2 ,, ... 2
F. M. Jonas, scratch 3

Walker was never headed and won a capital race in 16½ sec.

THROWING THE HAMMER, 16 LBS.: HANDICAP. ONE PRIZE.

F. J. Smith, 10 feet 1
A. J. Smith, 10 ,, ... 2
A. Brooke, 20 ,, ... 0
C. Esdale, 15 ,, ... 0

The best man being absent no great throw was made, F. J. Smith winning with 79 ft. 8 in. including his allowance of 10 feet.

HIGH JUMP: HANDICAP. One Prize.

F. J. Smith, 3 inches 1
A. H. Dare, scratch 2
J. J. Dare, 4 inches 0
C. Esdale, 6 inches 0
A. J. Smith, scratch 0

A. H. Dare and A. J. Smith both cleared five feet, the latter winning by his allowance.

ONE MILE WALKING: HANDICAP. One Prize.

Geo. Hamilton, 20 secs. 1
C. Esdale, scratch 2
W. J. Hancock, 30 secs. 3

Hancock was never in this, which became a well contested match between Hamilton and Esdale, resulting in favour of the former by about five yards in the good time of 8min. 25sec.

LADIES' PURSE. HALF MILE FLAT: HANDICAP. ONE PRIZE.—"THE PURSE."

A. H. Dare, scratch 1
J. Y. Henderson, 45 yards 2
A. Brooke, 60 yards 3
W. J. Hancock, 40 yards 0
F. J. Smith, 50 yards 0
T. R. H. McClatchie, 15 yards 0
D. Scott, jun. 60 yards 0
G. Hamilton, 50 yards 0
J. J. Dare, 25 yards 0
F. M. Jonas, 30 yards 0
M. J. Snow, 35 yards 0

This was the race of the day and for which eleven started. Scott kept the lead for more than half the distance, but was passed by Henderson at the top of the straight. A. H. Dare, who had run through his opponents, here came up and in turn passed Henderson, securing the race by at least four yards in the excellent time of 2 min. 9 sec.

The Purse, in the shape of a belt, was presented to the winner by Mrs. Wilcox with some appropriate remarks, which were suitably replied to by Mr. Dare. Three cheers were heartily given for the ladies, and the winner of the purse carried off by his companions in a position more honourable than comfortable.

HURDLE RACE: 120 YARDS OVER 10 FLIGHTS: HANDICAP. TWO PRIZES.

F. J. Smith, 10 yards 1
A. H. Dare, minus 5 yards 2
T. R. H. McClatchie, 2 yards 0
H. J. Snow, 2 yards 0

This was an easy victory for Smith who was never headed. Time 20¼ sec.

FINAL HEAT. 100 YARDS FLAT.

F. Walker, 7 yards 1
J. Y. Henderson, 7 yards 2
F. M. Jonas, scratch 3

This was a very close race. Walker kept the lead from the first but was hard pressed by the others, winning only by about six inches. Time 10½ sec.

A race for sailors and marines concluded the proceedings; the race for Honorary members being postponed until to-day.

SECOND DAY.

The Members may be congratulated on again having favourable weather for their sports, although yesterday was not so beautifully bright as Thursday was. The attendance within and without the enclosure was about the same as on the first day.

11.—FINAL HEAT. 150 YARDS FLAT.

H. J. Snow, 12 yards 1
F. Walker, 7 ,, ... 2

This was an easy victory for Snow as Walker could never catch him, the time being good: 15 ⅛ sec.

12.—LONG JUMP: HANDICAP. One Prize.

A. H. Dare, scratch 1
C. Esdale, 24 inches 2

For this only two contended, and though Esdale had the very large allowance of 24 inches he failed to win, as he only cleared 16 ft. 1 in., against A. H. Dares' 18 ft. 2½ in.

13.—440 YARDS FLAT: HANDICAP. Two Prizes.

H. J. Snow, 20 yards 1
J. Y. Henderson, 20 yards 2
A. Brooke, 40 yards 3
W. J. Hancock, 40 yards 0
T. R. H. McClatchie, 25 yards 0
D. Scott, jr., 35 yards 0
F. M. Jonas, scratch 0
F. Walker, scratch 0

Brooke made the running being followed by Scott, but both had to succumb to Snow and Henderson in the straight. Time, 55½ sec.

14.—POLE JUMP: HANDICAP, One Prize.

F. J. Smith, scratch 1
A. J. Smith, ,, ... 2

This was a match between F. J. Smith and A. J. Smith resulting in favour of the formed by three inches. Height cleared 9 ft.

15.—100 YARDS FLAT: HANDICAP. For boys under 12 years of age. Entrance free. Three Prizes.

E. Brooke 1
Vincent 2
Braga 3

This was run in heats, the three prizes falling in the order above named.

16.—ONE MILE FLAT: HANDICAP. Two Prizes.

A. H. Dare, scratch 1
A. Brooke, 200 yards 2
F. Walker, 70 yards 3
W. J. Hancock, 150 yards 0
T. R. H. MacClatchie, 120 yards 0
Geo. Hamilton, 80 yards 0

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

This was by far the best race of the meeting. Brooke, who had 200 yards allowed him, looked very like winning as he kept the lead nearly to the post. Dare, who had started from scratch, gradually but surely passed M'acClatchie, Hancock and Walker, and coming down the straight for the last time put on a terrific spurt to catch Brooke, passing him only about 30 yards from home. This race was run in the extraordinarily short time of 4 min 45 sec—the shortest time on record in the East. The winners time was.

1st lap	1. 3
2nd ,,	1.13
3rd ,,	1.18
4th ,,	1.11

17.—VAULTING: HANDICAP, One Prize.

A. J. Smith, scratch	1
F. Vivanti, 6 inches	2

Vivanti failed to make any advantage of his allowance of 6 inches leaving the prize to A. J. Smith who cleared 6 ft. 4 in.

18.—CONSOLATION. ONCE ROUND.

F. M. Jonas	1
F. Vivanti	2
W. J. Hancock	3

Vivanti pressed Jonas hard at first but could not last, and the latter came in an easy winner of a slow race in 59½ sec.

HONORARY MEMBERS' AND STRANGERS' RACE. 150 YARDS HANDICAP.

Rich, scratch	1
Macleay, scratch	2
Remers, 15 yards	3
Cope, 10 ,,	0
Lilburne, 5 ,,	0
Permewan, 10 yards	0

Six entries were made on the ground for the ground for this, which Rich won by about a yard. Time, 17¼ sec.

19.—STEEPLE CHASE: HANDICAP. Two Prizes.

F. J. Smith, 75 secs.	1
Geo. Hamilton, 40 secs.	2
T. R. H. McClatchie, 40 secs.	0
J. J. Dare, scratch	0
F. Walker, 50 secs.	0

The misfortunes which were expected of the competitors excited great interest—though more in the way of curiosity than pity—and when the bell rang a rush was made by the spectators to the first water jump, in order to secure a good place to witness those starting come to grief. One unfortunate wight failed to clear the first jump: but he lost no time in scrambling out of the water and following the others in their struggle up and down hills, through mud and water, down precipices and over hurdles. Dare actually came in first being closely followed by Hamilton, though Smith, who was a good third, won by his time allowance. McClatchie was last, but gallantly keeping on was rewarded for his perseverance by receiving second prize, as all the others were, for some fault or another, disqualified.

Before the steeplechase which closed the events on the programme, proceedings were diversified by a "Tug of War," England *v.* The World, which England lost, but there was a great difficulty in restricting those engaged to an equal number on either side.

At the conclusion the prizes were presented to the several winners by Miss Smith, who very aptly congratulated each as he appeared. Three cheers were given for the ladies; and so closed a meeting redeemed from the obscurity into which such meetings usually fall by the splendid time in which the mile race was run.

Law & Police

IN H. B. M.'S COUNSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, May 8th, 1876.

A. MITCHELL, TRADING AS CURNOW & Co., PLAINTIFFS,
vs. G. REYNOLDS, MASTER OF THE STEAMSHIP,
Flintshire, DEFENDANT.

JUDGMENT.

By the Bill of Lading the Master acknowledges to have received four casks of wine in good order and condition, and agrees to deliver them in like good order and condition subject to the usual exceptions.

It has been proved and, indeed, it is not disputed, that only two of the casks have been landed in good order, that one of the remaining two was landed empty, and the other landed in staves.

Unless, therefore, the Master show that the loss is included in one of the exceptions of the Bill of Lading, he is liable to pay to the plaintiffs the value of the goods.

The only exception relied upon for the defence is that the loss was occasioned by the act of God, and a protest made by the master, mate, and carpenter of the vessel has been handed in to show that after the vessel left Singapore she encountered heavy weather, and on the 26th March, was struck by a tremendous sea which caused her to lurch over and which shifted the cargo in the hold. The engines were stopped in order to get cargo right again. The statement in this protest can only be taken as admissions against the master, but even admitting the statement as to these occurrences to be evidence there appears to be nothing in the facts stated to release the Master from his liability.

His vessel is struck by what is called in the protest a tremendous sea and the cargo shifts.

Now, it is to be observed that this sea which causes the cargo to shift does not seem to have done any other damage whatever. It appears, moreover, to have been the first rough weather that the vessel encountered after leaving Singapore.

The inference which I draw from these facts in the absence of any evidence as to the proper stowage—for the general declaration of the protest that she was properly stowed is not evidence—is that the vessel was not properly stowed at Singapore.

The evidence of Mr. Scott that the vessel was properly stowed when she arrived here does not affect this, as it is admitted on the part of the Master that the cargo was restowed at sea.

It appears, then, that the Master has not made out his defence that the damage was caused by the act of God, and judgment must be for the plaintiffs. The amount of the damages is what the, goods were worth to the plaintiffs on the day the goods ought to have been delivered. The plaintiffs' evidence is that the market value of the wine is $240, and that this is the market value has not been disputed by the defendant.

Judgment will, therefore, be for the plaintiffs for $240 and costs which I assess at ten dollars.

Tuesday, May 9th, 1876.

Alexander McKean, seaman of the British ship *Eme*, now lying at Shinagawa, was charged with refusal of duty, abusing the master, and assaulting the mate.

Prisoner pleaded not guilty.

J. Sproule, master of the *Eme*, sworn: The accused had been in prison and was discharged on the 2nd instant; since that time he has refused duty. Yesterday, while I was below, I heard a row on deck, and when I went up I found the prisoner assaulting the chief officer with a belaying pin, and using very insulting language. I ordered him to be put in irons, he threatened to take the mate's life and mine at the first opportunity, and to set the ship on fire. He was extremely abusive towards me. I did not see him strike the mate, nor did I see him with the belaying pin in his hands.

Prisoner stated that he had sore eyes and the doctor had ordered him to get some liniment for his eyes, but the captain would not give it to him. The captain had threatened to "lick" him, and prisoner had asked to see the Consul, but the captain would not let him. Yesterday, prisoner went to the poop and asked to see the captain, but the mate kicked him away, and the captain came up, struck him, abused him, and had him put in irons until this morning when the constable took him off. He did not deny using abusive language to the captain. His sore eyes prevented him from working, and the captain would not let him have the medicine ordered by the doctor.

D. C. Godfrey, apprentice on board the *Eme*, sworn: I saw the prisoner take up a belaying pin and run after the mate with it to strike him. The boatswain took the belaying pin away, and the captain came up and had the prisoner put in irons. The prisoner made use of very abusive language to the captain.

Sentenced to 3 weeks' imprisonment, but to be replaced on board if the ship should leave before expiration of the term of prison.

Wednesday, May 10th, 1876.

TANABE YASUZAEMON *vs.* ALEXANDER STEWART.

This was a claim for *yen* 9 and 75 *sen* damages for a wound alleged to have been inflicted on plaintiff by defendant's dog in the public street.

The parties to the suit appeared personally.

Plaintiff stated that he was a jinrikisha man, and that on the 5th of last month in the afternoon a little before 5 o'clock he was dragging his vehicle through Hatoba street, and as he was passing defendant's house a white dog rushed out and fastened on his leg. A policeman came up and took him to the Police Station. He had still some traces of the wound. From the 5th of last month until the 5th of this month he has not been able to work his jinrikisha. He fell on his back.

To Mr. Stewart: The dog that fastened on his knee was a white bull dog.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Mr. Stewart called as witness Sesi, who stated: I am a servant at No 82. I did not see tho dog bite the plaintiff; when I came out in the street I saw plaintiff looking at a wound on his knee that bled profusely, and a man from whom I made enquiries at the order of my master told me that the dog had been running after the jinrikisha man, plaintiff, who fell on his hands and knees. The jinrikisha man was sober.

To Mr. Stewart: I do not think the wound was from a dog's bite, it looked as if it was from a fall. I told you the jinrikisha man was drunk, and so he was.

A Japanese policeman deposed: When I was on duty at the street corner opposite No. 82, I saw a jinrikisha man come running past with his jinrikisha, and two dogs came out from No. 82, which ran after the jinrikisha man, and one of them fastened on his knee and he fell. I had the jinrikisha man taken to the police station, and I called the attention of the inhabitants of No. 82 to what had passed. The account of expenses was sent by the jinrikisha man himself to the station.

To Mr. Stewart: I looked at the wound, it was about an inch deep and an inch and a half long, and had every appearance of being made by a dog's teeth. When I came up the jinrikisha man was lying on his back.

Yokomicho, a Japanese doctor: The wound presented the appearance of a dog's bite. I attended the plaintiff every other day for a month after the accident. Plaintiff is not quite well yet, but will be cured in time.

To Mr. Stewart: The wound is on the upper part of the man's leg. The skin was not scraped off round the wound. The plaintiff was brought in a jinrikisha to my house at Noge. It was about six o'clock p.m. The man did not appear to me to be drunk.

Mr, Stewart: I think the whole case is a trumped-up one. It is a most improbable thing for a dog to bite a man on the front of his leg. Hatoba street was at that time in a very rough state, covered with pebbles and sand. I was informed at that time by Japanese eye-witnesses that the noise of the man and his jinrikisha running past, attracted the dogs, who gave chase; the man got frightened and fell, and in that manner hurt his knee.

Verdict for plaintiff for 9 *yen* and 75 *sen* without costs.

IN THE KANAGAWA SAIBANSHO.

In the case of Alfred Roper *vs.* the Mitsu Bishi Mail S. S. Co., lately heard in the Judicial Court of Kanagawa Ken, the following documents were handed into Court as evidence by plaintiff:—

EXTRACT FROM THE LOG OF THE S. S. *Kanagawa Maru* FROM NAGASAKI TOWARDS SHANGHAI.

Saturday, 22nd May, 1875.—4.30 a.m. commenced foggy and a little wet. Slow down engine. 8 a.m. the same. Sounded whistle every five minutes. 8.26 p.m. sighted lightship. 9.40 p.m. passed lightship. About midnight between light and small beacon tucht (touched) the grond (ground) for a moment.

(Signed) J. H. DUBOIS,
Chief Officer.

Sunday, 23rd May, 1875.—About 2 a.m. passed one steamer on the starboard bow, so we had to put starboard helm. After we port the Captain sung out port helm and hard port, and so I looks (I saw) the third mate and quarter master what was standing on the wail (wheel) put the helm port but slowly. We stop the engine for about half an hour but impossible. During the afternoon fine weather and light breeze. Discharging cargo out fore and aft hole (hold).

(Signed) J. H. DUBOIS,
Chief Officer.

EXTRACT FROM THE LOG OF THE S. S. *Kanagawa Maru* AT SHANGHAI RIVER.

Monday, 24th May, 1875.—The boatswain and scalors (sailors) bishi (busy) to made two small anchors ready, and pooler (pull) them out from the stern of the ship. Received from the shore a new howser (hawser). Every man in the ship was working well to get ship afloat. During the afternoon working the same. Fine weather.

(Signed) J. H. DUBOIS.
Chief Officer.

Tuesday, 25th May, 1875.—With high water we troying (trying) again, but we could' nt get en off.

(Signed) J. H. DUBOIS
Chief Officer.

Wednesday, 26th May, 1875.—3 a.m. we start again, had three tug boats, one large size, and one anchor and chain brought out from the stern and working with steam. About 5 a.m. we got here (her) off in float water, and we drop our port anchor.

(Signed) J. H. DUBOIS,
Chief Officer.

ARTICLES OF AGREEMENT.

1.—It is hereby agreed between the Mitsu Bishi Steam Ship Company of Tokio, Japan, on the one part and Captain Alfred Roper a Native of Great Britain on the other part, that the said Captain Alfred Roper will take Command of the Steam Ship *Kanagawa Maru* under the management of the Mitsu Bishi Steam Ship Company and will hold himself in readiness to proceed and navigate the said steam ship *Kanagawa Maru* to any place designated by said Company, within the navigable waters of the North Pacific Ocean, the Japan and China Seas, or to any port or ports, without the limits of either, as the said Company may direct, and will further engage the undermentioned Officers and Crew, subject to the sanction of the said Company.

2.—The Mitsu Bishi Steam Ship Company agrees to pay the said Capt. Alfred Roper one thousand eight hundred and seventy yen per month for disbursements as above, to be paid to each officer and man in full.

3.—This agreement to be binding for the space of twelve months, say from the fifth day of February 1875 to the first day of February 1876, but if the said Steam Ship should be sold or laid up for want of business or from being disabled, this Agreement will be finished and all officers and crew discharged and their wages will be paid up to the end of the current month.

4.—The said Captain A. Roper agrees to have good and competent officers on board, and in case of any misbehaviour, sickness, drunkenness, or any cause that makes them unfit for duty to report it to the Company's officer and have others appointed, and further in the event of discharging or engaging the above or other officers and crew only the exact number of days they have been on duty must be charged on the portage bill.

5.—It is further agreed that neither the said Capt. Roper himself nor any of the foreigners on board shall leave the Steamer to go ashore in any unopen port without the consent or in company with the Japanese purser.

6.—The Mitsu Bishi Steam Ship Company agrees to give the said Capt. Roper full discretionary power in the navigation of the said steam ship *Kanagawa Maru* and Captain Roper agrees to receive all sailing orders from the Purser or the proper Company's officer and to conform to these orders as near by as possible as the safety of the Steamer will allow.

7.—The said Captain Roper agrees not to order any stores or repairs, nor allow anything to be ordered without the consent of the Japanese Purser or the proper Company's officer and not to leave an anchorage until the Purser allows him to do so, except when it is necessary to get underweigh for the safety of the Steamer, and further not to be absent from the Steamer longer than necessary and always keep on board sufficient officers and engineers &c. while in port to take care of the Steamer in any emergency.

(Signed) ALFRED ROPER.

Personally appeared before me this 16th day of February 1875, Alfred Roper and acknowledged the foregoing to be his signature.

(Signed) RUSSELL ROBERTSON,
Consul (Seal).

S. S. *Kanagawa Maru*.
Woosung, 26th March, 1875.

TO CAPTAIN ROPER.

DEAR SIR,—We, the undersigned passengers on board your vessel, are desirous, before we leave, of expressing our high appreciation of the skilful way in which the ship has been handled under circumstances of difficulty.

Disabled and removed from assistance you successfully adopted measures which brought the vessel into a safe position, and for this as well as for your uniform kindness during the short voyage, we are truly grateful.

We are, dear Sir,
Yours faithfully,

(Signed) S. Fred. Ronewald, Alfred Bean, J. N. Beaumont, H. F. Abell, M. Robins, J. McColl, Jas. R. Thompson, A. S. Tough, H. Barnett.

HEAD OFFICE MITSU BISHI SHOKWAI.
Tokio, 19th April, 1875.

DEAR CAPTAIN ROPER,—Enclosed please find the letter you received from passengers on your last trip, and I am very much pleased to learn by it that the passengers appreciated the way in

which you handled the steamer while disabled, and I sincerely trust you will not again be put in such a difficult position as on your last voyage to Shanghai, and I myself thank you for the great care you took with your steamer, the *Kanagawa Maru*.

Believe me,

Yours faithfully,

(Signed) IWASAKI YANOSKE.

REUTER'S TELEGRAMS.

LONDON, 26TH APRIL, 1876.

The Russian Gazette states that the Great Powers are unanimous in their designs to pacify the East of Europe, and that they have dissuaded the Porte from offensive action against Montenegro. The Sultan disavowed aggressive intentions.

The Queen has returned.

The Prince of Wales at Madrid was much feted.

Shanghai, 24th April, 1876.

PASSED CANAL.—*Outwards*—"Sumatra," "Chefoo," "Amazone," "Lorne," "Ajax." *Homewards*—"Stentor."

London, 24th April.—The Emperor of Germany has visited the Queen at Coburg.

The Prince of Wales has visited Malta, Gibraltar, Cadiz, and Seville.

20,000 Colliers have struck in Derbyshire and Yorkshire in consequence of a reduction in wages.

There have been heavy snow falls in England and France.

Lord Lyttleton has committed suicide.

Spain insists upon religious liberty and the suspension of parleying with the Vatican.

There is an Arab rising in Algeria.

LONDON, 23RD APRIL, 1876.

The Porte has ordered the formation of a camp on the frontier of Montenegro and threatens to occupy the Principality unless it remains neutral.

(London, no date; probably 22nd.)

The Queen is at Gotha, Lord Carnarvon being in attendance. Lord Derby in returning to London had a lengthy interview with Decazes at Paris.

A revolt has broken out in Northern Bosnia. Horrible cruelties are committed by the insurgents against natives not joining them.

LONDON, 20TH APRIL, 1876.

The alarmist rumours are denied at Vienna, Berlin and St. Petersburg. The *entente cordiale* between Austria, Germany and Russia is declared to be intact.

There is continuous fighting on the frontier of Montenegro.

THE *ALABAMA* JOB.

(The Nation.)

Under the award of the Geneva Court of Arbitration the United States received the sum of $15,500,000 in gold for damages caused through the negligence of the British Government in permitting the escape of Confederate cruisers during the Rebellion. The Treaty of Washington, drawn up in the spring of 1871, was very definite and precise in its provisions. By the first article, reference was made to "differences" between the two Governments "growing out of the acts committed by the several vessels, which have given rise to the claims generically known as the 'Alabama Claims,'" and agreeing that "all the said claims" "be referred to a Tribunal of Arbitration," to be composed of five arbitrators. By the sixth article, the Treaty provided three rules of international law with regard to the duties of neutrals, and, having laid down the law, proceeded to define its application in the seventh and tenth articles by the following very strict clause:

"The said Tribunal shall first determine as to each vessel separately whether Great Britain has, by any act or omission, failed to fulfil any of the duties set forth in the foregoing three rules, or recognized by the principles of international law not inconsistent with such rules, and shall certify such fact as to each of the said vessels. In case the Tribunal find that Great Britain has failed to fulfil any duty or duties as aforesaid, it may, if it think proper, proceed to award a sum in gross to be paid by Great Britain to the United States for all the claims referred to it.

"In case the Tribunal finds that Great Britain has failed to fulfil any duty or duties as aforesaid, and does not award a sum in gross, the high contracting parties agree that a board of assessors shall be appointed, to ascertain and determine what claims are valid, and what amount or amounts shall be paid by Great Britain to the United States on account of the liability arising from such failure, as to each vessel, according to the extent of such liability as decided by the arbitrators."

By the final article, the Treaty provided that "the result of the proceedings of the Tribunal" or of the "board of assessors" should be "a full, perfect, and final settlement of all the claims." Under these rules the Tribunal, having the whole case left to them by both Governments, decided: 1st, that Great Britain was liable for "direct losses"—*i.e.*, losses of ships and cargoes, etc.; 2d, that she was not liable for any indirect losses, such as the enhanced rates of insurance caused by the war; 3d, that the United States had no claim for what were known as "national losses," such as the transfer of the commercial marine to the British flag, or the prolongation and increased expense of the war.

They also decided that the only cruisers for whose acts under the Treaty the United States could recover were the *Alabama* and *Florida* (with their tenders), and the *Shenandoah* (after leaving Melbourne). Having thus determined the extent of the liability "as to each vessel," the only remaining questions were, first, whether the Tribunal would award a lump sum or send the case to assessors; and, second, whether they would allow interest, and if so, at what rate. As to the first, the question was merely one of convenience. It has since been suggested that the "lump sum" was really a means of giving damages indirectly for claims which the Tribunal had in so many words directly ruled out. If this country had been represented in the court by B. F. Butler, and Great Britain by Dr. Kenealy, there might, perhaps, be some ground for such a suspicion; but, inasmuch as the American and English representatives were Mr. Adams and Sir A. Cockburn it is no more than fair to suppose that they did not perjure themselves when they agreed to determine judicially, in accordance with certain rules laid down by the parties, the amount of damages to be awarded, and did not stultify themselves by first unanimously declaring that certain claims were not allowable by international law, and then admitting them by a contemptible quibble. There is certainly no trace of any such intention in the record of the proceedings. With regard to the rate of interest, seven per cent. was claimed by our Government, and six per cent. was allowed by the Tribunal.

Thus far, the reference of the Alabama Claims to the High Court had produced the following results: The Tribunal had decided that Great Britian was liable for the acts of the three cruisers mentioned above, and also expressly decided by separate votes that she was not liable for the acts of the *Georgia*, *Sumter*, *Nashville*, or any of the others. It had also decided that the United States had no claim for "national losses," nor for "indirect damages"; that the "war-premium" men had no claim; that the total amount of direct damages caused by the three cruisers was, with interest, $15,500,000, or in round numbers, calling the time during which interest was running twelve years, $13,500,000 principal, and $2,000,000 interest. This sum the Tribunal gave to the United States as a "trust-fund," to be distributed "according to the tenor and spirit of the award" (we quote the language of the counsel of the United States) among the claimants. It could keep none of it itself. It had collected it as an agent, and must pay it over as an agent. These claimants were now reduced to three principal kinds—shippers, ship-owners, and insurers. As to the latter class, there was no dispute before the Tribunal that all underwriters who had paid as for a total loss stood in the shoes of the original owners, and were, in the technical language of the law, "subrogated" to their rights.

Now, what has Congress done with this trust-money? For nearly two years after the decision of the Tribunal—namely, till the passage of the act of June, 1874—absolutely nothing whatever was done. For nearly four years, during which time it has accumulated from $15,500,000 to more than $20,000,000 drawing interest at five per cent., it has remained in the Treasury. By the act itself the insurers, who had been from the first, by our Government and by all the arbitrators, decided to have the same rights to the money which the claimants themselves would have had, were deprived of half their rights; and a new Court of Alabama Claims was convened, directed not to allow insurer's claim unless he could show that the sum of his losses exceeded the sum of his premiums, and then to no greater extent than the difference between the two—or, in other words, was expressly directed not to give to the insurers the money which the Government had just collected in court for them.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

In the second place, the act provided that the claimants should be entitled to interest at four per cent., the difference between this rate and that of six per cent. awarded by the Tribunal being kept back, on what ground nobody has yet had the assurance to state. This, however, was only a beginning. After all the payments that may be made under the act of 1874 there will be a large surplus, and it remains to be decided how it shall be distributed. The majority of the House Committee have accordingly gravely recommended that the money be paid, first, to the claimants who lost by the vessels for whose acts the Tribunal expressly decided Great Britain was not liable, and for whose acts she paid none of this money; second, to the war-premium claimants, whose claims were expressly ruled out; and then, if there shall be any money left, to the insurers, who are the only one of the three classes who have any valid claims at all. Meanwhile, the State Department, which collected the claims and turned the money into the Treasury, stands by as if if had nothing to do with the case.

It is difficult to say whether the case is made more or less monstrous by the fact that the Committee is very evenly divided in its report, there being a bare majority in favor of the bill reported. This shows that the decision arrived at has been no hasty determination, but is the result of discussion, argument, and examination of evidence: so that it appears, taking this bill and the former act together, that the result of judicial discussion of private rights in a Committee of the House of Representatives is more likely on the whole, after due consideration, to be in favor of simple robbery than anything else.

But the effect of the disposition of this fund made by Congress upon the rights of the particular claimants is a matter of comparatively small concern. The disastrous part of the whole business is the effect upon the reputation and character of the Government and the nation. The *Alabama* Treaty and the subsequent proceedings have not been transacted on a narrow and provincial stage; we have called in the world to witness the noble example set by the two foremost nations of modern times in substituting peaceful methods of settling quarrels for violence, bloodshed, and war. We not only virtually, but in express terms, offered to show a benighted and barbarous generation our love of justice and law by submitting a grave international dispute to the decision of a court of justice. The submission of the Alabama Claims to a *court* was received the world over as a harbinger of the new gospel which was finally to do away with war altogether and put justice in its place. There is now no escape for us. The result will be judged in the light of the promises; and the question that the public will ask will be, not simply has something been substituted for violence, but what is presented to us in exchange? Can it be fraud? When we recall the glowing language that was used six years ago about the "principle of arbitration," it is difficult to believe that the management of the business by the Government has not been from first to last a roaring farce, got up for the purpose of bringing arbitration into contempt. Certainly, if that had been the object, no means could have been better adapted to the end than the submission of a dispute by a trustee to a voluntary court of justice and to rules of law until judgment was rendered in the plaintiff's favor, and then, walking off with the money out of the reach of the process of the court, defying it to enforce its decree for the distribution of the trust-fund, and proceeding to do what he pleases with the money. Bismarck and Moltke, when they hear of this queer triumph of justice over and barbarous instincts of human nature, may well doubt whether there are not some things that are even worse than war and bloodshed. Isolated as America is from the rest of the world both by position and circumstances, and exempted as we are by our immense material wealth from many of the consequences which bad government would naturally have brought in its train, we are always inclined to look on "the bright side" even of our worst errors. But such mistakes as the *Alabama* business has thus far been have no bright sides. It would have been a thousand times better than what has happened that all the money we received from England should have been sunk in the sea, and that the High Court should never have met to illustrate the "principle of arbitration" at all. We should have been then, at least, spared the shame of seeing the Government submitting to rules of law to evade those of justice, and swindling its citizens at home to disgrace them abroad.

THE USES OF CONTROVERSY.

(The Saturday Review.)

The new number of the *Contemporary Review* contains a very able and interesting article by Mr. Mark Pattison on the "Religion of Positivism," which is in fact, if not in form, a reply to a paper on the same subject in an earlier number of that *Review* by Mr. Frederic Harrison. We have no intention of explaining here exactly how far we agree with Mr. Pattison's view of the matter; still less do we propose to discuss that strange creation of M. Comte's brain in his declining years—which has found an energetic and by no means dreamy apologist, or rather protagonist, in Mr. Harrison—the Positive Religion. For ourselves we confess, though it may be a very old-fashioned, if not obsolete, superstition, that the idea of religion has alway seemed to us, as it does to Mr. Pattison, to imply the idea of worship, and therefore of an object of worship; and that the founder of a new faith who, "though he rejects Gods, will not therefore reject religion," appears to be twisting ropes of sand. We are almost inclined to add, what will perhaps be thought the still more humiliating confession, that if "the sentiments, the worship, the ritual, the sanctities, even the sacraments, of the old religion are to be retained," we had rather have them still associated with the old creed of Christianity than with the new creed of M. Comte. However, that is not the question before us just now. Nor shall we stop to inquire whether the reviewer is right in supposing that Mr. Harrison's Positivist enthusiasm is inspired, not so much by genuine faith in his new religion, as by antipathy to Broad Church theology, or at least to Broad Church theologians; though it is impossible not to feel a passing surprise at his perplexing jeremiads over the extinction of that school of thought. One cannot help thinking that if, since "Maurice and Robertson and Kingsley are gone," the Broad Church party itself "has melted into vapour," it is strange that a party consisting in its palmiest days of three divines—differing, we should have imagined, pretty widely from each other—should have exercised the influence and roused the apprehensions so widely connected with the Broad Church name. But this by the way. It is not on the controversy between the disputants in the *Contemporary* that we propose to comment, nor on the relative merits of "theosophy" and Comtism. Mr. Pattison opens his attack by laying down a very broad principle quite independent of the particular discussion he has in hand, and which indeed, if it were heartily accepted, would go far to prove that this and all other discussions of the kind are mere waste of time and trouble. The writer admits as much himself; he takes pains to assure his readers that "it is with full conviction of the unprofitableness of his undertaking" that he has nevertheless commenced and carried it out. But few men, least of all men of mark, care to expend their time and labour on what they really believe to be at best a mere *tour de force*, and we may be pardoned for doubting whether Mr. Pattison has not been hurried by a feeling of impatience or disappointment or irony into saying more than he seriously means. His recent criticism, in another periodical, on the present condition of Oxford studies, though containing a great deal of unquestionable, however unpalatable, truth, seems to betray a certain want of moral perspective in his way of looking at things which keenly interest him. Be that as it may, *litera scripta manet*. His thesis is worth examining, whatever may be thought of his consistency in putting it forward.

"Of investments of time writing controversy," we are told, "is one of the most wasteful. Your antagonist is confirmed by what you say in his own opinion. The readers, *if readers there are*, carry away no conviction beyond that which *they have before reading*—namely, that there is much to be said on both sides. No man was ever written down but by himself. Like the soldier of a democratic army, a controversialist is *chiefly dangerous to his side*. There is no more barren province in the realms of print than that of 'answers' and 'replies.'" We have ventured to italicize a few words here and there in the extract for reasons which will appear in the sequel. Now it is obvious at first sight that there is much in this statement of the case which cannot be disputed. There are many writers on all subjects, controversial or other, who have few readers or none; and there are many readers who go away after all with only a vague impression that the point at issue is a difficult one, and that there is about an equal chance of one side or the other being right. There are many controversialists who are chiefly dangerous to their own side, whence it has passed into a proverb, "Save me from my friends"; and it is oftener true than not that "your antagonist is confirmed in his own opinion by what you say." But, after admitting all this, the question still remains whether it is true on the whole, and putting aside accidental causes, such as violent or ignorant or feeble methods of argumen-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

tation, strong popular bias on a particular side, and the like, that controversy is mere idle expenditure of time, which can produce no result. It is hardly enough to reply that, if so, controversial writing would long since have become extinct; for, on the one hand, the old and dreary saying, *quantulâ sapientiâ regitur mundus*, may be applied to the literary as well as to the political world; and, on the other, many persons feel a keen enjoyment in controversy for its own sake, and independently of the effect which their arguments may be expected to produce. Their main object is rather to strike or startle than to convince, and if they can extort admiration for their own ingenuity or learning, they are comparatively indifferent to the triumph of their cause. Still, after making all necessary deductions on these accounts, it seems hardly conceivable that so many writers, who are not pedants or egotists or fools or mere literary prizefighters, should continue to cultivate the field of controversial discussion in philosophy, theology, politics, and other subject-matters, if experience had been found to bear out Mr Pattison's estimate of the practical value of their labours. But the fact is, that experience does not bear it out, in the sense and to the extent here assumed. Dean Milman after commenting on the gigantic controversial achievements of the schoolmen, observes, with less than his usual discrimination, that, "of those vast monuments of theology which amaze and appal the mind, *the sole remnant to* posterity is that barren amazement." The statement at best requires a very great deal of qualification, as he might have learnt from so uncongenial a critic of the schoolmen as Mr. J. S. Mill: but, in so far as it holds good, it is not at all because theological controversy, as such, is barren and unproductive, but because the particular points selected for dispute between the rival doctors of scholastic theology are trivial or have ceased to interest us. Thus, again, Dr. Dollinger says somewhere that four-fifths of the religious controversies among Christians are pure logomachies. Of course, wherever this is the case, controversy must be little better than ingenious hair splitting, which is most successful when it most adroitly keeps out of sight the true nature of the matter in dispute. But that also is because the wrong subjects have been brought into debate, not because polemical discussion is in itself unprofitable. We have spoken of theological controversy as being that which commands the most general interest, and still more as being evidently the special branch of discussion immediately present to Mr. Pattison's mind in what he has written, and we shall for the same reason proceed to illustrate our meaning from the same subject-matter. But it need hardly be pointed out that what is true of one particular department of controversy has a general application to controversial literature as a whole.

We have said that experience does not bear out Mr. Pattison's sweeping statement, as he has framed it But there is something like an *ignoratio elenchi* in his way of framing it. If the main object of a polemical argument is to convince the particular opponent to whom it is addressed, no doubt it is usually a failure. Athanasius did not convert Arius to orthodoxy, nor did Laud convince Fisher of the truth of Anglicanism; and most likely neither of them anticipated any such result. But it does not follow that their labour was thrown away. The polemical writings of Athanasius are read by theologians to this day, and, what is more important, they very materially contributed to the ultimate victory of the orthodox over the Arian conception of Christian doctrine in the Church. Bossuet's famous *Variations* may not have converted French or German Protestants whom at the moment he had in his eye; but the work has probably done much since then towards winning or retaining the allegiance of members of his Church. We need not, however, appeal to history in evidence of the inadequacy of Mr Pattison's estimate of the facts. The Oxford movement of our own day offers a sufficient refutation of his theory. And here we must observe, by the way, that if it is a mistake to suppose that the crucial test of controversial success is the conversion of "your antagonist," it is also a mistake, though a less fundamental one, to speak as if no result worth mentioning had been achieved, when readers are left under the impression that there is much to be said on both sides. This is by no means always, or generally, "the conviction they had before reading," as Mr. Pattison puts it. The chances are, on the contrary, that they had, if not a conviction properly so called, a very decided prejudice one way or the other; and the writer who has persuaded them that the side to which they were perhaps violently—opposed has as much to say for itself as the other, has done a good deal towards the removal of their antagonism to what he regards as the true view. Forty years ago the immense majority of Englishmen who thought at all on such subjects—we might add, of those also who did not—detested Popery as a mischievous or effete superstition, and regarded everything at all going beyond the somewhat limited range of Protestant opinion familiar to them as Popish, and therefore odious or contemptible. Now whether the change is for the better or the worse may be disputed, but there can be no doubt that a considerable change has taken place in this matter during the last two or three decades, and that it is mainly owing to what, for want of a better name, may be called the Tractarian movement—or, to put a more definite issue, to the writings of such divines as Dr. Newman, Dr. Pusey, Mr. Keble, and their associates. It may be quite true that these eminent divines have failed to convert their "antagonists," that is, the particular Evangelical, or Broad Church, or other opponents with whom they have from time to time been engaged in controversy. But it is not the less true that they have converted a considerable number of their readers to substantial agreement with their own views, and have convinced many more, whose previous range of vision was strictly bounded by the horizon of the Evangelical Alliance or the *Record*, that at all events "there is much to be said on both sides." Whether this result is beneficial or otherwise we are not now arguing, but we insist that it is a fact. And the fact, which is not an isolated, but a typical one, is fatal to Mr. Pattison's theory of the unprofitableness of controversial writing.

Many reasons might be given why controversialists seldom convince their antagonists, but it may suffice to state one here. It has been said with much force that a man may steadily change an opinion which he entertains in his own mind, but the change becomes more difficult if he has avowed it, while he will obstinately adhere to what he has maintained in wrong; and if he has committed himself still further by publication the case is almost hopeless. Viewed in this light, a literary duel is pretty sure to end in a drawn battle. But conquest of this sort is not the object of controversy among reasonable disputants, any more than a Prime Minister or leader of Opposition expects to bring over his rival, then and there, to his own views by the most brilliant and masterly exposition of them. Yet his speech is not wasted, for it is addressed, in fact, not to the individual opponent he is answering, not even to the Opposition benches, but to the outside public, who are not too heavily handicapped, so to speak, to be able to weigh its force dispassionately. And in just the same way a Roman Catholic, or Protestant, or High Church, or Low Church, dissertation is not really intended to influence the rival divine at whose arguments it is ostensibly aimed and who is most likely, what Archbishop Whately calls "proof-proof" on the points at issue, but is an appeal to the bystanders, that is, to the religious world generally, to judge between the rival systems. And, when so understood, a controversial discussion need by no means be barren of result, except through the fault or incompetence of the controversialist who conducts it. It follows, of course, that mere personal sparring is usually stale and unprofitable, because it turns, not on some question of common interest, but on the meaning or value of the respective arguments of A and B, which can hardly be of much interest to any one but the writers themselves and their personal friends or admirers. There are whole volumes *e.g.* of Warburton's works which very few readers, whether they happened to agree with him or not, would fail to put down in sheer weariness before they had got through half a dozen pages, and from which fewer still would carry away any new conviction, except of amazement that so able a man should have wasted his time in composing them But then Warburton is for the most part occupied, not professedly, but really, far more in demonstrating his own superlative superiority to his opponents than in demonstrating any principle true or false, which is worth the trouble of mastering, and his principal work, though it is spread over six volumes, leaves much the same sort of impression on one's mind as Whately's *Historic Doubts*. But Mr. Pattison is speaking of *bonâ fide* controversy on questions of genuine human interest, such as the contest between Christianity and Positivism. And of such disputation we cannot agree with him that "there is no more barren province in the realms of print." We are not indeed quite sure, if we may judge from his example as well as his words, whether he is even entitled to say with the Irishman that he "has his own consent."

Shipping Intelligence.

ARRIVALS.

May 7, *Tahai Maru*, Japanese steamer, Hubenet, 550, from Kobe, May 2, General, to M. B. Co.

May 7, *Nagoya Maru*, Japanese steamer, Young, 1,914, from Shanghai and ports, Mails and General, to M. B. Co.

May 9. *Gaelic*, British steamer, Kidley, 1,712, from Hongkong, May 3, Mails and General, to O. & O. Co.

May 8, *Tsuruga Maru*. Japanese steamea, Hussey, 800, from Osaka and Kobe. Mails and General, to M. B. Co.

May 8, *Meiji Maru*, Japanese steamer, Peters, 1,010, from Kamaishi, Japanese Government Service.

May 9, *Haidamack*, Russian corvette, Captain Tirtoff, 1,200, 7 guns, from Nagasaki, May 5.

May 9, *Talisman*, French corvette, Captain St. Hilaire, 1,386, from Yokoska.

May 10, *Iris*, British 3-masted schooner, Taylor, 258, from Takao, Apr. 12, Sugar, to Smith, Baker & Co.

May 10, *Irma*. German barque, Sasky, 460, from Cardiff, Nov. 14, 1875, Coal, to M. M. Co.

May 10, *Tibre*, French steamer, Girard, 1,600, from Hongkong, May 3, Mails and General, to M. M. Co.

May 11, *Tokio Maru*, Japanese steamer, Dunn, 2,112, from Shanghai and ports, May 4, Mails and General, to M. B. Co

May 13, *John H. Kimball*, American ship, Humphreys, 1,266, from New York, Nov. 24 1875, General, to Chipman. Stone & Co.

May 13, *Hiogo Maru*, Japanese steamer, Vroome, 690, from Hakodate, May 10, General, to M. B. Co.

DEPARTURES.

May 6, *Lady Elizabeth*, British barque, Cobbett, 657, for Nagasaki, Ballast, despatched by Captain.

May 6, *Saco*, American sloop of war, Captain McDougall, for San Francisco.

May 7, *Oceanic*, British steamer, Parsell, 3,707, for Hongkong, Mails and General, despatched by O. & O. Co.

May 9, *Banda*, British barque, Stollery, 481, for Kobe, General, despatched by L. Kniffler & Co.

May 10, *Sunda*, British steamer, Lee, 1,682, for Hongkong, Mails and General, despatched by P. & O. Co.

May 10, *Nagoya Maru*, Japanese steamer, Young, 1,214, for Shanghai and ports, Mails and General, despatched by M B. Co.

May 11, *Gaelic*, British steamer, Kidley, 2,626, for San Francisco, mails and general, despatched by O. & O. Co.

May 11, *Talisman*, French corvette, St. Hilaire, 1,386, for Kobe.

May 11, *Portia*, British barque, Constantine, 301, for Newchwang, Ballast, by Captain.

May 12, *Genetif*, German 3-masted schooner, Kuhse, 169, for Newchwang. Ballast, by Captain.

May 13, *Tsuruga Maru*, Japanese steamer, Hussey, 800, for Kobe, N'chwang, &c., General, despatched by M. B. Co.

PASSENGERS.

Treasure $569,500

Per *Tokio Maru*, from Shanghai:—
Treasure $1,800
Yen 1,590

Per *Nagoya Maru*, for Shanghai:—
Treasure $22,500
Yen 19,000

REPORTS.

The *Iris* reports:—Easterly gales nearly all the passage, especially during the last 10 days. Lay under Cape Idsu on Sunday to escape the heavy sea. 28 days from port to port.

The *Irma* reports: Heavy gales out from Cardiff; afterwards fine weather and light winds. Latterly heavy N. Easterly gales

The *Tokio Maru* reports: had a very strong wind all last night but no rain.

The American ship *John H. Kimball* reports: Left New York, November 24th, and met with the usual winter weather down to the equator which was crossed in 32° West, 25 days from port. Thence had to beat along the coast from Cape St. Roque to Bahia. S.E. trades were very light, and had many head winds up to Tristan d'Acunha; experienced many easterly winds thence right down to the coast of Australia, and had none of the strong westerly winds usually met with after passing the Cape of Good Hope. Sighted N.W. Cape of Australia, March 7th, and were 21 days from there till clear of the Gillolo passage. Had light winds in the Pacific and for 10 days after making the coast of Japan met with strong gales and stormy weather. Saw no ships for at least 70 days before making the land.

During the voyage the steward Calvin Bush, a colored American, died just outside of the Gillolo passage on the 4th April, and yesterday morning after the Pilot came on board a young Norwegian, named Gustava Olsen, fell from the foretop gallant yard to the forecastle and died about two hours afterwards. The deceased never recovered conciousness after the accident.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—We have but little to report of the condition of our market during the week now closing. Transactions have been throughout on a retail scale and the tendency of the market is again towards lower rates.

Grey Shirtings:—					White Shirtings:—				
7 lbs.	38½ yds.	39 in.	per pce.	$1.85 to $2.15	60 to 64 reed	40 yds.	35 in.	nom. per pce.	2.10 to 2.30
8 lbs.	38½ yds.	44 in.	„	2 20 to 2 50	Turkey Reds	24 yds.	30 in. 2—3 lb.	per lb.	0.75 to 1.05
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„	2.07½ to 2 50	Black Velvets			*nom.*	8.00 to 8.75
9 lbs.	38½ „	44 in.	„	2.45 to 2 80	English Drills	15 lb.	40 yds, 30 in.		3.20 to 3.35
					Taffachelass		12 yds, 43 in.	*nom.*	2.00

Yarns.—

No. 16 to 24	per picul	$30 00 to 33 50	
No. 28 to 32	per picul	$33 00 to 38.00	
No. 38 to 42	per picul	$40.00 to 44.00 nom.	
Reverse Twist	16-24 „	——	

Woollens.—Stagnation still prevails in the market for Woollens, and the week has passed with scarcely any business. Things remain therefore much the same and the quotations are quite nominal.

Plain Orleans	40—42 yds.	32 in.	6 50 to 7 50		Figured Mousseline de Laine	30 yds.	30 in.	0.25 to 0.28	
Figured Orleans	29—30 yds.	31 in.	4 75 to 5.25		Multicolored „	30 yds.	30 in.	0.32 to 0.35	
Chimagoro	30 yds.	30 in.	5.25 to 5.75		Cloth, all wool plain or fancy	48 in. to 52 in.		0.80 to 1.20	
Italian Cloth	—30 yds	32 in.	0 25 to 0.33		Presidents	54 in. to 56 in.		0.60 to 0.70	
Camlet Cords	29—30 yds	32 in.	6 25 to 7 25		Pilots	54 in. to 56 in.		0.40 to 0.45	
Camlets Asstd.	56—58 yds.	31 in.	18 50 to 19 00		Union	54 in. to 56 in.		0.40 to 0.65	
Lastings, Japan	22—30 yds.	32 in.	13 00 to 14 50		Blankets, scarlet & green	7 to 8 lbs.	per lb.	0.40 to 0.41	
Plain Mousseline de Laine	—30 yds.	30 in.	0.18 to 0.20						

Sugar.—Formosa descriptions are quiet at present quotations. Stocks are heavy and further arrivals expected. China descriptions are unchanged with limited business in them.

Sugar:—Formosa in bag	per picul	3.05 to 3.10		China No. 5 Kong-fun	per picul	4.20 to 4.80	
in Basket	„	2 95 to 3.00		„ No. 6 E-pak	„	3 30 to 3 50	
China No. 1 Ping fah	„	7 30		Swatow	„	2.60 to 2 80	
„ No. 2 Ching-pak	„	6 50 to 7 00		Daitong	„	2 60 to 2.90	
„ No. 3 Ke-pak	„	5 50 to 5 90		Japan Rice	„		
„ No. 4 Kook-fah	„	5.00 to 5 30		Kerosene Oil	per case	2.50 to 2 52	

Kerosene Oil has undergone but little change in price, but importers are bent on holding for higher rates. The *John H. Kimball* has arrived from the States with 15,000 cases.

EXPORTS.

Our fortnightly report dated 10th instant, was to the following effect:

Silk.—Since the 22nd instant, arrivals barely amount to 200 bales, and nearly one-half of the silk purchased had, owing to the inferiority of the assortments, to be rejected after inspection. Thus, settlements are only 50 bales of Hanks and 200 of Oshiu sorts. We have heard of no transactions in "filature." Our quotations for Hanks are of course almost nominal and prices for Oshius are unchanged. The stock, almost entirely composed of the latter, is reduced to about 100 bales.

The shipments of the fortnight are 302 bales, making the total export since the 1st July, 12,799 bales against 10,930 last year for the corresponding period.

In most of the Hank districts the silk worms have hatched and in the most advanced localities are between the first and second stage. There is some talk of damage done by frost in Oshiu; but in mountainous districts such damage may be purely local. On the whole, the crop is reported so far to be progressing well.

Kakeda, Best	—	—	—
„ Good	—	—	—

Since the above was written arrivals are 35 bales, and deliveries 100 piculs mostly Oshiu.

Tea.—Heavy arrivals of New Crop coming in at the commencement of the present week, holders showed some inclination to accept reasonable offers and a considerable business ensued, most settlements, however, showing a decline of from $5 to $8 per picul on first purchases; prices paid are somewhat irregular, according to the ideas of various operators, but the following represent the average:

On Fine:—Light liquor but lacking strength, rough leaf	$33 to $35
Fine fair good cup fairish leaf	$36 to $37
Finest fresh liquor good leaf	$38 to $41
Choice full fresh liquor handsome leaf	$42 to $45

Good Medium grades can hardly be considered as represented, although some few small lots have been shown; and no settlements are yet reported as holders have too high ideas of their value.

Settlements of new leaf since the 6th instant amount to piculs 2,800, leaving but light stocks in first hand. Native merchants are endeavouring to establish higher rates; but when answers are received from New York to telegrams already sent reporting extensive operations to date, recommending, as they doubtless will, more caution in purchasing, prices must tend downwards or a stoppage of business will be probable.

EXCHANGE AND BULLION.

Exchange.—Since the departure of the American mail rates have remained firm, with but little business doing.

Rates close as follows:—

EDWARD FISCHER & CO.,

d. w. & m. SOLE AGENTS FOR JAPAN.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 21.] YOKOHAMA, SATURDAY, MAY 20, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Prince Arisugawa-no miya was appointed to the office of President of the *Genro In* on Thursday last.

The stars were somewhat against Races this week. Wednesday was excessively hot, and the high temperature of the previous ten days had worked on the condition of many of the ponies to such an extent as to baffle the predictions, and disappoint many of the hopes, of their owners. On Thursday the wind rose toward mid-day, and by one o'clock the road leading to the course, and the ground immediately surrounding the grand-stand, were beset with clouds of a fine penetrating black dust, which besmirched everything and played havoc with the very best complexions. Veils were unavailing, pink turned to burnt umber, and white to russet. The beauty of Helen could not support this, and misgivings in regard to appearance imperceptibly, but surely, affect the brilliancy of conversation. Women rarely talk their best when they do not feel, or think, that they look their best. The diamond cannot sparkle when its facets are obscured, and if we stop short at this extremely rare metaphor it is because we have not space to show what all the worshipful things in creation cannot do under unfavourable conditions. On Friday it began to rain at about nine a.m., and poured in torrents during the whole day. The races were postponed, and will not be finished before late this afternoon. As regards the racing itself, a superficial judgment is not worth very much, but there appeared to be some well contested runs and a fair amount of good sport. But the lottery system, which seems to have become inextricably bound up with the Races, makes them far more the subject of financial strategy than of good, sturdy, straight-forward, English sport. The entries of course are swelled by the names of ponies never intended to run for all the stakes or prizes for which the payment entitles them to compete; and it is conceiveable that a special joy may be added to life by an owner hearing one of the uninitiated bidding highly for a pony which he has determined to scratch for the race he is tacitly under some obligation to compete for. One of the excuses for the continuance of the present system is that as every one is concerned in blinding every one else to his tactics, any confidence bestowed upon what would, in all other sports, constitute an obligation, is an idiotic act of misplaced confidence. How far this tends to make racing the worthy sport of men otherwise honorable, may be called a question by some, but appears to us no question at all, or, at most, one which answers itself. One of the wittiest books ever written had for its object the exposure of the casuistry of the Jesuits, and we have sometimes thought that a pretty parody of some of the *Lettres Provinciales* might be made, showing the ingenious sophistries resorted to by racing men to defend practices which, to do them justice, many of them would not for a moment resort to except in the disturbing atmosphere of the turf. That some of them may leave this atmosphere and go to the duties of daily life without permitting the inversions of the one to affect the obligations of the other, we are entirely prepared to believe. But that many, less analytical, will, on the contrary, gradually accommodate their practice to this convenient standard, is as certain as that two and two make four.

That we shall do much good by these reflections either to ourselves or others, we are not so sanguine as to imagine, and we can assure our readers that far from deriving any gratification from making them, we approach the whole subject with intense aversion—we do not speak of the sport, of which we are rationally fond. But we are persuaded that these lotteries are bad things. The English law has denounced and made them criminal offences, punishable by regulated penalties. We do not like the idea of a premeditated violation of that law. The Indian Government, in view of the harm they have done, has lately abolished them by a special edict,—recent Indian papers report this—and though anything of the kind is impossible here, we think all sturdy men who detest that a fine, and, in itself, really noble, sport, or one which might be made such, should be associated with one of the basest tendencies of our nature, and tainted—it is idle to deny it—with all kinds of sharp practice, should set their faces against these lotteries or put their heels on them. We regard them as a poisonous parasitic growth upon a fine manly pastime, and the public announcements of them as incentives flaunted in the faces of Englishmen to do that which their law forbids. The very fact that there exists no power here to enforce this law renders us all the more bound to obey it uncompelled. The voluntary obedience of free men is the only acceptable incense to the gods.

Whatever annoyance and irritation the local foreign Press may at times occasion to the Government, Japan owes it a very deep debt of gratitude, and there is no man of any penetration or enlightenment in the Cabinet who will for a moment venture to deny or even dispute this. It has fulfilled two important duties. First, it has painted on the mind of the Western world a picture, fair and truthful on the whole, of the progress, the condition and aspirations of this Empire. Nor has Japan any reason to be dissatisfied with the picture. If not actually flattering, no one can say that the more winning features have not been placed in the best light, or that a kindly shade or drapery has not here and there been so disposed as to deserve the gratitude of a sitter not devoid of the love of approbation. Second; it has very fairly reflected to the Japanese Government the opinion entertained by foreigners of its course of action, and whether this has been more or less sound or favourable, it is of high importance to the Government to know that opinion. If we were desirous of blowing the Press's trumpet very loud, we think we could show other claims which it has on the gratitude of the Government. We shall content ourselves, however, with these two, and put a question which the facts suggest. How

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

is it, then, that on important public occasions, invitations or tickets of admission, as the case may be, are not always sent to the representatives of the Press and to a reporter of each section of it? We shall not at present imagine that the omission is an intended discourtesy, but it is certainly the omission of a courtesy extended throughout the world to the Press, and confers at least as much advantage upon one side as upon the other. We say 'always sent,' because some of the Departments have from time to time conformed to the established practice, though we imagine that the attention has in many of these cases been rather a personal than a professional one. We had rather have said nothing on this subject, and only do so now because the practice we should wish to see established may not be known to the Japanese, in whose own interest it were well that a time honoured custom should find due acceptance here. To avoid any future misunderstanding which might arise on these grounds, we may mention that it is not always possible to do honour to such invitations. The staff of any foreign paper in this country must necessarily be small, and, for one reason or another, neither the editor of a journal nor his reporter may find it possible to be present on the occasion for which the invitation is sent. But the effort to do so will always be made, and no discourtesy must be inferred if it is not always made successfully.

A translation will be found elsewhere of an article from the *Hôchi Shimbun* giving an account of a religious excitement which prevailed in this country some ten years ago, and of the means by which it was produced. It deserves the special study of the Japanese, and republication in every newspaper in the Empire. To the European student of the history of religion, religious excitement and religious opinion, it presents no new feature, except the extremely frank confession of the author, which is as unusual as it is gratifying. It is as certain as any thing undemonstrated can be, that the sceptics who refused to believe in the miraculous nature of this visitation were abundantly denounced as atheists, infidels &c., &c.; by the priests who were not in the secret. And it may be considered equally certain that the manifestations of excitement among the people were appealed to by the more earnest among the priests as evidences of a special outpouring of divine influence. Here we are admitted behind the scenes, the door is opened, and we can see "the works." A true religion must approve itself both to true physics and metaphysics, and the reason that scepticism is so rife among the best and fullest minds in Europe is that the teaching of so many of the priests of all denominations defiantly or ignorantly sets at nought both.

One of the native papers complained this week that it had been forbidden to publish the price of gold, which was an item of interest to its readers. Really this is too bad. The Finance Minister set an admirable example in this country of the duty and value of publicity in the Imperial affairs, and gave his Budget out to the world like a man who realized the obligations of a State anxious and determined to keep its accounts square and hold up its head as nations alone can do which pay twenty shillings in the pound. What is the consequence? Japanese stock keeps its place, the credit of the Empire is remarkably good, and while almost universal distrust surrounds the paper of the less known borrowing States—especially since the publication of the Report of the late Committee of Enquiry into Foreign Loans—Japan is really in excellent credit. One fine day, out comes a prohibition to some paper in the capital to restrain it from publishing the price of gold! What may be published in this Empire? May the date of the next solar eclipse or transit of Venus be made known? Is there no danger of some indiscreet revelations which might affect the celestial mechanism—or compromise the reputation of the Land of the Rising Sun.

The Press prosecutions still continue, why or wherefore it is difficult to say. The editor of the *Hioron Shimbun*—which resembles the Hydra in so far that when one of its heads is cut off, two immediately spring up in its place—has been sentenced to three months' imprisonment for having erroneously stated that the Government intended to increase the severity of the Press-laws, but subsequently determined not to do so. His sub-editor suffers a smaller penalty as an accessory to the offence. (Under the same, or another, clause?) A former editor of the *Nichi Nichi Shimbun* has been sentenced to three months' imprisonment for an offence against the Press-laws committed on the 19th January last. When is this to stop, or what will be the end of it? One thing is clear; no building up of a vigorous race, no free men, no real intellectual life, no unforced and willing obedience, no affectionate loyalty to the State, no devotion to the principles on which the government is conducted. One of the papers says that the now notorious case of the punishment of Messrs. Suwada and Kusama, under different sections of the Press-laws, for one and the same offence, is under consideration of the Government—whatever that may mean. And it will be observed that one of our translations to-day deals with the case much as Gratiano does with Shylock. It never tires of repeating the circumstances of the mistake, and the words 'principal' and 'accessory' are rolled out over and over again with exquisitely irritating solemnity, frequency and iteration. The Judicial Department is down on its back like Gulliver at Lilliput, and the moment it moves, a shower of tiny arrows is discharged by the little men moving about and around which make it smart and tingle again.

Two details in our account of the Temperance Hall in last week's issue require correction. We stated the amount recently contributed by the Residents towards the Hall as $1,200: it is over $1,650. And this money was devoted strictly to the reduction of the debt on the establishment; not in any way to defray current expenses.

From the "Japan Mail Daily Advertiser."

Monday, 15th.

GAIETY THEATRE.

Astronomers have a favourite and forcible method of illustrating the distance between the heavenly bodies by stating the time occupied by a ray of light from the one in travelling to the other. We are keenly reminded of the immense distance Japan is from the civilized world by something of a similar process. It is now some years—we know not how many—since "*La Fille de Madame Angot*" was first produced on the Brussels stage. It put the Belgian capital into a high fever, and every city on the continent rapidly caught the infection, which of course crossed the Channel and seized upon the more serious Londoners. Travellers complained that they could hear but one opera. If they left Paris, where *Madame Angot* was all the rage, for Munich, where they looked for *Tristan und Isolde*, there they found *Madame Angot* again. They rushed off to Pesth in hopes of a change:—nothing there but *Madame Angot;* to Warsaw, *Madame Angot* again; to Vienna, again *Madame Angot*; to St. Petersburg; *Madame Angot* again. Down to Italy; *Madame Angot;* at Malta, *Madame Angot;* down to Algiers, of course *Madame Angot*; across the Atlantic, *Madame Angot* in New York, in Boston, in Philadelphia, in New Orleans, in San Francisco, in the Havannah, in Mexico, in Rio, *Madame Angot* everywhere. There was no relief but in Japan, the vast distance of which from civilization may be roughly computed from the fact that her celebrated daughter only made her first appearance on the Yokohama stage on Saturday evening last under the auspices of M. Launay-Céphas.

An opera of such wide celebrity deserves perhaps a more detailed analysis of its plot than we are in a position to give, and we are strongly impressed with the idea that a frank avowal of our incapacity in this respect will find an abundant response from nineteen-twentieths of the audience of Saturday evening. It would be ungracious to these to place ourselves in a position assuming a superior intelligence to their own, and, if only in obedience to this instinct, we shall arrogate to ourselves no knowledge they do not themselves possess. That the play is cast in the times of the Directory, that certain inscrutable mysteries attach to the origin and parentage of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Clairette, that she could neither refuse nor marry *Pomponnet*, that she loved *Pithou*, who in his turn loved *Mademoiselle Lange*, who proved to be an old school-fellow of *Clairette*, that by writing a letter to each as from the other, she brought them together at the *Bal de Calypso* and overheard their mutual declaration of love—all this of course we know, in common with the rest of the audience; and even one or two other discoveries may be in their and our possession. But it certainly was not easy to put all these things together, and no one can feel at all satisfied that *Clairette's* fate after all was to marry "*cet imbecile*" *Pomponnet*.

Be all this as it may, the audience was delighted with the performance, and repeatedly expressed this by loud and hearty plaudits. The more prominent airs of the Opera were, of course, familiar to all, and the music is unquestionably very clever, very sparkling and lively, and an excellent mixture of the comic and the serious. Madame Dorlia, as *Clairette*, played with admirable spirit, and sang her part, not indeed always with faultless intonation, but with intelligence and the best possible will. She carried the sympathies of the audience with her thoroughly well from the first moment of her appearance to the fall of the curtain, and, in view of all the difficulties incidental to the production of such a piece with the limited resources at the command of the *troupe*, she presented the character of *La Fille de Madame Angot* with great and undeniable success. Miss Ella Herbert fairly took the house by surprise as *Mademoiselle Lange*. Her appearance and manner, the vivacity and grace of her action, the excellence of her singing, her self-possession, ease and even elegance, astonished every one. These must have been remarkable to dispel the sense of incongruity which naturally arises when a lady sings in a voice an octave lower than that usually bestowed by nature on her sex. Yet no such sense arose in the mind while listening to her, and this can only be explained, we think, by the perfect illusion produced by the appearance and manner. Miss Herbert's success was not only distinguished, but we only do her justice when we say that it was very remarkable. That an amateur should be able to learn the music of a part of this kind, and of a subsidiary part which she played in the first act, in a few days—as Miss Herbert must have done—and assumed the two characters with an ease supposed to only come with long practice, argues no ordinary quickness of apprehension and power of memory. In the part of *Pithou* M. Legros displayed to advantage the excellent qualities which distinguish him as an actor. He looked his part well, and played it with spirit and cleverness throughout. M. Henri as *Pomponnet*, too, did himself great credit, and, if admirably ridiculous, was so in virtue of the intelligence with which he assumed his *rôle*. M. Alexandre, as *Larivaudière* added his share to the success of the piece; while the sergeant, who abandoned the severity of his stern duties for the lighter steps of the waltz in the ball-room scene, showed a facility of disposition and movement in a high degree entertaining. If the *gens d'armes* were somewhat wooden, the fact may be attributed to over severe discipline. Entire freedom of volition is not the privilege of the soldier.

We must not forget how much was due to M. Launay-Céphas for his direction and accompaniments—the latter played with the greatest intelligence, and showing throughout truly musician-like qualities.

The piece was an entire success, and we should be pleased to hear that it was to be given again for the benefit of Mde. Dorlia, to whom in a large measure this success is due. The stars have been somewhat against the French *troupe*, but we may hope that the happy combination of Saturday evening promises more encouragement.

The *Choya Shimbun* has heard that a new department, the *Kousho Kioku*, or bureau of Commercial Industry, will shortly be established under the superintendence of the Naimusho.

The celebration of the festival of "Daijingû" was held yesterday and will be continued to-day by the Japanese townspeople. The temple at Nogé Hill was thronged with crowds of the devout during the day yesterday and the streets were illuminated at dusk.

The *Nichi Nichi* is informed that the Judicial Department has despatched officials to the provinces to investigate the customs peculiar to certain remote districts.

The *Akebono Shimbun* refers to the invention of a new abacus for the use of blind which has been examined and reported on favourably by the Education Department. Mr. Komagai, its inventor, is about to open a school for the instruction of the blind in arithmetic.

The designs for the new Imperial Palace having been completed and approved the bulding will be begun next year. It is estimated to cost about one million of *yen*. The construction will occupy about five years.

Tuesday, 16th.

We learn from the *Hongkong Times* that H. M. S. *Thalia*, having been relieved by the *Juno*, had proceeded on her way home.

The *Nichi Nichi Shimbun* reports that certain parties have been arrested for shipping adulterated tobacco from the province of Shimôsa to Tokio.

The *Shichi Ichi Zappo* says that some seven or eight recent converts to Christianity have been baptized at Nagasaki.

The *Hochi Shimbun* reports that on His Majesty's return from the *Genroin* on the 22nd inst., he will visit Hamagoten and there be entertained by His Highness Arisugawa no Miya and H. H. Fushimi no Miya. The *Daijin* and *Sanghi* will also be present.

The same paper reports that a fire broke out at Morioka in the Iwaté *ken* a little after midnight on the 14th inst., and destroyed 53 houses. Another fire broke out in the same town at 4 a.m. and destroyed 13 houses.

The *Osaka Nippô* says that Mr. Seki Shingo, the former editor of the *Hioron Shimbun*, was summoned from prison to the Saibansho or the 11th instant, and was tried for an article published in No. 12 of the *Hioron Shimbun*.

The same paper reports that in the province of Awaji the banks of a lake over two miles in length gave way, and the water rushing out carried away the banks of two other smaller lakes and flooded an area of 400 acres and 14 hamlets.

Wednesday, 17th.

It is rumoured, says the *Akebono Shimbun*, that towards the end of last month some 120 *Shidzoku* of Satsuma, Bizen and other provinces, arrived at Shinagawa. They were dressed in ordinary Japanese costume, but immediately after landing put on clothes of the foreign fashion, and went off to different parts of the capital carrying their swords wrapped up as bundles. These facts being remarked by the police, extra guards were stationed at the houses of the *Daijin* and other officials of high rank.

The same paper says that the pictures of the 500 disciples of Buddha will be exhibited to the public from the 31st of the month to the 3rd proximo in the temple of Zojioji, Shiba.

From the *Nichi Nichi Shimbun*.

His Majesty the Mikado will visit the *Kuadzoku Kuaikwan* (Nobles' club) before leaving the Capital on his intended journey northward.

From the *Hochi Shimbun*.

Mr. Ito, the Minister of Public Works, will leave Tokio on the 18th inst on a visit to the Sado mines.

From the *Kobe Minato Shimbun*.

A large rice merchant, Kita Kaze by name, having closed his establishment, there are over a hundred junks laden with rice in the harbour and waiting to sell their cargoes, while the price of grain is daily declining.

From the *Hochi Shimbun*.

A party of Loochooan officials arrived in the Capital some five or six days ago, and another party on the 14th inst. Their errand, it is said, is to take exact instructions from the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Home Department in regard to the connection between China *(sic)* and Loochoo.

The *Kansho Kioku*, or Bureau of Commercial Industry, was opened on the 11th inst.

From the *Heiji Shimbun*.

We learn by telegraph that the disturbance in the Wakayama *ken* has been quieted, but troops from Osaka are still stationed there.

The War Department has summoned to Tokio the heads of the Hospitals in the various military stations throughout the country.

The M. M. S. S. *Tanais* is announced to leave Hongkong for this port, at 6 p.m. to-day, bringing the European mails of 9th April.

The *Japan Herald* says:—

Through the kindness of a friend, we have been placed in possession of the following telegram, which was received here last night:—

"Revolution in Mexico. Mintage and shipment of dollars stopped."

The effect of this news on the London Silver Market has been to drive Mexican dollars up to 53½*d.* per oz., whilst Bar Silver is only 53⅛*d.* per oz. Mexican dollars are ·900 fine, and have for some time past been only quoted at their melting value, 1½*d.* per oz. below Bar Silver (·925 fine) standard.

Thursday, 18*th*.

The *Hochi Shimbun* says:—

The former residence of Imagawacho at Ogawamachi, Tokio, is now being prepared for the reception of the Corean Embassy, and a tea-house keeper at Shinbashi, Bichotei by name, has had instructions from the government to supply meals daily for seventy persons for the Ambassadors and their *suite*.

Further:—We have up to the present published daily the market price of gold coin, but having been ordered by the *Naimushô* to discontinue this, we must refrain from doing so for the future.

Further:—The statement made yesterday by a native paper that Mr. Ito, the Minister of Public Works, is to start for Sado proved to be incorrect, for the same paper states that Mr. Ito will embark to-day on the *Tokio Maru* for Ikuno, in the province of Tajima, for the purpose of inspecting the silver mines there.

Mr. Torii, the editor of the *Hioron Shimbun*, was sentenced on the 16th inst to four months imprisonment for violating the newspaper laws by publishing in No 80 of the *Hioron Shimbun*, a statement that the Government had intended to add several new clauses to the Press-laws, but did not carry out its intentions. Mr. Komatzu, on the staff of the same journal, was sentenced to two months imprisonment for the same offence.

The *Nichi Nichi* says:—

A general meeting of the *Kucho* and *Kocho* of Tokio took place on the 15th at the chief Police Station, and an animated discussion took place.

Friday, 19*th*.

From the *Nichi Nichi Shimbun*.

Mr. Hokiyama, the former editor of the *Nichi Nichi Shimbun*, was sentenced on the 19th inst., to imprisonment for three months, for having published, in its issue of the 19th January last, a letter which was an offence against the Press laws.

From the *Osaka Nippo*.

A notification was issued by the Prime Minister on the 8th inst to the effect that, in consequence of the journey of His Majesty the Mikado northwards, the *Chihokuan Kuaigi* will not meet again this year.

From the *Hochi Shimbun*.

The *Korio Maru*, which started from Kobe on the 13th instant for Corea, is expected to arrive in Fusan on the 17th inst.; will take the Corean Ambassadors on board on the 18th, and will immediately start for Japan. She is expected to arrive in Shinagawa on the 23rd instant.

Saturday, 20*th*.

The performance at the Gaiety Theatre of *La Fille de Madame Angot* on Saturday last, half the proceeds of which were destined for the General Hospital, resulted in an accession to its funds of $166, the receipt of which was acknowledged in the following letter, which has been handed to us for publication.

[*Translation.*]

Yokohama, 15th, May 1876.

DEAR SIR,—I beg to acknowledge the receipt of your favor of this day enclosing $166, the proceeds of the performance which you kindly gave on the 13th instant, for the benefit of the Hospital.

In the plaudits elicited by the talent of the artists who acquitted themselves so well under your able management there was also true gratitude, and it is of this feeling I am more particularly requested by the committee to give you the most sincere assurance.

I am, &c.,

H. ALLEN,
Honory Secretary, of the Yokohama, General Hospital.

To Mr. L'AUNAY-CEPHAS.

The *Osaka Nippo* says:—

Kônoike Jutaro, a famous banker of Osaka, became bankrupt on the 15th instant. This, with the late bankruptcy of Kita Kaze, the great rice merchant of the same city, has caused no slight excitement in and around Osaka and Kioto.

We learn from the *Choya Shimbun* that eleven Loochooan officials were received at the *Sei-in* on the 15th instant.

The *Nichi Nichi Shimbun* says:—

A fire broke out at 1 p.m., on the 17th instant, at Kurume, in the province of Chikugo, which destroyed five houses; and another at 9.30 p.m., on the 18th instant, at Reigan-jima, Tokio, which destroyed ten houses.

The same paper says:—

Some twenty law students presented themselves at the *Tokio Fu* on the 18th instant, to undergo their examinations, the results of which have not yet transpired.

The *Akebono Shimbun* says:—

The *suite* of His Majesty the Mikado on his northern journey will consist of 148 persons.

AWAKENED.

(FROM THE JAPANESE.)

I rambled over hill and plain,
Where roses, girt with verdure, reign
Through summer's golden weather;
In each cool shade a joyous bird
With rustling wing the silence stirred,
He and his mate together.

At length my little cot appeared,
And round it every leaf endeared
A grateful guard was keeping:
I gently move the yielding door,
I lightly step across the floor,
And find my young wife sleeping.

I watch the silver moonlight rest
Upon her brow. To balmy breast
It wraps her in its splendour.
And, bending o'er her rosy cheek,
With love more fond than words can speak,
I breathe some fancy tender.

Her bright eyes open, and she cries
"What is it love?" Her colour flies;
Her red lips softly quiver.
"The matter is—How sweet you are!"
She smiles one happy smile, then far
Floats forth on sleep's dark river.

KAJIN.

THE ENGLISH PRESS ON SIR H. PARKES' PRESS-NOTIFICATION.

THE articles in the *Pall Mall Gazette* and the *London and China Telegraph* on the BRITISH MINISTER's recent Notification forbidding British subjects to publish newspapers in the Japanese language, have doubtless been seen by most of our readers, but we publish them elsewhere as fairly belonging to the history of an important case. The writer of the former article expresses himself cautiously, and falls into an error in supposing that anything had appeared in the *Bankoku Shimbun* of a nature to merit the disapproval or arouse the apprehensions of the Japanese Government. This was not the case, nor, truth to tell, was there much danger of it. But the paper might have fallen into other hands, or other papers conducted by men of different intellectual calibre and temperament might, and would, soon have made their appearance, and there would shortly have been some pretty bidding for circulation among a people long unaccustomed to speak of their authorities in a voice above a whisper. The anomaly and injustice would have been this, that in a country where there are Press-laws one of the first of which is that no foreigner shall be the proprietor of a newspaper published in the native language, foreigners should establish and conduct such papers, proclaim themselves free from all Press control, and defy the Japanese under the protection of their own Governments. If the Japanese interfered to prevent their people from engaging in such enterprises, there would be endless protests, endless representations on both sides, infinite bad blood, and a perpetual disregard of their own laws by Japanese subjects protected in the infraction of them by foreigners. Complications more certain to bring about bad relations between ourselves and the Government, it is impossible to conceive. Above all, it would have brought foreigners not indeed actually under Japanese law, but within the sphere of its operation. Japanese officials would be summoned to give evidence in regard to facts, and also to their opinions regarding the probable effect of incriminated writing. Is any one so simple as to believe that a jury would convict on such evidence? Never. Would this be a fair ordeal to which to expose the Japanese Government, and, above all, our friendly relations with it? Of course it would not. The remainder of the article in the *Pall Mall Gazette* consists of matter which we are estopped from saying much about, still less praising, because it is practically a *précis* of our own remarks. We shall not impugn it on this account certainly, and the Government may learn from the tenor of the whole article in how fair a spirit towards itself the home press canvasses matters which concern this country. It may also learn that while quite ready even to make a concession in its favour upon a right so jealously guarded as the liberty of the Press, there is no sympathy at home, and can be none, with the spirit in which the Press prosecutions in this country have been conducted. "If, therefore," the writer says, "the Japanese Government be wise, it will permit "as far as possible the free expression of opinion "in the native Press, and only seek in the interests "of peace and order to exercise such power of repression "or punishment as may be absolutely required to that end." Of course. We have never thought it would be wise in the Government to divest itself of the power of checking and even punishing writing which was vicious in intention and inflammatory in its tendency. The outcry against the Press-laws has always appeared to us a most glaring evidence of the often noticed impossibility of getting Europeans, and especially Englishmen, to see that what may suit them perfectly well may be as unsuitable to orientals as snow-shoes to a Brahmin. But in regard to the hardship, the severity and practical injustice of the Press prosecutions, we have never wavered for a moment, either as a question of right or policy. They are all wrong and unsound in degree from beginning to end.

The writer in the *London & China Express* takes a wholly different view of Sir HARRY PARKES' notification. He thinks it unwarranted by any powers delegated to a British Minister by the Order in Council, and evidently believes that a conviction under it would be reversed on appeal to the Supreme Court in Shanghai. He quotes Clause VI of the Order to prove that no act can be created an offence under it which would not be deemed such by the common law of England. But he takes no cognizance of the clause in the Order which empowers Her Majesty's Minister "to make such regulations as may "seem fit for the peace, order and good government of "British subjects in or resorting to Japan * * * and "for the maintenance of friendly relations between "British and Japanese subjects and authorities." On this Clause of the Order in Council no question can for a moment exist of Sir HARRY PARKES' power to make the Regulation under consideration, and the omission of all reference to it, though doubtless accidental, is not the less destructive of the writer's argument.

Of the justice and expediency of the prohibition made in the Notification, *vis-à-vis* of the Japanese, we remain strongly convinced. Regarding the exact form under which that prohibition was issued, we are not so clear, though we do not at all see how the question could have been dealt with otherwise. The objections to bringing British subjects under, or even within the sphere of the operation of Japanese law are absolute. All nations have a kind of criterion of what may and what may not be published in a newspaper. To have insisted on our own, would have been most unjust; to have submitted to that of the Japanese, absurd and humiliating. Sir HARRY PARKES' notification cut all the ground away on which any possible interruption to our friendly relations with the Japanese could arise from this source; and, in view of the possible damage which might have been done in the manner contemplated, the inherent injustice—as it seems to us—of the course Mr. BLACK thought it right to pursue, and the many various channels by which all the good can be done which any such newspaper as his could do, we think it would have been extremely difficult to find any means of effecting the desired object other than those adopted by Sir HARRY PARKES.

We would only beg for attention on one other point. We were promised "a howl of moral indignation at home" when the Notification reached England, and there was certainly some noise made here which deserved the application of this graceful term. Nothing, however, can be more perfectly quiet, calm and sensible—whether more or less correct in argument—than the only two articles which have yet reached us on the subject. A self-respecting Press, worthy to assist, as does that of England, in the government of the country, does not set itself to "howl," and this is one of the reasons why it extorts the respect and admiration of the world.

THE YUNNAN COMMISSION.

THE English Commissioners, Messrs. GROSVENOR, BABER and DAVENPORT, left Yunnan-fu on the 26th of March, on their Homeward Journey. It is stated that when they arrived they were treated with marked and ostentatious civility, and that they found that the investigation into the circumstances of Mr. MARGARY's murder had commenced. Nothing could exceed the punctilious courtesy of their reception by the mandarins at Yunnan-fu, and throughout the whole of the journey they met with civility and respect. But it is said *they have achieved no definite result.*

If this should prove to be the case, we might expect that the Press and the Public will reopen their batteries on the British Minister and taunt him with the futility of his plan. The phrases "we told you so" and "we knew how it would be" will very naturally reappear with irritating frequency, and we shall hear that the Briton has once more allowed himself to be deceived by his over confidence in the professions of Asiatics. We shall be called on to deplore for the hundredth time the evil fate which has placed the destinies of England in China in the hands of a diplomatist who is so credulous that he believes the professions of men to whom mendacity is second nature, and who is above all persistently deaf to the Cassandra voice of warning which rings ever in his ears from the residents of Hongkong and Shanghai.

We cannot help thinking that perhaps certain considerations come in here to which sufficient weight has not yet been attached. Without pretending to have access to any peculiar sources of information, we may perhaps throw light upon the real situation by remembering what was the position of affairs in India when the unfortunate disaster occurred in Yunnan. Every thing was being prepared for the reception of the "immediate heir of England." The long promised dream of the PRINCE of WALES was about to be realized, and he was to visit the vast and superb Empire which English genius and energy have founded in the East. Now it was essential that this visit should be in every sense a success. It was necessary that the troops should be gathered together in large numbers, that the great Princes should be summoned to the conclave and the pageant, that war-ships should thunder forth welcomes in the harbours, and serried lines of swarthy warriors protect and compose the processions on shore. Thus during the year 1875 every sepoy we could muster was required in India. If any native regiments had been excluded from their share in the pageantry of the "annus mirabilis," they would have felt aggrieved and disappointed, and, like the soldiers who were at home when Agincourt was won, would have "held their manhoods cheap" when their more fortunate comrades told of the splendours they had witnessed at royal Delhi and holy Benares, of the tigers that were slain, and the elephants that were ridden, of the stately durbars and the yet more glorious investiture of the Order of the Star. During the months immediately following the murder of AUGUSTUS MARGARY and the attack on Colonel BROWN it was imperatively necessary that all the Indian troops should be in India. The PRINCE of WALES could not put off his visit. It had been announced, and it would have been a fatal blunder had it been deferred or shorn of any of its peculiar and distinctive magnificence. It was one of those things which must be done well or not done at all. Now, had we proceeded to the punishment of the Chinese for their cowardly and treacherous assassination of our gallant young officer at once, we should have been obliged to withdraw troops from India when they could not with any propriety have been spared. This seems to explain why the British Minister at Peking devised the expedient of the Commission. He played off their favourite game of procrastination on the Chinese, and delayed because he was anxious to gain time himself, not because he saw his opponents desired it—knowing all the time that every week he waited increased the efficiency of England for the struggle, and rendered China less able to resist when the crisis should come. Of course it is possible that a peaceful solution may yet be found of the Yunnan difficulty, but we cannot see that the few months which have been allowed to pass have in any sense weakened our position. On the contrary, they have distinctly and emphatically strengthened it. We have acted with singular forbearance and temper. We have exhibited nothing but an earnest desire to discover the exact truth. The most scrupulous advocate of the policy which recognizes all nations, civilized and barbarous, as entitled to equal rights, might be satisfied with the course taken by Sir THOMAS WADE. The Chinese Government have had every chance. If they are innocent of complicity in the murder of MARGARY, they have had the fullest opportunity given them of proving their innocence. If they have failed to do so, it is no fault of ours. The gentleman who acted as Chief Commissioner is a man of the highest character and of very wide experience. His associates are recognized as Chinese students of sufficient attainments. We may be sure that if the Chinese had a plain story to tell they would have been listened to patiently, and the best construction would have been put upon any extenuating circumstances they may have had to allege. If, however, they have failed to justify themselves in the eyes of the Commissioners, we are perfectly warranted in believing that they have no case, and we must conclude that directly or indirectly the Chinese officials are guilty. Then of course the question rises; what next? If we are to have a war, how much better we are prepared for it now than we were a year ago! We have at our command an Indian Army in a state of unexampled efficiency, prepared by the recent sham fights and reviews for the more serious business for which these trials and spectacles are the needful rehearsals. We have ships at hand just at the right moment to add the necessary emphasis to our demands for justice. Very different indeed is the position of China. If she was ill-prepared for war in May, 1875, she is far more 'unready' in May 1876. The boasted military reforms which were to fit China for a contest with European troops were found to be a sham when their practical value was tested in Formosa. The "ever victorious" army when opposed to the well-drilled Japanese was found to be an utter failure. It is painful to think of the ill-fed and ill-clothed rabblement, without arms of precision, attempting to stand against the disciplined and well-armed sepoys supplied with breech-loaders. But there is another reason why China is less prepared for war now than she was a year ago. Not only has the vague prestige attached to her newly equipped army vanished into thin air, but she has very serious troubles within her borders. "Rumour, painted full of tongues," asserts that the Mohammedan rebels are preparing for a rising. The secret societies which honeycomb the land are causes of peril not the less dangerous because they are subterranean. If the Amir better known as YAKOOB BEG has not actually entered Kansuh, he is menacing that province. If, then, the Chinese Government is so ill-advised as to try and befool the Yunnan Commissioners, under the impression that we were playing her own game of delay to mask unpreparedness for action, she is fatally mistaken. The year that has passed since the murder has been as well employed by us as it has been ill employed by China.

SPIRIT OF THE JAPANESE PRESS.

The Sentences upon Messrs. Suwada and Kusama.

(Choya Shimbun.)

In No. 787 of our issue we published the sentence passed upon our Mr. Sawada, and that passed upon Mr. Kusama, the writer of the article for the publication of which our editor was convicted of an offence against the Press-laws, and after stating our own misgivings upon these sentences, we appealed to the public if possible to dispel them. Many days have elapsed since this appeal was made, and yet not a single person has responded to it. We are therefore, however reluctantly, compelled to ask whether a mistake has not been committed by our Government. Moreover, we have frequently read over the newspaper laws, but have come to no clause in them which provides that a principal and accessory to the same offence are guilty of a violation of two distinct clauses of those laws, and this remark does not apply solely to the newpaper laws, but to all the laws of the country. This it is which causes our great misgiving.

However wise a person may be, it cannot be said that he is infallible, and as the duties of the Judges are onerous, it is possible that some of their decisions may at times be erroneous, nor must it be said on this account that such men are useless. On these grounds we have no intention of seeming to reprove the Judges. At the same time it must be borne in mind that laws and penalties are important things in the government of a nation. In semi-civilized countries it happens that although two cases of exactly the same nature are brought before one Judge in one court, different decisions will be pronounced upon them, on account of the Judge liking the suitors in one case, and detesting them in the other. Under these conditions, judgments become lamentably arbitrary. Now we should not have imagined that anything of this nature could take place among the Judges in Japan. But when we see that two men, accused as principal and accessory to one offence, are punished under two distinct articles of the Press-laws, we cannot but ask whether some mistake has not been made by the law-officers.

Now, both our government and all our prominent men are desirous that we should have jurisdiction over foreigners resident in Japan, while the foreigners are of opinion that our laws are not yet perfect and our judgments not always just, for which reasons they show but very little inclination to entrust themselves to those laws. They were therefore desirous of proving their case against us, and, just at the moment when this feeling was strong on both sides, these two judgments made their appearance, and the foreigners have very naturally adduced them to substantiate their argument. The whole question has been fully dealt with by the *Japan Mail*, and this has tended to increase the doubt which foreigners feel regarding the justice of our laws. It tends also to give us a bad reputation for the administration of justice in the face of the whole world.

Some people say:—"When a Judge pronounces a decision, he makes our code the basis of that decision. But he is not solely guided by it. He may also be guided by his own views, and when two judges find one man guilty of and one man accessory to a certain offence, and punish them differently, this discrepancy of view must arise from their having a discretion in regard to heavier or lighter sentences."

But we are not arguing here about heavier or lighter punishments. We are speaking of the principal and accessory to the same offence being punished under different clauses of the law. We are of opinion that the Judge has a discretion in regard to increasing or diminishing punishments as he may think proper; but he cannot be right in arbitrarily punishing two men who had committed one offence as violators of two different laws. If this is admitted to be correct, the administration of justice will become a very confused thing. For example, let us suppose that one man assisted another in the commission of a theft. Both are arrested in one place, but they are tried in different courts. One of them is adjudged as a thief, and condemned to hard labour for a certain length of time, while the other is adjudged guilty of having broken into a house with arms, and is sentenced to decapitation. Could this be regarded as correct, and the proper manner in which to administer justice? Now Mr. Sawada was the Editor of the *Choya Shimbun*, and Mr. Kusama was the person who forwarded to him the article for publication; and, as we have said in an earlier issue, the former was tried for publishing the article at the Tokio *Saibansho* and adjudged guilty of violating the 13th Article of the newspaper press laws, which provides that "any one advocating a revolution in the Government, or the subversion of the State, or who attempts to stir up revolution, &c." The latter was convicted in the Ehimé *ken*, for writing this very article, under the 12th clause of same law, in which it is stated that:—"Any person who in a newspaper or magazine shall incite to the commission of any crime, &c." Can it be said that the analogy we have just adduced is otherwise than perfectly fair?

Again, some say: "Although men who have committed the same offence are condemned by two different laws, still if they have expressed their assent to the judgment passed on them, they cannot plead that they have been unjustly treated." But, we reply, it is the duty of a Judge to see that the innocent are not pronounced guilty, and he certainly has no right to take advantage of the confusion and excitement of mind incidental to a person's being tried, to punish him in an arbitrary way simply because he confesses his crime and expresses approval of the judgment.

Confucius has said "Never fear to repair a wrong." Some days have elapsed since we last wrote on this subject, but these two men have not been ordered a fresh trial, nor has the wrong committed in their case been repaired. What is the reason of this? We hear that the question is now under the discussion of the Government. But is not the case too clear to require any discussion at all?

None of the punishments for the violation of the Press-laws exceed three years imprisonment and a fine of five hundred *yen*. Thus although the Judges may make mistakes in administering these laws, the worst that can happen is that the term of imprisonment or the fine may be excessive as regards the offence. But in offences of another nature such mistakes might issue in the loss of life, and it is in the fear of this that these words have been written.

The Anatomy of a Revival.

(Hôchi Shimbun.)

The following words from Mr. Fujii Shigeaki of Osaka will tend to explain what has been a mystery to the majority of our countrymen for some years past.

"The *Shigonja* (an order of priests) worshipped the gods by blowing conch shells and burning sticks of wood. The *miko* (a priestess of the Shintô religion) rang bells in order to avert calamities. Those who pretended to raise the spirits of the dead by means of striking fire with flint or by striking two pieces of wood together, were the Nakayamagioja branch of the Hokke sect of the Buddhists. Those who clapped their hands and beat drums and said that they could bring the spirits of gods from *Fukamagawara* were the *Yuichi-Shinto*. Those who supposed that they had been bewitched by a fox or a badger prayed to *Inari*. Those who desired to evade damage by floods or to be preserved from danger in travelling by water prayed to Kompira. Those who desired to evade suffering in bearing children worshipped Jizosama, and those who wished for the cure of any disease prayed to Yakushi. Those who desired to become wealthy prayed to Bishamonten or Kankiten, and those who wished for muscular strength prayed to Marishiten. Whether it were Kobo-daishi, Nichirin Shonin, Hônen Shonin, a Shintô god, a Buddhist god, a wooden or a stone god, the people used to pray to and worship them by making offerings of rice, flowers, or incense, and the very pious used to squat down with their heads to the ground, thinking that their prayers would be answered, and kept on repeating the words *Namu mio ho ren ge kio** or *Namu amida butsu** or *Takamagahara ni kami todomari*† Up to about ten years ago there scarcely was a moment from morning to evening that voices repeating the above words ceased. It mattered not whether it was a Buddhist or a Shintô priest. So long as he acted cleverly he was able to make his living, and I also, being acquainted with Shintôism, was making my living by it. Now, a little over ten years ago, cards with the names of various gods written on them and also figures of gods descended from heaven in different parts of the country, and a dance called *Yejanaika* originated in Osaka and then prevailed in many parts of the Empire. I am one of those who planned and originated all these mysteries and excitements. But now that education has so far advanced in our country and that I have become ashamed of myself, I will confess all and entreat that my countrymen will grant me pardon. The education of the present day differs in very many respects from that which prevailed ten years ago, and Japan has almost become a different country from what it was then. Even the aged and children in the interior have begun to know something about the earth, the sun and moon, that the Europeans are not savages, that when it thunders and lightens it is not because the devils beat drums or kindle fire. I

have also read some translations of European works, and repent greatly of my past conduct. I have made confessions already to some people, but, as they seem to doubt me, I now make this known by the aid of the press. I formerly had in my possession a figure of Yebisu (a god) which was made at Nishimiya. Finding it of no more use to me, I left it one night quietly in the front of a merchant's house in Osaka, and on the morrow the merchant found it and said that the god of fortune had descended from heaven to him. He assembled a large party of his friends and gave a great entertainment to rejoice with him at his good luck, and I was one of the party thus entertained. I then thought that I had discovered something of great interest, and I got a quantity of cards with the names of Yebisu, Daijingu and other gods printed on them, and left them secretly in different parts of the houses in various quarters of the city. The effect that this had was enormous. There was an outburst of joy over the whole city. What I did, I did for amusement only; but others, seeing the great results of my acts, took up my cue and did the same, and within ten days there was scarcely a place in Osaka where there was not prodigious rejoicing, with songs and dances. A friend of mine went to the province of Bitchu and did the same, and the priests who figured in these transactions did indeed make enormous sums of money. The excitement was great and universal. Men would dress like women, and women like men. The tailors were kept continually busy at their trade. The price of *saké* rose greatly, and in fact the people were in general half beside themselves. This strong excitement prevailed from Shimonoseki to Yedo, and the whole of it originated simply in my deceiving a single merchant. Thousands were misled, and, enlightened as the people have now become, they are yet liable to be misled again to a certain extent. For this reason, I, being the originator of this delusion, am now the first to confess my deeds through the medium of this newspaper, in hopes that the people may see what a farce most of these excitements are, and will not in future be deceived by them.‡

The introduction of the Cotton Plant.

(Yoyoshadan.)

It is stated in a work called *Nihonkoki Zanpen* that in the 18th year of *Yenriaku* (A.D. 799,) an east Indian landed from a small boat on the coast of the province of Mikawa, and had with him some seeds of a plant which proved to be the cotton plant. This is said to be the first time that cotton was known in this country. In another book called the Ruiju Kokushi, it is stated that in the 19th year of *Yenriaku* (A.D. 800) some cotton seeds were found by certain officials in a boat which had drifted to the shores of Japan from Konron (?) Some of the seeds were sent to the provinces of Kii, Awaji, Awa, Sanuki, Iyo, Tosa, and Dazai fu (Kiushiu) and the government ordered that they should be set about an inch in the earth with some four seeds in a single place. Though no one seems to have been acquainted with the name of the seed at that time, it was known that a warm climate was necessary for them. But the plant seems to have become extinct again, for in a work called Shinsen Rokujo which was composed in the first year of Kangen (A.D. 1248) there is a piece of poetry, composed by Prime Minister Kinugawa Fuyuyoshi, which states that the cottont plant had become extinct. This shews that cotton had once been planted and that it disappeared. Another work called *Sejidanki*, written about the year 1570 states that cotton seeds were again introduced into Japan, but it does not seem as though the plant had spread to any great extent.

In a book called Chino it is stated that when Iyemitu, the 3rd Shôgun of Tokugawa dynasty, was about to ascend the throne, there was no cotton to put under the papers when they were to be sealed. Some of the ministers asked whether they should send for some. But Matzdaira Idzumi no Kami on hearing this said that they had better use the cotton that came wrapped round various articles imported from Nagasaki. This shews that cotton was produced in certain parts of the country to a greater or less extent, but not in any of the districts near Yedo, and it must have been from about this period that cotton plantations spread throughout various part of the country.

---

‡ The above affair took place about ten years ago, and the people actually thought, and the majority of them still think, that the images and cards were really sent from heaven. About one half of the Empire was thrown into a great state of excitement, and wherever it prevailed the people became more or less beside themselves. After continuing for about six months, it disappeared with great rapidity before the revolution, and this event was regarded by some as the reformation of the world. [Trans.]

BRITISH CONSULAR TRADE REPORT FOR KANAGAWA FOR 1875.

British Consulate,
Kanagawa, 8th May, 1876.

Sir.—I have the honour to furnish you with a report of the Trade of this Port for the year ended December 31st, 1875, accompanied with the following returns.

Enclosure 1.—Return of the Import Trade.
Enclosure 2.—Return of the Export Trade.
Enclosure 3.—Return of Shipping.
Enclosure 4.—Return of Export and Import of Treasure.
Enclosure 5.—Return of the duties collected on Imports and Exports, with a Return of Shipping (Entrance and Clearance) fees, and storage charges.
Enclosure 6.—A Return showing the number of British Residents and British firms, and the number of Foreign residents and Foreign firms at this Port.

I proceed to compare the Trade of 1875 with that of 1874. The figures for 1875 show as follows.

Imports	$21,953,909
Exports	$12,466,730
	$34,420,639

being an increase of $5,125,768 on the trade of 1874.

The following are comparative tables for the two years.

	1875.	1874.
Imports	$21,953,909	$16,716,298
Exports	$12,466,730	$12,578,573
	$34,420,639	$29,294,871

or, to particularize :—

Imports.

	1875.	1874.
Cotton Manufactures	$7,299,603	$7,092,252
Woollen Manufactures	2,867,543	1,210,824
Mixed Cotton and Woollen	1,072,292	884,121
Metals	655,408	742,039
Arms and Ammunition	42,520	16,342
Miscellaneous, foreign	7,009,960	4,069,790
Miscellaneous, local	3,006,583	2,700,930
Total	$21,953,909	$16,716,298

Exports.

	1875.	1874.
Silk, Raw	$5,424,916	$5,295,190
Silkworm Egg Cards	474,921	731,275
Tea	4,813,458	4,843,357
Copper	184,710	265,378
Cocoons	248,416	242,862
Lacquerware	128,334	164,955
Tobacco	43,925	31,660
Wax	2,640	2,579
Coal	23,957	14,870
Dried Fish	153,414	193,196
Miscellaneous	968,039	793,251
	$12,466,730	$12,578,573

In Imports.

Cotton manufactures exhibit an increase of	$207,351
Woollens an increase of	1,656,719
Mixed Cotton and Woollens an increase of	188,171
Metals a decrease of	86,631
Arms and Ammunition an increase of	26,178
Miscellaneous foreign an increase of	2,940,170
Miscellaneous local an increase of	305,653

In Exports.

Silk shews an increase of	$129,726
Silkworm Egg Cards a decrease of	256,354
Tea a decrease of	29,899
Copper a decrease of	80,668
Cocoons an increase of	5,554
Lacquerware a decrease of	36,621
Wax an increase of	61
Coal an increase of	9,087
Dried Fish a decrease of	39,782
Miscellaneous an increase of	174,788

Original from UNIVERSITY OF CALIFORNIA

The above figures shew an increase in the Import Trade for 1875 of $5,237,611 as compared with 1874, the Export Trade of the past year exhibiting only a small decrease namely, $111,843 on that of 1874.

In my summary for 1874, I had to chronicle a diminution in the Import Trade of this port as compared with 1873 of $2,819,460, and the above figures show that the trade has quite recovered itself, being $5,237,611 in excess of the Import Trade of 1874, and $2,418,151 in excess of that of 1873; taking into consideration the fact that the values of most articles of Import have ruled very much lower during the last year, it must be acknowledged that, so far as the elasticity of the trade is concerned, the above figures are by no means discouraging.

It does not, however, always follow that a profitable trade results from an increased importation, and I am still induced to believe that the number of merchants here continues to bring about active and very serious competition, moreover the fact of so many commercial disasters having occured in the China and Japan trade shows that profits have dwindled down almost to nothing, whilst losses are at times very heavy.

The successively declining rates in the Home Markets for all classes of textile fabrics during the last year have naturally had their effect here, and when the depreciation in the value of silver, which of course affects the remittances made from here, is considered, the fall in goods has been a very serious one. Most of the merchants here endeavour to sell at the best rate obtainable on arrival, but in a limited market like this, such a course is I fear very difficult and at times probably impossible. As those interested in the trade know better than I do, the large difference in prices ruling at the close of 1874, compared with those in 1875, it would serve no good purpose in a report of this nature to go into detailed particulars—there is no doubt that goods have been bought on a lower basis but not sufficiently so in most cases to come out without loss.

I proceed now to make some remarks on those articles of Import which seem most to demand comment.

Cotton Yarn again shows a considerable increase, being 34,302 piculs in excess of the previous year, but probably this has only been obtained by considerable concessions in price being made by importers.

The chief demand is for the lower qualities of 16 24, the best yarns not realizing as a rule as comparatively good prices.

Shirtings exhibit a decrease of over 10,000,000 yards; there is little doubt that the increased consumption of yarn has somewhat militated with that of shirtings, the natives probably finding that they can work up yarns into cloth more adapted to their requirements than the ordinary shirtings imported here. As has been the case in yarns the demand has been for lower qualities. It would therefore seem to be useless to raise a voice against the alleged use of injurious ingredients in their manufacture when shirtings so made up appear to suit the tastes of native customers, who are fully alive to what they are purchasing.

T Cloths seem to require no comment, the demand is fitful and, like *drills*, is to a great extent dependent on the requirements of the Naval, Military or other departments of the Government.

Chintzes:—The small importation of these goods in previous years has caused them somewhat to recover their position, for I find that the importation is more than double that of the previous year.

Cotton Satins or *Imitation Italian Cloth* figures in the Returns for nearly four times as much as in 1874, and prices which I am led to believe have been by no means favorable to Importers have probably stimulated consumption.

Taffachelas:—The importations have been on a par with the previous year, a fact somewhat difficult to be accounted for, unless the fact of prices having ruled considerably cheaper than last year and yet failing to attract buyers, and of stocks being reported by the Chamber of Commerce at 64,260 pieces against 25,000 in 1874 seems to confirm the remark made in my last report as to the native manufactures of this description of goods having been resumed.

The variation in other cotton goods is unimportant; they show however for the most part an increase.

The comparatively insignificant item of cotton singlets and drawers should not be passed over without comment. In 1873 the import of this class of goods figured at 139,913 doz. valued at $508,146, in 1874 the import had fallen to 48,337 doz. valued at $169,202 while during the past year only 6,382 doz. were imported valued at $50,579. This would go to show either that the taste for Western clothing has not been maintained, or what is perhaps a sounder conclusion, that the importations in former years were largely in excess of the native requirements.

Woollen Goods:—The import in 1875 is valued at $2,867,543 against $1,210,824 imported in 1874, an increase of $1,656,719, accounted for by the large importation of *French Mousselines* which figure alone for $2,393,157 in 1875 against $971,325 in 1874.

In a memorandum on printed mousselines (written in Paris) which has been kindly placed at my disposal, the difficulties attendant on the manufacture of Printed Mousselines are commented on, more particularly in respect to two classes of these goods known as *Itashimes* and *Yuzens* so as exactly to suit the taste of native consumers; these difficulties are summed up under three headings.

1.—The impossibility of producing the exact shade of a silk crape.

2.—The difficulty in matching a given shade of a dyed or printed mousseline.

3.—The difficulty of guarding against different shades appearing in the various designs, even when these are printed at the same time.

"These differences result," (I here quote from the memorandum), "from the nature of the designs, some "requiring a deeper engraving and deposing, consequently, "more colour upon the cloth than others. Complicated "designs, presenting much detail, are apt to come up paler "than those showing much ground. The state of the "weather at the time of washing and steaming the goods "has also a varying effect upon the shades."

The above remarks apply more particularly to the quality known as *Itashimes*.

In respect to *Yuzens* great perfection has been attained in the designs of these. Owing to difficulties raised on account of alleged differences in shade or other trifling variations, printers refuse to accept orders unless some latitude is allowed to them, and further as the printers are dependent on the engravers they refuse to guarantee delivery of goods by a fixed date.

It would seem that the printers enjoy, owing to their limited numbers, a monopoly of the business and are thus in a position to compel compliance to their conditions.

From the specimens of printed mousselines that I have seen I am fully able to confirm all that is said of the excellence to which the printers of these in France have attained.

Check Lustres, known to the Japanese as *Shimagoros*, figure as a separate item in the returns for the past year; it is probable that they have been previously included under the heading *Wool fancies*.

Blankets:—An increased import in these is a noticeable feature.

Cloth:—Although the import of this has remained stationary and stocks decreased, prices have not improved, which leads me to the belief that the natives are not as a rule sufficiently well off to pay a remunerative price for the staple.

Mixed Cotton and *Woollen Goods* exhibit an increase of $188,171.

Italian Cloth for which there has undoubtedly been more demand at a reduction in price, figuring for an increase of $158,308, and *Orleans* and *Lustres* for $350,583, while under the heading Woollen and Cotton mixtures there is a decrease of $297,443. It is difficult however to reconcile the quantity of the last mentioned (Woollen and Cotton mixtures) with the value given in the Custom House Returns.

Arms and *Ammunition*:—The increased import is attributable no doubt to the Formosa difficulty and the prospect at one time of hostilities with Corea, but it will be seen from a note under the heading "miscellaneous for-

Digitized by Google
UNIVERSITY OF CALIFORNIA

eign" that although the quantity of Arms and Ammunition on the market was comparatively small, yet a large amount was imported on Government account.

Metals:—Import in 1875, $655,408 against $742,079, in 1874, the decrease in the Import value of Metals appears to have been caused more by their lower value than by anything else as there is an increase in the quantity of Pig and manufactured Iron, markedly in the latter, forming apparently, the chief feature in the business, which has, I am informed, resulted in considerable losses.

Miscellaneous Foreign:—The total under this heading in the returns for 1874, was set down at $4,069,790, but of this $1,259,115 were in respect of articles on Government account which are made out on a separate return in the statistics of trade kept at the Board of Revenue. The miscellaneous foreign returns might therefore have been stated at $2,810,675 exclusive of articles on Government account.

The returns for the past year exhibit under the heading of miscellaneous foreign an amount of $3,890,425, while articles on Government account shew for the same period a total of $3,119,535. The total import of 1875 under miscellaneous foreign amounts to $7,009,960. The increase as regards articles other than those on Government account is markedly in *Kerosine*, *Beer*, *Wines* and *Spirits*, *Medicines*, *Clocks*, *Canvas*, *Stationery* and *Silk piece goods*.

As regards medicines and clocks the opinion is that the trade has been overdone and that prices have not been on the whole remunerative.

Kerosine exhibits a considerable increase over 1874 but to the disadvantage of those engaged in the business, some outlet must however be found for the surplus production in America.

Of the amount of $3,119,535 for articles on Government account, $1,808, 609, are for arms and ammunition, ordered, I presume, in anticipation of hostilities with China in connection with the Japanese expedition to Formosa.

Blankets also under this heading figure for $179,020.

Miscellaneous Local exhibit an increase of $305,653, the chief item *Sugar* showing an augmented import of over $700,000, in spite of general complaints of the unsatisfactory condition of this trade which to a great extent is in the hands of the Chinese.

Raw Cotton shows a diminution of over $200.000, which, however, is considered a good feature as this diminished import has increased the consumption of cotton yarn.

In a general summary of the trade which is usually made at the Legation on receipts of the Reports and Tables from the different Consulates, the sale of four steamers to the Japanese at this port in the year 1875 is doubtless worthy of note. Of these one was British, sold for $166,250, and three were American sold for $585,800. total $752,050.

I proceed to review the business done in the Staple articles of export.

The Export of Raw Silk in 1875 figures according to Custom House returns at 11,813 piculs 87 catties, valued at $5,424,916, the export for 1874 having been 9,775 piculs 73 catties valued at $5,295,190, an increase is thus exhibited of 2,038 piculs 14 catties in quantity and of $129,726 in amount. A glance at these figures will show that much lower prices have been ruling for this staple throughout 1875 than during the preceding year.

Computing the quantity shipped in bales, I find the export in 1875 to be 14,598 bales against 11,985 bales exported in 1874.

The season's shipments for 1874-1875—that is calculating from the 1st July 1874 to the 30th June 1875—a mode of calculation more in favour amongst business men both with regard to silk and tea than the one which comprises the export between January 1st and December 31st,—amount to 11,941 bales, which is the shortest export of the 14 seasons commencing from that of 1861-1862 with exception of 1870-1871 when the Franco-German war was raging and the consumption of silk was considerably curtailed in Europe.

In reviewing the silk trade of this port I have to consider the circumstance that the season's export was comparatively a low one; my remarks will consequently be based on this fact and I shall endeavour to show the causes that have induced this falling off in the export, notwithstanding that the year's returns show a large increase over 1874 in the quantity shipped and a small increase in the value of the shipments.

Before going into the cause of this decline I proceed to trace briefly the course of the silk market throughout the year 1875.

The year opened with an unsold stock on the market of about 1600 Bales. Business throughout January was very limited, the native silkmen being unwilling sellers and holding off in expectation of higher rates. Owing, however, to the general inferior quality of the silk offered, the tendency of prices was downward, all round parcels of hanks ranging from $465 to $490 per picul.

In February there was a little more doing than in the preceding month; native silkmen, whilst still holding their best silk out of the market, showed more disposition to part with the current and inferior descriptions at reduced prices. All round parcels of hanks No. 2½ ranged from $450 to $475 per picul, current and inferior descriptions No. 3 to 4 fell from an average figure of $440 to 420. *Oshius* meanwhile remained scarce and firm.

In the early part of March the chief business done was in medium and common hanks at a further reduction, best sorts being still held firmly and kept out of sight whilst *Oshius* were scarce and maintained at high prices. At the close of the month medium hanks were neglected and the better sorts attracted more attention. *Oshius* were in active demand and several parcels were settled at an advance. Common hanks No. 3 to 4 fell from an average price of $440 in February down to $375. No. 2½ parcels ranged from $430 to $470. Good *Oshius* $500 to $520, best *Oshius* $540 to $560.

April witnessed a considerable activity in all descriptions, the native dealers meeting the market freely. Hanks having been much pressed for sale, settlements of medium and common qualities were effected at a further reduction but became much firmer again at the close, especially the better kinds.

The continued scarcity of *Oshius* and the firmness of the native silkmen hampered transactions, common hanks ranged from $330 to $360, good all round parcels No. 2½ from $410 to $450, *Oshius* without variation.

Business in May was much restricted by the diminution of stocks and the undesirable quality of the silk offered. The near approach of the new crop caused dealers to be less firm in their demands, but previous quotations remained without notable change.

The season 1874-75 drawing to an end some of the dealers were induced in June to dispose of their remaining stocks of hanks whilst others still held out. Prices were therefore irregular and in some instances lower, mainly owing to the mixed and inferior quality of the parcels settled. *Oshius* remained firm and without change, stocks at the end of June being reduced to about 200 Bales. Common hanks ranged from $330 to $360, all round No. 2½ from $390 to $420

Two small parcels of the new hank silk made their appearance on the market before the end of the month and fetched respectively $355, and $380. They were mixed in size, cased, and far from clean.

In July the settlements barely amounted to 150 bales, of which 40 only were new silk, the latter fetching from $360 to $380 per picul. Old silk consisting of common and inferior hanks fetched $330. The arrivals of new silk during the month did not exceed 50 bales, reelers in the country having looked more to the requirements of the native manufacturers than to those of Foreign buyers, in consequence probably of the reports of low prices ruling in Europe.

In August, silk coming in freely from the country met with ready buyers at a considerable advance on previous quotations, with a continuance of good demand nearly up to the end of the month, when enquiries appeared to be checked by the growing pretensions of the holders. Good all round parcels of hanks No. 2½ ranged from $400 to $420, medium to common No 3 to 4 $370 to $400. The quality of the medium hanks showed scarcely any improvement over the last year's produce, but a few parcels of superior hanks fetched from $460 to $480. Several lots from Oshiu native filatures were settled for Continental

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

buyers at $600 to $630. Good ordinary Oshins $520 to $550. At the end of the month the stock had increased to 500 bales.

In September business was again very brisk with gradually advancing prices for hanks, with the exception of common sorts, notwithstanding heavy arrivals and increasing stocks. Oshins remaining in good demand and firm. Hanks ranged from $460 to $490 for best, $400 to $435 for good all round No 2½, common sorts No. 3 to 4 $360 to $400. Best Oshins $530 to $550. Good $500 to $520. At the end of the month the stock amounted to nearly 1,000 bales.

October saw some fluctuations in the demand, but on the whole business was very active with stiffening prices. After the middle of the month the enquiry ruled chiefly on medium and common hanks as well as on coarse Oshins (Hamatsuki's), whilst the best description of both hanks and Oshins were comparatively in less demand with a weaker tendency. Some parcels of filature silk fetched from $550 to $670 for the continent of Europe and a small parcel for America. Stocks were again augmented, the arrivals from the country having been large. Best hanks ranged from $470 to $490, good all round No. 2½ from $420 to $435, medium to common No. 3 to 4 $370 to $415. Stocks at the end of the month about 1,300 bales.

In the beginning of November transactions continued large and prices remained unchanged, but unfavourable advices from the home markets having subsequently induced the native dealers to submit to a reduction in order to realize their stocks, a large business resulted at a decline of $10 to $20 on all classes of silk, the heavier portion of the reduction falling on the better sorts of hanks, whilst medium to common descriptions were affected in a less degree. Oshins, being in short supply, took but a small share in the decline. Prices ranged for the best hanks from $450 to $470. Good all round No. 2½ from $410 to $425. Common No. 3 to 4 $360 to $380. Good Oshins $485 to $510. Hamatsukis from $430 to $470.

December opened with a fair amount of business at the prices last established, the demand bearing chiefly on the common and inferior sort of hanks, whilst the better kinds were removed from the market by the native dealers. Later in the month very bad accounts from Europe caused buyers to offer considerably lower rates, but the silkmen were indisposed to give way and transactions became consequently very small. Best hanks ranged from $430 to $450. Good all round No. 2½ from $390 to $405. Common and inferior No. 3 to 4 $350 to $360. Settlements of Oshins were limited Good Oshins $500 to $520. Hamatsukis nominally $420 to $450. The month closed upon a stock of about 1,200 bales.

I have thus traced briefly the general character of the business in silk at this port during the year 1875, and while I have found it necessary to give quotations, for without these any review of the business would be very imperfect, I have endeavoured to avoid anything like complications of figures or calculations which would be of comparatively little interest. Before going into the causes of the depression of the silk trade during the season under review, I proceed to give a brief retrospect of the business done in 1875. The first six months of the year cannot but have been very discouraging to the native silkmen owing to the diminished value of the staple apparent in the monthly quotations already given. Exporters, on the other hand, seem to have had little reason to congratulate themselves, as prices at home were declining quite as fully and uninterruptedly as here; there is good reason for believing that the purchases of silk made at Yokohama from January to June, however low the figures at which they may have been made, left at best but a small margin after realization, whilst in not a few cases they resulted in more or less serious loss.

As has been mentioned before, only a few bales of raw silk made their appearance in June, that which arrived on the market in July gave rise to a variety of opinions about its quality as compared with the produce of the preceding year.

The new hanks were found generally fuller in size and of a good nervous body, but they were also much mixed, cased, and generally foul; in short, very little, if at all, better than the silk of 1874, being considered even by some as not so good on the whole as that of the preceding year. It is known that at the end of June there was still in the interior a quantity of silk, the produce of 1874, estimated at from 2,000 to 3,000 bales which remained unsold and which must have eventually found their way to this market mixed with the new silk and sold as such.

As to quantity, the silk crop of Japan in 1875 is considered to have been abundant, more so than in 1874, but the quality of cocoons in general does not appear to have improved. Some provinces, that of Oshiu in particular, have shown a superiority over others in the quality of cocoons of 1875; the greater portion of ordinary hank silk from Joshiu and Shinshiu, on the contrary, seems to have been more than usually deficient in clearness.

Whatever may be the general opinion about the silk of 1875 it would be unjust not to mention that a marked improvement has been found in the produce of several filatures erected in various provinces, especially of Oshiu, Joshiu and Shinshiu, from which silk has been turned out, reeled upon the European system, in a manner which reflects much credit upon their owners and managers. Considerable quantities of silk from those filatures have been sold at Yokohama during the latter half of 1875 at prices ranging from $500 to $680, independently of the produce of the Imperial establishment at Tomioka. There are good reasons for believing that the silks in question gave satisfaction to the Continental manufacturers who have used them, but it is not known that British consumers have tried them yet to any extent, nor am I in a position to furnish information as to the profit or otherwise which has accrued to the exporters of those kinds. As they come nearer to Italian and French silk than the ordinary old fashioned Japanese product, it is not improbable that they may partake in some measure of the present depression and neglect which weigh on the best classes of European silk.

I now proceed to offer an opinion as to the causes that bought about the depression in the Japan silk trade and on the prospects of the industry and the trade of the future. I would beg here to recall attention to the fact that I am dealing with the season's export 1874-1875, that is from the 1st July 1874 to 30th June 1875 and which with the exception of the season 1870-1871 exhibits the shortest export since the season 1861-1862.

The falling off does not seem to have been due to a deficiency in the crop of this country, but is probably to be ascribed on the one part to the diminished consumption of Japan silk in Europe, owing to a generally acknowledged deterioration of quality, and on the other part to the increasing production in France and Italy of fine silk, the competition of which drove the Japanese product in a great measure out of the European markets.

It must also be admitted that the unremunerative state of the foreign markets, as against the high prices which were ruling here, must have acted as a check on the operations of a good many of the shippers.

It is no less curious that the demand for the best kinds of French and Italian silk has for some months past considerably diminished, causing a gradual and continuous fall in prices, and that contrary to the hitherto universal practice it is the lower classes of silk which are now more especially enquired after by reason of their low prices. The change in fashion has lately brought low-priced goods into favour for which certain descriptions of silk are well adapted—notably China silk, the import of which into Europe has been largely increasing for some years past, whilst the cost of it is so low as almost to defy rivalry. Japan silk from its having been generally reeled fine for foreign use is assimilated in a greater degree to French and Italian silk, and consequently, like the latter, suffers proportionately from the disfavour and decline of prices which have attacked the European products.

A fact deserving of notice is that while in the first six months of 1875, an export of about 5,088 bales only is recorded, in the latter half of the year some 9,510 bales were shipped from this port. This increase however I am informed was not due to a revival of demand for Japan silk but can be safely ascribed to the unprecedented fall in the exchanges, which on the one hand was a no small

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

incentive to speculators, whilst on the other hand the foreign houses who had returns to make for imports sold were almost driven to resort to the shipment of produce, or say silk, instead of remitting bills. It is asserted that fully one-third of the shipments of silk in the latter half of 1875 was in return for imports.

A somewhat novel feature has characterized the Japan silk trade of the past year in that there has been an increased demand by native manufacturers for the raw material. It would appear that the serious decline in prices which took place in the spring of 1875 caused a considerable increase in the consumption of silk by the native manufacturers; certain descriptions of foreign woollen fabrics in particular, which enjoyed a ready sale in the interior, have been in a great measure replaced lately by mixed stuffs of silk and cotton of native manufacture.

In July and August last when the new season's silk made its appearance, the dealers who attended the inland markets to buy silk for Yokohama found themselves in the presence of manufacturers attracted by the low rates which were then ruling, and who drove them pretty hard especially for the lower grades of silk. The demand for home use has been pretty well kept up since, the native looms seeming to be still busily occupied. This will explain to a great extent the scarcity which has been noticed for some time past of the commoner descriptions, and the late gradual elevation of prices of those kinds.

It may thus reasonably be contended that the falling off in the exports of the first six months of 1875, is made good to a certain extent by the increase in the native consumption, and that the competition of the native silkmen, if it continues, as is probable, so long as prices remain low, will tend to cause the retention in this country of a good proportion of the crop of 1875, abundant as it was. As a natural consequence it is not unlikely that the total export from this for the season 1875-1876 will not exceed the ordinary average of about 14,000 Bales.

Having thus offered an opinion on the causes that have tended to bring about a decreased export of silk for the season under review, I proceed to offer a few remarks on the future prospects of the Japan silk trade, and in doing so it will be necessary to touch on the prospects of the same trade or industry in Europe. The fall in prices of all kinds has been so gradual, and yet so continuous, since 1870 that it is next to impossible to say whether or no the lowest point has been touched.

Doubtless Japan Silk has never been so depressed in Europe as it is at present, but it will be remembered that in 1860 and 1861 it was, or at least several kinds were, sold in this market at rates even below those which rule to day and yet offered at the time a sufficient profit or a sufficient inducement to producers to bring their silk here for sale.

What has taken place before may occur again. It is therefore not impossible that prices in this country may remain for some time at the present level, or even further decline, should they not be supported by demand for shipment. It is true that the native manufacturers are now competing in this very market with the foreign buyers, probably because the change mentioned as having taken place has cleared the Inland market of the commoner descriptions which had hitherto been generally discarded by the shippers, but were sought after for the native looms, the possessors of which did not require so good a quality of silk as the foreign manufacturers.

It is probable also that a considerable portion of cocoons from which the full-sized and commoner sorts of silk were formerly produced before the erection of filatures on the European system, has been diverted to the use of the latter, that consequently the qualities of silk adapted to the native consumption have been replaced by finer or better reeled sorts, which by reason of their higher cost and fine quality are less convenient for native consumers and are in consequence neglected. On the other hand, the disposable quantity of commoner sorts having proportionately diminished, their market value has naturally increased in the same ratio, and explains the fact, which is very rare, of country dealers coming to Yokohama to buy silk in opposition to the foreign houses. Hence the possibility of prices being maintained on this market so long at least as the demand continues to prevail.

The fact, however, must not be lost sight of that there are in the interior considerable stocks of cocoons which are not reeled yet and the produce of which will eventually find its way to this or the Inland markets in one shape or another. Again, the better classes of home reeled or filature silks, which the holders are indisposed to part with at present, cannot be held on for any great length of time, and will have to be sold sooner or later at such prices as circumstances will admit.

So much for the prospects of the silk industry in Japan. In Europe they are affected by considerations of a different order. Foremost there is the existence of very large stocks everywhere abroad, which proves a yearly increasing production in Europe as well as in Asia, notwithstanding that the consumption of silk has for the last year or two been going on at an unprecedented rate, production has it would appear everywhere exceeded consumption. Hence the continuous depreciation of prices which are now at a point unknown since 1848, but nevertheless silk continues to be pressed on the markets apparently regardless of cost. The Continental markets, and Lyons in particular, have shown far more weakness as regards prices, for certain classes of silk at least, than London, and the reason would seem to be obvious enough. In addition to French silk, the whole of which is consumed in France, Lyons has not only received a large portion of Italian silk very little of which goes now to England, but three-fifths of the exports from China and Japan found their way in 1875 to the French or Continental markets, whilst the usual proportion previous to that time was almost the very reverse, that is to say, two-fifths of the direct shipments for France or the Continental markets, and three-fifths for England.

The change which has taken place in this respect is now considered as disadvantageous. Lyons is far more a market for consumption than for speculation. The French houses, either from inability or indisposition to hold their stocks so firmly or so long as the London merchants, are generally looked upon as more ready sellers, especially so when stocks accumulate on their hands as they did in the last six months of 1875. It can be readily understood that in the face of a heavy production in France and Italy, and at the same time of heavy arrivals from China and Japan, the Lyons merchants had to press consumers and tempt them with low offers in order to move off their stocks, a notable portion of which (the best kinds of French and Italian silk) are, as has been mentioned above, for the moment without demand. Prices have been gradually declining and, although efforts have been recently made to arrest the fall, there is nothing to show that these efforts have been or are likely to be successful.

The London market has felt matters less than those of the Continent. Its stock is much lighter than that of Lyons although the latter is nearer at hand to the bulk of consumers, and much lighter also than it has been for three or four years past, but it has now only a very limited Continental demand to support it and the requirements of the British consumers alone are unable to give it buoyancy and animation.

I pass on to the question of production. In France and Italy it does not pay the agriculturists who rear silkworms to go on with their culture if they cannot count upon selling the cocoons at prices higher than those which they obtained in 1875, and yet, low as those prices were, the reelers who paid them have had to sell their produce at ten to fifteen per cent below cost. It follows then that the latter will look to reduced rates in 1876 to make up for what they lost or stand to lose by their purchases of cocoons in 1875.

It then becomes a question whether cultivators in France and Italy, having found last year's prices unprofitable, will be tempted to continue in the face of possibly lower prices or whether they will give up silkworm culture altogether and turn their attention to something else? It is generally considered that nothing short of a deficient crop will restore courage to those engaged in the industry.

The reduced export of Japanese silkworm eggs to Europe in 1875, as well as their doubtful quality, and moreover the possibility of unfavorable weather while the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

new crop is being reared, have been discussed by some as grounds for anticipating a shorter produce in the spring. But it is obvious that such an occurrence is not to be relied upon, however acceptable it might prove to those who are in the position of profiting thereby. There is little doubt but that it is chiefly the low range of prices which has brought consumption to the present unparalleled state of activity on the continent of Europe. Either, therefore, prices will remain much about as they are and consumption continue on the present footing, or prices will rise and the demand may be checked to such an extent as to cause production to be seriously in excess of consumption, when a fresh reaction is pretty sure to follow. Any way it would seem to be clear that if with the appliances they possess at present, and under the prevalence of moderate, not to say low rates, manufacturers can hardly work off the produce which is offered to them, they would still less be able to do so were it to be had in greater abundance. On the other hand, if a general impression of a somewhat diminished production was created, even temporarily, the immediate effect of it would be to bring back a firmness which seems to have more or less forsaken all the silk markets of Europe.

It is now ascertained that the low prices at which silk piece goods can be, and have been produced within the past year in Europe, fail not only to sufficiently remunerate the manufacturers but even to induce consumption on an adequate scale. Fashion apparently remains favorable to woollen goods and adverse to plain black silks, especially in America, from whence direct orders or commissions are far more restricted than previously; whilst in lieu of them manufacturers have resorted to large consignments on their own account and risk, the result of which has been lately anything but satisfactory.

Whether the falling off in the direct demand from that quarter is owing to the excessive import duty of 60 per cent, to the successful competition of native manufacturers, or to a preference for woollen goods over silk, it is no less certain that the American market, which used to be one of the greatest consumers of European silk goods, offers far less advantage to the English, French, or Continental looms than it did some years ago.

Silk manufacturers have therefore to contend at the same time with an increasing production of the raw material, a fashion adverse to their products, failing markets of consumption, and the difficulty of finding new ones where they may realize their accumulating stocks.

I cannot close this somewhat lengthy review of the silk trade without acknowledging the obligation I am under to Mr. J. M. Jaquemot of this port for his assistance in its compilation. It will be remembered that this gentleman, accompanied by his son Mr. Ronald Jaquemot, made a tour through the principal silk districts at the close of the summer of last year, and a very interesting report was furnished by them on their return to Yokohama. Their journey occupied from the 3rd July to the 14th August and embraced the silk districts of Oshiu, Echigo, Shinshiu, Kōshiu and Bushiu.

Silkworm egg cards:—Export in 1875, cards 727,463 valued at $474,921 against 1,334,625 valued at $731,275 exported in 1874. The number of cards offered on the market in 1875 was about 820,000, but of the above number 727,463 only were shipped, and of these about 550,000 cards went to Italy, 150,000 to France and the balance to other countries.

The decrease in the export is conspicuous.

Graineurs arrived from Europe towards autumn, but in small numbers and determined only to buy at low prices. The native dealers brought their cards down to Yokohama much later than usual in the season, and kept them off the market for nearly three weeks in the hope that buyers, on account of the short time left to them within which to make purchases, would yield to their high pretensions. But the *graineurs* stoutly refused to operate except at reduced figures. With the exception of some choice parcels of white Oshiu seed, which fetched from $1.20 to $1.60, the bulk of the purchases were settled at from 40 to 60 cents per card and a not inconsiderable quantity at from 25 to 5 cents.

(To be Continued.)

KAMAISHI.

Satius sero quam nunquam sapere.

That Kamaishi likes fish is undisputed. But then Kamaishi is Buddhist to the backbone, and must on no account deprive a living thing of life. Kamaishi is therefore uncomfortably seated between the horns of a dilemma. Starvation on the one hand, and, on the other, eternal—ahem!—well, an unpleasant hereafter, are hardly satisfactory alternatives to a gentleman with an empty stomach and an eye ahead. That such a restraint upon the appetite is inconvenient in a northern climate, where the breezes from the sea whet up the appetite, may fairly be conceded. Nay more, that it is a grievous and insupportable arrangement might almost be asserted with little fear of contradiction, when it is remembered that a perpendicular chain of mountains, snow-capped for full half the year and lost in clouds the other half, shuts out this nook from all the world, and compels the people who dwell therein to look at home for sustenance. Nor would this dependence on their own resources be altogether unsatisfactory perhaps in a district where, fish being tabooed, a more sustaining crop than thistles could be depended on. But it has yet to be proved, granting that the crop is ample, and has not been washed out of the stony ground by annually recurring floods, that as an article of diet the thistle is as palatable and nutritious to the human as to another family not yet so far developed. Under such circumstances, what course is open to a true believer? *Aut piscis aut nihil.* Death or—But life is sweet and so is salmon trout. Cod's head and shoulders have attractions, and to those whose taste lies that way, shark's flesh has much to be urged in its favour. It cannot be denied, it is true, that to eat one's grandmother is a doubtful way of exhibiting respect for her memory, but then the dear old lady may have migrated to a higher vertebrate, she had a restless way about her when alive and—, but what a splendid silver back! How it flashes in the sunlight! The season's short too. They're glorious fish these salmon trout. To-day they're here, and gone to-morrow, just like that fellow, now, he's surely underneath this stone. Dear, dear! I've killed him. What shall I do? Well, there is no help for it now, in for a penny in for a pound; I may as well have a couple more, this three-pronged spear is so convenient. How strange that I should have brought it with me. And so Kamaishi decides against the thistles year after year, and grandmama perforce must find another lodging. "'Tis chance directs the affairs of men" say these rude fishermen, "and so he might," says Seikitchi the philosopher, "if men did not so often take him by the hand and shew him where he ought to go." But then Seikitchi is a cynic or his opinion would count for more. Which is much to be regretted in a person of his great and varied attainments. For doth not all Kamaishi know full well that he can go three figures on the *soroban*? And if there be some who affect to disbelieve that he can read, of what account is their opinion against the testimony of his housekeeper? "What would he have a book amongst his belongings for if he could not read it?" she is wont to enquire, with a snap of her fingers and protrusion of the lower jaw. A pantomime which is intended to convey at one and the same moment, defiance, contempt, disgust and a variety of other compound emotions difficult of analysis. To the generality of sceptics, such an argument, as may readily be supposed, is conclusive; there is, however, unhappily a stratum of humanity so dense that not even a dribble from the spring of knowledge finds its way beneath the surface. Demonstrate conclusively that black is black and they'll be dissatisfied Place Seikitchi before them book in hand and they'll still be unconvinced. To such as these the *argumentum baculinum* is the only one, and the village doctor can certify if need be that the old housekeeper is mighty handy with such polemics. In view of these particulars then, Seikitchi's distrust of the element of chance in the killing of the salmon trout with yearly recurring regularity should command attention if it were not for that cynical turn of mind which distinguishes him. And perhaps, after all, there is something in it. On one subject, however, there

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

can be no difference of opinion, and that is that Kamaishi is by no means deficient in a lively sense of the proprieties. Whatever may be its faults or shortcomings, a sturdy uprightness, amounting it might be said to bluntness, is ever a characteristic of the simple-minded people. If they have done wrong they'll frankly confess to it—after the fact. And when the season is over, and the last fish poked from underneath the stones, they are content to fish no more that year, but folding their arms across their breasts and laying aside their three-pronged spears, with touching honesty they admit their sins and—repent; nay more, they let the world know of it and are not ashamed. For each succeeding year beholds a pair of wooden pillars erected at the river's mouth on which are painted with great care and nicety appropriate texts and verses from the Buddhist Bible. By this means, and a donation to the priest, the houseless souls who had their lodging in the fish are satisfied, and Kamaishi's conscience is cleansed from guilt intolerable.

SPORTS AT YEDO.

(From a Correspondent.)

On Saturday afternoon the Monzeki Parade Ground was occupied by the members of the "Tokio Amateur Athletic Association," who held there what was entitled a Spring Meeting—a horsey term, hardly appropriate to the occasion. The proceedings call for no comment, their vapidity being thorough, except in the case of the run in for the "Ladies Purse," the finish of which was fair, and the "game" manner in which Hancock struggled in the last round of the mile race against a hopeless certainty for his opponent, who, putting on a "spurt," easily distanced his only other competitor who ran the entire course, by over 100 yards. The pole jumping and height and long jump were supremely bad, and if the boys of the Naval College cannot discount the "Athletics" at their own games—should their bickering suffer the body to hold together long enough for an "Autumn Meeting"—the writer will be considerably surprised. Indisposition prevented one member from competing, who might have somewhat justified the title of the club, but what kept others from doing so, who could have easily redeemed the absurdities of there being three times as many prizes as competitors, and of pumping out those who made up the entries by repeated exertion before their specialty came round?

The Marine Band enlivened the proceedings, which were directed by committee men Messrs. G. Charlesworth, W. Dillon, J. Hall, C. W. Lagden, W. B. Mason, F. Prowse, F. W. Strange (secretary), J. Johnstone (treasurer), W. F. B. Sams (starter) and E. St. John (judge). There was a fair attendance of spectators.

It may be as well to inform the committee that it is usual in all communities to afford admission to the representatives of the press, and that their presence is even sometimes invited.

EVENTS.

THROWING THE CRICKET BALL.—Strange.
LONG JAMP.—Charlesworth.

VISITORS' RACE,—200 yds :—Grant.
FLAT RACE, for Cadets of the Naval College only. 300 yds :—1st. H. Sakamoto; 2nd, Kano.

A Jinrikisha Race, and one between the boats of the Naval College on the Canal concluded the proceedings.

THE SPRING RACE MEETING.

FIRST DAY.

Wednesday, 17th May.

A lovelier day than yesterday could not be wished for or expected; the course was in capital order and everything bid fair for good racing. Race time is not now, however, what it used to be. Formerly every one went to the races and the Grand Stand and enclosure were thronged, but now many residents take advantage of the race week holiday to make excursions into the country, and the attendance at the races themselves seems to fall off year after year. The comparatively small numbers within the enclosure yesterday caused a feeling of dulness to prevail, notwithstanding that many Ladies graced the Grand Stand by their presence, and the excellent band of the *Tennessee* did all that was possible to dissipate the ennui attendant on the long intervals between the races. During the early part of the afternoon the jockeys found the heat of the sun excessive.

1. THE TRIAL PLATE.—For China Ponies that have never won a flat Race here. Weight for inches. Entrance, $5. Once round.

Mr. Morrison's *Lintie*, 10st. 2lbs.	1
,, John Peel's *Grey Friar*, 10st. 5lbs.	2
,, J. Robertson's *Favori*, 10st. 5lbs.	3
,, Pringle's *Blackthorn*, 10st. 5lbs.	0
,, Sinbad's *The Judge*, 10st. 8lbs.	0
,, De Benter's *North Mongolian*, 10st. 8lbs.	0

Just about half an hour after the appointed time six ponies, out of fourteen entries, went to the post. *Grey Friar* almost immediately took the lead and kept it to the quarter-mile post, but was there overhauled by *Lintie*, who took a decided lead on entering the straight and eventually won in a canter. The rest were nowhere—the race having resolved itself into a match between the two ponies above named. Time, 2 min. and 20 sec.

2. THE GRIFFINS' PLATE.—Value $150, with Entrance Fees added. For Japan Ponies *bonâ fide* Griffins. Weight for inches. Entrance, $10. Five Furlongs, First Pony to receive 70 per cent., Second 20 per cent., and Third 10 per cent.

Mr. J. Robertson's *Doctor*, 10st. 6lbs.	1
Dr. Buckle's *Sandboy*, 10st. 4lbs.	2
Mr. J. Robertson's *Oyama*, 10st. 2lbs.	3
Mr. Pringle's *Peasant Boy*, 10st. 2lbs.	0
Mr. Morrison's *Discard*, 10st. 6lbs.	0
Mr. Ola's *Moh-ichido*, 10st. 8lbs.	0
Mr. John Peel's *Bawbee*, 10st. 6lbs.	0

This brought out a field of seven who were got off with, strange to say, but one false start. *Sandboy* started off with the lead, being followed closely by *Discard*, *Doctor* and *Oyama*, the rest tailing off. This order was maintained until entering the straight where *Discard* began to shut up and *Sandboy* ran wide, giving a chance to *Doctor* which was taken advantage of, as his rider cleverly landed him a winner by about a length. *Moh-ichido* pulled up lame. Time, 1 min. 21 sec.

3. THE CELESTIAL CUP.—For all Ponies. Weights as per scale. Entrance, $5. Three-quarters of a Mile.

Mr. J. Robertson's *Dibs*, 10st. 8lbs.	1
Mr. Ola's *Moh-stotz*, 10st. 6lbs.	2
Mr. Morrison's *Tallapoosa*, 10st. 8lbs.	3
Mr. Pringle's *Blackthorn*, 10st. 5lbs.	0
Mr. Morrison's *Andante*, 10st. 11lbs.	0

Moh-stotz quickly jumped off with the lead which he kept so well that he looked very like winning. At the quarter-mile post *Dibs* challenged the leader and the two made a splendid race down the straight, the China pony securing the prize only by a neck. The favorite, *Tallapoosa*, of whom much was expected, was a bad third, thereby greatly disappointing his backers. Time, 1 min., 38 sec.

4. THE FUJIYAMA CUP.—For Japan Ponies. Winners of two Races at last meeting excluded. Weight for inches. Entrance, $5. Five Furlongs.

Dr. Buckle's *Sirius*, 10st. 6lbs.	1
Mr. Reid's *Drizzle*, 10st. 8lbs.	2
Mr. Morrison's *Discard*, 10st. 6lbs.	3
Mr. J. Robertson's *Tim Whiffler*, 10st. 12lbs.	0
Capt. Costigan's *Tsuji Ura*, 10st. 6lbs.	0
Mr. John Peel's *Finale*, 9st. 12lbs.	0

Sirius started off with the lead and was never headed, winning by nearly two lengths. *Finale* kept well up to the leader until reaching the straight, but was passed by *Drizzle* and *Discard*, the former just securing second place. *Tim Whiffler* put his foot in a hole immediately after starting and fell, of course throwing his rider, who, however, luckily escaped with very slight injury. Time, 1 min. 20 sec.

5. THE CHALLENGE CUP.—Value $150. For China Ponies. Weight for inches. Entrance, $5. One mile and three-quarters.

Mr. William's *Grasshopper*, 10st. 5lbs.	1
Mr. Morrison's *Black Rod*, 10st. 8lbs	2
Mr. John Peel's *Cyclone*, 10st. 11lbs	3
Mr. Sinbad's *Dixie*, 10st. 8lbs	0

Only four started after some delay caused by *Cyclone's* usual bad temper. *Cyclone* led, being followed by *Black Rod*, *Dixie* and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Grasshopper—the latter several lengths behind—which order was kept on passing the Grand Stand the first time, the race being as slow as can be well imagined. At the three-quarters *Grasshopper's* rider called upon his pony who passed his opponents and took the lead without any apparent exertion. *Dixie* was completely done at the half-mile and *Cyclone* shut up at the Trees, leaving *Black Rod* alone to contend against *Grasshopper*; but he was, however, never able to catch the latter who won with plenty to spare. Time, 4 min. 21 sec.

6. THE STAND CUP.—Presented. For Japan Ponies that never won an open Race. Winner of the Fujiyama Cup excluded. Weight for inches. Entrance, $5. Half a mile.

Mr. Ola's *Moh-nai*, 10st. 1
Dr. Buckle's *Sandboy*, 10st. 4lbs 2
Mr. Morrison's *Dash*, 10st. 2lbs 3
Mr. J. Robertson's *Oyama*, 10st. 2lbs 0
Mr. Pringle's *Peasant Boy*, 10st. 2lbs 0

Half the number entered started for this race after less delay than was looked for. *Peasant Boy* almost immediately fell far in the rear, the others being well together led by *Sandboy* and *Dash*. At the quarter-mile post *Moh-nai* came to the front and, as the other three ran wide at the turn, won an exceedingly fast race by several lengths. Time, 61½ sec.

7. THE PROFESSIONAL CUP.—Presented. For China Ponies. Winners at this meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

Mr. Morrison's *Braemar*, 10st 8lbs 1
Mr. J. Robertson's *Gladiateur*, 10st 11lbs. 2

This was a very uninteresting race as only two ponies appeared at the post out of thirteen of those entered and not disqualified to run. The result was never in doubt, as *Braemar* took the lead at the start which he maintained throughout, winning easily in 2 min. 47 sec.

8. THE SPRING STAKES.—For Japan Ponies. Winner of the Fujiyama Cup, and Winners of any open Race at or previous to this meeting 10lbs. extra. Weight for inches. Entrance, $5. Three-quarters of a mile.

Mr. Marlborough's *Typhoon* (10lbs. ex.), 10st. 12lb. 1
Dr. Buckle's *Stalemate*, 10st. 8lb. 2
Mr. Ola's *Moscou*, 10st. 4lb. 3

But three put in an appearance at the post. *Typhoon*, as usual, jumped off with the lead which he kept throughout and won with ease, notwithstanding his extra weight. *Moscou* made a desperate attempt at one time to catch the leader but failed, and finally had to concede second place to *Stalemate*. The public very generally evinced their pleasure at the success of the old Yokohama favourite by hearty cheers and congratulations.

9. THE LEDGER CUP.—Presented For China Ponies. Winners in China or of two Races here during 1875, and Winners at this meeting excluded. Weight for inches. Entrance, $5. Once round.

Mr. De Benter's *South Mongolian*, 9st. 13lbs. 1
,, Sinbad's *The Minister*, 10st. 5lbs 2
,, Morrison's *Mongmusk*, 10st 11lbs 3
,, J. Robertson's *Doncaster*, 10st. 5lbs 0
,, Pringle's *Piastre*, 10st. 11lbs 0
,, Marlborough's *Ivanhoe*, 10st. 5lbs 0
,, Alphonse's *Kwo-pu-chu*, 10st. 11lbs 0
,, John Peel's *Bonito*, 10st. 8lbs 0
,, De Benter's *West Mongolian*, 10st. 5lbs 0
,, do. *Mid Mongolian*, 10st. 5lbs 0

This, the last race of the day, brought out a capital field of ten who got away, after but slight delay, with an excellent start, though *West Mongolian* unfortunately bolted for the outside rails, fouling *The Minister* and causing him to lose four or five lengths. *Bonito* led the best of the way round, being closely followed by *Mongmusk* and *Ivanhoe*. Near the quarter-mile *South Mongolian* and *The Minister* ran through their ponies, took the lead and raced down the straight together, the former eventually securing the prize by a length and a half. Time, 2 min. 22 sec.

The rider of *The Minister* entered an objection against *South Mongolian* on account of the foul at starting above mentioned, as both *South* and *West Mongolian* belonged to the same stable, but the committee, after consultation, decided that there were not sufficient grounds to disqualify the winner on account of the objection raised.

SECOND DAY.

Thursday, 18th May.

The day broke dull, but during the morning the clouds cleared away and by noon it was as clear and bright as on Wednesday. Unfortunately a strong breeze sprang up which raised the dust very considerably, and so rendered the journey by road to the course anything but an unmixed pleasure. The wind kept up, with more or less violence, throughout the afternoon. There was no escape from the dreadful dust which permeated everywhere, trying everyone's temper and making everyone thoroughly uncomfortable; while the breeze seemed in no way to mitigate the great heat of the sun. There were more ladies present than on the previous day, but the general attendance was about the same. Thanks to Captain Low and the Officers of the U. S. S. *Tennessee*, the band of that vessel was again present in the enclosure and rendered most efficient service.

1. THE MITSU BISHI CUP.—Presented by the Mitsu Bishi Company. For all Ponies. Winner of the Celestial Cup or Winners of two Races at the meeting. 7lbs. extra. Weight as per scale Entrance, $5. Once round.

Mr. Morrison's *Tallapoosa*, 10st. 8lbs. 1
Mr. Ola's *Moh-stoz*, 10st. 6 lbs. 2

Although nineteen ponies were entered for this only two appeared at the post. The race was a certainty for the Hongkong crack, who won easily in 2 min. 18 sec.

2. THE KANAGAWA CUP.—(THE MAIDEN STAKES.) Presented by the Kencho, Saibansho, and Customs. For Japanese Ponies that never won a Race. Weight for inches. Entrance, $5. Half a mile.

Mr. Ola's *Moonshine*, 10st. 6lbs. 1
Mr. J. Robertson's *Oyama*, 10st. 2lbs. 2
Mr. Reid's *Drizzle*, 10st 8lbs. 3
Mr. Smith's *Cupbearer*, 10st 8lbs. 0
Mr. Marlborough's *Sirocco*, 10st. 4lbs. 0
Mr. Morrison's *Dambrod*, 10st. 4lbs. 0
Dr. Buckle's *Sandboy*, 10st. 4lbs. 0
Mr. Ola's *Moh-skoshi*, 10st. 2lbs. 0
Mr. John Peel's *Finale*, 9st. 12lbs. 0

After the long delay which is expected when Japanese ponies run, and several false starts, they got away leaving *Finale* at the post. *Sandboy* led, having the ruck close by, but most of them running wide on entering the straight gave a good chance to *Moonshine* who had been coming up strong from the quarter-mile. *Oyama* did all he could to pass *Moonshine* but could not manage it, the latter winning by a nose. Time, 64 sec.

3. THE LADIES' PURSE.—Presented by the Ladies of Yokohama. For all Ponies. Winners of Mitsu Bishi Cup, or of any Race under a mile, and winner of two races at the meeting, 7lbs. extra. Winners of more than two Races excluded. Weight as per scale. Entrance $5. Half a mile.

Mr. De Benter's *South Mongolian*, 9st. 13lbs. I
Mr. Ola's *Moh-nai*, (7lbs. extra.) 10st. 7lbs. 2
Mr. Sinbad's *The Judge*, 10st. 8lbs. 3
Mr. J. Robertson's *Doncaster*, 10st. 5lbs. 0
Mr. Pringles's *Picayune*, 10st. 5lbs. 0
Mr. Ola's *Lodi*, 10st. 4lbs. 0
Mr. John Peel's *Grey Friar*, 10st. 5lbs. 0
Mr. William's *Grasshopper*, 10st. 5lbs. 0

This, of course, was the race of the day though only eight ponies started out of twenty entered *Grey Friar* gave much trouble at the post and several false starts were made; the ponies eventually getting away with a very bad start. *South Mongolian* jumped off with the lead and kept same to the three furlongs where *Moh-nai* came up and pressed *South Mongolian* hard, but the latter came away when called upon and secured the race, neatly, by half a length. Time 65½ seconds.

After weighing in Mr. Herhausen, the winning jockey, was led to Miss Jaquemot at the Grand Stand to receive from her the prize. When handing the winner the purse—a blue satin saddle-bag pendant from a hunting crop and embroidered with a cleverly designed monogram—Miss Jaquemot gracefully congratulated him on his success on this occasion, which she hoped would be a precursor of much more at this and future meetings. Mr. Herhausen, though he expressed his willingness to ride and had confidence in his pony's power to win, yet deplored his inability to make a suitable reply to the fair representative of the Ladies, whom he begged to thank for their kind present; and on behalf of the jockeys presented Miss Jaquemot with a bouquet.

4. THE TEA CUP.—Presented. For Japan Ponies that never won an open race. Winners of the Fujiyama Cup and Stand Cup excluded; other winners, 7lbs. extra. Weight for inches. Entrance $5. Five Furlongs.

Dr. Buckle's *Sandboy*, 10st. 4lbs. 1
Mr. J. Robertson's *Doctor* (7lbs. extra.), 10st. 13lbs. 2
Mr. Morrison's *Dambrod*, 10st. 4lbs. 3
Mr. Pringle's *Peasant Boy*, 10st. 2lbs. 0

A start was quickly effected when *Peasant Boy* was left at the post, *Sandboy* leading, being closely followed by *Dambrod* and *Doctor*. *Dambrod* bolted soon after passing the half-mile and again on entering the straight, and so was quite out of the race, which lay between *Sandboy* and *Doctor*. The former kept the lead, and running across to the outside rail, taking *Doctor* with him, won by three quarter of a length. The rider of *Doctor* entered an objection against *Sandboy's* jockey on account of a cross, which objection the Committee proceeded to take into consideration at the end of the day, but were obliged to defer their decision on account of the absence of one of the interested parties. The result of the race, therefore, remains uncertain for the present.

5. THE VISITORS' CUP.—Presented. For China Ponies. Winners of One Race at the meeting 7lbs; of Two Races, 10lbs. extra. Winner of more than two races excluded. Weight for inches. Entrance, $5. One mile and a half.

Mr. Morrison's *Braemar* (7lbs. ex.), 11st. 1 lb. w.o,

This was unfortunately a walk over for *Braemar* although there were thirteen entries.

6. THE CLUB CUP.—For Japan Ponies. Winners of mixed races, and winner of the Spring Stakes excluded. Winners of any

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

open races at or previous to this meeting, 10lbs. extra. Weight for inches. Entrance $5. Three-quarters of a mile.

Mr. J. Robertson's *Doctor*, 10st. 6lbs 1
Dr. Buckle's *Sirius*, 10st. 6lbs 2
Mr. Reid's *Drizzle*, 10st. 8lbs 3

Only three went out. *Sirius* started off followed by *Drizzle* *Doctor* lying behind; but the latter came up at the quarter-mile and gradually overhauled *Sirius*, who, notwithstanding a most game effort, had to succumb, being beaten by a length. Time 1min. 37½ sec.

7. The Ito Cup.—For China Ponies. Winners at the meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

Mr. Savile's *Crusader*, 10st. 5lbs 1
Mr. Sinbad's *The Minister*, 10st. 5lbs 2
Mr. Pringle's *Piastre*, 10st. 11lbs 3
Mr. J. Robertson's *Favori*, 10st. 5lbs 0
Mr. Alphonse's *Kuo-pü-chu*, 10st. 11lbs 0
Mr. John Peel's *Bonito*, 10st. 8lbs 0
Mr. Sinbad's *The Judge*, 10st. 8lbs 0
Mr. De Benter's *North Mongolian*, 10st. 8lbs 0
Mr. De Benter's *West Mongolian*, 10st. 5lb..... ... 0

There were nine starters who got away at once. *The Judge* made the running at a good pace and passed the Grand Stand the first time followed by *Bonito* hard held, with *Piastre* and *Favori* close at hand, then *Crusader* and *Kuo-pü-chu*, and finally *The Minister* and the two *Mongolians* well behind. At the top of the hill *The Judge* was collared and *Minister* began to join those in front of him, while at the half-mile *Crusader* began to go ahead and took the lead at the quarter which he never relinquished, winning easily in 2 min. 11 sec. *The Minister* also came through his ponies at the quarter-mile and in the straight made a splendid effort, but without success, to catch *Crusader*, securing second place, with *Piastre* third.

8. The Yokohama Plate.—For Japan Ponies. Winners at the meeting excluded. Weight for inches. Entrance, $5. Three-quarters of a mile.

Dr. Buckle's *Stalemate*, 10st. 8lbs..... 1
Mr. Ola's *Moscou*, 10st. 4lbs..... 2

Only two started and kept well together to the straight where *Moscou* shut up and *Stalemate* won by two or three lengths.

9. Criterion Stakes.—For China Ponies. A forced entry for all Ponies that have run at the meeting. Winners of one race, 10lbs.; of two races, 14lbs. extra. Ponies that have run twice, and have not been placed, allowed 7lbs. Weight for inches. Entrance, $5. One Mile and a quarter.

Mr J. Robertson's *Dibs*, 11st. 4lbs..... 1
Mr. Morrison's *Andante*, 10st. 11lbs..... 2
Mr. Morrison's *Tallapoosa*, 11st. 4lbs..... 3
Mr. Pringle's *Blackthorn*, 9st. 12lbs..... 0
Mr. William's *Grasshopper*, 11st 11lb..... 0
Mr. John Peel's *Cyclone*, 10st. 8lbs..... 0
Mr. De Benter's *Mid Mongolian*, 10st. 5lbs..... 0

Cyclone again gave trouble at the post, and by his gyrations fully exemplified his name. They got off with a bad start, *Mid Mongolian* leading on passing the stand closely followed by *Blackthorn*, and at an interval *Cyclone*, with the rest in a ruck behind. At the half-mile *Dibs* was let out and joined those in front. At the quarter *Dibs*, *Blackthorn*, *Andante*, *Tallapoosa* and *Grasshopper* were all well together and it might have been anybody's race, but after entering the straight *Dibs* drew away and won the best race of the meeting with ease. The 'Tartan' ponies secured second and third places. Time, 2min. 56 sec.

Third Day.

Saturday, 20th May.

Owing to heavy rain on Friday the third day's racing had to be postponed until to-day, when, fortunately, the weather was again beautifully bright. Riders and visitors—and for that matter ponies too—were spared the infliction of the dust storm which was so distressing on Thursday, and the heat was by no means so oppressive as on the two previous days. The band of the U.S.S. *Tennessee* was again in attendance, for which sincere thanks are due to the Captain and Officers of that vessel. At this meeting Mr. Walter acted as Judge, Mr. Russell Robertson as Time-keeper and Mr. F. A. Cope as Starter, and the whole proceedings may be considered to have been very successful.

1.—The Hurdle Race.—Value, $75. For all Ponies. Over Six (6) Hurdles. China Ponies, 10st. 7lbs.; Japan Ponies, 10st. Entrance, $5. Once round and a distance.

Mr. Robertson's *Tim Whiffler*..... 1
Do. *Snob*..... 2
Mr. Marlborough's *Ivanhoe*..... 3

Only three started. *Ivanhoe* baulked at the first and other hurdles and was never in the race, which was left to the two Blue and White ponies who went round together without refusing a hurdle; *Tim Whiffler*, however, leading all the way and winning easily. Time 2 min. 41 sec.

2.—The Merchants' Cup.—Presented. A Handicap for all China Pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, $5, *compulsory*. Open also to beaten Ponies at the meeting, One Mile and a quarter.

Mr. J. Robertson's *Dibs*, 11st. 10lbs. ..... †... 1
Mr. Morrison's *Lintie*, 10st. 3lbs..... †... 2
Mr. John Peel's *Grey Friar*, 9st. 12lbs..... 3
Mr. Pringle's *Piastre*, 9st. 10lbs..... 0
Mr. Robertson's *Gladiateur*, 10st. 12lbs..... 0
Mr. Morrison's *Braemer*, 11st. 5lbs..... 0

Grey Friar of course gave lots of trouble at the post and seemed to have a decided objection to face the starter. They eventually got off to a wretched start, *Gladiateur* making the running, closely followed by *Grey Friar*, *Lintie* and *Piastre*, and in this order they passed the Grand Stand the first time round; *Dibs* and *Braemar* lying far behind. After ascending the hill *Dibs* began to close up and *Gladiateur* to fall back, and after passing the Trees the former ran past the others and challenged *Lintie* for the lead. These two made a most exciting race down the straight, finishing with a dead heat. Time, first heat 2 min. 56 sec.

The deciding heat was run off after the Sayonara Stakes, and resulted in an easy victory for *Dibs*. Time, 2 min. 55 sec.

3.—The Nippon Champion Handicap.—A Handicap for all Japan pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, $5, *compulsory*. Open also to beaten ponies at the meeting. Once round.

Mr. Marlborough's *Typhoon*, 10st. 10lbs..... 1
Dr. Buckle's *Sirius*, 10st. 4lbs..... 2
Mr. Ola's *Moh-nai*, 10st. 10lbs. 3
Mr. Ola's *Moonshine*, 10st. 0lbs..... 0
Mr. Robertson's *Doctor*, 10st. 12lbs..... 0
Mr. Robertson's *Tim Whiffler*, 10st. 5lbs..... 0
Dr. Buckle's *Stalemate*, 10st. 2lbs..... 0
Dr. Buckle's *Sandboy*, 10st. 0lbs..... 0

There was great delay at the post and several false starts were made, the ponies finally getting away with a very bad start, in which *Moh-nai* had all the disadvantage. *Sirius* led with *Moonshine*, *Tim Whiffler* and *Typhoon* well up.

At the five furlongs *Typhoon* took the lead, and *Moh-nai* came well up. In the straight *Typhoon* led, *Sirius* being second, and *Moh-nai* third, and the three made a splendid race home, the little Yokohama favourite winning a capital race by three-quarters of a length in 2 min. 19 sec. The same distance divided the second and third ponies.

4.—The Scurry Stakes.—For all Ponies. Weight as per scale. Entrance, $5. Three furlongs.

Mr. De Benter's *South Mongolian* 9st. 13lbs. 1
Mr. Ola's *Lodi* 10st. 4lbs. 2
Mr. Sinbad's *The Judge* 10st. 8lbs. 3
Mr. John Peel's *Grey Friar* 10st. 5lbs. 0
Mr. De Benter's *East Mongolian* 9st. 13lbs. 0

The ponies got off to a bad start after the usual fractiousness on the part of *Grey Friar*. *The Judge* jumped off with the lead, *Lodi* being second and *South Mongolian* third. On entering the straight *Lodi* went ahead and looked very like winning, but unaccountably shut up near the post, when *South Mongolian*, who had passed *The Judge* shot by and won very cleverly through good riding by a neck. Time, 2min. 47 sec.

5.—The Solace Cup.—For all beaten Japan ponies at the meeting. Weight for inches. Entrance, $5. Five furlongs.

Mr. Robertson's *Oyama*, 10st. 6lbs..... 1
Mr. Ola's *Moh-stotz*, 10st. 6lb. 2
Mr. Morrison's *Discard*, 10st. 6lbs..... 3
Mr. Smith's *Cupbearer*, 10st. 8lbs. 0
Mr. Reid's *Drizzle*, 10st. 8lbs..... 0
Mr. John Peel's *Finale*, 9st. 12lbs. 0
Do. *Bawbee*, 10st. 6lbs..... 0
Mr. Marlborough's *Sirocco*, 10st. 4lbs..... 0

Cupbearer made the running with *Sirroco* well up to the quarter mile where *Moh-stotz* came up, and the two latter raced hard down the straight together, but *Oyama* gradually over hauled the leader and just won by a head. Time, 1 min. 21 sec.

6.—The Consolation Plate.—For all Beaten China ponies at the meeting. Weight for inches. Entrance, $5. Once round and a distance.

Mr. Morrion's *Blackrod* 10st. 8lbs..... †... 1
Mr. John Peel's *Bonito* 10st. 8lbs..... †... 2
Mr. Robertson's *Doncaster* 10st. 8lbs..... 0
Do. *Gladiateur* 10st. 11lbs..... 0
Do. *Favori* 10st. 5lbs..... 0
Mr. Pringle's *Piastre* 10st. 11lbs..... 0
Do. *Blackthorn* 10st. 8lb..... 0
Mr. De Benter's *Mid Mongolian* 10st. 5lbs..... 0

A false start was made when *Mid Mongolian* bolted and threw his rider. On getting away *Black Rod*, *Doncaster* and *Mid Mongolian* led past the stand, but on ascending the hill *Bonito*, *Piastre* and *Blackthorn* closed up. At the quarter-mile *Blackrod* and *Bonito* were well ahead, and from that point the race lay between them, as they came down the straight neck and neck and made a dead heat of it. *Favori* came up very well for third place.

The deciding heat, at the close of the meeting, was won by *Blackrod* by two lengths. Time, 2 min. 46 sec.

7.—The Sayonara Stakes.—A Handicap for all ponies. To be handicapped by the Stewards at the close of the second day's

Digitized by Google UNIVERSITY OF CALIFORNIA

racing, when entries will be received. Winner of the Merchants' Cup excluded. Winner of the Nippon Champion Handicap, 7lbs., and winners of any other race after the publication of the handicap, 3lbs. extra, Entrance, $10. Once round.

Mr. Malborough's *Typhoon* 10st 2lbs.	1
Mr. Morrison's *Tallapoosa* 11st. 0lbs.	2
Mr. William's *Grasshopper* 11st 0lbs.	3
Mr. Sinbad's *The Judge* 10st 0lbs.	0
Mr. Pringle's *Blackthorn* 10st. 0lbs.	0
Mr. Robertson's *Tim Whiffler* 10st. 0lbs.	0
Mr. John Peel's *Cyclone* 9st. 12lbs.	0

Tallapoosa lost several lengths at the start, but closed up on reaching the hill, all being well together, led by *Grasshopper*, and so kept to the Trees. Here *Tallapoosa* and *Typhoon* come ahead, the latter leading down the straight and winning an exciting race by half a length. Time 2 min. 19 sec.

The objection made by the rider of *Doctor* in the Tea Cup on Thursday against Dr. Buckle on *Sandboy* was not allowed by the Committee, so that the race remains with the latter.

Law & Police

IN H. B. M.'S CONSULAR COURT.

Before R. ROBERTSON, Esq., Consul.

Tuesday, May 19th, 1876.

KIMOTO SHIMPEI *vs* R. F. LIVINGSTONE.

This was a claim for $55.32 balance of wages.

Both parties to the suit appeared personally.

Plaintiff stated that on the 13th March last year he was employed by defendant at a salary of $20 a month to go as captain in the whaling schooner *Kaisi Maru*. The vessel was lost up North on the 14th July following, and on the 27th August plaintiff was back in Yohohama. Before he started in the vessel he received an advance of $30, and his wife had received $6 monthly during four months; he claimed wages from the 13th March until the day of his return, or for five months and fourteen days, minus the $54 already received.

Defendant would only admit to be indebted to plaintiff in $14.68. Plaintiff was engaged as captain of the schooner *Kaisi Maru*, belonging to defendant and Mr. Colemann, but he was not engaged by defendant but by a Captain Kennett, and defendant stood guarantee that he should receive $20 monthly as long as he remained on board, From the moment the vessel was lost, that is, from the 14th July last year, defendant considers his guarantee to have ceased. Plaintiff's wages did not commence on the 13th of March but a few days later, and he and his wife have already received $54.

Verdict that defendant pay to plaintiff wages $78, after deducting from this amount the $54 already paid.

Wednesday, 17th May 1876.

REGINA *vs.* RICHARD KING.

Prisoner, who is an engine driver on the railway, was charged with threatening to shoot, and to set fire to some buildings belonging to the Japanese Government.

Prisoner pleaded that he had only threatened to shoot his own horse, and burn his own premises.

Thomas Bellamy, sworn: I am an engine driver. On the 12th inst. I received a letter from Mr. Christy, stating that Mr. King was to deliver up to me the keys and furniture belonging to the department. I went to Mr. King the same day, and told him the order I had received. Mr. King answered, "All right; we can manage together for a few days." On Monday night King and I went out together; when we came home I went into King's room, and told him my orders must be complied with. He went out into the back yard, and I heard him say something to a servant about the keys. He commenced to make a row, and I could hear him say in a neighbouring room that he would blow my brains out. The next morning I told Mr. Christy what had happened. This took place at the buildings at the Yokohama Railway Station.

Prisoner: The premises belong to me. Before I go away I want to sell them; others want me to give them to them, and I have said that before I give them away I will set fire to them.

The case was adjourned until the day after to-morrow, and prisoner admitted to bail in his own surety of $100, and another surety of $100.

Friday, May 19, 1876.

REGINA *vs.* RICHARD KING.

This case, which was adjourned last Wednesday, the 17th instant, came again before the Court to-day.

The prisoner presented himself at the bar in discharge of his bail.

Mr. G. P. Ness appeared on behalf of the Japanese Railway Department, and stated that the premises had now been vacated by Mr. King, and that the charge against him was withdrawn.

His Honor cautioned prisoner against future use of violent language, and ordered him to pay costs of summons.

IN THE U. S. CONSULAR-GENERAL COURT.

Before Gen. T. B. VAN BUREN, Consul-General.

Wednesday, May 17, 1876.

THE PEOPLE OF THE UNITED STATES *vs.* JAMES BUTTLER.

James Buttler, seaman of the U. S. man-of-war *Tennessee*, was charged with being drunk, assaulting Japanese, and destroying property last night.

Prisoner pleaded ignorance of what had happened.

A Japanese policeman stated: Last night, about 7 o'clock, a Japanese came to the Police Station, and asked for police assistance. I went with him, and found prisoner had broken some paper windows and a sideboard. The prisoner was lying down on a mat. The tenants of the house complained that prisoner had broken windows and sideboard. Arrived in the street. the prisoner tried to run away from me, but I caught him.

Totzuke: Prisoner came yesterday at 3 p.m. in a jinrikisha to my house, and went directly to lie down on a mat to sleep. I roused him, and he then first behaved indecently in the house, and afterwards broke the paper window and the sideboard. I estimate the damages at $1.50.

Prisoner was sentenced to pay damages and costs,—total, $3.

IN THE GERMAN CONSULAR COURT.

Before A. SCHAEFFER, Esq., *Acting Consul*, Mr. H. FRANCKE, AND Mr. H. DE LA CAMP, *Assessors*.

Monday, May 15th, 1876.

GUSTAV SCHMID *vs.* P. BOHM.

This was a claim for $200 with interest and costs, based upon a promissory note issued by defendant to a Mr. Hoffmann, originally for $300, on which, however, an instalment of $100 had been paid, said note now being in plaintiff's possession.

Both parties to the suit appeared personally.

Plaintiff stated that Hoffmann, the original owner of defendant's promissory note, left Yokohama at the commencement of last month, and on the eve of his departure plaintiff advanced him $200 and received in return from him defendant's promissory note and an acknowledgment of having received $200 from plaintiff. Shortly afterwards plaintiff asked defendant for payment of his promissory note and defendant promised to pay on the 6th of April, but has since refused to pay.

Defendant acknowledged his note and indebtedness to Hoffmann in $200, but he objected to pay plaintiff because plaintiff has no power to collect and give receipt for the money, nor is the promissory note transferred to plaintiff by any endorsement from Hoffmann. Besides he has counter claims against Hoffmann. As for his promise to take up the note on the 6th April it arose from his erroneous impression that plaintiff was duly authorized to receive the money.

Verdict for defendant with costs againts plaintiff. Plaintiff asked if he could appeal, which question was answered by the Court in the affirmative.

Thursday, May 18, 1876.

A. LUBOWSKY *vs* P. BOHM.

This was a claim for $25, remuneration for inspecting and appraising a lot of otter furs.

Both parties to the suit appeared personally.

Plaintiff stated that last year he was requested by defendant to inspect and appraise a lot of furs, for which work he was to be paid $20, or more if he would wait for the payment. He made the appraisement, and has waited long enough, but now payment is refused him.

Defendant acknowledged to have engaged plaintiff for the work just mentioned, and to have promised him $20 if the furs were sold in Europe to advantage. Plaintiff appraised the furs at $5,500 to $6,000, and they sold in Leipzic for only 16,500 marks: thus there was a loss on the furs, and this was partly due to their bad packing, and plaintiff had undertaken to give proper orders for the packing. He had not promised plaintiff more than $20 if he would wait for his payment. Under these circumstances, he asked that the case be dismissed.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Plaintiff replied that his remuneration was not made dependent upon the more or less advantageous sale of the furs, and he denied to have undertaken any duties with regard to the packing of the furs. He did not value the furs at a higher price than $4,500.

Defendant said that he wished to call as witnesses Mr. William Smith and Mr. Carl Roepke.

The case was adjourned until Thursday, the 25th inst., at 10 a.m., when defendant's witnesses will be examined.

IN THE SPANISH CONSULAR-GENERAL COURT.

Before Señor Don EMILIO DE OJEDA,
Consul-General.
Thursday, May 18th, 1876.

Pedro Gomez, a Manilla man, seaman on board the *Meiji Maru*, was charged with assaulting and wounding another Manilla man, Manuel Lorente.

Manuel Lorente, whose head was shaved in 5 different places, each place exhibiting a wound on an average 2 inches long, deposed that yesterday afternoon at 5 o'clock when he passed in the street prisoner came rushing out of No. 133 and with a link of an anchor chain, which he had drawn over his hand as a knuckle duster, knocked witness repeatedly on the head, the blood flowed copiously, and at last witness fell down insensible. Witness believes that the reason of prisoner's attack was that prisoner, who is to be discharged from the *Meiji Maru*, knows that witness is to take his place.

A Japanese policeman, who had arrested prisoner and picked the former witness up in the street, corroborated this statement.

The weapon with which the injuries had been inflicted had been found on prisoner and was produced in Court.

Prisoner was sentenced to 3 months' imprisonment

IN THE NETHERLANDS CONSULAR COURT.

Before W. C. VAN OORDT Esq., Consul.
Dr. De Jong and J. H. Doncker Curtius, *Assessors.*
Thursday, May 18th, 1876.

Chachul, a Javanese seaman on board the *Malacca*, was charged with stabbing a Japanese last night.

Kubaja Tajiro, the wounded Japanese, deposed: Last night about half-past eight I was stabbed by prisoner at the Chinese shop No. 147 in the Swamp. I was in the shop when the prisoner entered drunk, and spoke something to me which I did not understand. I do not live at that place and wanted to leave it, when the prisoner attacked me and stabbed me in the back of the neck. There was another foreigner of the same colour along with prisoner. I think I was stabbed with a knife. I am a bumboatman, but I am now unable to work on account of weakness caused by my wound. A Japanese doctor attended to me last night.

At the request of the Consul Dr. De Jong here went with Kubaja into another room to inspect his wound. On his return he reported that a superficial examination showed the wound to be about an inch long and apparently made with a knife. He did not wish at present to remove the bandages.

Witness continued: The prisoner afterwards hid himself between the house and the privy, and I called a policeman and had him arrested. The Japanese doctor has told me that my cure will take twenty-one days at a cost of 6 sen a day, and besides I claim 20 sen a day as compensation during the time I am unable to work.

A certificate of to-day's date from the Chief officer of the *Malacca* was here produced, stating that prisoner had been on board for twelve months and not shown any quarrelsome disposition.

Prisoner stated that he belonged to the *Malacca*; he went yesterday to Kanagawa and from thence to the Chinese house No. 147, where he was attacked by plaintiff with a piece of wood. He defended himself, but he had no knife about him and did not use any.

A Japanese woman said that she saw prisoner strike Kubaja, but with what weapon he struck or stabbed him with she is unable to say because it was rather dark.

Police Constable Mansbridge said that about half-past nine last night prisoner was brought to the station by a Japanese policeman. Prisoner was not quite sober. Kubaja also came to the station and was there attended to by a Japanese doctor, who probed the wound, and it appeared to witness about 2 inches deep.

Sentence deferred until the wounded man has been properly examined and reported upon, and the Court thus enabled to form an opinion of his injuries.

Friday, May 19, 1876.

Chachul, who was remanded yesterday on a charge of stabbing a Japanese, was again brought before the Court.

Kabaja Tajiro, the Japanese who had been wounded last Wednesday night, was present.

The following certificate from Dr. Goertz was read in Court: —"I have this day, at the request of the Netherlands Consulate, examined the Japanese, Kubaja Tajiro, and find that the wound, which has been inflicted on his neck, is entirely without danger. The wound is as good as healed to-day, and a week at the utmost will be required to heal it up definitively."

Prisoner was sentenced to 30 days' imprisonment, and to pay damages and costs, amounting to 16 francs.

ADMINISTRATIVE POWERS OF THE BRITISH MINISTERS IN CHINA AND JAPAN.

(London and China Express.)

In the House of Commons last week Sir Charles Dilke asked a very pertinent question of the Under Secretary of State for Foreign Affairs bearing upon the powers exercisable by the Ministers in China and Japan by virtue of the Foreign Jurisdiction Act and the Orders in Council framed under it. The question was whether the Government approve of Sir Harry Parkes's notification to the effect that any British subject in Japan who shall print or publish a newspaper in the Japanese language shall be deemed guilty of an offence, and upon conviction before any British Consular or other Court shall be liable to imprisonment for any term not exceeding three months, with or without hard labour. To this the Under-Secretary of State replied, in somewhat vague terms, to the effect that the notification had been issued in consequence of representations which were made to Sir Harry Parkes by the Japanese Government respecting the publication of newspapers in Japan, and in the Japanese language, by persons who were British subjects; and he added, that the full particulars were expected by the next mail, and in the meantime he could not say whether the British Minister's regulation would be approved or not.

We think that the full consideration of the subject can lead to only one conclusion. A reference to the preamble of the Order in Council of 1865, by which all matter relating to civil and criminal proceedings in regard to British subjects in China and Japan are regulated, will show clearly that Sir Harry Parkes has exceeded his powers in the issue of this notification, and that no British Court in Japan would be justified in enforcing the regulation which he has taken upon himself to make. Prior to the issue of the above-named Order in Council the Superintendent of Trade had powers to make such regulations as he deemed necessary for the peace, good order, and government of Her Majesty's subjects in China. Originally these powers were exercised in Hong Kong with the advice of the Legislative Council there; but when the seat of the Ministry was transferred to Peking by virtue of the treaty of 1860, the Governor of Hong Kong was divested of authority to frame Ordinances applicable without the limits of the colony, and the Minister at Peking retained the power of issuing regulations for the government of British subjects at the treaty ports or in other parts of China. These regulations, known as Consular Ordinances, are (according to the seventh section of the preamble) left undisturbed as to administrative and general matters by the Order in Council of 1865; but that order limits the power of the British Minister in regard to the issue of regulations affecting the judicial rights of British subjects by a most important provision. Under clause six of the order in question it is laid down that "any act other than an act that would by a court of justice "having criminal jurisdiction in England be deemed a crime or "offence making the person doing such act liable to punishment "in England, shall not in the exercise of criminal jurisdiction un-"der this order be deemed a crime or offence making the person "doing such act liable to punishment." Since the passing of the Order in Council of 1865 regulations have been issued by the Minister at Peking even affecting judicial matters—one, for instance, which admits of suing only a portion of the partners in a firm instead of the whole—but no regulation has before been promulgated infringing broad principles of right, or purporting to make anything an offence in China or Japan which is not an offence in England, unless the act prohibited be such as to contravene the stipulations of the Treaty.

The notification just issued is based upon the the 85th and 86th sections of the Order in Council, which provide that the British Minister may from time to time make such regulations as seem fit for the peace, order, and good government of British subjects resident in or resorting to China (or Japan), subject to the approval of the Secretary of State for the Colonies, and may enforce such regulations by means of a penalty not exceeding $500, or imprisonment, with or without hard labour, for any term not exceeding

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

three months; but it is clear, in view of clause six above quoted, that these sections relate exclusively to matters provided for in the Treaty, the more so as the sections in question are subdivisions of Art. VII., which is headed "Treaties and Regulations." Unless therefore, Sir Harry Parkes can show that the publishing a newspaper in the Japanese language is contrary to the Treaty—which is absolutely silent on the subject—he has evidently gone *ultra vires* in his recent edict. Upon only one ground could he be justified—taking an extreme view of the case in his favour—in the course he has adopted, namely, that the act which he purposed to provide against was one which, though not specifically prohibited by English law is still—to borrow the language of the Roman jurists—contrary to *natural* law; that is, such an act as it may be reasonably concluded all nations would recognise as wrong. So far, however, from this being the case, it is nowhere considered an offence merely to publish a newspaper, though there are differences of opinion as to the lengths to which criticism may go; and our own laws amply provide for the punishment of those who exceed legitimate bounds. Where, therefore, the act of publishing becomes an offence of any kind it is already provided for by the Order in Council, and Sir Harry Parkes has fallen into a serious error—which is the more strange in one who usually displays a marked sense of justice and equity—in issuing the recent notification on the subject. If his right be conceded, it will be within his power at any time to alter any of our civil or criminal laws by a stroke of the pen—a power which the Order in Council of 1865 is expressly designed to limit and control. The proper course for the Minister to have adopted would have been to recommend the Japanese authorities to bring the proprietor of the newspaper publishing any objectionable article before the Consular Court, when the whole question would have been gone into on its merits, and would have been subject to the ruling of the Chief Judge of the Supreme Court, or, if need were, of the Privy Council upon appeal.

JAPANESE JOURNALISM AND PRESS LAWS.

(Pall Mall Gazette.)

Sir Charless Dilke's question in the House of Commons with reference to a regulation recently issued by Sir Harry Parkes, our Minister in Japan, is one of considerable interest. The regulation itself is a great novelty, if not wholly without precedent in the history of our relations with Eastern countries. It enacts that—"Any British subject who shall within the dominions of his Imperial Majesty the Mikado print or publish a newspaper in the Japanese language shall be deemed guilty of an offence, and upon conviction thereof before any British or other consular court shall be liable to imprisonment for any period not exceeding three months, with or without hard labour."

It must be confessed that at first sight this seems to be a law of an unusual and stringent character. Before coming definitively to any conclusion, however, it is essential that we should know all the circumstances; and in the meantime the English press in Japan supplies a good deal of information as to the preceding conditions which must have been present to the mind of our Minister. It appears that a newspaper under the title of the *Bankoku Shimbun* was published in the Japanese language, but owned and edited by Mr Black, a British subject, and was therefore English property, and removed from Japanese jurisdiction. It is to be inferred that the matter thus circulated among the Japanese under the ægis of British exterritoriality was not of a nature to meet with the approval of the Government of the country, since we are told in the Minister's notification that the Japanese Government had represented to him that the publication of newspapers in the Japanese language by persons who are not subject to the Japanese press laws "may be subversive of internal order, and cause grave injury to the public interests of Japan." Upon this appeal, having, we must assume, a fair foundation in fact, Sir Harry Parkes framed his regulation prohibiting and making it a penal offence, punishable by fine and imprisonment, for any British subject within the dominions of the Mikado to print or publish a newspaper in the Japanese language.

Although the proprietor may not have published, or intended to publish, "seditious matter calculated to embarrass" or prejudice the Japanese Government with its own subjects or with foreigners, we think the *Japan Mail* is quite right in its conclusion that "it is neither conformable to reason nor justice that foreigners residing in this country should have the power to override laws deemed necessary for the regulation of the relations between the Japanese Government and its own subjects." What that Government did, however, before appealing to the British Minister was, as is usual in the far East, as much a violation of reason and justice as the act of the British offender against the press laws. Not being able to reach the person or the property of Mr. Black, they prohibited their own subjects employed in its production to do any further work upon it, stopped its sale, and finally its transmission through the Post Office. As a Japanese Minister is once reported to have said to a foreign representative contending for the right of missionaries to teach:—"Well, they may teach, but we will exercise our right to cut off the heads of all Japanese who listen to them."

We gather from various sources that the relations between the Government and the native press are not of a satisfactory character. The Cabinet is said to be divided upon the question whether the press laws as they now exist should be increased in severity or relaxed. How far this untoward state of affairs is to be attributed to the unfitness of the Japanese for a free press and uncontrolled liberty of speech, or to the unreasonable fear of an absolute Government of such an instrument of public influence being employed so as to endanger its existence or the maintenance of order, is a question on which much diversity of opinion, both native and and foreign, is to be expected. The issue raised is wholly new for such a country as Japan. And to us it derives a sort of reflected interest, because something very similar arises in connection with a free press in our Indian Empire. In both we find if we look at the native press, a great deal of desultory writing, often of a very turgid or vapid kind, which does no great injury to any one. While side by side there is much of a better stamp, indicating fair insight into the existing state of affairs, and a laudable desire for further information. But we also see in both a good deal of incendiary matter, equally vicious in expression and aim, which may do a great deal of mischief among an ignorant and excitable people. No Government would willingly, or wisely, divest itself of the necessary power to restrain such writers and hold them responsible in penal consequences. But it would be a misfortune if any undue stringency of press laws were to deprive the rest of the world of the means of ascertaining the mind of the people, whether in Japan or in India. Mr. Cowen was quite right in saying in his speech on the Royal Titles Bill that those who have lived longest in Eastern countries are the most reticent about the feelings of the people and their thoughts. And Lord Salisbury might well admit that one of the greatest difficulties with which our statesmen had to contend in India was that they did not know the mind of the people. All through Asia, and among Asiatic races from the Bosphorus to the Japan Seas, there is the same difficulty. "The mind of the native population is truly to us Westerns as a sealed book." And what it is to us it is also in a lesser degree to their own rulers. If, therefore, the Japanese Government be wise, it will permit as far as possible the free expression of opinion in the native press, and only seek in the interests of peace and order to exercise such power of repression or punishment as may be absolutely required to that end. To do otherwise will be to deprive themselves of the most valuable aids to good government and security; and for the sake of the advantages only thus to be obtained they may be well content to accept some of the inconveniences more or less inseparable from a free press in all countries.

SPELLING-BEES.

(The Spectator.)

It is evident that Spelling-Bees,—which should, by the way, certainly be called "spelling hives," and not "spelling-bees," for nothing can be more anomalous than to give the name of the individual to the industrial association to which he belongs,—answer to some social want in the community, or they would not prosper and multiply as they do. There is hardly a town in England which is not getting up, or thinking of getting up, its Spelling-Bee; nay, not only getting it up, but reporting its small failures and successes with the sort of enthusiasm which implies a keen social interest. We suppose the reason is that these "Bees" bring together many classes on terms of real equality, without the embarrassment which is caused by any attempt at general social intercourse between classes of different habits and different degrees of culture. We say 'real equality,' because it is certainly true, and very curious that it should be true, that men and women of comparatively little literary knowledge, and who have had not a tenth part of the experience of books which their competitors have had, often spell as well or better than those competitors, in spite of this familiarity. We know of a recent instance in which a University man of a highly

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

literary family only just succeeded in beating a butcher's boy at one of these Spelling-Bees, while his younger brother, a University undergraduate, was actually beaten by the butcher's boy. In another case within our own knowledge, the interrogator, an experienced journalist of middle-age, whose whole youth had been spent in University studies, confessed that the winner of the first prize, a young man engaged in a thriving manufacture, spelt certainly no worse, and probably better, than he himself could have done. Evidently in this spelling rivalry, a subject of competition has been hit upon in which the apparent disadvantage of want of culture is nothing like as real as it seems, so that those who start at a disadvantage are not unfrequently able to reap not only the success they court, but the additional distinction of winning that success against odds, and what seem at least to be great odds. No doubt one great reason of this is the fact that the knowledge required implies, of course, no real mastery of either thoughts or things, but only of the instruments of thought and the names of things,—and hardly even so much as this. The very best spellers will spell correctly names of things of which they have no correct notion at all; nor is this in any way more true of the little-taught than of the well-taught. At one Spelling-Bee, for instance, the interrogator, having asked for the spelling of the word 'newt,' was requested by the candidate to state what it meant, whereupon he replied rather doubtfully and very erroneously, that he believed it was the name of the creature into which the tadpole grows. Evidently he did not himself in the least know the difference between an eft and a frog,—nay, worse still, confounded the immature form of the eft with the ultimate form of the tadpole. Yet he knew, of course, how to spell 'newt,' and, as it may be concluded, nothing else in the world about it,—surely a typical piece of modern 'education.' But it is precisely this shallowness of the knowledge required which makes the Spelling-Bee so useful and popular as a social amusement in which different classes of society can participate. The girl or boy fresh from the primary school who has a good eye for the appearance of words, will spell better than many a carefully-educated Eton boy who has got beneath his first acquaintance with words, and has confused his mind with etymologies—which are often as misleading for the purpose of correct spelling, as a superficial knowledge of a whole family is misleading for the purpose of directly identifying a particular member of it. For example, the word 'anonymous' is much more likely to be misspelt 'anonomous' by a boy who has just acquired the knowledge that the word is derived from 'onoma,' the Greek for 'name,' than it is by a child perfectly innocent of its etymological origin. Nay, to say nothing of etymology, we fancy that a literary feeling for the effect of words often tends to confuse people as to the proper spelling. Every one almost must have experienced the curious emotion with which a very familiar word, when looked at simply as a sound, is apt to affect one. Is it possible, we ask ourselves, that *q-u-a-s-h* can really be the right way of spelling the word which expresses the sudden and complete undoing of an elaborate procedure? The word, carefully considered, looks so silly; we begin to doubt if there be such a word at all, and to be quite sure we must have made some serious mistake as to its component elements. Well, that sort of uncertainty.—that swimming of the head with which we look at a word and ask if it can really mean the thing which we have in our mind,—is not a complaint to which the beginners in literature are liable. It is due to the same kind of wonder with which dreamy people sometimes look at themselves in the glass, and ask if that really is the creature with whose inward history the gazer has had such a long and melancholy acquaintance. It is when the first familiarity of the association between the word and the thought or thing for which it stands, has worn off, and you begin to be able to think of the thing without the word, and the word without the thing, that this sense of wonder and doubt begins. And no feeling is more disastrous than this to the presence of mind necessary for a Spelling-Bee. You must go at your words as a good old hunter goes at a gate—without losing yourself in contemplation, or you are lost. If the horse could realise how odd it was that the gate was there, and that he was just going to be maniac enough to lift himself and his rider high enough in the air to get over it, though he is just as well on one side of the gate as he would be on the other, and perhaps a little better, clearly he would never rise to the emergency, and would not clear his gate. And so the literary competitor at a Spelling-Bee is not unfrequently at a disadvantage. The word gets steeped for him in the curious cross-lights of a reverie, and he cannot go at it in the old, mechanical way, as a mere series of sounds. And so he collapses while a boy fresh from the National School will take the word easily in a canter.

A worthy person who recently presided at a Bath Spelling-Bee, and who was evidently very much pressed indeed to invent introductory remarks such as he thought it due to his position to prefix to the amusement of the evening, ventured on the prediction that if 'Bees' were to continue the fashion, they might "eventually include the whole range of educational requirements." That was as magnificent a generalisation as that of the journalist who proposed to substitute for "the balance of power" "the Equilibrium of Universal Justice." But just imagine what a bore it would be if this truly fearful prophecy were realised,—what a society of competitive prigs we should soon have. No, the merit of the 'Spelling-Bee,' if it has a merit, is the extremely superficial character of the qualification on which it relies for winning in the race. Whatever may be said of the inadequacy of the ordinary English dictionary as a tribunal of appeal in case of dispute, it is at least a much more satisfactory tribunal than it would be possible to find on any other subject. Imagine comparing Froude with Lingard, to make out the correctness or incorrectness of an answer in a 'Historical-Bee;' or Huxley with Owen, to determine the right solution of a question in a 'Biological-Bee;' or "Hansard" with the "Parliamentary Mirror," to find the proper authority for the decision of a moot-question in a 'Political-Bee.' The truth is that this sort of thing is tolerable only because it embraces a very wide area of competitors, and therefore cannot well be made pedantic. Also there is a good deal of luck in it,—a good deal of the nature of a lottery,—and that, again, rather recommends it as an amusement, instead of constituting an objection. If there were not a good deal of luck in whist, how many would play whist? If there were not a good deal of luck in a Spelling-Bee, how many would join in the Spelling-Bee? Of course every one knows that his neighbours may get the words which he could not himself spell, and he only the words which he can spell, and this encourages him to join in the competition. But if the chances were greatly against him, as they would be against nine persons out of ten, if any substantial amount of real knowledge were required for a decent prospect of success, only the few proficients in the subject would join in the 'Bee,' and then all the fun and life of it would be over. A very large number of young people may fairly hope to be able to spell four or five words out of every six which may be set them, and to escape the sixth. But how many young people would seriously hope to be able to answer four or five geographical, or historical, or mathematical, or chemical questions out of every six which should be set them? Of course, only the few who had made a study of the subject; and so instead of an animated competition, covering a very wide area, in which chance has almost as much to do with success as skill, there would be a little knot of young prigs, proud of some special acquirement, and always ready to dispute the decision given and to appeal to half-a-dozen authorities on their side. If the knowledge required were not very superficial, and the number of persons who possess enough of if to give them some hope of success, very large, these New Olympic games born of the Education Act of 1870, would be the most intolerable of nuisances, They are tolerable only because they are trivial, and bring very different classes to compete together for the prizes, and this too in relation to a struggle in which failure is not seriously felt, and even success is more of a joke than a glory.

REPORTS.

The *Tsuruga Maru* is the pioneer vessel of a line to run between Japan and the Northern ports of China, but as freights are now ruling in China it is a question whether it will prove a profitable trade for the Company.

The *Lord of the Isles* reports, strong easterly gales and heavy sea, lost a portion of the bulwark. Barometer fell very low on nearing the coast of Japan, but did not experience any very severe weather after the fall.

The *Amanda* reports, had moderate weather after leaving Takao. Some heavy gales from the N. E. between Van Dieman's strait and O-osima, and afterwards rainy weather.

The *Eme*, takes away above 800 tons of rice, but is not fully loaded.

The American ship *Cleopatra* leaving for San Francisco to-day, takes away 600 tons of rice, and the *Wallace* to follow in a day or two will take 750 tons of same, beside other general cargo.

The American barque *Wallace* arrived to-day at noon from Shinagawa, with rice for San Francisco, and will probably leave on Tuesday for that port.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

August 1st, 1875. 26 alt.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Owing to the Race-week holidays business in general has been almost entirely suspended and quotations may be considered quite nominal.

Grey Shirtings:—				White Shirtings:—			
7 lbs.	38½ yds.	39 in.	per pce.... $1.85 to $2.15	60 to 64 reed	40 yds.	35 in. nom. per pce.	2.10 to 2.30
8 lbs.	38½ yds.	44 in.	„ ... 2.20 to 2.50	Turkey Reds	24 yds.	30 in. 2—3 lb. per lb.	0.75 to 1.05
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ... 2.17½ to 2.50	Black Velvets	... ...		*nom.* 8.00 to 8.75
9 lbs.	38½ „	44 in.	„ ... 2.45 to 2.80	English Drills	15 lb. 40 yds, 30 in.	... ...	3.20 to 3.35
				Taffachelass	12 yds, 43 in.		*nom.* 2.00

Yarns.—

No. 16 to 24 ... ...per picul...	$30.00 to 33.50	No. 38 to 42 ... ...per picul...	$40.00 to 44.00 nom
No. 28 to 32 ... ...per picul...	$33.00 to 38.00	Reverse Twist ... 16-24 ... „ ...	——

Woollens.—Since our last there is nothing of importance to report, the same absence of demand for English and French Goods still prevailing.

Plain Orleans	40—42 yds. 32 in.... 6.50 to 7.50	Figured Mousseline de Laine	..30 yds. 30 in... 0.25 to 0.28
Figured Orleans	29—30 yds. 31 in.... 4.75 to 5.25	Multicolored „	...30 yds. 30 in... 0.32 to 0.35
Chimagoro	30 yds. 30 in.... 5.25 to 5.75	Cloth, all wool plain or fancy	...48 in. to 52 in... 0.80 to 1.20

„ No. 4 Kook-fah... ... ... „ ...	5.00 to 5.30	Kerosene Oil ... ... per case ...	2.50 to 2.52

Kerosene Oil is entirely without change since our last, and we have no further arrivals to announce.

EXPORTS.

Silk.—Since the 8th instant, arrivals are 150 bales. Settlements about 50 bales of Oshius and 25 bales of Hanks.

On the receipt of advices implying the probability of a reduced crop in Europe, the market was cleared during the closing week of nearly all the remaining stock, which consisted almost entirely of Oshiu sorts. These were at full rates—as much as $455 being paid, we hear, for good Hamatsukis. The following quotations are therefore nominal.

	At Exchange 4s. in London.	*At Exchange 5.05 at 6 m.s. in Lyons.*		*At Exchange 4s. in London.*	*At Exchange 5.05 at 6 m.s. in Lyons.*

Tea.—An extensive business has been done during the closing week and settlements have exceeded 3,500 piculs. Prices have gradually declined; and though not yet sufficiently easy to offer much inducement for general purchasing, yet some desirable parcels have changed hands at rates approximating to the laid down value in New York.

Good Medium and lower grades, so far, are not well represented, and the few lots of the former offering at about $30 per picul show comparatively poor value in comparison with higher grades.

Arrivals continue coming in freely and with fine weather we may count on a well stocked market.

To-day's prices rule as under, the market being quiet and buyers still looking forward to a further decline.

Good Common	None.	Fine	...$33 to 35
Medium	Nominal.	Finest	36 to 39
Good Medium	Nominally. 28.00 to 32.00	Choice	40 to 45

EXCHANGE AND BULLION.

Exchange.—The business of the week has been interfered with by the Race holidays, but at the close a good amount has been done in Private Bills at a considerable advance in rates.

Rates close as follows:—

STERLING—Bank 6 months' sight	3s. 11¾d. nom.
„ Bank Bills on demand	3s. 11d. „
„ Private 6 months' sight	4s. 0¼d. to 4s. 0⅛d.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. tf.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 22.] YOKOHAMA, SATURDAY, MAY 27, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The announcement that the meeting of the provincial authorities is not to be held in consequence of the Mikado's absence from the capital on his progress though certain portions of his dominions, has caused a good deal of dissatisfaction, to which the native newspapers give vent. It is pleaded that if he makes a progress every year, and his absence is held to be a sufficient reason for not summoning the Assembly, the present adjournment may be indefinitely extended. Why the Assembly should not sit even in the Sovereign's absence, does not seem very clear. The subjects of discussion are of a purely local character, such as Police, Roads, Poor-relief, Primary Education, and so on, and thus the Assembly resembles our own meetings of magistrates. It has no analogy whatever with a Parliament, either in such powers as it may wield, or in the nature of its discussions. It would be very gratifying to have a debate in this Assembly upon the results of the centralizing tendency of the present form of administration, so that some estimate could be formed of the advantages and disadvantages of it. We have no doubt that it has checked a good deal of extravagance and peculation in the provinces. But we are not so certain that it has banished them altogether, and, as we have elsewhere stated, there is a strong feeling abroad in very influential native quarters that the capital is invested with an appearance of progress and prosperity, which, if not fictitious, is at all events procured at the expense of the provinces, which are proportionately impoverished. We doubt whether the newspapers have yet encouraged anything like provincial correspondence; but they might do good service both to the *ken* more remote from the capital, and to the Government, by moderate representations of the grievances under which the provinces are said to labour. It is of high importance, if they lay themselves out to become channels for the expression of such views, that their correspondents should be sound and moderate men, and not merely factious grumblers.

We are informed on good authority that two foreigners have been making considerable purchases of silk in the interior, in contravention of the clause in the passports which forbids all trading out of the foreign settlements. The act is not a *malum in se*, but it is a *malum prohibitum*, and if overlooked in one case will be resorted to in others. As one or two foreigners have got into trouble by acts of this nature, which, however, would hardly take place if they were not profitable, and as it is important that rules made for all nationalities should be observed by all nationalities, we draw attention to the facts as reported to us.

An announcement has been made that a Weekly German paper called the *Ostasiatische Zeitung* is about to be established in Tôkiô, under the editorship of Herr Sutor, formerly a Lieutenant in the Prussian Army. We wish Mr. Sutor success. He enjoys the great advantage of living in the capital, and in close proximity to many of his learned and accomplished countrymen in the service of the Japanese Government. These gentlemen have already shewn much good intellectual mettle in their contributions to the German Asiatic Society, and their advice and assistance cannot fail to be of signal service to the new journal.

We are compelled by lack of space to withhold until next week the remarks suggested by Mr. Consul Robertson's Trade Report, which is concluded in our present issue.

From the "Japan Mail Daily Advertiser."

Monday, 22nd.

If we may believe a correspondent of the *Hochi Shimbun* who has but recently returned from a tour in Europe, the ignorance which formerly existed in England, as to the views on political and social matters held by the people of this country, has been largely dispelled by the translations from the native press, which the foreign newspapers of Japan have been recently placing before their readers. English people, he tells us, begin to find some interest in the news which is borne to them from the Land of the Rising Sun, and this he deems no small honour to its press. The greater number of translations are taken from the *Nichi Nichi*, *Chôya*, and *Hôchi* newspapers. The writing of the second of these is highly meritorious, but it is learned and strains the attention of the reader. The *Nichi Nichi* displays facile composition and a somewhat ambitious parade of erudition in its quotations from European writings. And, lastly, the *Hôchi*, though caustic and severe, is ever ready to check excesses. Such, we learn, are the opinions of the native press which are entertained in London.

The *Hochi Shimbun* announces that some thirteen police officers have received orders to proceed to the Loo Choo Islands.

From the *Chôya Shimbun*.

The *Tokio Fu* announced on Friday last that His Majesty the Mikado would commence his northern journey on the 2nd proximo.

Tuesday, 23rd.

From the *Osaka Nippo*.

It is rumoured that disturbances have arisen in *Kôchi Ken* on account of the new land taxes, and that the farmers have armed themselves with bamboo spears in rebellion against the authorities.

From the same:—

The disturbance in Wakayama *ken* has been tranquillized and the troops, which had been sent from Osaka, were withdrawn on 18th instant.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

From the *Hochi Shimbun.*

Mr. Okubo, the Minister of the Home Department, will start for the North on the 23rd inst., to make preparations for the visit of the Mikado.

Further:—The representatives of the Educational Departments of seven different *ken* are about to meet at *Aichi ken* for the purpose of discussing educational matters.

From the *Fu Ken Jikko.*

Chinese residents in Yokohama being addicted to habits of uncleanliness, the following sanitary regulations have been issued by the *Kencho*:—

All decayed flesh, fish, vegetables or undried skins of animals must be removed from their houses, which must further be kept free from dust and dirt. No offensive food, nor explosive and dangerous articles are allowed in shops or houses. Dealers in Kerosine oil are not allowed to keep a larger stock than five cases on their premises.

No Household Furniture, Merchandize or Sign-boards must obstruct the thoroughfare.

No filth or litter may be thrown out into the street.

The above regulations must be strictly observed and any violation of them will render the offender liable to be punished by law.

Thursday, 25th.

A most daring robbery was committed at the International Hotel on Tuesday night, apparently by some one well acquainted with the premises. The thief obtained an entrance to the Hotel by removing a pane of glass from the Billiard room window which overlooks Messrs. Domoney & Co.'s back-yard. He went direct to the manager's room, and without awakening Mr. Henriques, who was sleeping there, succeeded in abstracting from the pockets of his clothes the keys of the safe and $11.30 in cash. From there he proceeded to the safe (standing by itself in a small room adjoining the bar) which, of course, he found no difficulty in opening. The contents he appropriated, consisting of $720 in cash, a gold watch valued at $150 and promissory notes to the extent of $600; and retired by the same way he had entered, without, strange to say, disturbing the watchman who was on duty, considerately leaving the safe keys on the floor. It is supposed that all this must have occurred about three o'clock in the morning.

The matter has been put in the hands of the Police, who are sanguine of discovering the perpetrator. Most of the servants employed at the hotel leave the premises at night, and suspicion naturally points to one of them.

We would call our reader's attention to the fact that a "Spelling Bee" will be held at the Temperance Hall this evening—as yet quite a novelty in the East.

From the *Choya Shimbun* we learn that several people at Tokio have fallen within the clutches of the law for selling the photographs of the Mikado and Empress.

From the *Nichi Nichi Shimbun.*

His Majesty the Mikado visited the *Genro In* on the 22nd inst., and listened for some time to the discussions.

The *Nichi Nichi Shimbun* says:—Brigadier General Ôyama Iwao has been ordered to proceed to Sendai and take command of that military district during the visit of His Majesty the Mikado to the North.

From the *Heiji Shimbun.*

The Government has ordered a review of the troops to be held in honour of the Corean Embassy.

The *Hochi Shimbun* says:—Telegraphic advices have been received from Shimonoseki to the effect that the Corean Embassy arrived at that port on the 23rd inst., at 7.40 a.m.

From the *Nichi Nichi Shimbun*:

A reformed Code of Criminal Laws has been drawn up by the Judicial Department and submitted to the *Genrô-In* for approval.

Friday, 26th.

The *Nevada*, with American mails on board, will be despatched for Shanghai and coast ports to-morrow, Saturday, at 4 p.m., instead of the *Genkai-Maru* as previously advertised.

From the *Choya Shimbun*:—

During the absence of Mr. Okubo in the north, Mr. Hayashi will act as Minister of the Interior. It is rumoured that Mr. Okubo will be promoted to the rank of *Naidaijin.*

A fire broke out in Honjo, Tokio, on the night of the 24th instant, which destroyed some hundred houses.

From the *Akebono Shimbun*:—

The Kaitakushi Department have recently send a large lot of young trees, of various sorts, from their establishment at Tokio to the Island of Yezo.

The *Nichi Nichi* says: The present dull times, which are complained of everywhere, have greatly interfered with silk manufactures at Kioto, as at least two-thirds of the Nishijin looms are now unemployed.

Saturday, 27th.

It has been discovered that the robbery at the International Hotel, on Tuesday night last, was committed by one of the boys. The culprit had continued his duties at the Hotel for some time after the robbery, but his absence on Thursday evening led to suspicion which resulted, fortunately, in the recovery of the whole of the missing cash and valuables. The thief is still at large, but hopes are entertained that he will be shortly arrested.

The *Surat* with the English mails on board broke her shaft and had to put into Lisbon, transferring the mails to the *Australia* a week later. This will, of course, delay the arrival of the mail which is due here on the 30th instant.

We would call attention to the fact that the hour of departure for the *Nevada* to-day has been changed from four to three o'clock p.m., and that, in consequence, letters for Shanghai and the Coast ports must be posted by two o'clock.

From the *Nichi Nichi Shimbun.*

Mr. Ito, Minister of Public Works, paid a visit to the Ikuno Silver Mines, in the province of Tajima, on the 21st instant, and inspected the new machinery which has been erected there. The day was observed as a holiday by all those employed at the Mines.

From the *Hochi Shimbun.*

The Corean Embassy arrived at Kobe on the 24th instant, and from there paid a visit to Kiôto. In all probability the Embassy will arrive at Tokio on the 29th instant.

MR. CAVE'S REPORT—EGYPT AND JAPAN.

AFTER the British Government had concluded its recent purchase of shares in the Suez Canal, they despatched a Commissioner, Mr. STEPHEN CAVE, to Egypt, at the desire or with the consent of THE KHEDIVE, to investigate and report upon the actual condition of the Egyptian finances. After a stay of a few months Mr. CAVE returned to England on the 9th of March, and, on the 23rd of the same month, addressed to Lord DERBY the Report which will be found in the London *Mail* of the 5th April. It is impossible to read this admirable document without being struck with its perfectly business-like and practical character, its clearness, thoroughness, and grasp of correct administrative principle. It traces out the causes of the present financial embarrassments of THE KHEDIVE; then proceeds to enumerate the sources and sum of the revenue; next, it deals with the amount of the debt; and finally shows by what means the annual interest upon it may be met, and the principal itself ultimately cancelled. There is no object to be gained here by stating the particulars of these obligations or the methods Mr. CAVE recommends for meeting them. Suffice it that every security of real value has been pledged, the floating debt must be met if a very serious crisis is to be averted, and the independence hitherto enjoyed by THE KHEDIVE in the management of his finances is seriously threatened by the only means which can be devised to extricate him from his difficulties.

It is admitted that the country has made great progress under its present ruler. Although the annual charge upon the people is heavy and has increased, the power of meeting it has increased in a far greater degree. The exports have quadrupled in 13 years, and show a balance of value over the imports during that time of about £85,000,000. The population has increased. More schools, affording better education, have been established. Every branch of the revenue yields more to the Treasury. There is much general prosperity, and, as we have said, great progress has been made. But THE KHEDIVE is practically insolvent, and it is only by getting temporary assistance, consolidating all his debts, and placing his finances in the hands of one or the other of the great European powers, that he can tide over his troubles.

Now, no one who has watched the recent history of Japan can fail to see that it presents many points of resemblance to that of Egypt. Both countries have sought, with greater or less success, to engraft upon their own civilization one of a purely European character. Both have made great and undisputed progress. Both have raised themselves considerably in the scale of nations, have elevated the condition of their people, have constructed important public works of a character and for purposes unimagined in their remoter history, have improved their systems of public education, and have sought to introduce new methods of increasing their wealth, whether by external trade or the development of their own internal resources. Both have made many mistakes. Both have been the prey or the dupes of rapacious or ignorant foreign adventurers. Both have spent much money with no result whatever, some money with a poor result, and some with a very fair result. And, lastly, one has become seriously embarrassed in its financial affairs, while the other is suspected of being far from easy in the same respect. True it is that nearly the whole of the debt of Japan is due to her own people, and the whole of the debt of Egypt to European creditors. True, that the debt of Japan demands a very small portion of the revenue for interest, while that of Egypt demands a very large portion. True, too, that, so far as we know, though there is pressure here there is no actual embarrassment. But, in unfavourable contrast to Egypt, we are in no state of prosperity here. The value of our exports does not increase. Our annual charge on the people is far heavier than in Egypt, while it may be gravely doubted whether the power to meet it has increased at all of late years, except in the tea districts. Our railway traffic has fallen off grievously, complaints are heard both in the capital and from the country, and the nation can neither be said to be contented nor prosperous.

Now let us turn to Mr. CAVE's Report and see how far the causes which have brought trouble on Egypt are operating here. He begins it thus:—

"Egypt may be said to be in a transition state, and she suffers from the defects of the system out of which she is passing, as well as from those of the system into which she is attempting to enter. She suffers from the ignorance, dishonesty, waste, and extravagance of the East, such as have brought her Suzerain to the verge of ruin, and at the same time, from the vast expense caused by hasty and inconsiderate endeavours to adopt the civilization of the West.

"Immense sum are expended on unproductive works after the manner of the East, and on productive works carried out in the wrong way, or too soon. This last is a fault which Egypt shares with other new countries (for she may be considered a new country in this respect), a fault which has seriously embarrassed both the United States and Canada; but probably nothing in Egypt has ever approached the profligate expenditure which characterized the commencement of the railway system in England.

"The Khedive has evidently attempted to carry out with a limited revenue in the course of a few years works which ought to be spread over a far longer period, and which would tax the resources of much richer exchequers.

And what have we had here? Does not this passage very fairly represent our own troubles and the causes of them? We are in a state of transition here, and are suffering from the defects of a system which is passing away, and from those of a system as yet only imperfectly entered upon. The ignorance, dishonesty, waste and extravagance which are the curses of the administration in Egypt are equally curses here, while enormous sums of money have been spent in hasty and ill-considered efforts to adopt the civilization of the West.

Mr. CAVE goes on to say, that

"Experience shows that while dishonesty goes wholly or partially unpunished, independence of thought and action, resolution to do one's duty and to resist the peculation and neglect which pervade every department give rise to intrigues which, sooner or later bring about the downfall of honest officials. Consequently, those who begin with a desire to do their duty give way before the obstructiveness which paralyzes every effort."

We next come to the position of the foreign employés of the Egyptian Government, respecting which Mr. CAVE writes as follows.

"The European *employés* of the Khedive take care, naturally, that their position should be defined and secured. This gives them freedom of thought, speech and action, which has been in many cases most valuable to Egypt. Mr. Acton, sent out from the English Board of Trade, is a most useful member of this class. If men of such character and position were appointed to higher offices in the Civil Service, they would, as we believe, bring about most excellent results. They would be checks upon the adventurers who have preyed upon Egypt; and they would take care that the adviser upon public works should be in every case distinct from the person who benefits by their construction. The actual terms of the contracts require the scrutiny of men of integrity and capacity. It is admitted by contractors themselves that they charge far more than the fair amount of their work because the conditions of the contracts are so unnecessarily and absurdly onerous that they are compelled to make extra charges to protect themselves against possible loss; so that one way or another, Egypt is the loser. An official of high rank said to us that the great want in Egypt is a body of high-class Europeans, not those who compete with each other to make money and put pressure upon the Khedive, but men like our Indian officials, who have done so much to raise the tone of the native races.

We can never too greatly lament for the sake of this country that while it has had, and still has, a few excellent foreign servants in its employment, it has listened to a great deal of ignorant and mischievous advice from men whose only idea in giving it was to preserve their places, and who therefore jumped invariably with the humour of their masters. It would have been well for the Japanese

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

had they thrown themselves in this matter on the loyal coöperation of those of the western governments whose civil services could have been relied on to furnish men of equal ability and character for all the necessities of this country. So far as we know, this policy has always succeeded where it has been tried. But how small in this country has been the proportion of the men thus chosen! If we could ever learn the history of much of the advice given to the Japanese, it would be the history of every possible personal and national jealousy, of great principles sacrificed to petty intrigues, of common sense, sagacity, caution and prudence set aside to make way for personal interests or to gratify personal animosity or vanity. Had the plan we speak of been adopted, the men thus lent to this Government, remaining still in the service of the country which sent them, what far larger guarantee would there not have been for their sturdiness, soundness of view and principle, the maintenance of their own self-respect, their industry and sense of responsibility. The Chinese have acted more wisely in this respect. Though they have not adopted the above system, they have entrusted the formation of an important branch of their civil service, and that a revenue service, to foreigners, and it now takes rank as one of excellent reputation, besides serving admirably and faithfully the purposes for which it was instituted. If the head of it is an Englishman, his subordinates are, and his successor may be, German, French or American. All work harmoniously together, united by that *esprit-de-corps* which is essential to any good service whether civil or otherwise; they combine to show the vast superiority of a western over an eastern administrative organization, and thus, it may be hoped, form a leaven, however infinitessimal, in the vast civil administration of the Chinese Empire. In view of all the perplexing difficulties, partly made by themselves, partly made for them, attending this section of their recent history, it is no great wonder that the Japanese have made many mistakes here. Not the less, however, have these mistakes acted very prejudicially to their interests.

Here is another of Mr. CAVE's remarks:—

> The fault here, as in so many other instances, has been that industries have been established without due consideration. Very large factories were built before the land was ready to supply them* * * * * Some factories, full of costly machinery, have been abandoned, others left unfinished with the machinery on the spot; steam machinery * * * * * has been erected and never used.

All this applies just as well to Japan.

There is, however, one cause at work in this Empire which threatens its welfare very seriously, and which Egypt seems to have escaped—we refer to the present system of government which centralizes everything in Tôkiô. A translation which will be found elsewhere refers to this, and the Government may rely that the system will work mischief. The provinces are becoming impoverished by it. Formerly, the revenues of each daimiate were spent within its own area. Now, all are sent to Tôkiô. Formerly, the people in hard times could obtain time or money relief from the *daimios*. Now they fly to usurers for aid, "like," as the writer prettily says, "the bird to the man's breast." Under this system agriculture will decline, production will diminish, and land fall out of cultivation. It is to be hoped that HIS MAJESTY'S progress in the interior may furnish an opportunity for enquiring into the actual state of affairs, and that the provincial authorities will be encouraged to represent fully and fearlessly the advantages or disadvantages attaching to the new system of administration. So far as is compatible with the more advanced views in regard to the progress of the country presumably held by the Central Government, (wholly apart from any question of the greater or less intelligence with which they are carried out), it certainly would seem well that as much power of government as possible should be given to each *ken*, extending, under certain prescribed circumstances, even so far as to allow some latitude in regard to the taxation, and the permission to disburse a fair portion of the local revenues on local improvements. Nor should any means be omitted to encourage production with a view to increase the exports of the country. The growth of rice is understood by every peasant, and it would be extremely satisfactory to see Japan paying for her foreign manufactures out of her annual production, rather than from her small accumulated capital.

There are other questions dealt with in Mr. CAVE'S report on which we should like to have dwelt, if only shortly, because the lessons they teach might be useful to this country. But we are limited in our space, and may overtax the patience of those whose attention we would claim. Our sole object has been to point out some of the dangers attendant on a rapid transition from one phase of civilization to another. Egypt has fallen into serious trouble by having ignored them. We trust Japan will have wisdom enough to profit by the lesson they teach, and thus avoid them.

SIR EDMUND HORNBY'S RETIREMENT.

WE learn from the Shanghai papers that the first Chief Judge of the Supreme Court of China and Japan has accepted a retiring pension, and by this time he has probably started for Europe. It was the fortune of Lord BROUGHAM to read his own obituary and to see what estimate the most influential organ of public opinion in England formed of him when he was supposed to be removed from the reach of praise or blame. Something like this happens to every public man who divests himself of the appointments and preferments which he has held for a long time, and retires from the scenes of his activity. He dies officially, and the critics are at liberty to speak of him in a strain closely resembling that which they would employ had Libitina encompassed him with her funereal pomps. In order to form a just estimate of Sir EDMUND HORNBY'S character we must glance at the prominent points in his career. He was the son of a London solicitor and was very early plunged into active life without the softening process of a University career. At a very early age he was attached to the British Embassy at Lisbon, later he worked hard at newspaper and periodical literature, and then went to Canada to settle a difficult question connected with boundaries which threatened to give us trouble with the United States Government. He was then entrusted with the most important official charge he ever held, viz: the Judgeship of Constantinople. Here he acquitted himself with distinguished ability, and showed his special fitness for dealing with an imperfectly established judicial system, and for eliciting order out of a legal chaos. The necessity of establishing a Supreme Court in China and Japan which forced itself upon the British Government in 1865, gave an opportunity to Sir EDMUND HORNBY for doing in China what he had done in the Levant. Once more he set to work drilling junior members of the Consular service into police magistrates, establishing precedents, and "organizing" in the fullest sense of the word a system of legal and judicial coherency out of a confused and random entanglement.

The state of things which existed in the times of the He-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

brew Judges, "when every man did what was right in his own eyes," was a *Kosmos* compared to that which existed in the ports of China and Japan before the establishment of the Supreme Court, and it is we believe very generally admitted that the system of order was firmly and promptly evolved out of the "muddle" by the tact and energy of Sir EDMUND HORNBY. Of course he was very severely criticised. In the nature of things he offended many persons—he interfered with many cherished abuses—he clashed with many interests; and he made many enemies, but he was felt by all to be straightforward, and strong, and these two qualities make up for many defects. There is a story told of an American orator who, in the midst of soaring platitudes and lofty promises of impossible boons to the Union which would follow on his election for Congress, was brought rudely and abruptly to a standstill by the sudden question "what does that mean when it is peeled and biled"? This was the homely question which Sir EDMUND HORNBY was always practically putting. He could not bear pretence. He had an eye as keen as that of THOMAS CARLYLE for "a sham." He could at a glance detect the hidden motive which prompted a "cry", or inspired a clique. His soul detested jobs of any kind. The most imposing pretext disappeared when he brought the dry light of his common sense to bear upon its flimsiness.

Of course the faults of his judicial character were severely commented upon for they were only too obvious, but they really flowed from the most admirable quality of his mind, his keen insight, and almost intuitive power of discerning where the difficulty of a case lay. He strove to strip every case of needless technicalities and to administer the Law according to the dictates of common sense. It frequently happened that his decisions offended the Bar, and indeed he was too fond of sweeping away the mazy cobwebs of precedent and taking such views of the subject in hand as were prompted by an abstract sense of right to be popular with the "retrospective class."

This is not the place to speak at length of his cordial and manly personal character. He was the resolute foe of pretension or unreality, and the warm supporter of what was genuine and sensible. When he first arrived in China he set himself steadily to discourage the extravagance of "the good old days," as they are still called, and in various ways he laboured to correct the faults that communities essentially mercantile invariably develop. Though he never aimed at popularity, and indeed was curiously deficient in the gifts that secure the applause of the multitude, he was appreciated by all the residents who had opportunities of judging of his sterling good qualities. As an adviser he was sagacious, and as ready to give his counsel and help to those who had opposed him as to those who were personally friendly to him.

A Judge who is popular with the Bar will generally be one who is fertile in discovering difficulties. A Judge who is popular with the laity will be a Judge who is fertile in finding solutions. Sir EDMUND HORNBY acted up to the Spirit of the Order in Council and strove to stop litigation. That this is a boon to the public cannot be denied, and it is quite within the compass of possibility that many will regret in years to come the vigour and clearness of an official, who, with many faults of manner and an impulsive temper, kept steadily in view the great object of preventing expenditure on litigation, and who settled rather than fomented differences.

It is premature to speak as to the probable successor of Sir EDMUND HORNBY. It will be a matter of deep regret in Japan if we are destined to lose the learned Judge who has hitherto presided over our Court so efficiently. It will be a still graver loss to those who enjoy the privilege of Mr. GOODWIN's friendship, if he is to be taken from our midst. His ability and wide knowledge have already commended, and his kindliness has endeared him to the community, and it will be a sad misfortune to lose almost the only scholar of European reputation whom we have ever had in this remote land. But of course our regrets are purely selfish, and we shall rejoice at Mr. GOODWIN's promotion, though deploring his departure.

SILK.

WE have now reached a period of the Silk Season which may be deemed not unfitted for casting a retrospective glance at the business which has been done in that staple and upon the prospects of the closely approaching campaign of 1876-7.

During the first six months of the Season 1875-6—that is to say from the 1st July to the end of December 1875,—the settlements of Silk were fairly active, if we except the month of July. Prices on the whole were not only well supported, but even recovered a portion of the ground which had been lost in the preceding six months. This improved position was mainly due to two causes. The first may be found in the extensive purchases which were made by way of returns for goods sold, in lieu of Bank Bills, the exchange of which was extremely unfavorable to importers; the second arose from the brisk demand on the part of native manufacturers who, resorting to this market, purchased certain descriptions of silk in competition with the foreign houses—a very unusual occurrence.

Since the beginning of 1876 business has assumed a more quiet aspect. Reports from European markets have been more and more discouraging, not indeed as to the extent of consumption—which continued as large as ever—but with respect to prices which exhibited an uninterrupted downward tendency. Arrivals from the Interior have moreover gradually diminished, evidencing the active consumption by native manufacturers which was absorbing a large proportion of the silk that in ordinary years found its way to the Yokohama market. Up to the present date the export from this port for eleven months of the season 1875-6 amounts to barely 13,000 bales or nearly 1,000 bales short of the average export of the past sixteen years.

Nor is it probable that the month of June will sensibly increase the figure we have mentioned. The arrivals from the country which were more and more insignificant within the last two months, have apparently come to an end, whilst the stock of Silk on the market is completely exhausted. We may therefore consider the season of 1875-6 as virtually closed, and look forward to the next so as to examine what prospects it holds out.

The present *raccolta* is in a fair way in the interior of Japan. By all accounts received to this date everything is going on well, and promises a good outturn.

The reports from China so far point to a large production, fully equal to that of last year.

Telegraphic advices from Europe received within the last fortnight led to the supposition that the crop in France and Italy had been somewhat injured by bad weather; but we have not heard that more recent reports have confirmed the first unfavourable impressions. In the absence of further news, we consider ourselves justified in thinking that if any partial harm has been caused to the crop in Europe by bad weather, the fears as to the ultimate result are subsiding; con-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

sequently, the chance is that there may yet be, if not a good, at least an average European crop, which is quite as much as may be considered desirable under existing circumstances.

Now, to what more immediately concerns the trade of this country, we fear that some misapprehension may arise in the minds of native dealers, as well as in those of a portion at least of the foreign shippers. The Japanese silkmen may be led astray by the late rumours of a reduced crop in Europe, and encourage themselves in asking for their own produce prices out of proportion with the rates ruling in the home markets. The foreign houses, on the other hand, run the risk of over-estimating an item of intelligence which was received by one of the late mails, to the effect that China silk will henceforth be no longer in the ascendant, and that good fine French, Italian and Japanese silk will shortly resume the place they have lost during the past few years. Granted that such may be the case in the interest of Japan silk; but it does not follow that the anticipated return to favour is sure to raise prices to any great extent. Although the stocks of Japan Hanks have decreased at home, and although they might eventually be more enquired for in Europe than has been the case lately, still we would caution shippers against yielding to the pretensions of the native silkmen, or to their own hopes and inclinations. In the very face of a threatened crop in Europe, we only hear of a trifling advance in prices, and yet there is no doubt that holders did all they possibly could to take advantage of the opportunity offered them by the weather. Does not this show that the solution of the question lies some distance beneath the surface? Does it not seem to prove that, we do not say the *possibility* but even the *certainty* of an indifferent crop of silk seems powerless to restore courage to all and cause an advance of prices?

We have long been, and are still, of opinion that it is a mere question of *production* and nothing more.

We know nothing as yet for certain of the actual result of this year's European crop. But we already know beyond dispute that the crop in China is *good*, some even say large —*i.e.* 70,000 bales at least. It is true we are told that China Silk, which has enjoyed for some years past a sort of monopoly amongst the European manufacturers, to the detriment and exclusion of continental kinds, is in danger of losing its supremacy. Fashion is playing freaks once more—casting aside her late favourites, woollens and low priced coloured silk dresses, to revert to rich black silk tissues for which the Chinese product is not so well adapted. It may be so. We shall only reply that the Chinese are a shrewd race of dealers. They can spare for shipment a quantity of silk equal to nearly one half of the whole consumption of Europe, and keep, in addition, enough for themselves. Is it likely that they will quietly submit to be displaced in the European markets without trying to retain their position?

We believe not. It may be necessary that they should struggle hard, but struggle they will; and as it is with the "big battalions" in the battle-field so will it be with them: they will carry the day by the very immensity of their production. We may perhaps lay ourselves open to a charge of partiality in making the following statement, but we have good grounds to warrant it. It will be remembered that in the season 1867-8 the export of China amounted only to 28,000 bales, prices being at that time at an extremely high point. Since then the export from that country has yearly increased in quantity, and although as gradually increased at the same time in Europe and prices fell in proportion, China silk continued in demand, notwithstanding its comparative inferiority. We may therefore hazard the assertion that however changeable the vagaries of fashion, it will be all but impossible to drive Chinese silk out of foreign markets. The value of it may decline more or less considerably; but the mere fact of its abundance and cheapness will compel consumers to revert to it again, even though they abandon it for a time.

From this we infer that the question of production is paramount. Italian, French and Japanese silk may enjoy their turn again for a month, possibly longer. If, however, we assume that, we must admit also that it will be very difficult, not to say impossible, for the prices of these sorts to advance much if there are at the same time heavy stocks of Chinas weighing on the market with but little demand for them.

Let us add that barely one half of last year's crop of France and Italy has gone into consumption; there is consequently quite enough left to make up for a considerable deficiency, if there should be one in this year's production. The crop of China silk, we must say again, is large, and must eventually find its way to Europe, not to speak of supplies from all the other silk-producing countries of the world.

Taking all these points into consideration, we conclude that in the considerable stocks existing in Europe, reinforced moreover by this year's crop, consumers will find ample materials for their present requirements, large though they may be. Consumption seems to have reached the extreme limit of its present power, and we can hardly hope for its further increase; whilst, on the contrary, it might be checked or gravely diminished by any adverse occurrence. Under these circumstances prudence may surely be best recommended, and no valid reason is apparent why the foreign houses of the port should be induced to pay, at the opening of next season, higher prices than they paid at the same time last year. Our fear, however, is that in a perfectly bare market, as this is, some buyers may be carried away by their eagerness, and give for silk long prices which will subsequently cause them serious regrets.

SPIRIT OF THE JAPANESE PRESS.

The Postponed Meeting of the *Chihokuan Kaaigi*.

(Precis)

(Chuga Shimbun May 26th 1876.)

Every picture whether of joy or sorrow has its reverse. The day on which our parents attain to the age of three score and ten is one to be celebrated with great rejoicings, and yet with these must be united the sad thought that man's life is limited and that those parents in whose honor we are now rejoicing are drawing nigh to the grave. By the affair at Kokwa our prestige was greatly increased, we took great spoil in guns, muskets and other things, and in great glee we raised the song of victory. On the other hand, however, were the wretched Coreans who had to lament the loss of slaughtered relatives, and their homesteads and property consumed in the flames of war. While America, after having for seven years endured a cruel and bloody war, finally succeeded in shaking off the oppression of an arbitrary Government and was enabled to exult in the possession of freedom and liberty, England on the other hand, after having squandered millions upon millions of money and lost tens of thousands of lives, had to submit to the humiliation of peace. Unscrupulous grain merchants may acquire immense fortunes by buying up all the rice and wheat, but look to the other side of the picture and we see the starving people unable to provide a single meal. The joy of one is another's sorrow, and it has ever been so from earliest ages down.

On the 24th of April last it was notified to the whole country that our intelligent, accomplished and kind Sovereign was about to visit Osaka and Dewa. Ah! is there a single person in those provinces who did not rejoice on hearing that His Majesty was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

about to visit so distant a quarter and to inquire into and remedy their woes in person? We have heard that, when His Majesty a few years back visited the western provinces, the entire people shared his favor, that in every house were feasting and gladness, that prayers for His Majesty's welfare were offered up in every quarter, and that every day now seems to those people as it were an age until His Majesty visits them once more. What were the thoughts of the people of the north at the time of that visit? "Why does His Majesty leave us to the last, why "will he not visit us too, are we too not his children, why then "does he favor them and neglect us?" Such are probably the feelings that have been since nursed by the people of the north, and the visit of His Majesty will now be more welcome to them than a rain cloud to a husbandman after a long drought.

Well, the yearnings of the whole country that His Majesty should visit them being unquestionable, the people of the midland provinces, when they hear of this visit to the north, will wish in their turn to be favored in like manner. If His Majesty goes to the south, the north will be jealous, and if to the west, the east. The joy of one is the other's sorrow and each is naturally eager for its Sovereign's presence. Such being the case, His Majesty will next year probably gladden the hearts of the midland people by a visit, in the following year he will perhaps go to Yezo, in the next to Loochoo, and in the succeeding year to the Hachijo and Bonin Islands, and thus all our thirty-five millions of brethren will share in His Majesty's favor without preference or partiality.

When, however, we turn around and survey the other side of the picture we find that, as we stated at the beginning of this article, joy and sorrow go together, each striving to obtain the mastery. The sorrow to which we allude is the Notification which has been issued postponing on the account of His Majesty's visit the meetings of the Assembly of Local Officials. His Majesty's visits will not be limited to the east, or to the north, but, as shown above, will probably hereafter be gradually extended to the midland provinces, to Loochoo, the Hachijo and Bonin Islands, and, when visits to all these places have once been paid, the circle of them may be commenced anew. If, in that case, the meeting of the Local Officials be deferred from year to year on account of these visits, the result will be to render as empty as froth the speech which His Majesty vouchsafed to make to its members at the opening of the Assembly last year that, "in "accordance with his vow made to the gods at the time of his "accession to the throne, it was his desire gradually to extend the "purport of the vow, and by assembling representatives of the "people to establish laws based upon the result of their discus-"sions; secure harmonious terms between high and low and to "open a path to the people whereby their wants might be made "known to the Government, to enable them to pursue their "several avocations in peace, and by these means to impress upon "them the duty of sharing in the burden of the country; that the "chief local authorities had been therefore assembled to take "council together as the people's representatives and he gave "them the rules of the assembly which they should well observe," It will also nullify the rule that "the assembly was one for the "discussion by the chief local authorities of local matters "and that it should meet once in every year." We therefore cannot in view of this do otherwise than grieve for our country's sake. Is it not true then that joy and sorrow cannot be separated? Thinking of this subject we are lost in a fog and unable to decide on which side (i. e. on the visit of His Majesty to the north or on the assembling of the local officials) lies the greatest advantage and which it is best should be deferred for the other's sake.

Mode of Paying the Land-Tax.

(Choya Shimbun, May 23, 1876.)

We do not know whether it is profitable to pay taxes in money or unprofitable to pay them in rice, but a consideration of the abolishment by the Government of the practice of rice payments and the adoption of money payments can hardly be otherwise than convenient and advantageous. Taxation is a subject of primary importance to the country and one involving either profit or loss to the people, and although we entertain no decided doubt that the Government adopted this step after having given every thought to it, so that profit might be ensured both to themselves and the people, still, when we consider the condition of the different provinces, we are unable to say that the universal adoption of the money payment is to our advantage, and that that of the rice payment is the reverse.

In what do the convenience and advantage of the system of taxation at present enforced by the Government consist? A question so deep is of course not apparent to our poor capacity, but the old practice was probably amended because it involved a great and useless expenditure to both Government and people. The convenience and advantage of the money payments were not only that by it the salaries of the officials could be paid at once and numerous other expenses provided for, but that a large number of officials, who had been required under the old system, were no longer rendered necessary, and a great and avoidable expense was thus saved. The danger of the rice putrefying was in addition avoided, no godowns wherein to store it were required, and the trouble and expense of transporting it to the capitals (of the provinces) diminished. While, however, the advantage and convenience that accrued to the Government from the adoption of the new system were so great, considerable trouble was thereby entailed on the people, and, even supposing that the Government, in adopting it, thought to do what was to the advantage of both themselves and the people, a consideration of the present condition of the provinces will show that the advantages derived by both were by no means commensurate.

Those who followed the occupation of agriculture, and gave all their labour to it, however skilful in raising the cereals, were in the dark as to the mode of disposing of their produce. While therefore they were inured to the burning heat of summer and the piercing cold of winter, and could endure both without distress in the pursuit of their occupation, they were unaccustomed to watch the daily rise and fall of market prices, or to consider the times at which it was advantageous for them to sell. The system of money payments having been imposed on these farmers who were so ignorant of the mode of trading, when the time for payment came the pressure which they incessantly underwent from the Government resembled a usurer's dunning of an embarrassed client. Unprincipled merchants, watching for this time, suddenly caused the market price of cereals to fall thirty or forty per cent, and awaited the coming of the farmers to dispose of their crops—the latter having recourse to them just as a hunted bird flies for shelter to a man's breast. Distressed by the dunning applications of the Government, who refused to grant any grace whatsoever, and having no choice but to obey their orders, they with difficulty succeeded in disposing of five *yen* worth of rice for three *yen*, and with it paid their taxes. A very small part of this money was spent in the place wherein it was collected, the greater portion of it being sent to Yedo where it was squandered on buildings, made the capital on which public works were constructed, devoted to the payment of officials salaries or to the expenses of the army and navy. Yedo thus yearly became more and more flourishing while the provinces declined in proportion, and the system is thus one cause of the centralization of the wealth of the country in Yedo. This is one of the evils attendant upon the general adoption of the new system throughout all the *Kuni*.

When we compare the present amount of money taxation, which is assessed at three per cent on the (yearly) value of the land, with the old rice assessment, the former may seem very much lighter, but this apparent lightness is on the contrary rendered a burden by the necessity imposed on the farmers, ignorant as they are of mercantile dealings, of paying in money. The Government loses by it, the farmers lose by it, and between them the only persons who gain by it are a few unscrupulous traders. An excursionist who has recently come up from the country to Yedo has told us that "the depression and the want of circulation of money in his "ken are indescribable, and that the farmers have with difficulty "succeeded in paying the taxes now levied by the Government "by borrowing the pensions of shidzoku and pledging their title "deeds as security therefor; that though they have in this way "for the time being escaped distraint, they will, when the time for "payment again comes round, have no other means of raising the "money than by selling their title deeds." There are probably other reasons to account for the depression complained of, but it cannot be denied that one of the reasons is the loss occasioned to the farmers by causing them, ignorant of trade as they are, to pay their taxes in money.

Supposing that the systems were again changed and the rice instead of the money payment adopted, and such things as the disposal and transport of it undertaken by the Government, and the farmers allowed to give their attention only to the raising of it; even though some increase in the number of officers engaged in the taxation might be necessary and some additional expense incurred in consequence, the profit that would result from the convenience afforded to the people, although it might not be immediately apparent, would probably more than make up for the loss experienced by the Government. We are not well acquainted with the systems of taxation and do not therefore clearly understand the ad-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

vantages or disadvantages thereof, but looking at the present state of affairs we cannot, in view of the degree of civilization of the Japanese people, do otherwise than doubt that the payment of taxes in money is advantageous and payment in rice the reverse. We have therefore penned this article and now await the explanations of the learned.

The Publication of the Price of Gold.

(Nichi Nichi Shimbun.)

When there is any difference between the price of gold coin and paper currency, is is very important for merchants to know of it, for, if unacquainted with this difference of rate, they are apt to incur losses. Such being the case, though it required some trouble to obtain the quotations, we have been in the habit of publishing the price of gold for the convenience of the merchants. But, on on the 16th instant, we were summoned to the *Dzusho-kioku* of the Naimusho (Home Department) and informed that the difference between the rates of gold and paper were the purely artificial creation of the minds of the people, and as this was in entire contradiction to the ideas of the Government in issuing paper money, we must no longer publish the respective quotations. As the price of gold has not since been quoted in any of the newspapers, we presume all have received similar orders. How this may affect our countrymen in general we really cannot say, but for ourselves we are happy to be relieved from the trouble of obtaining the market prices from day to day.

Equally with the officials we wish to see gold and paper circulating on one level. But we desire that the equality should be real and not merely fictitious. An equilibrium will not be brought about by the quotations being withheld from the newspapers.

In dealing with this question, we ought to consider whether the difference in value has arisen from natural causes or has been brought about by indirect means:—whether this is a thing that can be stopped by the Government, or must not rather be dealt with according to the laws of Political Economy.

The Government began to issue paper money on the 15th May, 1868, and a great difference at once was made between paper and gold. On the 14th December it was notified that this difference of value was lawful, and on the 24th January, 1869, an edict was issued to the effect that people could pay their taxes in paper at the rate of 120 *rigo* in currency for 100 *rigo* in cash.

Then on the 24th April of the same year the Government proclaimed that no difference could be permitted to exist, and as this order was obeyed throughout the nation, it had the effect of law. So long as this law is not repealed there ought properly to be no difference between gold and paper. Why then has any such difference arisen? Directly after the Revolution the *nibukin* and paper circulated as currency, and the reason why coin was preferred to paper was that people were more accustomed to handle it, and the value of the gold made a substantial appeal to the mind of the owner. But a great deal of spurious coin found its way into circulation, while there was no spurious paper money, so that the value of the latter rose gradually, and finally the equilibrium between the two was restored. Since the erection of the Mint many kinds of coin have been made, and our great wish from the very first has been that the paper and metallic currencies should remain in equilibrium. But the gold began to be exported abroad and gradually rose in value, and hence the difference between the gold and the paper.

The cause of the difference between the paper money and the *nibukin* was that people had not full confidence in the paper, and were more used to handle the one than the other. But the present disparity between gold and paper arises from a different cause, viz.: the demand for gold in the market. In other words, gold rises in obedience to natural causes, and, under these circumstances, it is impossible for the Government to prevent it by edicts or notifications.

There is also another cause why gold rises above the price of paper, but, our space being limited, we must leave this for future consideration. Many possibly are acquainted with this reason, and do not require us to mention it; the officials of the Naimusho must certainly know it.

We hope the difference between gold and paper will disappear, and the equilibrium between them be established. But if this should be the case, it must not be supposed that it has been caused by withholding the publication of the rates from the newspapers.

Rousseau.

(Hioron Shimbun.)

It is rumoured that the officials detest the doctrines of Rousseau. But we regret to say that the *Contrat Sociale* and other works of this writer are being published.

Torii Masakato says:—I have read the *Contrat Sociale* and other works of Rousseau's, and find that their principal object is to check the exercise of arbitrary power, to abolish useless ostentation, to give happiness and equal rights to the people, and I have seen nothing in them calculated to excite men or mislead them. Should the ideas which are found in these works be impressed upon the minds of people, corrupt officials will be deterred from acting arbitrarily, and it is for this reason that I think the *Contrat Sociale* is an extraordinary work and the man who wrote it a genius.

When this remarkable work was first published, the French Government was oppressing the people in no small degree, and this had produced so much exasperation that the effect of the work was enormous. It was the root of the French Revolution and finally overthrew the Government. People subsequently called it the Bible of the French Revolution. But, the fact is, that the action of the French Government had long been such that its overthrow was inevitable, and the book can thus in no true sense be called the cause of that overthrow. Had the Government acted with justice and consulted the happiness of the people, thousands of Rousseaus and millions of copies of the *Contrat Sociale* would not have sufficed to overturn it. Yet the officials of the French Government said that the book was the cause of the overthrow. This I cannot agree to as correct.

I have recently heard the curious fact that the Japanese officials detest Rousseau's works. I am, however, of opinion that our officials industriously discharge their duties in order to advance the welfare of the people, and they surely do not occupy their positions in order to behave haughtily. If I am not entirely mistaken, the object of the officials will be identical with that of the above work, and the aim of both will be the same. Thus I see no good reason why they should detest the book. They may dislike the author and his works, because his habits were very different from those of ordinary men, but they should remember that a fine horse will often have a hot temper.

Komatzu Masatané says:—Had the French Government acted agreeably to the wishes of the people, and won their confidence, all the works of Rousseau would have been unavailing to produce a revolution. But the French Government had been brought to the brink of ruin without Rousseau saying one word, and moreover King Louis XV was so foolish that he used to say he would give Rousseau rank, but would not permit him to dine with him. With so weak a man at the head of affairs it was not unnatural that things should come to a crisis, but had the Government really sought to promote the happiness of the people there would have been no reason for this inordinate dislike of Rousseau's works. I do not understand the reason, but I hear that our officials detest them, so that we desire to recall the brief biography of Rousseau which we published a short time back.

YOKOHAMA SPRING MEETING.

The usual Bettoe's Races took place yesterday afternoon, but excited but little interest.

Bettoe's Race.

Japanese Ponies, weight 8st. 8lbs. Three quarters of a mile.

Sirocco	1
Sirius	2
Tim Whiffler	3
Chosai the 2nd	3

This was a good race between the first and second ponies. Won by half a length. Time 1 min. 40½ sec.

Bettoe's Race, China Ponies. Weight 8st. 8lbs. Once round.

Andante	1
Crusader	2
Grasshopper	3
Piastre	0
Doncaster	0

Andante was never headed, but was hard pressed in the straight by *Crusader*.

Sweepstakes $25 each. Half-mile. Heavy weights.

Sirocco (Capt. Costigan)	†
Tim Whiffler (Mr. Kuruma)	†
The Snob (Capt. Conner)	3

The dead heat was not run off, the stakes being divided.

BRITISH CONSULAR TRADE REPORT FOR KANAGAWA FOR 1875.

British Consulate,
Kanagawa, 8th May, 1876.

(Continued)

Tea.—Export in 1875—134,415 piculs 67 catties (17,921,089 lbs.) valued at $4,813,458 against 120,209 piculs 2 catties (16,027,859 lbs.) valued at $4,843,357 exported in 1874.

January 1875 opened with the following prices :—

Choicest, None.		
Choice, $50 to $52	per picul	(scarce)
Finest, $48 to $50	„	
Fine, $45 to $47	„	
Good Medium, $42 to $44	„	
Medium, $36 to $39	„	
Good common, $32 to $34	„	
Common, $28 to $30	„	

Throughout the month there was an active demand, buyers being stimulated by the news of a considerable improvement in the New York market owing to the duty agitation. Supplies of desirable kinds were, however, small and the native holders were firm in their demands.

Business was almost checked in the beginning of February, owing to telegraphic advices from New York reporting that no duty on Teas would be levied ; this almost entirely checked business and a decline in prices was immediately established.

The total settlements from January up to the arrival of the new leaf were about 14,200 piculs (1,893,333 lbs.) the bulk of which was settled before it was announced that the duty would not be imposed.

The usual small parcels of new crop teas reached this market about April 22nd. The quality was fully equal to that of former seasons and if anything rather better in the cup. Choice and choicest leaf have been comparatively scarce throughout the season, the prices offered for these qualities during the past two or three seasons have been disproportionately low and apparently show no margin to the producers for the extra expense and trouble in preparation. Prices at the opening of the new season ruled much lower than they have done for many years past and have continued to decline as the year advanced, especially for the lower grades.

Competition in the tea trade has been very great and the business has been anything but remunerative. The cost of preparation of the tea leaf remains much about the same.

The United States and Canada take the entire export.

Railway.—I append a comparative return of the traffic receipts of the line between this and Yedo—length of line 18 miles.

	Passengers.	Amount.
1874	1,592,314	$405,421.00
1875	1,732,391	$402,578.62
	Goods (piculs)	
1874	—	$ 35,091.00
1875	316,414 75	$ 28,998.16
1874 total receipts		$440,512.00
1875 total receipts		$431,576.78

Shipping.—British Shipping exhibits a slight increase in tonnage under the heading "General" that is other than "Mail Steamers." As regards the latter although the entries and clearances are one and two less respectively, the tonnage is slightly in excess of the previous year.

American Shipping—General.—The entries and clearances fall below those of the preceding year by eight ships in each case, the tonnage remains much the same. The mail steamers require some notice.

The entries for 1875 are 79 steamers with a tonnage of 228,771 tons, the clearances 77 with a tonnage of 221,154 tons—in 1874 the entries were 96 giving 245,857 tons the clearances 96 with 245,857 tons—the entries and clearances for 1875 are thus 17 and 19 respectively below those of 1874 with a decrease of 17,086 tons in the one case and 24,703 tons in the other. The numerical decrease in the entries and clearances is due to the sale of three of the company's steamers that performed the mail service between this and Shanghai (*vid* the way ports of Kobe and Nagasaki) to the Japanese Company known as the Mitsu Bishi line. The sale took place in October last and the service has since been continued by the Japanese Company with steamers under the native flag excepting one boat the *Nevada*, belonging to the Pacific Mail Steam Ship Company under charter to the Mitsu Bishi Company, but still flying American colours, a circumstance necessitated by the terms of the mail contract between the United States Government and the American Mail Company and by which one vessel at least has to be kept running in connection with the steamers plying between San Francisco and Yokohama.

The comparatively slight decrease in tonnage, when viewed with the greater diminution in the number of entries and clearances, is, I think, to be attributed to the fact that the steamers employed by the American line running between San Francisco and Hongkong, and touching at this port, during the year 1875 have been those of the largest class inclusive of the two new steamers the *City of Peking* and the *City of Tokio*; the smaller sized steamers having for the most part been taken off this line and confined to that between San Francisco and Panama.

French shipping.—"General" calls for no comment.

"French Mail Steamers."—It will be observed that while the entries and clearances differ but slightly in number with those of 1874, the excess of tonnage is altogether disproportionate, and the figures are at first sight somewhat startling.

Thus the entries in 1874 were 26 steamers with a tonnage of 25,371 tons, and the clearances 27 with a tonnage of 26,560 tons.

In the past year 1875 the entries were 28 with a tonnage of 43,694 tons, and the clearances 29 with a tonnage of 45,370 tons. The entries and clearances are thus respectively, so far as numbers go, two in excess of 1874, while the tonnage in 1875 is in the one case 18,323 tons and in the other 18,810 tons above that of the preceding year.

The difference is caused by the fact that in 1874 the measurement of French mail steamers was confined to cargo space only, after deduction of the space taken up by engines and coal bunkers—while the measurement for 1875 includes these ; for purposes of comparison it is as well I should give the tonnage as it would have figured had the former measurements been accepted at the French Consulate—the entries of French Mail Steamers would then read—entries 28 with a tonnage of 27,425 tons, and clearances 29 with a tonnage of 28,407 tons.

Other foreign shipping calls for no particular notice, unless I draw attention to the decrease in the number and tonnage of Russian vessels, both in the entries and clearances.

In pursuance of a plan, commenced in my trade report for 1873, of furnishing information in respect to staple products intended either for export or for consumption in the country, their culture or preparation, I have selected for this report the three following—*Mushrooms, Sugar* and *Cotton*. In previous reports I have touched upon Silk, Silkworm Egg Cards, Tea, Tobacco, Wax, Hemp, Rice, and Lacquer Ware. I do not pretend that anything I have written on these subjects is in any way complete or full, but I trust it lent interest to reports, which from their very nature must almost of necessity go over the same ground year after year.

The export of Mushrooms, it will be found on a reference to the export tables, amounts for the year 1875 to 1461 piculs 77 catties valued at $52,024; in 1874 the export was 1,603 piculs 31 catties valued at $61,656; and 1,218 piculs 49 catties valued at $34,170 were exported in 1873.

The best of the edible species of Mushrooms are known as Matsutake and Shii-take. The difficulties attendant on preserving the former kind almost exclude them from the market for export, for not only do they decompose very rapidly, but even when successfully dried they are nearly tasteless and are thus useless in cookery. The Shii-take species, however, have this peculiar excellence, that though they are all but tasteless in their raw state, when they are dried they have an extremely fine flavour. The quantity that grows naturally on the decayed roots, or cut stumps, of the Shii-tree is not sufficient to meet

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the demand felt for them, consequently much skill has been brought to bear on their cultivation, notably by cutting off the trunks of the Shii and other trees and forcing the growth of the Mushrooms on them. The localities in which they are thus cultivated are Yamato, Ise, Mikawa, Tôtômi, Suruga, Kai Idzu, Hitachi, Mutsu and Dewa, Shinano and Hida, Kii and Suwo.

These provinces produce the largest quantities; indeed, the quantity produced elsewhere is insignificant. Small parcels are produced in Yezo.

There appears to be no great difference between the wild and cultivated varieties of the Shii-take Mushroom, both being in taste and appearance very much the same, with this exception, that in the wild variety the upper surface is of a purplish brown colour while the under surface and stalk are white: in the cultivated variety the shape is uneven and irregular.

Different varieties of oak appear to be the trees most in favour with the Japanese for the cultivation of Mushrooms; the tree known to natives as the Shii giving the best results. This tree grows abundantly in warm places having a South-Easterly aspect; it attains to a height of about 18 or 19 feet. It has a long narrow leaf, thin and stiff, the front surface of a deep green colour, the back of a brownish tint and glazed. The tree is an evergreen, the fruit (acorn) small with a rough cupule. The acorns are steamed and eaten. The wood of the tree is used in the making of boats-oars, also for fuel and charcoal.

Another oak, the Kashiwa, from which Mushrooms are obtained, is also plentiful in warm localities, and attains to a height of 30 or 40 feet, the leaves are used in cookery and the wood is in great demand for divining sticks, for which it is considered the best.

The "Donguri," another species, is to be found all over the country, it grows to about 18 or 19 feet, has very thick branches and dense foliage, the leaf is oval and slightly wrinkled. The fruit (acorn), after being pounded and steeped in water, is made into dumplings and eaten in this form. The wood is very much used in boat making and also for carts.

Mushrooms are obtained from any of the above in the following manner. About the beginning of Autumn the trunk, about five or six inches in diameter, of any one of these trees is selected and cut up in lengths of four or five feet—each piece is then split down length wise into four, and on the outer bark slight incisions are either made at once with a hatchet, or the cut logs are left till the following spring and then deep wounds 7 or 8 inches long are incised on them.

Assuming the first course to have been pursued—the logs after having received several slight incisions are placed in a wood or grove where they can get the full benefit of the air and heat, in about three years they will be tolerably rotten in parts. After the more rotten parts have been removed they are placed against a rock in a slanting position, and about the middle of the ensuing spring the Mushrooms will come forth in abundance. They are then gathered. The logs are, however, still kept and are submitted to the following process. Every morning they are put in water where they remain till afternoon, when they are taken out, laid lengthwise on the ground and beaten with a mallet;—they are then ranged on end, in the same slanting position as before, and in two or three days Mushrooms will again make their appearance. In Zenshiu the custom is to beat the logs so heavily that the wood swells, and thus induces Mushrooms of a more than ordinarily large growth.

If the logs are beaten gently a great number of small sized Mushrooms grow up in succession. In places where there is a scarcity of water, rain water should be kept for steeping the logs in.

There is yet another plan; the cut logs are at once buried in the earth and in a year's time are dug out and beaten in the manner as above described.

The Mushrooms thus grown are stored in a barn on shelves, ranged along three sides, with braziers lighted under. Afterwards they are placed in small boxes, the bottoms of which are lined either with straw or bamboo mats, these boxes are then ranged on the shelves and all approaches carefully closed—an even degree of warmth is thus diffused. The boxes ranged on the upper or lower tiers are constantly changed, so that the contents of each are throughly dried.

Another mode of drying is to string the Mushrooms on thin slips of bamboos, which are piled together near a brazier; the heat is well kept in by inverting a closely woven basket over them.

Dried Mushrooms are much esteemed in China, and they are also largely consumed by Japanese, either as a dish by themselves or as a condiment with other dishes. Dried Mushrooms retain their flavour for a great length of time and thus bear transport to any distance very well.

Of other edible Mushrooms in Japan besides the Shii-take, there is the "Kikurage" which grows in spring, summer, and autumn on the mulberry, the willow, and other trees. It is a small, thin, soft Mushroom, very much curled at the edge and of a brownish tinge; when dried in the sun the upper surface gets quite black and the under surface a brownish grey. The flavour is somewhat insipid. The *Iwatake* which grows on rocks in thick masses.

The *Zôtake* a very delicately flavoured Mushroom—to be found on precipitous crags, and consequently scarce, owing to the difficulties attendant on gathering them.

The *Kawatake* to be found in shady spots on moorland, a funnel shaped Mushroom with a long hollow stalk.

Sugar.—The Provinces where this is mostly grown are Ise, Owari, Tôtômi, Suruga, Aki, Kii, Awa, Sanuki, Tosa, Hizen and Satsuma.

Sanuki has the name for producing the best kind of white sugar, and Satsuma for the better quality of the darker description. Sugar cane, which is obtained from seed, is said to attain to a height of about ten feet in Japan. It is not known to bear any flower.

The mode of cultivation is as follows:—At the commencement of the cold weather small bundles of sugar cane roots are planted in rows, stem down and root upwards, on a slope of about 45°. The following spring they are taken up and about two inches of cane, both above and below the joint, having been cut off, they are planted out in the proportion of about 900 lbs. weight of cane to $\frac{1}{4}$ of an acre of ground.

The soil is well looked after in the spring, and a quantity of small holes dug here and there. Into these the lees of oil are poured and they are then filled up with earth, in which the cane slips are now planted out, that is, so soon as the cane slips show signs of budding or of having taken root. When planted a little liquid manure is applied. After the lapse of fifteen days the shoots or slips will have attained to a growth of about 7 or 8 inches. At this stage fish manure, mixed with the lees of oil, is applied. In droughty seasons the ground is also watered. There are three known kinds of insects which do much harm to sugar cane in Japan, and against the ravages of which some precaution has to be taken. During winter the canes that have attained the highest growth are either broken off just above the root or are cut with a sickle; the canes are then stripped of their leaves and are made up in bundles, each of about 80 lbs. weight.

A quarter of an acre of ground will produce about 10,800 lbs. of cane, and this quantity of cane will turn out from six to seven piculs of sugar.

The sheds in which the cane is crushed are generally about twenty-four feet square and in each there are three crushers worked by oxen. The teeth of the crushers are kept constantly fed with cane, about four or five being inserted at a time. A workman stands behind on the watch for any canes that may slip through the crushers without being caught in the action of the mill, and canes that have so passed are handed to a third man who feeds the mill from the opposite side, the mill having a reverse action; it thus results that no one cane is lost. The cane juice is now removed to a separate place in quantities of about 200 lbs. weight at a time, and the mill is cleaned after each such removal. The syrup then goes through no less than four refining processes and is afterwards removed to where it is to be made into sugar.

The working up of about 2,200 lbs. weight of cane is considered a fair day's work. As regards the further process with the syrup, about 133 lbs. weight are poured into two tubs, each tub containing half of the above quantity, fires are then lit under the boilers and the contents of one tub poured into the boiler; a small

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

quantity of lime is then mixed with the syrup which is skimmed when at boiling point. The clearness of the syrup will be the test of its having been sufficiently boiled. If the syrup is thick, or in any way impure, it shows that either too much or too little lime has been put in.

The syrup is now placed in a tub called by the Japanese the *sumashi oke*, in which it is allowed to settle; fresh syrup is again poured into the boilers and boiling goes on as before. So soon as the syrup is once more at boiling point, that which has been already boiled is poured in and mixed with it, the white froth being skimmed off and placed in an empty tub. The syrup is now divided between the two boilers and allowed to simmer for about two hours, being constantly skimmed during this time. In order to ascertain the amount of boiling which the syrup has undergone, a bamboo is inserted, and, on withdrawal, the drops are allowed to fall into a saucer containing water. If the drops congeal rapidly the fires are at once withdrawn from the boilers, the syrup promptly poured into coolers arranged in sets of four, and constantly stirred. So soon as it has sufficiently cooled it is poured into tubs, one man attending to each tub.

To make the very best quality of sugar, a picul of ordinary sugar is divided into nine parts and each is wrapped in a hempen cloth. They are then placed in receptacles pressed down with heavy weights and are thus sweated for one night; on the following morning the sugar thus sweated is placed on a table and kneaded for about two hours, after which it is again wrapped in cloths and the same process gone through for three successive days and nights. On the fourth day it is placed in clean receptacles and is now termed first quality sugar. To obtain a superfine quality the sweating and kneading is gone through for an extra day.

A picul, or say one hundred and thirty three pounds, of ordinary sugar will thus be made to yield about 50 lbs. of first quality sugar. The remaining 80 lbs. are, of course, not wasted, but from them are obtained about 40 lbs. of a sugar known to Japanese under a particular name, and the residue also finds its way to market.

Second quality sugar is known as *Jiu mai*, and is made by sweating a certain quality of coarse sugar.

Sugar is generally known to the Japanese under the three headings white, black and candied, but the two former are again known under a variety of names. A good deal of black sugar is produced in the Loochoos, in Sakurajima, Araki, Hamaoka, and Saramidzu.

Any marked difference as to good or inferior kinds of black sugar depends on the quality of the cane and the skill of the workman, but the above mentioned places have always well sustained a reputation for producing the best sugar.

Sugar candy is made by boiling down a certain quantity of best quality sugar, and adding the white of egg. Split pieces of young bamboos about an inch in length are then put into the syrup which crystallizes around them.

A good deal of sugar candy is made in Osaka.

Either Japan sugar cannot compete with that produced in China, or the supply is not equal to the demand, for the import of China sugars is always an important item in the import returns of this Port.

Cotton.—The cotton plant is not indigenous to Japan, but is said to have been introduced somewhere between the years 782 and 805 A.D. It is more generally believed to have been introduced about the period comprised between the years 1558 and 1609, and it has since then been extensively cultivated, more particularly in the southern provinces bordering on the sea. There are now in Japan several varieties of the cotton plant, each having its peculiar excellence or otherwise.

The mode of cultivation varies according to the different qualities of soil, but that pursued in the province of Tôtômi is generally quoted as an example. In that province a soil, of which one third part is sand, is generally considered best adapted for cotton. The seed is sown early in summer, and generally in wheat fields in furrows made between the rows of wheat, and which are well manured before receiving the seed.

The manure is composed of burnt straw ashes, lees of oil, chopped weeds, rice-bran and swamp mud, mixed in equal proportions. It is usually worked over and over again for about ten days, and then left to stand for about fifty days before using. It is dropped in with the hand, and the process is a familiar sight to any one going about the country. The seed is steeped a day and night in water, then taken out and and mixed with straw ashes. The seeds are sown at proper distances from each other and then covered with a layer of earth about half an inch thick; it is considered beneficial to trample the earth lightly down. Four or five days after sowing the sprouts appear. After the wheat crop has been gathered the young cotton plants are thinned out and a little liquid manure poured over them. Soon after this, when the plants have attained a height of about four inches, a manure made of fish and the lees of oil and saké, the whole powdered fine, is applied; later on, when the plants are about six or seven inches high, the top sprout is nipped off and a slight manuring given as before. After this, when the plant has put out some six or seven branches, the leaf buds at the end of each are nipped off, as also any leaf buds that appear along the branches; the flowers now gradually bloom and then the seed pod ripens, after which the pod opens and displays the cotton. The cotton is then picked and dried in the sun. A ginning machine is used for separating the cotton from the seed; when the seeds have been got rid of the cotton is then beaten out even, and is now called finished cotton. A small quantity of cotton figures in the last years returns as exported from Kobe.

China raw cotton is imported into Japan and forms no inconsiderable item in the returns; the quantity imported into Kanagawa in 1875 being 9,749 piculs, 97 catties valued at $107,979, considerably below the import of the preceding year.

I have the honour to be, Sir,
Your most obedient humble Servant,
RUSSELL ROBERTSON.

SIR HARRY S. PARKES, K.C.B.,
&c., &c., &c.

I.—RETURN OF THE IMPORT TRADE OF THE PORT OF KANAGAWA FOR THE YEAR ENDED DECEMBER 31st, 1875.

CONCERNING BEEF.

An Essayist has related in language which will live for ever, how the accidental cremation of a dwelling house first demonstrated to a world as yet ignorant of the advantages of cooked meat over raw, the excellencies of roast pig. In that remote period in which this happened an idea took so long to be improved upon that, for many generations after, it was still considered necessary in order to prepare the delicacy aforesaid to continue to burn down a house. And indeed, it might so have continued to the present day were it not that in the words of the Chronicler "in process of time a sage arose like our Locke "who made a discovery that the flesh of swine, or indeed of "any other animal, might be cooked (*burnt* as they called it) "without the necessity of consuming a whole house to dress it. "Then first began the rude form of a gridiron. Roasting by "the string or spit came in a full century later, I forget in "whose dynasty. By such slow degrees," concludes the manuscript, "do the most useful and seemingly the most obvious "arts make their way among mankind."

The authenticity of the manuscript which the essayist purports to have translated, and laid before the public and from which the above is extracted, has been called in question. Indeed some have gone so far as to assert that the whole affair is but an invention of the writer's, who was known for a droll fellow given to hoaxing. Forgetting that the very improbabilities which they make believe to have discovered would, if properly regarded, amount almost to so many guarantees of its veracity. Else why should it have been erected into a proverb that truth is stranger than fiction? Be that as it may, however, and notwithstanding the sneers of the hypercritical, who are never contented to take on trust anything which they have not seen to happen beneath their noses, a parallel to the story in question may be found at the present day in a neighbouring country for many centuries closed to foreign intercourse and isolated from the remainder of the world. In this sequestered realm, as may readily be supposed, strange customs and observances were to be found. A hoary antiquity pervaded everything. The habits and manners of the people exhibited a simplicity redolent of times before the flood. Spirits of dead ancestors returned to earth and flitted round their former homesteads of summer twilights, and on nights when the moon was in the full. No grove of trees but had its mystic occupant, nor lake or river without its deity. The doctrine of transmigration was diligently inculcated and so implicitly believed in that for immemorial ages it was forbidden to take the life of beast or bird, lest in so doing the vested rights of departed spirits should be unduly interfered with. A vegetable diet supplemented now and then by fish, for the consumption of which a dispensation had been granted, sufficed for all their wants. How long this state of things might have lasted if the country had remained undisturbed, it is impossible to conjecture. Possibly the inhabitants would have remained in ignorance of beef until the final dissolution of the universe, were it not that some turn of the world's machinery projected a traveller from another land upon their shores. He came bringing with him strange habits and manners, and leading in his train animals of a hitherto unknown species. Presently it began to be whispered that these animals were disappearing, and it was hinted that the stranger ate them. Certain it was that unaccustomed odours proceeded from his kitchen. Appetising steams savoury, delicious, assailed the nostrils of the crowd, striking unknown chords and harmonies upon their gustatory apparatus, till now attuned to but one string—a feeble gamut of herbs and lentils and such poor watery stuff as earth when cultivated rewards the toiler with. In process of time curiosity to taste this forbidden food obtained the upper hand of horror, and here and there, secretly at first and with many misgivings experimenters, (in the interests of their fellows, they said to one another) met to try it. Amazed at the discovery of possibilities hitherto dormant in palates ignorant of roasts and stews and pastics, what wonder that the affair leaked out and flew across the land upon the wings of the wind. The custom was adopted readily enough in many places, for the people discovered opportunely about this time that many ailments, for which they had no name and that were heretofore unnoticed, betokened that a vegetable fare was unsuitable to their

condition. In portions of the Empire, however, where the roads were bad, the news that meat was eatable was slow in travelling. To one district in particular lying cut off, as it were, by an almost impassable chain of mountains, the intelligence might never have found its way, were it not for an adventurous merchant who scaled the mountain from a neighbouring country in search of a market for his wares, and brought with him not only a description of the habit but also a savory morsel of the flesh, which, intended for his own delectation alone originally, he nevertheless, being a kindly sort of fellow, permitted the Mayor and Aldermen to partake of. Then, having transacted his business, he departed, leaving behind him the taste for meat, but not the wherewithal to gratify it. He had told them, it was true, that beef was the flesh of bullocks, but how it was obtained they had quite forgotten to enquire. Surely not by purposely depriving an animal of life. Their principles forbad that; besides, which of them had hardihood enough to undertake so unpleasant a duty? The priests were bitterly opposed to innovations and promissed pains and penalties innumerable hereafter, to such as directly or indirectly assisted in the slaughter of an animal. The village was in an uproar, what was to be done? The Mayor and Aldermen grew moody and dejected and suffered from a perpetual watering at the mouth whenever a bullock passed the Mansion House. Public business was neglected, and there's no saying what might have taken place had not accident befriended the Corporation and shown them a way out of the difficulty with clean hands. For it so happened at the very height of the controversy, when matters seemed to be approaching a crisis, that a bullock, the property of a contractor for firewood, being overloaded on his return journey from the top of the hill whither he had been driven for carrying purposes, fell over a precipice and was killed, and that his master, a thrifty fellow, with a view to taking off his hide and horns had him carried through the town to his residence. He had hardly conveyed him, half way, however, when the meat-eaters, having got wind of it, pounced upon the carcase and divided it amongst them, giving the owner so good a price for his property that he is said to have observed to a chum, with a knowing wink, that it was a lucky day for him when the accident happened. Great was the demand for beef on this occasion, so great indeed that the timely supply was quickly exhausted, and things might soon have been no better than at first, had not—wonderful to relate—just as the scarcity was beginning to be grievous, another of the contractor's bullocks, stumbled and again fallen headlong from the cliff into the valley below and been killed. So singular an accident happening twice in succession could not fail to be regarded—by such as wished to view it in that light—as a special intervention of Providence in their behalf. It was undisputably wrong to kill a bullock, they admitted; the idea filled them with dismay; but if a bullock killed itself why that was no concern of theirs beyond the fact that beef was the result, and they were fond of beef. And so, as time went on, and meat became a customary article of diet (to such as could afford the luxury) the accidents upon that mountain road became more frequent, insomuch that beef was always in the market and, although the villagers are persuaded that there is no other way to slay an ox than to drive him furiously when he reaches a certain angle of the road—now called "bull's jump"—they have yet so far modified their practice within the last few years, that instead of firewood—which has grown scarce and is expensive—they load the animal with stones, and, averse to innovations as they are, are not above confessing that they find it quite as efficacious.

Law Report.

IN H. B. M.'S CONSULAR COURT.

Before R. Robertson, Esq., Consul.

Monday, May 22nd, 1876.

Edmund Church, H. J. Davis, Wm. Smith, J. Jarrett, and Frederick Cook, seamen on board the British barque *Tamesa* were charged with drunkenness and using insolent language to their officers.

Francis Green, sworn: I am master of the *Tamesa*. On Saturday afternoon last the carpenter, Jarrett, brought on board from shore half a case of gin, in consequence of which the crew got drunk. Immediately afterwards the carpenter returned ashore and did not show himself until next day, Sunday, at noon, when he came to the gangway in a sampan with a stranger. The stranger came on board and I ordered the chief officer to request him to leave, which he did. I refused to admit the carpenter on board, he being drunk, and the rest of the prisoners came to me on the poop, when Davis and Smith, in insolent language, asked my reasons for refusing to admit the carpenter. The latter again made his appearance at 7 p.m. yesterday, but was again refused admittance on account of his drunkenness. This morning at 5 o'clock he was permitted to come on board. The prisoner Cook left the ship yesterday at noon contrary to the orders of the chief officer. The prisoners were all drunk yesterday, and I sent to the Consulate for assistance on account of their mutinous conduct.

J. Jarrett stated that he brought the case of liquor, containing 7 bottles, on board for his own use.

William Eales, sworn: I am second officer of the *Tamesa*. I confirm the master's statement here in Court.

H. J. Davis declared that he was neither drunk yesterday nor the day before yesterday.

Wm. Smith also denied having been drunk on Sunday or Saturday last.

In reply to a question from the Court the captain stated that he expects to be ready to go to sea in a fortnight.

Cook acknowledged having been drunk yesterday and the day before yesterday. He got the liquor from the carpenter.

Sentence: Jarrett, 6 weeks' imprisonment with hard labor, Davis 3 week's, Smith 1 week's, and Church and Cook each one week's imprisonment with hard labor, but to be sent on board should the ship leave before the expiry of the terms of imprisonment.

IN THE U. S. CONSULAR-GENERAL COURT.

Before Gen. T. B. Van Buren, Consul-General.

Friday, May 26, 1876.

The People of the United States

et al

James Gordon *vs.* John Duncan.

John Duncan was charged with stabbing James Gordon at John White's, No. 136.

Gordon stated: The prisoner was making a disturbance, and on the landlord attempting to put him out, he (prisoner) struck me violently on the mouth. I then got up and told him that he was no man to strike an old man. Prisoner called me a cur, and I struck him in the face. He struck me three times: once in the arm, cutting a piece out; once in the back of the neck, and once in the shoulder;—all these places are cut. I saw a knife in his hand. I have been to a doctor. A Japanese policeman took the knife out of his hand. It occurred in the street. I struck prisoner twice. I knew I was stabbed, and I struck him and knocked him down. I saw the knife when it was taken away from prisoner; the knife produced in the Court is the same one. I am a boilermaker. I came in the *Nevada* from Kobe here. I worked for Mr. Kirby in Kobe. I am a Scotchman.

John Ridley, called, said: At No. 136, this morning, I saw prisoner go to sit down at a table. Bryan, White's partner, told him he should not come where he was not invited, and would not let him sit down. He then quarrelled with Bryan, and struck him. The man Gordon (plaintiff) got up, and wanted to part them, and tried to keep prisoner from striking Bryan. They put prisoner out of the house. Gordon then sat down, and prisoner called him a cur. Gordon then went to the door to see about it, when prisoner struck him, and pulled out a knife, and opened it behind his back; it is the same one that is in Court. He cut Gordon three times. I then got a Japanese policeman to take the knife away from prisoner. I took plaintiff to a doctor.

James Duncan, the prisoner, said: I wanted to chastise a friend of mine, because I thought he was playing a bad part. I believe

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Bryan struck me, and my shipmate struck me. Gordon then interfered, and said he could lick me. I told him no ——— Scotchman could lick me. He then struck me, and knocked me down.

Gordon, re-called: The house is a public one, and the table a public one, for those who would pay for it.

Judgment reserved till to-morrow morning, prisoner ordered to be locked up till that time.

Saturday, May 27, 1876.

The prisoner, John Duncan, charged yesterday with stabbing a Scotch boiler-maker, named James Gordon, at John White's public-house, No. 136, was to-day sentenced to be confined in jail until his ship, the *Tennessee*, leaves, and then to be sent on board with a statement of the facts.

IN THE GERMAN CONSULAR COURT.

Before A. SCHAEFFER, Esq., Acting-Consul.

Friday, May 26, 1876.

A. LUBOURSKI *vs.* P. BOHM.

This case, which was a claim for $25 for appraising a lot of otter furs, and had been adjourned on Thursday the 18th last for examination of defendant's witness, was resumed to-day.

The parties were personally present, plaintiff assisted by Mr. F. Grunwald.

The witnesses Carl Roepke and William Smith were present.

The parties and the witness Smith were told to leave the Court-room during the examination of the first witness.

Carl Roepke, warned to speak the truth: I am 25 years of age, a Lutheran, and captain of a ship. I am no relation to either of the parties. I am interested in the otter furs, but this interest shall in no way affect the truthfulness of my testimony. It is now about a year since the furs were appraised by plaintiff on board my vessel,—the *Lotte*, here in Yokohama harbour; he appraised them at $6,000 and that was the amount for which the furs were insured. The agreement about appraising was made between plaintiff and Mr. Bohm, who was to advance $2,000 on the furs, and wanted to know their value. The agreement was that plaintiff should have $10 for his trouble, and if the furs sold well in Europe, something more. I overheard this agreement, and I was asked if I was satisfied therewith. My opinion was taken because the furs belonged partly to me, and the cost of their appraisement would partly fall on me. Plaintiff inspected each fur separately, and it was arranged that he should come back next day, if the weather was fine, and see the furs packed. Next days it rained but the Sunday following was fine, and plaintiff came on board about 11 a.m., the furs were, in his presence, packed in a box and afterwards shipped on board the *Menzaleh* for Europe. The appraisement took about three quarters of an hour and the packing also three quarters of an hour. Plaintiff had told me what I should buy for preserving the furs during the voyage, to wit, Japanese tobacco and camphor, and this I did.

William Smith, examined in the English language through Mr. Maack as interpreter: I am 22 years of age, and a Protestant: I am no relation to any of the parties; I am interested in the otter furs; I have not been instructed what evidence to give to-day, nor concerted my evidence with the other witness. We were four partners in this otter skin business, but the management was left entirely in the hands of Captain Roepke and a Mr. Johnson. Mr. Bohm told me that he had engaged Mr. Lubourski to inspect the furs and see them packed. The agreement about the payment was made on board the *Lotte* in my presence; it was that if the furs sold well plaintiff should have $20, but if they did not sell well he should have less. Plaintiff valued the furs at $5,500 to $6,000 and said that they might perhaps sell in Europe for $7,000, or $8,000. The appraisement took about an hour. I think the furs were appraised and packed on the same day, at least I cannot remember that plaintiff was more than once on board. If the Yokohama valuation, $5,500 or $6,000, had been obtained in Leipzic, I should have had no objection to Mr. Lubourski being paid $20. The furs were inspected on board the schooner *Lotte*. Plaintiff said that the furs ought not to be insured for less than $6,000.

The witness Roepke was here recalled, and his attention was called to the circumstance that Mr. Smith had said that inspecting and packing were done in one day, while he himself stated that these acts took place on different days. Roepke said that it must be forgetfulness on the part of Smith and the witness Smith was now inclined to think that the inspection and packing really were on different days.

The parties to the suit were recalled and the witnesses were in their presence again warned against perjury and then sworn to their declarations.

His Honour observed that defendant had not proved either that the packing of the furs was faulty or that the less advantageous sale were due to faulty packing. The decision in this case must therefore entirely depend upon the question, if the remuneration of $20 were promised conditionally or not. As regards the $5 more claimed by plaintiff, they were not, even according to plaintiff's statement, promised in any legally binding way. The two witnesses, who had given evidence as to the manner in which remuneration was promised, were both interested as owners of the furs, and the defendant would therefore be put on his oath.

JUDGMENT.

If defendant trusts himself to take his solemn oath in court that his agreement with plaintiff was that the latter for inspecting and appraising the furs, and also directing their packing should only receive $20 on condition that the furs sold to advantage, then he shall pay plaintiff $10, and plaintiff shall pay costs: if on the contrary defendant does not trust himself to take such oath, then defendant shall pay plaintiff $20 and each of the parties pay half of the costs.

LORD MACAULAY.*

(London Times.)

Lord Macaulay remarks in his essay on the life of Johnson, that few men could have come so creditably out of an ordeal so searching as the great subject of that undone biography. We need hardly say that we have no idea of comparing Mr. Trevelyan's method of treatment with Boswell's. Mr. Trevelyan has written the memoir of his uncle with as much good taste as grateful and affectionate feeling. But as he remarks in the opening of his preliminary chapter, he has necessarily cast the light of publicity on the character and domestic habits "of a man who has produced works which are universally known, but which bear little or no indication of the private history and the personal habits of the author." With Macaulay's own journals and the letters addressed to public men and literary intimates, Mr. Trevelyan has chiefly relied on copious selections from a mass of the most unreserved family correspondence; for from his boyhood to the latest days of his career Macaulay lived with his sisters on terms of the most loving intimacy, making them the confidants of all his hopes and feelings. His letters to Lady Trevelyan and the others, while they bubble over with verve and playfulness, resemble rather those private journals which some men keep for their own satisfaction, but scrupulously reserve for personal reading. They make us intimately acquainted with the great author and statesman. We are presented to a man of most affectionate and lovable nature, with the gift of inspiring intense attachment and admiration in those who were the nearest and dearest to him. It seems strange that Macaulay should never have married. Few men ever made their happiness more absolutely dependent on the unrestrained indulgence of the domestic affections. There was little that was selfish in his devotion, and it is painful to realize how deeply he felt the bereavement when a sister was either snatched from him by death or formed new ties in the natural course of things. It was almost a necessity with him to give vent to his feelings, yet he succeeded in rarely betraying a suspicion of them to those who were most nearly concerned, or might have been capable of any sacrifice for him. Children adored him, as they well might. He was never so happy as when relaxing in their company: the life and soul of their games and merriment, he might have been seen chasing them over the house, or playing the part of the tiger of the jungle in the lair he had formed among the drawing-room furniture. When all London was courting his society, he had no such pleasure as giving children's dinner-parties in the Albany, where he would arrange a most sumptuous *menu* in anticipation of their likings. When public business was embarrassing him in his literary labours, and he was constrained with extreme reluctance to suspend his contributions to the *Edinburgh Review*, he was ever at the service of his nephews and nieces to take them the round of the London sights; and his busy pen could always find time to write rhymes and fancies down to their intelligence. He invariably showed himself the most exemplary of sons, although he and his father had but little in common. He was as fortunate in the firm friendships he formed as in the family ties that he strengthened through a lifetime. He was liberal of his money to a fault, in spite of the ingratitude of the undeserving. On the other hand—and it is the most conspicuous blemish in an engaging

character—he was capable of intense dislikes, and could be almost rancorous in his animosities. Occasionally he was stern and severe on principle, as, when acting on the well-known motto of the *Edinburgh Review*, he laid the knout upon literary offenders and impostors on public grounds. He would never, for example, consent to suppress the article that turned to gall and bitterness the ephemeral popularity of poor Robert Montgomery. But there were men whom he personally detested, and to whom he never softened. With Brougham and Croker, we have him returning again and again to the attack, analyzing each action of theirs in distorted lights, and speculating with extreme harshness on their motives, when he did not posively misinterpret them. For although willing enough to make concessions and retractions on occasions, if taken in the right way, he had abundance of *amour propre* and no inadequate sense of his own talents and merits. Considering how great these were, his strong common sense, the flattering tributes he received from the most capable judges, and the almost unparalleled popularity of his historical writings, it would have been strange, indeed, had it been otherwise. Yet throughout his life his ambitions were unambitious, if we may use the expression, his political career supplying numerous instances of his disinterestedness. He set great store on the attainment of a competency, but emoluments beyond that were almost indifferent to him. While relying absolutely on his pen in one place for support, he gave repeated proofs of his political incorruptibility and independence by refusing office or offering to resign it on some point of principle that would have seemed insignificant to honourable contemporaries. Indeed, the consciousness of his relative poverty among the rich Whig placemen made him nervously sensitive to imputations of corruption. It was mainly anxiety to provide for his family, partly the desire to secure him self the means of literary leisure, that persuaded him to a lucrative exile in India; and he more than consoled himself, when the tenure of his office was threatened, by the prospect of being permitted to withdraw to the congenial seclusion of his library. Almost from their first pages to the last Mr. Trevelyan's volumes show the ascendency of the literary temperament, while they remind their readers of what we are apt to forget—the eminence as orator, statesman, and jurist of the famous historian and essayist. Mr. Trevelyan has succeeded in showing the various aspects of Lord Macaulay's character. It is no fault of his if he suffers from the reflection that will irresistibly force itself upon us of all his uncle might have made of so magnificent a subject. So far as Macaulay is concerned he appears to have used the correspondence at his disposal with great discretion, reconciling the impartial performance of his task with his reverence and admiration for his uncle's memory.

If Macaulay in his maturity was a remarkable man, it is certain he was one of the most extraordinary of children. There has rarely been an instance of such marvellous precocity,—more seldom still of so much early promise followed by such ample fulfilment. Living among books like the Venerable Bede, he was as much of a prodigy as John Stuart Mill, and it seems a miracle that mortal powers of mind and memory should have stood the sustained strain that began in his infancy. "From the time that he was three years old he read incessantly, for the most part lying on the rug before the fire, with his book on the ground and a piece of bread and butter in his hand." His infant imagination sobered by the somewhat sombre influences of Zachary Macaulay's household—he said afterwards himself, that he had been brought up in the straitest sect of the Pharisees—ran riot in the sublime waste of gorse and gravel-pits which covered the wilds of Clapham-common. One range of eminences he had christened the Alps: another knob he had identified with the majesty of Sinai. He had quaint scriptural allusions at his command, which he would apply to the circumstances of such play as he condescended to. A maid servant had thrown away a row of oyster-shells which he had arranged for a border in the back garden. "He went straight to the drawing-room, where his mother was entertaining some visitors, walked into the circle, and said very solemnly, "Cursed be Sally; for it is written, cursed is he that removeth his neighbour's landmark." In those very early years he reminds us of one of those changelings from Fairyland who have obviously been matured in strange experiences if they are clothed in the semblance of childhood. Although always brimming over with fun and drollery, and even blessed with abundance of animal spirits, he was never a boy at any time. The letters of his school-days are models of correct propriety, and in their style and sentiment the quintessence of "priggishness." At the same time, in his revenous appetite for books and the thoughtful interest with which he followed public events we have all the germs of the future historian. Imagine a boy of twelve and a half reporting on his recreations as follows:—"The books which I am at present occupied in reading to myself are, in English, 'Plutarch's Lives' and Miner's 'Ecclesiastical History;' in French, Fénelon's 'Dialogues of the Dead.' I shall send you back the volumes of Madame Genlis' *petits romans* as soon as possible." Or alluding then to the fall of Bonaparte,—"My dear Mamma,—The news is glorious, indeed. Peace! peace with a Bourbon, with a descendant of Henri Quatre, with a Prince who is bound to us by all the ties of gratitude! I have some hopes that it will be a lasting peace, that the troubles of the last 20 years may make Kings and peoples wiser. I cannot conceive a greater punishment to Bonaparte than that which the Allies have inflicted on him. How can his ambitious mind support it? All his great projects and schemes which once made every Throne in Europe tremble are buried in the solitude of an Italian isle," &c. The tenacity and compass of his memory sound incredible. When only 12 he passed an hour or two in a coffee-room, waiting for a postchaise. He killed the time by reading the country newspaper. A couple of pieces of doggrel verse on subjects perfectly trivial seem to have caught his fancy. "He looked them once through and never gave them a thought for 40 years, at the end of which time he repeated them both, without missing or, so far as he knew, changing a single word." After that, the wonderful feats of his later life, such as giving a complete list, on the spur of the moment, of all the Senior Wranglers at Cambridge, or repeating the names of the Archbishops of Canterbury backwards, become intelligible. If we remember that through a reasonably long life he was adding incessantly to his miscellaneous stores, that "to the end he read books faster than other people skimmed them, and skimmed them as fast as other people could turn the leaves," that it was his practice to pursue his studies even while rapidly threading the crowded throughfares of London, we cease to be much astonished at any anecdote of his surprising fulness and readiness. Nor is it any wonder that he should have been "so cocksure of everything." Being so entirely given over to bookishness, he had neither time nor turn for amusements. It is much to his credit and to that of his schoolfellows that they could admire a nature so unsympathetic and intelligible. He made himself master of many things during his life, but he never learnt even the rudiments of any game. As he grew up he suffered among his contemporaries from similar disabilities. They might have paraphrased for him the address of the offhand hero in *Cool as a Cucumber* to the elderly city gentleman on whom he forces himself:—"You don't boat or play cricket. You don't shoot, or fish, or ride. Will you kindly give me a list of what you do do?" For, in his assiduous application to sedentary pursuits, he scarcely ever walked for walking's sake. Yet, happily, his admirable constitution made him well-nigh independent of exercise and air. Years afterwards, on his voyage to India, he confined himself closely to study in his cabin; and during his residence in Calcutta he lounged away in his garden with a book those morning hours when all the other Europeans in the place were abroad and bracing themselves for the exertions of the day. Yet, with a single exception, he never had an hour's illness in India, and he rarely touched medicine. The truth is, he was made for the career into which his earliest instincts forced him, and as he grew into a man, the habits which are antagonistic to all our notions of boyhood adapted themselves gradually to his increasing years. After all, and thanks to his early start, he made a conspicuous figure in public affairs at an age when most promising polticians are only in training for them.

He entered at Trinity College, Cambridge, when he was 18. Among his friends and contemporaries there were Derwent and Henry Nelson Coleridge; Lords Grey, Belper, and Romilly; Praed, Moultrie, Charles Austin, &c. :—

"The day and the night together were too short for one who was entering on the journey of life amid such a band of travellers. So long as a door was open or a light burning in any of the courts, Macaulay was always in the mood for conversation and companionship."

Even in company so brilliant he made a pre-eminent name for conversational powers. Nor did he merely shine in a circle of admiring youths :—

"On a visit to Lord Lansdowne at Bowood, Austin and Macaulay happened to get upon College topics one morning at breakfast. When the meal was finished, they drew their chairs to either end of the chimney-piece. . . The whole company, ladies, artists, politicians, and diners-out, formed a silent circle round the two Cantabs, and, with a short break for lunch, never stirred till the bell warned them that it was time to dress for dinner."

With all the classical enthusiasm that sent him in the intervals of his arduous Indian administration to the society of the authors of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Greece and Rome; with all the glow and fire of classical poetry that broke out later in the "Lays of Rome," it was characteristic of him that he could never endure to manufacture Greek and Latin verse to order. The bent of his studies, together with his social success, conspired to interfere with his gaining honours, nor was he chosen a Fellow till the third trial, greatly to the distress of his proud father. Yet already we have specimens of the marked and indisputable style with which his articles and history have made us so familiar in a prize essay on the congenial and suggestive theme of "The Conduct and Character of William III.:"—

"Lewis was not a great General; he was not a great legislator; but he was, in one sense of the word, a great King. He was a perfect master of all the mysteries of the science of Royalty, of all the arts which at once extend power and conciliate popularity which most advantageously display the merits or most dexterously conceal the deficiencies of a Sovereign. He was surrounded by great men, by victorious commanders, by sagacious statesmen. Yet, while he availed himself to the utmost of their services, he never incurred any danger from their rivalry," &c.

In 1826 he was called to the Bar, and joined the Northern Circuit. An elderly King's Counsel who observed him retiring for the night, with a heavy volume under his arm and the longest of the bed-room candles in his hand, expostulated against the dangerous practice of reading in bed. He rejoined with immense rapidity of utterance:—"I always read in bed at home, and if I am not afraid of committing parricide and matricide and fratricide, I can hardly be expected to pay very special regard to the lives of the bagmen of Leeds." But he never took to the Bar as a profession. He systematically absented himself from the Chamber of an evening, and the person who knew him best said of him, "Throughout his life he never really applied himself to any pursuit that was against the grain." His first appearance on a public platform was at a meeting of the Anti-Slavery Society, and, although he was addressing an enthusiastically sympathetic audience, the maiden speech must have been a decided success. The *Edinburgh Review*, which as yet had formed no ties with the most valued of its future contributors, pronounced it "a signal display of eloquence, deserving the admiration of the most practised orator." It was in Knight's *Quarterly Magazine* that he broke ground as a writer, but very shortly afterwards, in a letter to his father, he alludes to "a piece of secret history which will show you how important our connexion with this work may speedily become." Mr. Trevelyan infers that the mysterious allusion had reference to the *Edinburgh*, and, at all events, the *Edinburgh* soon launched Macaulay into a literary and social reputation. His article on Milton made its appearance in summer of 1825.

"The effect on the author's reputation was instantaneous. Like Lord Byron, he awoke one morning and found himself famous. The beauties of the work were such as all men could recognize, and the very faults placed it. The unbounded tone of youthful enthusiasm, which he himself in a few years condemns in the preface to his collected essays, seemed graceful enough in the eyes of others, if it were only as a relief from the perverted ability of that elaborate libel on our great epic poet which goes by the name of 'Dr. Johnson's Life of Milton.' Murray declared that it would be worth the copyright of 'Childe Harold' to have Macaulay on the staff of the *Quarterly*. The family breakfast table in Bloomsbury was covered with cards of invitation to dinner from every quarter of London. . . . But the compliment of all others that came most nearly home—the only commendation of his literary talent which even in the innermost domestic circle he was ever known to repeat—was the sentence with which Jeffrey acknowledged the receipt of his manuscript,—'The more I think the less I can conceive where you picked up that style.'"

As to the appearance of the rising author, his nephew tells us it was never better described than in two sentences of Praed:—'There came up a short manly figure, marvellously upright, with a broad neckcloth, and one hand in his waistcoat pocket. Of regular beauty he had little to boast; but in faces where there is an expression of great power, or of great good humour, or both, you do not regret its absence." Although he dressed ill, he had always a superabundant wardrobe, and if his genius did not lie in the direction of harmonious simplicity of costume, he would, like Dr. Johnson or Goldsmith, occasionally take an honest pride in the display of some incongruous piece of finery.

"He was unhandy to a degree quite unexampled in the experience of all who knew him. When in the open air he wore perfectly new kid gloves, into the fingers of which he never succeeded in inserting his own more than half-way. After he had sailed for India there were found in his chambers between 50 and 60 strops, hacked into strips and splinters, and razors without beginning or end. About the same period he hurt his hand, and was reduced to send for a barber. After the operation he asked what was to pay. 'Oh, Sir,' said the man, 'whatever you usually give the person who shaves you.' 'In that case,' said Macaulay, 'I should give you a great gash on each cheek.'"

It was his literary ability that opened the doors of Parliament to him, and he had the singularly good fortune to make his *début* during the stormy debates which preceded the Reform Bill. In the beginning of 1830 he received a letter from Lord Lansdowne. His Lordship had been struck by the power of the articles on the Bill, and suggested that the writer should sit for his borough of Calne. Macaulay made his first speech in the House on the Bill for the Removal of Jewish Disabilities—a congenial subject, although sufficiently hackneyed; and he rose only once again in the course of that Session. But in the next Parliament he conspicuously came to the front, and speedily delivered the first of his orations on the Reform Bill. The opinions of the best judges were unanimous on it. "When he sat down the Speaker sent for him, and told him that in all his prolonged experience he had never seen the House in such a state of excitement." "Sir Thomas Denman, who rose later in the discussion, said, with universal acceptance, that the orator's words remained tingling in the ears of all who heard them, and would last in their memories as long as they had memories to employ." "Portions of the speech," said Sir Robert Peel, "were as beautiful as anything I have ever heard or read. It reminded me of the old times." But the power of his eloquence gained nothing from the manner of his delivery. He had much of an Englishman's *mauvaise honte* in the matter of appropriate gesture; his action was absolutely passive, if we may venture on something like a bull, and he had a habit of speaking with his arms crossed, which somewhat told against him. But from the first he won the ear of the House, and members would crowd in from the library and dinning-room, even when he had begun to address himself to empty benches. Speaking with extreme fluency, even when it was a question of figures and unfamiliar proper names, he was the terror of the Reporters' Gallery. Generally speaking, his subjects had been carefully studied beforehand; for the most part they were such as he had previously mastered thoroughly, and his wonderful memory did him excellent service. In the excitement of discussion he sometimes spoke with effect on the spur of the moment; but, although fully alive to his own successes, he acknowledged in later life, when pressed once more to take office, that he had never exercised himself sufficiently in acquiring the facility of a ready debater. Sir Arthur Helps remarks that fine speakers are always abjectly nervous. That could never be said of Macaulay; there was too much innate composure in his constitution. But he was always conscious of some nervous excitement on the eve of one of his great efforts—excitement to which he was made more painfully alive when his failing health had insidiously enfeebled him. As for his personal experience, he describes the House in very characteristic language as

"A place in which I would not promise success to any man. I have great doubts even about Jeffrey. It is the most peculiar audience in the world. I should say that a man's being a good writer, a good orator at the bar, a good mob orator, or a good orator in debating clubs, was rather a reason for expecting him to fail than for expecting him to succeed in the House of Commons. A place where Walpole succeeded and Addison failed—where Dundas succeeded and Burke failed—where Peel now succeeds and where Mackintosh fails—where Erskine and Scarlet were dinner bells—where Lawrence and Jekyll, the two wittiest men, or nearly so, of their time, were thought bores, is surely a very strange place. And yet I feel the whole character of the place growing upon me. I begin to like what others about me like, and to disapprove what they disapprove. Canning used to say that the House as a body had better taste than the men of best taste in it, and I am very much inclined to think that Canning was right."

He had an early opportunity of establishing a claim to political respect by proving that his personal interests did not bias his votes. He had recently been made a Commissioner of Bankruptcy, and the income was very welcome to one in his narrow circumstances. A Bill was brought in which incidentally abolished the place without providing any compensation. He said, in answer to an inquisitive constituent:—

"I voted for the Bankruptcy Court Bill. There were points in the Bill which I did not approve, and I only refrained from stating those points because an office of my own was at stake."

Yet at that very time, as his biographer informs us he was reduced to selling his Cambridge gold medals. For the moment, and in the flush of his triumphant appearances, Parliamentary ambition was in the ascendant with him—or, at least, the feeling that he could do his country and his Party good service in the House of Commons; for his pen, had he given himself more leisure to use it, promised him both high reputation and a ready pecuniary resource. In a journal kept at that time by one of his sisters we find some curious revelations as to his habits and literary training. He said:—

"My accuracy as to facts I owe to a cause which most men would not confess. It is due to my love of castle-building. The

past is in my mind soon constructed into a romance. With a person of my time, the minute touches are of great interest, and perhaps greater than the most important events. Spending so much time as I do in solitude, my mind would have rusted by gazing vacantly at the shopwindows. As it is, I am no sooner in the streets than I am in Greece, in Rome, in the midst of the French Revolution. Precision in dates, the day or hour in which a man was born or died, becomes absolutely necessary. A slight fact, a sentence, a word are of importance in my romance. 'Pepys's Diary' formed almost inexhaustible food for my fancy. I seem to know every inch of Whitehall. I go in at Hans Holbein's gate, and come out through the matted gallery. The conversations which I compose between great people of the time are long and sufficiently animated in the style, if not with the minds of Sir Walter Scott's. The old parts of London which you are somewhat surprised at my knowing so well, those old gates and houses down by the river, have all played their parts in my stories."

When he talked of living so much alone, the best London society was open to him. But from the first to the last, if he had no positive repugnance to mixing in the world, he had always a reluctance to leave his books and literary musings. Latterly that reluctance grew upon him, and with better reason, as he became sensitive to his responsibilities in making the best of the precious time that was left him for the employment of his unrivalled gifts, as well as the mass of intellectual materials he had laboriously collected. Had it not been for the affectionate influence of Lady Trevelyan, he might have settled into a confirmed recluse. In his earlier life, however, as his intimate letters show, he was far from being insensible to the flattering attention of people of high station. He entertained his sisters with lively accounts of the compliments paid him in such brilliant circles as Holland House, or of the deference with which he was listened to in the select gatherings of the leaders of his Party. The literary breakfasts that were more in fashion then than now had always a fascination for him. The conversation could hardly turn to any subject on which he could not throw some striking lights from the rich fulness of his information, and the guests were held entranced by the sustained brilliancy of his talk, whose only fault was that the flow of its eloquence was too seldom lightened by "flashes of silence."

In the Reformed Parliament he left Calne for Leeds—a snug nomination borough for a great manufacturing constituency. His nephew observes subsequently, *apropos* to one of his Edinburgh elections, that there never was a worse electioneerer; and at Leeds he certainly made an exhibition of independence that seems to us equally overstrained and unreasonable. At one of his public meetings an elector expressed a wish to know something of Mr. Macaulay's religious creed; and if there was any room for doubt on the matter we cannot see that the man was unfairly inquisitive. Macaulay fired at once. "Let that man stand up. Let him stand on a form where I can see him." The culprit—a Dissenting clergyman—having been forced to the bar by his neighbours, was harangued and denounced by the candidate for the suffrage as if he were the living embodiment of religious intolerance and illegitimate curiosity:—

"I have heard with the greatest shame and sorrow the question which has been proposed to me; and with peculiar pain do I learn that the question was proposed to me by a minister of religion. I do most deeply regret that any Party should think it necessary to make a meeting like this an area for theological discussion. I will not be a party to turning this assembly to such a purpose. My answer is short, and in one word,—Gentlemen, I am a Christian."

In the ensuing Session that steady and almost aggressive independence of his threatened to involve him in a serious embarrassment. His father, who had once believed himself rich, had been gradually brought to the verge of ruin by philanthropic distractions and unfortunate mercantile speculations. Macaulay nobly claimed the position of an eldest son, with the right to charge himself with the care of the younger members of the family. For several years, as we are told, he devoted every spare shilling to that generous purpose. He now held office at the Board of Control, and his peculiar circumstances made the income of the utmost consequence to him. But the Government brought in a Bill on slave emancipation which, unfortunately, stopped far short of the point his zealous father approved. He felt constrained to tender his resignation. To the friendly expostulations of Ministers he had but one answer:—

"I cannot go counter to my father. He has devoted his whole life to the question, and I cannot grieve him by giving way when he wishes me to stand firm."

Most happily, the unforeseen course of events enabled him to preserve his consistency and his place. But, none the less, he had passed a most anxious time, although nothing could possibly have been more flattering than the consideration shown him by the Government, as a proof of the value they set on his co-operation.

Macaulay's devotion to his family had its reward, and his selection for an extremely lucrative post relieved him permanently from serious money troubles. After some difficulties with the Chairman and Vice-Chairman of the Board of the East India Company, his appointment as member of the Supreme Indian Council was cordially ratified by the stockholders. The place was worth £10,000 a year, and the prospect of laying by half the income overcame his objections to accepting it. It went far to reconcile him to what he naturally regarded as banishment, that his favourite sister, afterwards Lady Trevelyan, consented to accompany him. After all, he was then only 33, and had the prospect of a long lifetime before him; and with his unlimited power of work, which renewed itself by passing from one form of activity to another, he had no idea of suspending his literary labours. He wrote Mr. Napier, the editor of the *Edinburgh*, to that effect. He suggested that the remuneration for his articles should take the shape of such books as he wanted, and in the meantime he was laying in a supply for the voyage. His sea stock of "light literature" consisted principally of classical and foreign works. "Except at meals," he says in one of his letters, "I hardly exchanged a word with any human being. . . . During the whole voyage I read with keen and increasing enjoyment. I devoured Greek, Latin, Spanish, Italian, French, English; folios, quartos, octavos, and duodecimos." At the hill station of Ootacamund, where he went on a visit to the Governor-General, with the help of the rainy season, which made the official colony close prisoners, he talked his favourite, "Clarissa Harlowe," into such extraordinary popularity, that we are told the tradition of Macaulay and his novel were still lingering there 30 years afterwards. He "cast up his reading account" at the end of his first year in India, and the sum total of the volumes it embraces sounds portentous, if we remember the indefatigable assiduity with which he devoted himself to the duties of his office. His studies lay chiefly among the standard classics, and very many of these he read twice. What is more, he annotated each of his favourites with extreme care, "as if he were preparing the book for another edition." About this time, in one of his letters to his friend Ellis, we find him discussing an interesting comparison between the respective attractions of literature and politics, now that he had removed beyond the excitement of Parliamentary warfare:—

"I often wonder what strange infatuation leads men who can do something better to squander their intellect, their health, their energy on such objects as those which most statesmen are engaged in pursuing. . . . That a man before whom the two paths of literature and politics lie open, and who might hope for eminence in either, should choose politics and quit literature seems to me madness. On the one side is health, leisure, peace of mind, the search after truth, and all the enjoyments of friendship and conversation. On the other side is almost certain ruin to the constitution, constant labour, constant anxiety. Every friendship which a man may have becomes precarious as soon as he engages in politics. . . . Who would compare the fame of Charles Townshend to that of Hume; that of Lord North to that of Gibbon; that of Lord Chatham to that of Johnson?"

Yet, so little did he suffer his passion for literature to interfere with his public duties that he had just volunteered for one of the most formidable tasks that could have fallen to the lot of any man: He undertook the superintendence of framing a complete Criminal Code for British India. As to the great legal value of the work, Mr. Trevelyan appeals to the testimony of Mr. Fitzjames Stephen—no bad judge of such an undertaking. He remarks himself that it is "the most readable of all digests; its pages are alive with illustrations drawn from history, from literature, and from the habits and occurrences of everyday life." What is very remarkable is that its author should have thrown himself with so much enthusiasm and success into the study of the science of jurisprudence, when, as a barrister on the English Circuits, he had found the law so distasteful. But another events occurred during his sojourn in India which interested him far more nearly than measures in Council or criminal codification. His sister Margaret married Sir Charles Trevelyan, then a rising young civilian, distinguished chiefly for the determination of character he had shown in assailing vested abuses and superiors high in influence. From the first the connexion had Macaulay's warmest approval, and to the last he regarded his brother-in-law with growing esteem and affection. He takes some credit for having encouraged an attachment which seemed likely to deprive him of the society of his house-keeper and devoted companion. As it happened, the separation proved as slight as it could well be under the circumstances. In India the two establishment kept house under the same roof. The Trevelyans went home in the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

same ship with him, and lived afterwards in London within easy reach. Their home was his to all intents and purposes, and their children, who learnt to love him as a father, he almost regarded as his own. When congratulating himself on the extraordinary profits of his history, it was what these relatives might gain by it that he had principally in view. It is true that Sir Charles' appointment to the Governorship of Madras threw a gloomy cloud over the last weeks of his existence; but, as it chanced, he was not spared to survive the bitterness of the actual separation.

We have already alluded to his hostility to Lord Brougham. In a letter to Mr. Napier, written immediately after his landing in England, we have a most frank and full expression of his sentiments with respect to the omniscient Chancellor. It seems clear to him, he says, that Brougham, having broken with both the great political parties, and having detached himself from any Parliamentary following, is resolved upon making the *Review* his organ. He admits great merit in Brougham's contributions to it, and then goes on to tone down the praise. Being models of ephemeral magazine-writing, they are not made for duration. "Everything about them exaggerated, incorrect, sketchy." "The passions of the writer will not suffer him even to maintain the decent appearance of impartiality. And the style, though striking and animated, will not bear examination through a single paragraph." He believes it to be Brougham's desire to make the *Review* the instrument of his vengeance on those who have provoked his animosity; that he means "to drag it along with him to any party to which his furious passions may lead him—to the Radicals, to the Tories, to any set of men by whose help he may be able to revenge himself on old friends whose only crime is that they could not help finding him to be an habitual and incurable traitor." "As to his feelings towards myself," he goes on, "I know and have known for a long time that he hates me. . . . If I have had any success in life, it has been without his help and countenance, and often in spite of his utmost exertions to keep me down." It is plain enough that the repugnance was mutual, and that in everything Macaulay says of Brougham there is a very visible tinge of jealousy. In truth, the two men had very little in common, except the great versatility of their powers and their wonderful capacity for work. Personal feeling apart, Macaulay had little toleration for the brilliant superficiality which savoured of the literary imposture he always treated professly, and there was a sting in the feeling that a man he regarded as a successful smatterer should affect to treat him *de haut en bas*, even in those departments of literature which he lightly regarded as his specialities.

By way of comment, too, on his opinion of Brougham, it is interesting to read the criticisms he wrote on English politics in the languid security of his Indian bungalow. His faith in the Whig Party was pronounced; he honestly believed that they incarnated and monopolized all political virtue, and he blinded himself absolutely to the jobbery and nepotism for which they were notorious. Naturally he resented bitterly any defection from their ranks, and it seemed to him monstrous that an ally who might have been so influential as Brougham should selfishly imperil party ascendency even by resenting the jealousies of an aristocratic clique.

Although he had become a member of the Government as Secretary of State for War, he had been brought into Parliament for Edinburgh.—Macaulay found ample leisure for the work he loved.

Fresh from those Indian associations which had inspired the eloquence of Burke on the Hastings impeachment, he wrote his magnificent essay on Clive. He was overflowing with ideas for articles to follow: and in the summer of 1841 the defeat and resignation of the Melbourne Ministry left him once more a free man. At the close of 1840 he had moved into those rooms in the Albany which are identified with the best years of his industry. "His chambers, every corner of which was library, were comfortably, though not very brightly, furnished. The ornaments were few, but choice." More than two years before, in a letter to Napier, we find one of the first allusions to the History, to which he had now settled in earnest. It gives the outline of his original ideas with regard to it:—

"The first part (which, I think, will take up five octavo volumes) will extend from the Revolution to the commencement of Sir Robert Walpole's long Administration—a period of three or four and thirty very eventful years. From the commencement of Walpole's Administration to the commencement of the American war, it will again become necessary to be copious. These, at least are my present notions. How far I shall bring the narrative down I have not determined. The death of George IV. would be the best halting-place."

Now, in 1841, as the defined scheme of the work begins to occupy his mind and engross his power, we find him not unnaturally beginning to express his objections to anticipating his great work in the matter of magazine articles. He writes Mr. Napier:—

"Now that I am seriously engaged in an extensive work, which will probably be the chief employment of the years of health and vigour which remain to me, it is necessary that I should choose my subjects for reviews with some reference to that work. I should not choose to have to write an article on some point which I should have to treat again as an historian; for, if I did, I should be in danger of repeating myself. I assure you that I a little grudge you Westminster Hall in the paper on Hastings. On the other hand, there are many characters and events which will occupy little or no space in my history, yet with which, in the course of my historical researches, I shall necessarily become familiar. There cannot be a better instance than Frederic the Great. His personal studies, character, manners, literary associates, his quarrel with Voltaire, his friendship for Maupertius, and his own unhappy *nostra mania* will be very slightly, if at all, alluded to in a history of England. Yet, in order to write the history of England, it will be necessary to turn over all the memoirs and all the writings of Frederic, connected with us as he was in a most important war. In this way my reviews should benefit by my historical researches, and yet would not forestall my history or materially impede its progress. I should not like to engage in any researches altogether alien from what is now my main object."

Henceforth his History was to monopolize the best of his time and thoughts, and the change in his purpose was visible enough in its influence on his political career. The "Lays of Ancient Rome," thrown off at intervals, the revision and republication of his selected Essays, occasional new contributions to the *Edinburgh Review*, came as in mere interludes in the execution of the *magnum opus*. In hours of political crisis, when the fates of Ministries were trembling in the balance, or when negotiations for fresh combinations were dragging on their anxious length, Macaulay professes the indifference he felt. He might be flattered by the offer of office, or deem it his duty to accept it, but if there came a slip between the cup and the lip he was more than content to settle back to the History. If he found his constituents obtrusive or troublesome, he treated them with scant ceremony; and when solemn deputations waited on him with long-winded expositions of their views, to their great disgust and mortification he would lecture and harangue them into silence. So, with serene resignation, he saw himself ousted from the seat for Edinburgh, which he had come to look upon as something of a *corrée*, and went back in excellent spirits to the History, relieved from the apprehension of electioneering interruptions:—

"Insatiable of labour, he regarded the near approach and still more the distant prospect of worry with an exaggerated disquietude, which, in his case, was a premonitory symptom of the disease that was to kill him. Perpetually overworked by his History (and there is no overwork like that which has grown to be dearer to a man than life itself), he no longer had the nerve required to face the social efforts, and to undergo the minute and unceasing observation to which he was, or fancied himself, exposed when on a visit to the city which he represented."

As to the manner of his workmanship, Mr. Trevelyan gives most interesting details, which entirely recommend themselves to the convictions of those who have studied Macaulay carefully. The brilliancy of his style and the vastness of the miscellaneous stores of knowledge he had incidentally heaped all ready to his hand might have been a snare to many men. Alexander Dumas, for example, explaining the rapidity with which he laid his volumes behind him, attributed it to the extent of his reading and the readiness of his memory. The range and depth of Macaulay's studies were very different from those of Dumas, and his memory was as exact as it was comprehensive and tenacious. It is human to blunder, and he has occasionally fallen into mistakes, while the strength of his opinions and prejudices has sometimes distorted his judgment. But, at least, we may believe that he never consciously went astray when patient investigation could keep him straight. We fancy it is impossible to realize the amount of research that went to so exhaustive a chapter as his introductory one. But, by way of helping us to some conception of it, we have a couple of letters to Mr. Ellis, showing the extraordinary pains he took to make an estimate of the population of the single city of Leeds in the time of Charles II. Nor even when he had assimilated his materials and taken up his pen did he cover any great quantity of paper at a sitting:—

"As soon as Macaulay finished his rough draught, he began to fill it in at the rate of six sides of foolscap every morning; written in in so large a hand, and with such a number of erasures, that the whole six pages were on an average compressed into two pages of print. This portion he called his 'task,' and was never quite easy till he accomplished it daily. More he seldom sought to accomplish, for he had learnt by long experience that this was as much he could do at his best: and, except when at his best, he never would work at all. . . . Macaulay never allowed a sentence to pass muster until it was as good as he could make it. He thought

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

little of recasting a chapter in order to obtain a more lucid arrangement, and nothing whatever of reconstructing a paragraph for the sake of one happy stroke or apt illustration."

Although he might have been reassured by the unprecedented popularity of his historical Essays, it was but natural that he should have felt some misgivings as to the work on which he was staking so heavily. A fortnight before the appearance of the first two volumes, he writes that he has armed himself with all his philosophy for the event of a failure. His suspense, however, was of no long duration; the immediate sale immensely surpassed either his own expectations or those of his publishers, although it fell short of that of the subsequent volumes; and congratulations from the critics, whose opinions were law, began to flow fast in upon him. "My dear Macaulay," writes Lord Jeffery, "the mother that bore you, had she been yet alive, could scarcely have felt prouder or happier than I do at this outburst of your grown fame." While Lord Auckland, the Bishop of Sodor and Man, says significantly, "I had also hated Cromwell more than I do now, for I always agree with Tom: and it saves trouble to agree with him at once, because he is sure to make you do so at last." Almost the only discordant note of consequence was sounded by Mr. Croker, in the columns of "the Quarterly," and the notoriety of the vendetta between the Whig historian and the Tory critic naturally deadened the insolence of the attack. More damaging, we may add, are those calmer strictures published subsequently by Mr. Paget, to whom we find Macaulay making a passing allusion in another part of Mr. Trevelyan's volumes. The Quakers, too, had something to say in vindication of their great hero. Five of them waited on Macaulay, at his chambers, with a formal expostulation; but his answer was ready, and its tone reminds us of Johnson:—

"I wrote the history of four years, during which he was exposed to great temptations; during which he was the favourite of a bad King, and an active solicitor in a most corrupt Court. His character was injured by his associations. Ten years before or ten years later he would have made a much better figure. But was I to begin my book ten years sooner or later for William Penn's sake?"

His visitors complimented him on his courtesy and candour, and parted from him on the best of terms. While the sale of those opening volumes had gone beyond his most sanguine expectations, and the public were making a rush on a second and a third edition, he had returned to his task with redoubled energy. He writes in his journal.

"I have now made up my mind to change my plan about my History. I will set myself to know the whole subject; to get by reading and travelling a full acquaintance with William's reign. I reckon that it will take me eighteen months to do this. I must visit Holland, Belgium, Scotland, Ireland, France; the Dutch archives and French archives must be ransacked," &c.

All this he proceeded to do methodically, and Mr. Trevelyan, who was privileged to accompany him on many of his expeditions, remarks on the fascinating interest his glowing conversation would throw over historical scenes. It might have been well in the end had the healthful distractions of travel and foreign residence weaned him more from sedentary work and the retirement of his library. The dominating idea absorbed his attention injuriously, and the mental strain began to tell on his health, although at first he was naturally unwilling to connect cause and effect. But we have him complaining more frequently of unwonted lassitude, and what he was pleased to describe as "indolence." He no longer worked with the old regularity, nor could he reckon so confidently as before on inspiration. At last, in 1852, the year when the Edinburgh people by re-electing him their member had made honourable amends for their former fickleness, melancholy suggestive passages begin to abound in his journal. "In the midst of my triumphs, I am but poorly." "I am out of sorts and cannot write; why, I cannot tell." "I wrote some of my History—not amiss, but I am not in the stream yet. I feel quite oppressed by the weight of the task. . . . I sometimes lose months. I do not know how; accusing myself daily, and yet really incapable of vigorous exertion. I seem under a spell of laziness. Then I warm and can go on working twelve hours at a stretch. How I worked a year ago! And why cannot I work so now?" Yet, although he must have had ominous forebodings of the abrupt termination of an uncompleted task, he never lost his equanimity of temper and serenity of spirit. The following year he is writing to his old friend Ellis:—

"I hope that it (1853) will be as happy a year as, in spite of some bodily suffering, 1852 has been to me. It is odd that, though time is stealing from me perceptibly my vigour and my pleasures, I am growing happier and happier. As Milner says, it is shocking, it is scandalous to enjoy life as I do."

To the last he enjoyed the literary consolation of having every reason to be satisfied with the execution of his work. It might be carried onward by fits and starts, and sometimes with a painful sense of effort, but it showed no signs of impaired faculties or flagging animation. He had resigned his seat in Parliament. He had greatly changed his habits of life from the days when he delighted to wander through the London streets, familiarizing himself with their history and archæology, and ransacking the old book-stalls as he went along. But, although he stirred far more seldom from his study, except when he exchanged it for his second home with the Trevelyans, he was still indefatigable as ever in his attendance at the British Museum:—

"His habit was to work in the King's Library, partly for quiet and partly in order to have George the Third's wonderful collection of pamphlets within easy reach of his chair. He did his writing at one of the oak tables which stand in the centre of the room, sitting away from the outer wall for the sake of the light. He availed himself of his official authority to search the shelves without the interposition of the librarian; and (says the attendant) when he had taken down a volume he generally looked as if he had found something in it."

And so in the beginning of 1856 he could feel that his popularity, far from waning, had been increasing beyond all precedent in the case of a writer of serious history. There is an entry in his journal:—"This is wonderful. Twenty-six thousand five hundred copies sold in ten weeks. I should not wonder if I made £20,000 clear this year by literature." He had said in 1841 that he should not be satisfied unless he produced something which should supersede for a few days the last fashionable novel. He had ample reason to be satisfied in that respect. The romantic attractions of his style had numbered among his eager readers hundreds of thousands who seldom trouble historical tomes; and as for the permanent hold his solid genius had established on the reading world, Mr. Trevelyan sums up a page of figures with the statement that "within a generation of its first appearance, upwards of 140,000 copies of the History will have been printed and sold in the United Kingdom alone." His closing years were filled with honours, and with happiness as well, and that notwithstanding his growing infirmities. His chief troubles came from public events and such anxieties as he experienced during the Indian Mutiny. Enmities for the most part had died out, literary criticisms were almost universally flattering; he retained the warm regard of friends, although he had never had many intimates; with the public he was the object of general admiration, which savoured pleasantly of personal gratitude; he had long been in the enjoyment of an ample income, and he had the satisfaction of feeling that his worldly prosperity would benefit those beloved relatives who had affectionately devoted themselves to anticipating his wishes. On August 28, 1857, "a great day in my life," his brilliant career was appropriately crowned by the tender of a Peerage, which he gratefully accepted. He took his title appropriately from Rothley Temple, the pleasant country mansion were he was born, and which was associated with some of his happiest years. In the main he had always felt with Johnson, that London is the only place to live in; but, though he had been loath to leave his rooms in the Albany for a bright little residence in the outskirts of Kensington, yet the change to a suburban life contributed largely to his enjoyment. Like Warren Hastings at Daylesford, he awakened to new tastes with his altered circumstances, rejoicing in the bloom of his thorns and rhododendrons, delighting himself in landscape gardening in miniature, in "my little paradise of shrubs and turf." Death stole so gently on him at the last that it came with a shock on his watchful relations, and the great student ceased to breathe in his library chair, his book lying open on the table beside him. As his nephew acknowledges, if he had always shown a sincere and contented spirit, his had been a singularly happy and prosperous life. They laid him in Westminster Abbey with Johnson and Garrick, Goldsmith, Gay, and Addison, those departed worthies of literature he most had loved and honoured in life, with the simple inscription—"His body is buried in peace, but his name liveth for evermore." And were it worth while indulging in unavailing regrets, we might feel still, with many of his mourners, that perhaps no tomb in the great national mausoleum ever closed on such a wealth of accumulated treasure which the possessor had been using to the last to such brilliant purpose.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—A slightly improved feeling may be said to animate the import market and the condition of business presents a more hopeful aspect. During the last few days the demand for Yarns, especialty 16 24, has considerably improved and a moderate business has been done at firmer rates. *Shirtings* continue in their dull condition and move only in small lots. In *T. Cloths* no fresh transactions are reported. For *Black Velvets* there has been some speculative demand, but the prices offered did not lead to business. Other cotton articles are unchanged, but altogether there is more disposition amongst buyers to operate.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.85 to $2.15	60 to 64 reed 40 yds.	35 in. nom.	per pce. 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	„	2 15 to 2 50	Turkey Reds 24 yds.	30 in. 2—3 lb.	per lb. 0.75 to 1.02½
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„	2.47½ to 2 50	Black Velvets		7.75 to 8 50

Kerosene Oil.—In consequence of a forced auction sale prices are somewhat easier being quotable at $2.40.

EXPORTS.

Our fortnightly report dated 23rd instant, was to the following effect :—

Silk.—On the receipt of advices bearing on the prospects of the European crop the market was cleared, during the last week, of the remaining stock, which consisted almost entirely of Oshiu sorts. Buyers had to pay in full the prices quoted in our last, and good Hamatsuki fetched $455. We have no transaction to report in filature silks.

Settlements, since the 10th instant, are 275 bales of Oshiu and 25 of Hanks, leaving a stock of some 50 bales. The shipments for the fortnight are 155 bales, making the total export since 1st July, 12,934 bales against 11,184 bales last year for the corresponding period. The crop is progressing well.

Tea.—Our Tea market still continues very active, settlements for the week amounting to 4,200 piculs. Supplies are coming in freely, though the average quality of parcels offering is far inferior to samples on show at the corresponding period last season. This is a matter which requires prompt and serious consideration. Japan Teas in New York and other centres of distribution in America are in over supply, and purchasers have a full assortment to select from. Chops of broken or poor leaf, consequently, stand but little chance of realising covering cost.

The general quality of the crop, so far to hand, has been so inferior and badly manipulated that it is very difficult to fire the bulk of parcels satisfactorily, the leaf either breaking up or firing unevenly. This arises in no small measure from hurried and imperfect preparation at the place of production. One thing remains to be said:—either the Japanese must pay more attention to the initial preparation of the leaf, or their teas will fall into the same disfavour which happened to Oolongs some six years ago. It will be easier to rectify these defects by prompt present measures, than to regain confidence and popularity when the character of the product shall have been damaged by persistent slovenliness in fitting it for a foreign market.

FRAUD.

On the 27th June, 1866, MOTEEWALLAH, a Printer, was convicted at the Supreme Court, Calcutta, of counterfeiting the

LABELS

Of Messrs. Crosse & Blackwell,

London, and was sentenced by Mr. Justice Phear to

TWO YEARS RIGOROUS IMPRISONMENT:

And on the 30th of the same month, for

SELLING SPURIOUS ARTICLES

bearing Labels in imitation of Messrs. CROSSE & BLACKWELL'S

SHAIK BACHOO was sentenced, by the Suburban Magistrate at Sealdah, to

TWO YEARS RIGOROUS IMPRISONMENT.

CAUTION.—Any one *selling spurious oilmen's stores*, under Crosse & Blackwell's name, will be liable to the same punishment, and will be vigorously prosecuted. Purchasers are recommended to examine all goods carefully upon taking delivery of them, and to destroy all bottles and jars when emptied. The GENUINE Manufactures, the corks of which are all branded with Crosse & Blackwell's name, may be had from EVERY RESPECTABLE DEALER in India.

June 12, 1875. f. 12ms.

THE FOLLOWING

IS AN

EXTRACT FROM A LETTER

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,
To the Proprietors of L. S.

NORTONS' CAMOMILE PILLS, London.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Hence forward, therefore persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

March 4, 1876. 1-f. 13 ins.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 23.] YOKOHAMA, SATURDAY, JUNE 3, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The pageant which marked the departure of His Majesty the Mikado from Tôkiô on his northern journey was not unworthy of the occasion. He was attended by the Empress, and the great officers of State, and escorted by a goodly number of his troops. It is to be presumed that the proportions of the cavalcade will be greatly diminished after the first few stages of the journey have been reached, and that the modest and sensible programme of the progress put forward some two or three weeks ago will be strictly adhered to. Of the good effect which this progress is calculated and likely to produce, we entertain no doubt. It will heighten the loyalty of His Majesty's subjects by producing an impression of their Sovereign's personal interest in them, and if he has any of the art which comes so naturally to princes, he will, at a small expense of effort, leave some cherished recollections along his road. The awe exerted by oriental monarchs in the minds of their subjects, and the severe ceremonial imposed on them by custom, do not permit perhaps of those personal condescensions which are so graceful in their European brethren. The smile or gracious bow of a king or queen among ourselves, as their carriage drives along a country road, is often referred to with unconcealed satisfaction as among the minor incidents of life, pleasing in itself and outlasting many of far more real moment and interest. In countries where the sentiment of personal loyalty and devotion to the Sovereign is very strong, wholly apart from any adherence to monarchy as an institution, these little exchanges of homage and recognition are not without their value, and in England especially they constitute a form of magic which wins without degrading. It may be a higher form of polity which dispenses with all this, and a higher view of human society which affects to despise it. But it is very difficult to make all men believe this—impossible with some of us, especially with those who refuse to judge human institutions *à priori*, and insist on estimating them by their success in practice.

The arrival of the Corean Embassy and their presentation to the Mikado have been among the most prominent events of the week. The Japanese are legitimately proud of having introduced the Coreans to the world, or such part of it as they are inclined to see. But the simple fact is that beyond a little curiosity to know how these queer people look, and to find out—which is impossible—what they think, "there is nothing in it." If we mistake not very much the European Governments will hardly lift a finger towards opening the country to general trade. They will wait until it opens of itself by the pure force of circumstances, which it is pretty sure to do before many years are over, and meanwhile the only sufferers by its remaining in its present state, are the Coreans. They appear to be a fine large race of men, devoted to Confucianism, dirt, and the most distracting music. How Nature has had the patience to sit and watch the slow march of the human race in the East, will ever remain an inscrutable mystery. Yet the fact is that the progress of which we talk so much is, at a certain stage of human affairs, really an exception to the law, not the law itself, which is stationariness. Somehow or another we have escaped its operation in Europe, and may be travelling in some direction which Nature, whom we have just pitied so much for her thousands of years of *ennui*, is alarmed at. Fortunately we cannot get our planet out of its place; but if, as Bishop Butler once imagined possible, the world were to go mad, nothing would be less surprising than that a vast Company should be formed for this purpose, or that its shares should go to a premium. It is said—though the Japanese newspapers deny the report—that the Coreans have been struck with the European buildings in Tôkiô, and that the Japanese have been frank enough to say that but for the foreigners they would never have had them. The same with the railway. But whether the impressions thus made will have force enough to subdue the fears and prejudices which the Coreans have cherished against foreign intercourse, is another question. We are always afraid that when men have got Confucius well into their heads, nothing but a surgical operation can get it out again, and really we have no wish to see this resorted to in the case of Corea.

The sooner the press of this country takes a lesson in decency, the better. The *Nichi Nichi Shimbun*, which is certainly one of the most prominent and ably conducted of the native journals, contained an account in its issue of the 31st ultimo of the visit of the Corean Ambassador to the Foreign Office which is so abominably gross that it could only be published in English with wholesale expurgations. The public press has not the slightest justification for throwing this filth about. Making every allowance for a condition of society and a standard of taste and morals widely different from that of Europe, it is still intolerable than an engine which professes to be the diffuser of a purer light and life among these people should pander to the dirty taste for indecency which befouls the whole mind of this nation. The Government of Japan has already done something to mitigate this odious evil, but it is still far behind the advanced position it ought to take on the subject, as the theatres and the newpapers themselves abundantly prove. It is impossible to take up any one of the native journals without finding paragraphs which the vilest print in Europe would not dare to publish, and this filthy stream is allowed to run through the national mind unchecked. What hope is there that that exquisite purity and chastity of mind which is the brightest ornament of Christian women, can ever find any counterpart in this country so long as those who should be the public instructors remain so ignorant of the duties they have taken on themselves to discharge, as to win their bread by keeping the minds of their pupils perpetually sullied, instead of endeavouring to refine, elevate and purify them? Truly, this is a

Digitized by Google
UNIVERSITY OF CALIFORNIA

great evil, and a great curse to this country. We are averse to dealing with such questions by repressive laws, and would rather see reform proceed from the gradual advancement and elevation of the national mind. But the sanction of law might in some way be found for an attempt to deal with the evil, and we should be glad to see the Government advance upon those measures which it has already taken to mitigate it. It is idle to suppose that the morals of nations cannot be raised by the judicious application of laws wisely adapted for that purpose. If the law inflicts disgrace upon violations of public decency, they gradually come to be regarded as in themselves disgraceful, and the national moral sense throws out a new shoot which eventually bears its own sound and wholesome fruit. It is in no puritanical or over-fastidious spirit that these words are written. Were it so they would attract a deserved contempt. They proceed from a strong conviction of the vast superiority, if only in mere point of gratification, of the higher over the lower emotions and tastes. It is abundantly certain that the instincts and passions of man may be so guided and controlled as to become ministers to his elevation and advancement. It is equally certain that they may subjugate the whole of the nobler side of his nature, and leave him incapable of producing or enjoying the manifestations of those faculties which he justly regards as his richest prerogative.

The case of the *Nichi Nichi Shimbun* admits of no excuse—though we really had no wish to refer to it again. But it is a flagrant one, inasmuch as the instinct of a true politeness—and the Japanese pride themselves on nothing so much—would naturally dictate the concealment of a guest's infirmities, and the desire to treat him with as much respect as possible. To point and jeer at his defects, at his shortcomings in the knowledge of a ceremonial which he could not by any possibility know, to throw ridicule and contumely over him for not observing restraints which a low form of civilization has never yet imposed, and to insult him with laughter at his personal unacceptability—these are not right methods of welcoming a guest, or of proving a superiority which is belied by the very means taken to assert it. The Coreans are now the guests of this country, and however ridiculous they may be, the Japanese should remember that people who exclude themselves from the rest of the world are very apt to become so. Were it polite to say anything on this subject, there would be no lack of material, and a press which has not yet travelled beyond the stage at which we find that of Japan, would do well to put off some of its own soiled linen before making remarks about its neighbour's wardrobe.

The following item of intelligence reached us at the moment of going to press on Wednesday morning, and was therefore issued as an extra.

One of Reuter's telegrams to Shanghai announces Mr. Goodwin's promotion to the Chief-Judgeship of the Supreme Court of China and Japan.

We do but represent the public feeling on this subject when we heartily congratulate Mr. Goodwin on his promotion, and express a regret at his removal which nothing but the assurance that it conduces to his benefit can adequately allay.

The King of the Samoan group seems to have got into trouble. His Prime Minister, an American adventurer—whose acumen in expending his energies in a kingdom the Treasury of which has only a few hundred of dollars in it, may fairly be impugned,—has been handed over, at His Majesty's request, to the Captain of a British man-of-war, in default of the presence of a vessel of the American Navy, and is to be held in safe custody until he can be remitted to his own authorities. There is at least one monarch in the world for whom the *Steinberger Cabinet* has no flavour or attractions.

From the "Japan Mail Daily Advertiser."

Monday, May 29th.

The *Chiiya Shimbun* says: His Majesty the Mikado will leave the capital for the north on the 2nd proximo, which day will be observed as a holiday throughout Tokio.

Further:—A detachment of police have been appointed for special duty in attendance on the Corean Embassy.

From the *Nichi Nichi*.

H. I. H. Kwacho no Miya, a cousin of His Majesty the Mikado, died on the 24th inst., and in consequence all singing and dancing has been forbidden throughout the Empire for three days.

The Editor of the *Akebono Shimbun* says that the verses which Nakajima, the Editor of the *Hiroshima Shimbun*, wrote when in prison and which were published in the first named paper, caused an enormous demand for the number in which they appeared—a demand which the supply could not satisfy.

From the *Hochi Shimbun*.

A fire broke out on the night of the 24th instant at Tzuchiura, in the province of Hitachi, which destroyed 200 houses.

We learn from the *China Mail* that the *Glenfalloch* and *Gordon Castle* both left Singapore on the 16th instant, and the *Lena* on the following day.

According to the *Osaka Nippo* an exhibition will shortly be opened in Kobe.

The troubles of Mr. Seki Shingo, lately Editor of the *Osaka Nippo*, have not yet come to an end, as we learn from the *Nichi Nichi* that on the 22nd instant he was condemned to three months imprisonment for an offence against the Press laws committed over two months ago. As this unfortunate man is at present undergoing a sentence of eighteen months imprisonment for a like offence, the shorter one has been mercifully remitted. There is therefore, it would seem, some advantage in a long sentence of imprisonment.

Tuesday, May 30th.

The Corean Ambassador and suite landed at eight o'clock yesterday morning from the Mitsu Bishi Co.'s steamer *Kōrio Maru* and proceeded at once from the English hatoba to the Machigaisho, where they stayed some time for refreshment. From the windows of the Town Hall the Coreans gazed down on the crowd below with some astonishment, which was greatly increased when the clock struck the hour, as they all appeared at a loss to account for the reason of the sound or whence it came. They left the Machigaisho in ample time to catch the 10.45 train to Yedo. The Ambassador himself is a fine looking man, being rendered more sapient looking by means of large horn spectacles which he wore, and was dressed in a robe of violet coloured crape. As he descended the steps of the Town Hall he was received with a shout from his followers and a burst of music from the band, being carefully assisted, by two high officers, to a seat covered with tiger skins which was perched on an open litter borne by nine men. The procession then formed in the same order as it had left the hatoba and proceeded down Hôncho-dôri to the Railway Station at a snail's pace. First came two marshals dressed in blue and white, then the band consisting of fourteen players dressed in variously coloured garments and playing on trumpets, flageolets, flutes, cymbals, conch-shells and tom-toms. They discoursed most distressing music which had all the irritating effect of the bagpipes' strains exaggerated by the addition of tom-toms, which gave it an effect not easily to be forgotten. We are bound to say, however, that the Corean music made the Japanese spectators laugh immoderately. After the band came two—well, beings, for it is hard to determine whether they were girls or boys. They carried boxes slung from their shoulders which might, or might not, contain the famous Treaty itself, the Ambassador's credentials or, after all, only toilet necessaries for the great man. They were bareheaded and wore their hair plaited into a queue, and as they had a martyr like expression of extreme suffering, we are inclined to think they were girls—and slaves. After them followed attendants with staves of office, spears and flags, and then, immediately preceding the Ambassador's chair, two gentlemen in waiting gorgeously dressed, with two more on either side of the Ambassador. Behind the chair came a man bearing the umbrella of office, and then the rest of the suite on foot or in jinrikishas. Nearly all were tall good-looking men of the Chinese type, and with few exceptions wore gaiters and the Corean broad-brimmed horsehair hat which admits of the wearer's hair being visible through the meshes. The hats of two of the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

bandsmen bore the Chinese character for "Brave," but those of most of the others were ornamented with bunches of peacock's feathers and tassels, tied under the chin by strings of large amber beads. The picturesque costumes, with their variety of colour, and the novelty of the whole thing made it a sight of much interest, though of course one from which it was difficult to dissociate the idea of farce. The crowd in the Honchô-dôri to witness the procession was not large, probably because the time of the arrival of the Embassy was doubtful. On arriving at the Station the Ambassador was conducted from his seat with the same ceremony as before and proceeded to a waiting room where he stayed until it was time for the train to leave for Tôkiô. Additional first class carriages had been added for convenience of the Embassy, and all duly and safely reached the capital.

The Embassy travelled to Yedo by the ordinary passenger train to which some carriages had been added for their separate accommodation. On arriving at the terminus at Shinbashi, and after awaiting the egress of the passengers, the Envoy's *cortège* formed upon the platform and proceeded to the upper rooms of the building where refreshment was provided and the Envoy rested for short time. Shortly after twelve preparations were made for the march to Kanda, where accommodation had been provided for the ambassador and his *suite*. The bandsmen, some twenty in number, led the march, followed by a party of retainers, the procession being closed by the Envoy in his chair. The march was made at a funeral pace, and the distressing sounds emitted by the instruments, and the regulated beat of the *taiko* at intervals, imparted a melancholy character to the *cortège*. To the Japanese assembled in dense crowds along the line of march, however, the unwonted scene afforded much amusement, and the procession, designed no doubt to add to the dignity of the embassy, only provoked the laughter and jeers of the spectators.

It is said that no Corean embassy has visited the capital for some 230 years past, the latter embassies having been received by special sanction at Nagasaki with the view of sparing them the cost of the long land journey to Yedo. It is not expected that the present Envoy will make a long stay.

We regret having to announce the death of Mr. George Wills, late Interpreter to the Judicial Court of Kanagawa, which took place yesterday morning. The funeral will leave the South Camp at 5 o'clock this afternoon.

H. M. S. *Audacious*, bearing the flag of Vice-Admiral Ryder arrived in port this morning. H. M. S. *Vigilant* also arrived at the same time.

A review of the troops will be held on the 30th instant at Narushina, in the province of Shimôsa, when H. I. H. Arisugawa no Miya will be present to represent His Majesty the Mikado.

The *Hioron Shimbun* says:—Offences against the Press-laws have been treated from time to time with undue severity, and lately editors of newspapers have often been consigned to prison for what should be considered venial infractions of these laws. All this has been noised abroad, and Foreign Governments have not failed to express their opinions that such a mode of administering the law has become downright persecution. Such expressions of opinion have been conveyed to the *Gaimusho* by Japanese Ministers and Consuls resident in foreign countries, and now Mr. Samé Shima, *Daijo* of the above Department, concludes the question has become so important that he has thought it advisable to lay it before the *Sei In* for consideration.

It was never expected that the Press-laws—or rather the severe admininistration of them—would call forth such a spirit of resistance from the editors of newspapers, so now some of the *Sanji* recommend a more moderate administration of the law, which they rightly think would ensure a closer conformity with such law on the part of the editors.

From the *Chôya Shimbun*.

It is rumoured that a religious service will be held at Uyeno on the 7th of next month in commemoration of those who fell in the battle at that place during the revolution.

From the *Hochi Shimbun*.

Mr. Takabané, of the *Hioron Shimbun*, came out of prison yesterday, on the termination of his sentence.

From the *Ôsaka Nippo*.

A detachment of troops started from Ôsaka on the 28th inst., for Wakayama *ken*, and it is therefore feared that fresh troubles have arisen in that province.

Wednesday, May 31st.

From the *Hôchi Shimbun*:

The Corean Embassy visited the *Gaimusho* on arrival at Tokio yesterday, and will be presented to His Majesty the Mikado on the 1st proximo.

From the same.

The *Mezamashi Shimbun* has, for a few days past, ceased publication, but issue will be resumed shortly.

Further:—The funeral of H. I. H. Kwachô no Miya will take place at 7 a.m. on the 31st inst.

From the *Chôya Shimbun*.

The cost of re-building the temple of Monzeki at Tzukiji, Tokio, which was destroyed by fire some years ago, is estimated at 200,000 *yen*, of which 130,000 *yen* have already been subscribed by members of the Buddhist Sect.

From the *Hoiji Shimbun*.

On the 22nd instant, Admiral Ito received orders to proceed to Awomori in the *Meiji Maru* and await the arrival of His Majesty the Mikado, who will there embark on board the above vessel and return in her to the capital.

From the *Chôya Shimbun*.

On the 1st of June, there will be a festival, enlivened by music and dancing, in honour of Iyeyasu, in the temple at Shiba called Tô-shô-gu, which is dedicated to that deified Shôgun.

Thursday, June 1st.

The Corean Ambassador will be honoured by an interview with His Majesty the Mikado to-day.

The P. & O. steamer *Bombay* with English Mails on board (probably to 20th April) left Hongkong as 5 a.m. yesterday, the 31st ulto.

Though Japan cannot boast of monster gooseberries nor, as far as we know, has experienced a shower of frogs or a fall of red snow, yet from time to time reports are heard of the capture of enormous fish of various sorts. The latest is, according to the *Nichi Nichi*, a skate measuring fifteen feet in length, which was caught at Obuchi mura in the province of Tôtômi on the 25th inst.

The schoolmaster is certainly abroad in Japan. The study of the world's history has not been entirely neglected, nor the example set by the Emperor Charles V. thrown away. We learn from the *Nichi Nichi* that a man living at Hamamatz, in Yenshiu, who must be a philosopher in his way, came to the conclusion that a funeral ceremony in the ordinary course of events was a piece of pure extravagance, as it could not gratify the person on whose behalf alone it was performed. He determined, therefore, to share in such satisfaction as his own obsequies might bestow, and accordingly summoned his friends and neighbours to partake of the funeral baked meats. Having previously purchased a coffin, he ensconced himself therein before them all, and had the usual burial service completely and correctly performed. The *Nichi Nichi* omits to state if the friends carried out the service in its integrity so far as to inhume the philosopher.

From the *Hochi Shimbun*.

It is reported that the Empress and the Empress Dowager will visit Hakoné for sixty days after the return of His Majesty the Mikado from the north.

From the same.

The Coreans expressed great suprise at the number of ships in the harbour of Yokohama and at Shinagawa, but were not, strange to say, impressed by the Railway or any of the buildings which met their view.

Digitized by Google UNIVERSITY OF CALIFORNIA

From the *Hochi Shimbun.*

Mr. Watanabe, the editor of the *Hioron Shimbun* has been sentenced to imprisonment for two months for an infraction of the Press-laws.

Friday, June 2nd.

By kind permission of Capt. Colomb and the officers of H. M. S. *Audacious*, the band of that vessel will play in the Bluff Gardens from 4 to 6 o'clock this afternoon.

The M. M. steamer *Menzaleh*, with the French mails to 23rd April on board, left Hongkong on the 31st ultimo at 6 p.m.

His Majesty the Mikado starts on his northern tour to-day which is observed as a strict holiday in the capital, the usual daily papers not being issued. It is expected that crowds of natives and many foreign officials and residents will witness the procession as it passes through Tokio.

At a general meeting of the Canoe Club yesterday, Mr. J. J. Dare was elected Commodore for the ensuing season and Mr. Hamilton Vice-Commodore. Monday next, if the weather permits, is the day fixed for the opening cruise, and Saturday, the 10th instant, for the championship race.

A dinner and ball were given yesterday evening at the British Legation, Tokio, in celebration of the birthday of the Queen.

From the *Osaka Nippo.*

On the 21st and 22nd ulto., a large number of *geysha* gave a grand musical entertainment at the Kiôto Exhibition, which had the effect of greatly increasing the number of visitors on those days.

From the *Hochi Shimbun.*

Some seventy well-known wrestlers are expected to arrive at Tokio from Ôsaka, on the 2nd inst., to take part in wrestling matches which are to be held at Shitaya, Tokio, commencing on the 5th instant.

From the *Akebono Shimbun.*

It is reported that eight students have been selected from the Kaisei Gakko to be sent to England and France, in order to finish their education in those countries.

The *Nichi Nichi* says:—It is expected that the Coreans will shortly pay a visit to the General Post Office at Tokio, and inspect that establishment. They have also expressed a desire to witness the working of the Fire Brigades at the capital, and in consequence a general muster of the Companies will be held at Nakasu, on the 7th inst., when the members of the Corean Embassy will be present.

Further:—The *Daijin* and *Sanghi* were entertained by His Majesty the Mikado at a farewell banquet, held at the Imperial Palace, in anticipation of H. M.'s northern journey.

Further:—The *Daijo Daijin* will take entire charge of the affairs of the nation during His Majesty the Mikado's absence from the capital on his northern tour.

The *Hôchi Shimbun* and *Nichi Nichi* will both send members of their staff to report the proceedings of the Imperial party on the northern journey, but special facilities for so doing do not appear to have been offered by the Government.

Saturday, June 3rd.

His Majesty the Mikado accompanied by the Empress started on his northern tour yesterday, his progress through the streets of the capital being witnessed by thousands of orderly spectators. The *cortége* consisted of about eighty carriages of all sorts and the escort of a detachment of cavalry, some 2,000 infantry and two batteries of artillery. The beautiful court robes, the variety of uniforms, the gaily caparisoned horses and the long train of carriages rendered the spectacle one well-worth seeing. The line of route was kept in order by the police with, apparently, little or no difficulty.

The opening cricket match of the season will be played to-day, wickets being pitched at 1.30 p.m. and play commencing at 2 o'clock. The match is England *vs.* The World, (the former being re-inforced from some of the British men-of-war now in port) and is expected to be a very interesting one; and as the weather is all that could be wished, the presence of the band of the *Audacious* alone is require to render the game doubly attractive.

The Band of H. B. M. ship *Audacious* played in the Bluff Gardens yesterday afternoon, and formed a very grateful addition to their attractions.

The *Eiri Shimbun* says:—A certain German merchant has given an order to a fan manufacture in Tokio for 100,000 fans, and that the order is being executed with all possible despatch.

From the *Hochi Shimbun*:

The number of paupers applying for admission to the workhouse at Uyeno increases day by day, so that the establishment cannot afford relief to all who need it. Temporary accommodation has been provided as far as possible, and it is now in contemplation to erect more commodious permanent buildings.

The same paper says:—A guard of ten men from the garrison patrols the streets of Ôsaka every night, to assist the police in preserving order among the soldiers out on leave, and judging from what we have heard of the conduct of the military towards the police and citizens of Ôsaka, this is an arrangement made not a day too soon.

TRADE REPORT FOR KANAGAWA, 1875.

ONE of the critics of the *Essay on the Human Understanding* complained that its author had nowhere in it treated of the nature and functions of the Imagination. On the objection being stated to LOCKE, he replied that his work treated of the Understanding, not of the Mind. Had its title involved the consideration of all the mental faculties, he would have been justly open to the reproof of his critic. But the limitation which he had imposed on himself by the well defined scope of his essay proved the objection to be irrelevant and unjust. In like manner, in answer to animadversions upon their restricted character, it may fairly be pleaded that the yearly reports issued by our Consuls are Trade Reports, and that excursions into the regions of philosophy, science, history, morals or other kindred subjects, interesting and valuable though they might be, could not appropriately be made in documents expressly devoted to the movements of trade. When it is pleaded that a Consul has not gratified the intellectual appetite of readers not greatly interested in the history of prices during a given period, the obvious reply is that this was not within the scope either of his duty or his intention, and he might further urge that his superiors would think ill of his understanding, or at least of his sense of congruity, if he imported into his commercial record a history of Japanese Buddhism or a description of the *Nō* dances. Mr. ROBERTSON, and indeed Her Majesty's Consuls generally in this country, have of late years greatly added to the interest of their annual reports by selecting some subject bearing more or less directly upon trade, and treating it in its relation to this special sphere of their work. Thus, in the Kanagawa report for 1873, Mr. ROBERTSON gave us a valuable account of the movement of the labour market and the change in the purchasing power of money in this country since its opening to foreign trade. Last year he described the processes employed in the preparation and use of the lacquer which is so peculiarly the specialty of Japan, and this year he has shewn how mushrooms—an article of extensive internal trade and export,—and sugar, also an article of large trade, but of import, are grown and prepared for the market. The other Consuls have done likewise. One has treated the subject of the roads in the vicinity of his port, another the advance of manufactures which has come under his notice, another the local taxation, and so on. And, we submit, this is all very good service, which is not only useful and instructive in its present form, but will be invaluable when the time arrives for the coming man who is to write exhaustively the modern history of Japan. But it forms no part of the mission of Her Majesty's Consuls to write monographs upon Japanese philosophy, theology or art, and nothing can be more unreasonable than to blame the omission of these subjects from their yearly reports. It would be equally unreasonable in men who have been personally engaged in the trade of the port, to expect to find any great novelty in documents which profess to be little more than epitomes of its history in any one year. These reports, though interesting to, are not written for, them, but for the guidance and service of those who are the guardians of their interests, and whose experience of the trade is not susceptible of reduction to a 'Profit and Loss Account.' The only policy England has in this country is a commercial policy. She is anxious that Japan should grow up into a wealthy customer allied to her by common interests and friendly feelings, and she looks to her Minister to transmit home such reports of his subordinates as will inform her accurately of the condition, progress and prospects of those interests, and enable her to take the best measures to protect and develop them.

The portion of the Report before us which is devoted to Imports will be generally accepted as giving a faithful account of the vicissitudes which that branch of trade has undergone during the past year, and there is little to add to it. Mr. ROBERTSON's opinion that increased importation does not necessarily imply a profitable trade, at all events in any given period, will commend itself to all commercial men, and the events of the past year prove incontestibly that the trade has been overdone. The figures show that the value of the imported goods has risen considerably above that of last year, and as there is good reason for believing that they have gone into consumption, it is a fair inference that Japan is a ready consumer of our manufactures *at a price*. Many will be found to agree with this statement, and yet to follow up their assent with the question: Is there much elasticity in a trade carried on at a reduction of from 20 to 30 per cent. upon home cost? The answer is: Certainly not; but there are the foundations of a trade which will improve if, or when, the wealth of the country increases. It must not be forgotten that the old conditions of the eastern trade vanished with the introduction of the telegraph. The difference between prices in various parts of the world is now little more than the cost of transmission from one to the other, *plus* the commission, itself much reduced of late years, of the middle-man. Exceptional circumstances may at times slightly increase or diminish this commission—profit it can hardly be called—but the trade must pay it or it will cease to exist.

But we must return from this digression, and, before passing to other matters, say a word upon the entire and remarkable cessation of trade in one staple article, formerly in great demand, viz. camlets; and the remarkable increase exhibited by another, viz. French mousselines. The former were demanded by the Japanese in the early days of the trade with remarkable eagerness. It may be presumed that our large purchases of their silk, at constantly rising prices, soon put the common use of silk dresses beyond the reach of all but the rich classes, and the camlet, which admirably adapts itself to the Japanese style of dress, furnished a most acceptable substitute. Latterly, however, the greater attractions of silk, or, more probably, the adoption of broadcloth and other woollen stuffs more suited than camlets to the foreign style of dress, has driven the material, once so much prized, into complete neglect. French mousselines, on the other hand, have gradually assumed very considerable importance in the statistics of our trade, and it is remarkable that all the ingenuity and enterprize of the English manufacturers have not enabled them to compete with their French rivals in this trade and that in fabrics of the same order.

Mr. ROBERTSON touches only very lightly and almost incidentally upon the fall in exchange, which has been one of the most remarkable features of the commercial year, and has not yet been redressed by an equivalent rise in the value of goods. Time after time the merchant has found himself disappointed of such small profit as his sales showed, by the fall in the rate at which he was compelled to remit the proceeds of them. It is true that he could have purchased produce proportionately cheaper; but as little will two blacks make one white as two losses one profit, and the shippers of produce have been, metaphorically, "weeping and wringing their hands" during the whole year. By this fall in silver, all holders of real estate, mortgagees, persons who have kept their savings in the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

East, or have made other forms of investment, are grievously prejudiced. Similarly situated are those whose personal expenses, owing to the nature of their family arrangements, are chiefly incurred in Europe. Not many years ago $400 would nearly pay for a £100 bill sent to England; now $500 will not pay for it, and the hardship entailed by this is severe. With the increase of wealth at home the expenses of living have sensibly increased; while those who derive their incomes from the East find their remittances growing smaller year by year. Some time, too, must elapse before real property will rise to meet this fall in the currency wherewith it was purchased. All these things are against us.

Of the detailed review of the silk market embodied in Mr. ROBERTSON'S Report, we need say nothing more than that it covers the whole ground. There is a story told of Handel visiting, unknown to anyone, a church in a provincial town, and sitting down to the organ. The organist, who well knew his fame, but had never heard him play, listened for a few minutes to the giant and cried out enraptured, "Dr. Handel, or—the Devil"! If something of the same kind, suggested by the fulness of special experience which it embodies, do not strike the silk-inspectors who read this section of the Report, we are much mistaken. The secret of the disastrous state of the silk trade, *quoad* the raw silk shipper, seems attributable to the fact that production has overtaken consumption. The quantity available for the few is too large, while the many cannot yet afford the luxury. Until there is more general prosperity in the world than at present, the silk-grower and exporter will do but little good for themselves. The worms may toil and spin their golden balls as they will, but those who tend them will get little for their pains, the reelers little for their work, and the merchant—*unless he be very prudent*—little from his venture.

We doubt if Mr. ROBERTSON has drawn sufficient attention to the increased area of land planted with Tea—a very profitable form of cultivation. Judging from the stocks left in native hands at the close of last season, and the prospect of even increased supplies this year, we imagine this must be very considerable. There exist fears, better or worse founded, that the Americans, who are the sole consumers of this tea, show some inclination to forsake their taste for it. Nothing more unfortunate could well be imagined for this country, and we trust these fears are ill-founded. How far the leaf is available for making black tea is a question not yet, or easily, answered. Should it prove to be so, Japan might look forward to extend the circle of her consumers.

The mouse content with one poor hole
Can never be a mouse of any soul.

Certain alternations are made in the laws of theft. One law is abolished: it is the formerly enacted one, which punished officials for privately borrowing—or what English law knows as embezzling, when discovery takes place—any property (whether money or goods) of the government, or any local authorities, which might be in their charge. Another alteration makes the outside limit of punishment for persons who steal property intrusted to them, hard labor for life, and puts all punishments for that offence one degree heavier than is enacted in the present existent code. The servant who steals his master's property will also receive a punishment one degree heavier than that heretofore awarded. The penalties attendant on the like offences committed by certain other offenders of a different class in society are also raised one degree.—*Hiogo News*.

OLD AND NEW QUESTIONS.

IT will hardly be doubted, we think, by those who have watched with any interest and attention the history of this country during the last five years, that the difficulty known as the *samurai* Question has practically ceased to complicate its politics. Whether the Question received its death-blow in the Saga insurrection, or was dispersed by the reflex influence of the Formosa success—the last traces of it being lost on the shores of Corea—or whether the intellectual progress made by the *samurai*, and the able move of the Government in recruiting the army by conscription from the ranks of the *heimin*, have disposed of it, certain it is that it no longer gives the Government of Japan any anxiety. Considering its really formidable nature, no fair critic will deny that it has been approached and surmounted with statesmanlike insight and energy. In weaker hands it might have led to civil war or to a most formidable derangement of the national finances; and to both of these, had it led to the first of them.

It is, however, the condition, we shall not say the fate, of all progressive states of society to find that as one difficulty disappears, another, at least as formidable, takes its place; and if the rate of progression is very rapid, as it undoubtedly has been for some years in this country, the interval which elapses between seeing these difficulties in the distance, and having to deal with them practically, is a very short one. In the few following remarks we shall make no pretension to estimate the relative magnitude of the special difficulty with which we shall briefly deal. It may be even more important than we imagine: or there may be other questions of greater gravity demanding an earlier solution. We know not. All we claim is that the question is even now a serious one, and may become far more serious within a short time.

If we have not overrated the interest attaching to the translations laid weekly before our readers, most of them will recall one in our last issue headed 'ROUSSEAU.' The original article appeared in the *Hioron Shimbun*, the organ of the advanced liberals, and very shortly embodies the views held by two different writers upon ROUSSEAU'S works, and especially upon the *Contrat Sociale*, the gospel of the French Revolution. Both of these writers express their approval of the general tendency of the work; one warmly, the other more covertly. One extols the genius of the author, but urges that the book would have had little effect but for the oppressive character of the French Government; the other expresses no laudation of ROUSSEAU, but agrees in the remainder of his colleague's criticism. It is, however, abundantly clear that both are prepared to become, if they are not already, disciples of the famous author of *Emile*, the *Contrat Sociale*, the *Confessions*, *Discours* &c., and to make the experiment of applying ROUSSEAU'S political doctrines to the government of this country.

It is not perhaps altogether out of harmony with the dangerous superficialty which is the characteristic and besetting sin of the Japanese mind, that in one of the earlier notices of ROUSSEAU in the above-named or some other native journal, he is called "a French philosopher, born in Genoa, a town in France." It may not be of vital importance to the Japanese to know that ROUSSEAU, though undoubtedly of an old French stock, was born in Geneva, where his family had resided for upwards of two centuries; that he was consequently not a French philosopher; and that Genoa is a city of northern Italy. But straws show the direction of the wind, and in Europe we should think that a student made but

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

an unpromising beginning to an essay on Emerson, who should say that he was an English philosopher, born at Lyons, a town in England. We do not wish to infer too much from the above errors, but it is certain that a superficial examination and acceptance of ROUSSEAU'S political philosophy would prepare for this country something like an intellectual nitro-glycerine which might easily blow society to atoms, and it is on this account that we desire, shortly, and it must needs be most imperfectly, to point out to the Japanese admirers of ROUSSEAU the more prominent objections to his philosophy which are taught by a less enthusiastic view of the relations of governments to society than that which he held.

In the first place, then, the assumptions on which ROUSSEAU bases many of his most important arguments are absolutely false. He sent a thrill through the hearts of two continents by the words with which the *Contrat Sociale* opens, 'Man is born free, and everywhere I see him in chains.' Now, is this true? In what sense is Man born free? From the moment of his birth he is compelled to submit to the social relations which surround him, these again being the more or less direct results of political, moral and religious relations. Follow up the origin of society as far back as we can, and there is no trace of any such freedom. The assumption of it is a mere abstract prepossession, absolutely belied by historical records. The proposition is far too wide to be anything like true, and though we should be compelled for the same reason to reject the proposition that Man is not naturally free, it is, on the whole, far more true than the former one. In his impatient passion to be logical and symmetrical, ROUSSEAU was absolutely unfitted to deal with the complex tangle of the history of social growths. From the unreal state of nature, which he invented, he passed to an equally unreal social state, which the fervour of his imagination prevailed on him to accept as the attainable condition of any given society. Instead of going to history and the constitution of human nature for the bases of his political philosophy, he sought them in conditions, both past and future, which never had and never can have any real existence. Indeed, for such large purposes as these, he was too ignorant of history to pursue this method, and it has been remarked that where he resorts to it for illustrations, he does so to support conclusions arrived at independently of them. "The desperate absurdity of the assumptions of the *Contrat Sociale*," says his best and admiring commentator, MORLEY, "constituted the power of that work, *when it accidentally fell into the hands of men who surveyed a national system wrecked in all its parts.*" And the reason of this is, that there is so much dogma in it: and it is dogma which gives fervour to a sect. When society is in a state of distraction, and a hundred new and old philosophies are all pulling different ways, men fly eagerly to, and are irresistibly fascinated by, a teacher who never qualifies a proposition or places any limitation on a theoretic principle. The only man capable of dealing with society on a large scale, especially in times of marked transition or violent convulsion, is one who regards government as the art of dealing with huge groups of conflicting interests, of hostile passions, of hardly reconcilable aims, of vehemently opposed forces. Let any one read a few chapters of BURKE after some of the thin but frothy speeches of the leaders of the French Revolution, and he will soon see the difference between the majestic sweep of the one, and the thin geometrical kind of theorems which the others thought would suffice for the government of thirty millions of men on fire. But it was "this seeming demonstration, this measured accuracy," as Mr. MORLEY says, "which filled ROUSSEAU'S disciples with a supreme and undoubting confidence, which leaves the modern student of these schemes in amazement unspeakable." It is BURKE who is the true antidote to ROUSSEAU, on whose application of these inapplicable theorems to government he pours such merited scorn. If the one produced the French Revolution, which, in some sense, he did, the other stood, like Aaron with his burning censer between the living and the dead, and prevented the plague from spreading to England. Or, perhaps rather,—if this be an overstatement of the case—he so wisely tempered the action of the potent drug which had convulsed France, that it became in his hands a medicine to us which cured many of our old diseases, and fortified us against others to which we might have fallen victims.

ROUSSEAU undoubtedly derived his doctrines from LOCKE, and claims to have treated the same subjects on exactly similar principles. But the reserve and moderation of LOCKE, and the absence from his works of those concise dogmatic formulæ which convert men into fanatics, are the true sources of the wholesome and nourishing character of his philosophy. It is quite true that he teaches the principle of popular sovereignty, which, of course, is the central conception of the *Contrat Sociale*. But his grasp of the qualities of human nature, and of the conditions of human society, is so large that his theory led by natural steps in a direct line to the popular form of Government which we now enjoy, while that of ROUSSEAU was practically responsible for the more vague and unpractical aims of the leaders of the Revolution and the fearful excesses to which these gave rise. So soon as it is held that society reposes upon conventions which the human will has made—and this is ROUSSEAU'S idea of the social pact—it is obviously logical to assume that the human will is competent at any time to unmake them. The simple truth is that society rests upon no such pact, but upon the power of the ruler. It is not a question of mutual consent that makes law valid, but the fact that the sovereign is strong enough to enforce that law. The idea of this pact is a pure figment, and therefore all the deductions from it fall to the ground. The origin of government is in the social instincts of man, and in the conditions of expediency which are necessary for his convenience and the natural play of these social instincts. The theory of ROUSSEAU makes government logically impossible, because it bases the right and even duty of resistance upon an arbitrary interpretation of a purely imaginary compact. Instead of giving us practical doctrine such as, that if a government is a bad one and the people are strong enough to displace it and provide a better one, they may lawfully do so—a doctrine which, whether true or not, at all events permits of tests being applied to it—ROUSSEAU pleads that "if sovereignty is usurped, or the social compact has been broken," we may take the matter into our own hands. But how are you test this usurpation of sovereignty, this rupture of the social contract?

But while we think that the theory of the *Contrat Sociale* is utterly unsound and practically very mischievous, it would be most unjust to deny that the generous aspirations after freedom which the work produced in the enslaved countries of Europe—and both France and Germany were then in this condition—were the genuine fruits of it. It roused a noble patriotic energy which perhaps saved France from partition; which fired the Americans in that great struggle which has exercised such an immense influence upon the history of the human race; and it

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

gave to Germany phrases so full of the active principle of freedom that they produced much of the emancipation which she has since enjoyed.

We need hardly say that in these few words we have only dealt most insufficiently with a theme of vast extent and importance. Our object has been to point out to Japanese writers that the compact and concise formulæ of the Swiss philosopher have neither stood the test of logical analysis nor practical application, and we should be extremely sorry to see the works of ROUSSEAU circulating widely in this country without the antidotes which the works of the more moderate and far more sound English writers on political philosophy afford. The growth of liberal ideas in the minds of the youth of Japan is of course a good thing, if wisely directed. But it is also assuredly the source of serious danger—or, perhaps rather, it should be constantly taken into account. Superficiality is the bane of the Japanese mind—it is idle to deny it, and foolish to ignore it. Years ago we pointed out the inevitable effect of sending so many of the Japanese youth to America. These young men have all returned republicans at heart, and the idea of republicanism in this country is compound nonsense. Even ROUSSEAU himself says, (and rather illogically, as it seems to us,) "In view of such relations as these, we must assign to each people a particular system, which shall be the best, not perhaps in itself, but for the state for which it is destined." Elsewhere he calls attention to the manners and customs, and, above all, to opinion, as the parts of a social system on which the success of all the rest depends, "particular rules being," in his own words, "the arching of the vault, of which manners, though so much tardier in rising, form a key-stone that can never be disturbed." It is no use holding these truths and not appreciating and applying them. We repeat it; the young men of this country should be sent to England, not to America. They would see there how and why a limited monarchy can be regarded by a people, who, whatever their defects—and they are many—are the possessors of a political sagacity which no other race has ever surpassed, nor in our own humble opinion, has ever approached, as the best of all attainable forms of government. They would learn the importance of that thoroughness which does not exist in a new country, and which cannot exist in a country where most standards are fixed by the average knowledge of the many, instead of the far more accurate knowledge of the few. The art of government will not be learned in a country where government has not yet arrived at the condition of an art. All the theoretic preaching in the world avails little as against the practice which comes under the eye. The object of the Japanese should be to harmonize the broadest principles of freedom with monarchical institutions, and there is only one country in the world where this has yet been done. The application to Japan of such republican ideas as the Japanese can now, or, for many generations will be able to assimilate, is utterly unsound from an educational point of view, and, in saying this, we believe we should be supported by the most instructed and practical believers in republican institutions.

The impression at Hankow seems to be that the *Glenartney* teas are likely to be the first on the London market, that steamer having had nine hour's start of the *Hankow* and the latter having been further detained in the river. It has been blowing great guns for the last day or two up the river, and there was a sea on the Yang-tsze, so that shipping tea has been next to impossible for steamers lying mid-stream. As the *Peking* is in, however, the weather was calming down and there was every prospect of heat:—*Shanghai Courier.*

SPIRIT OF THE JAPANESE PRESS.

TWO MONTHS OF PRISON EXPERIENCE.

(Hochi Shimbun.)

An article of mine under the heading "The Government of Monkeys" appeared in the *Hochi Shimbun* of the 15th of February last. For this article, which proved to be an offence against the Press-laws, I was, after being kept for five days in jail during my trial, sentenced to imprisonment from the 15th of March to the 13th of May, and as this time was spent in the most gloomy manner, I will now make a faithful narrative of it in hopes that future writers may not make such mistakes as I did.

UYEKI EDAMORI.

"At one o'clock in the afternoon of the 9th of March last, I was tried by the Judge Kusaka in the court room of the Tokio *Saibansho.* The trial continued for two hours and I then was ordered to wait. A constable came and ordered me remain in the waiting room of the smaller court room, which I did for some hours, but without receiving any fresh orders. I then supposed that I should be placed in jail, and true enough my expectations had not deceived me, for I was then summoned to the larger court room where the Judge said to me "During the time that this trial continues you are to be kept in jail"—and just at that time I met Mr. Oka,* the editor of the *Hochi Shimbun* who had also received the same orders. The constable then ordered us to the waiting room, and a jailor came at about four o'clock and after putting ropes round our waists took us to the jail, which is situated in the southern part of the police station. The place is enclosed by a fence which has a gate in each of its four sides. There are two smaller houses near the right and left gates, one of which is used for the reception of visitors, while the other is the place in which the clothes of all those who go in and out are examined. There they examined me they took off all my clothes. The inspectors took off the strings that were on my *hawori* (outer robe), all the buttons off my shirt, and my socks. They took off my girdle also, and gave me a cotton cloth instead. My handkerchief was then torn into two parts. (All those who wear the foreign style of clothes have them all taken off their backs and receive cotton clothes dyed red instead.) They then took all the paper and other articles that I had in my possession. I was bound with ropes and taken to the jail with Mr. Oka, where we met with several policemen. Not being acquainted with the etiquette of the jail we commenced to answer the questions that the policemen had put to us in a standing posture, but the jailor told us in the most harsh tone to squat down, and this we immediately did. The policemen then asked our names and why we had come there, and immediately on our answering the ropes were untied and Mr. Oka was placed in cell No. 30 and I in No. 2.

The building itself is in the shape of a cross, and the ground floor and second story contain in all 80 cells; these cells are about nine feet square, and within this space about 3 feet square is set apart for necessary conveniences. Under ordinary circumstances there are six or seven persons in each cell, but at times the number rises as high as ten.

When I went in the jailor brought me a wooden bowl and a blanket, and this is all the furniture that is allowed to prisoners. There were eight persons besides myself in the cell that I entered. I made myself as small as possible, but was utterly comfortless. The place was covered with vermin and most of the men incarcerated with me were thieves. As soon as the sun went down, as no lights were allowed in the cells, there was nothing else to do than to try to get to sleep. But imagine 36 arms and legs in a space of nine feet square filled with vermin! There was not the least chance of stretching oneself out, and it was impossible to obtain much rest. My jail comrades told me it was not the habit of people in jails to kill vermin. On the 10th I was called to the Court but received no trial, and another man came into our cell on this day, so that we numbered ten. The 11th being the day of rest, there were no trials, and the people in the jail were permitted to take baths. The bathing place was at some distance from the cells and differed in no respects from the public baths that are to be found in the streets. Twenty men go at a time to bathe.

On the 12th instant I was again summoned to the Court. Previously when I went to the Court, I was examined and bound in ropes at the house near the gate, but on this occasion the jailors bound me by twisting my hands on to my back, just as they would have done to a thief or other criminal. I then told them that I had been bound before, but never in such a manner. The jailors there-

* Mr. Oka, the then editor of the *Hochi Shimbun*, was considered the principal offender for publishing the article, and Mr Uyeki, the writer, was tried as an accessory.

Original from UNIVERSITY OF CALIFORNIA

upon asked me what crime I was guilty of, and I replied that of sending a letter to a newspaper. They then said that as that was the case they would bind me differently, and then placed the rope round my waist. I then proceeded to the Court escorted by a jailor, and after being further tried I returned at about four o'clock, passing through the house near the gate to have my clothes examined. I put my clothes on the floor so that they might not get dirty. When I was just about to put them on again I shook them, which seems to have been contrary to the rules of the jail, for one of the jailors became enraged and said to me in a stern manner "What are you about?" Never was I so harshly scolded before in my life. Mr. Narushima said that while he was being tried in the Court he heard a constable say to another constable secretly, "Here is another of the newspaper men, they should all be killed," and that these words greatly astonished Mr. Narushima. The scolding from the jailors terrified me no less than those words did Mr. Narushima.

On the 13th instant I went to the Court in the morning and after trial I signed the *Kosho* (document stating the prisoner's crime) and then the judge summoned the *Kocho* (an official) of the ward in which I lived and placed me under his charge until I received my sentence. I then went to the house near the the gate and after receiving the various articles that they had taken from me, returned home.

I was of opinion that the writers in newspapers were so often committed to jail because they argued too sharply with the judges, but this was not the case with me, for I remained as calm and quiet as possible.

On the 15th I was summoned to the Court and there received the following sentence "You, Uyeki Edamori, a *shidzoku* of the *Kochi ken*, residing at Kanda Nishikicho, have written the article published in the *Hochi Shimbun* under the heading of "Government of Monkeys" which has been proved to be an offence against the 12th. article of the newspaper laws, and you being regarded as accessory to the offence are hereby sentenced to severe imprisonment for the term of two months." This occurred in the large court-room, and I then was ordered to the eastern criminal court where an official handed me my sentence in a written document. Mr. Oka† was also present, and we here met a reporter from the *Hochi Shimbun*, who copied down our sentences and then retired.

After waiting a short time a jailor took us to a place to have our clothes examined, and as we were going to jail whatever we had in our possession was taken from us. An official asked what my sentence was, and I replied that it was in conformity with the document referred to. He then told me that if I were not satisfied with the judgment that I had received I could appeal against it. I told him I was quite aware of this. The jailors then put ropes round us and took us to the prison, where we were questioned by policemen just as at the time of first entering the jail. Mr. Oka was placed in the cell No. 29 and myself in No. 22. All prisoners concerned with the press seem to have been confined in cells between the numbers 20 and 30. Among the imprisoned editors and writers personally known to me were; in cell No. 21 Messrs. Tanaka, Higashi and Miyamoto; in cell No. 22 Messrs. Narushima, Okamoto, Shibata, and myself; in cell No. 23 Mr. Komatzubara; in cell No. 24 Messrs. Suyehiro and Nakajima; in cell No. 25 Messrs. Motoki, Yamawaki, Sawada and Takabane; in cell No. cell 26 Mr. Yamashina; in cell No. 27 Messrs. Nishikawa and Ishida; in cell No 28 Messrs. Mitzuki, Sugita, Makashima, Minoura and Yano; in cell No 29 Mr. Yokase, Nakajima, and Oka; in cell No 30 Mr. Kato.

I got two blankets and a wooden bowl this time. I therefore was one blanket better off than I was before, and instead of ten men in a place of nine feet square there was only half the number. My companions in the jail were thieves and such-like criminals, but here they were all men of learning. This being the case I was not in the last troubled by the former class of vermin.

During the time that I was in prison many reforms took place and the treatment and management of the prisons are gradually improving. I have forgotten the exact dates on which the reform took place, and being forbidden to use pen or ink I was unable to make memoranda of the dates, but I shall nevertheless endeavour to enumerate the reforms that took place.

Up to the end of March the watch on the prisoners was kept by non-commissioned officers who had been jailors in the time of the late Government, and who, on account of the intense cruelty they displayed, were termed "the devils who torture the unfortunate in the infernal regions." But at about that time these men were dismissed and policemen set to watch in their stead.

From the first we were permitted to read books, but whenever we raised our voices we were scolded by the jailors, and whenever we looked out of the windows or lay down during the daytime we were severely reprimanded. It is true it is against the regulations to read books with very loud voices or to carry on conversation after sunset. But I will mention an instance of the harshness of those jailors. When a party of prisoners were going out for exercise, one of them laughed. A non-commissioned officer thereupon asked him why he had done so, said that he had no right to laugh, and then prohibited him from taking his exercise. But most of these annoyances have been done away with since the watch was placed in the hands of the police.

A prisoner has nothing to do from morning till evening, and the only pleasure that we enjoyed was that of reading books. When I first went there all works on Law, of Chinese poetry and prose, and all works of the western countries, were prohibited. Moreover, when we desired to read a book we had to send and buy it from the bookseller's, and were not allowed to have any books sent from our homes, nor was one prisoner allowed to lend a book or borrow one from another. But mostly all these inconveniences were done away with before I left the prison, and recently some officials who were passing in the street remarked that the part of the prison where the newspaper prisoners were kept sounded as if a school were kept there. This is very true, for those within felt to a certain extent like students, except that they had no exercise ground to go to. Reading was the only resource of the prisoners in our ward, and as we were deprived of exercise some fell sick. Now exercise and bathing are the things which the prisoners greatly desire to enjoy, and from the time that I went there to the beginning of May, the prisoners were allowed exercise only once in five days, and that only for a space of twenty minutes. The exercise ground was in the southern part of the prison, fenced in on all sides, about sixty feet square, and neatly planted with trees or shrubs. From ten to twenty prisoners went out to take exercise at a time, and there were some four or five watchmen to guard them, whose principal duty was, of course, to see that none of the prisoners escaped, and they also seemed to take special pains to see that none of the prisoners got possession of stones, fragments of porcelain and the like.‡

The trouble given in watching the prisoners during their exercise seems to be the cause of the short space of time allowed for exercise. All this has since been changed. There is an entrance at each of the four sides of the prison made to be opened in case of fire, and four exercise grounds in the shapes of Japanese fans have now been made just in front of these entrances. The ground is fenced just like the outline of a fan and thus one man placed as it were at the central pin of the fan, is sufficient to watch over the whole party. Moreover, there being nothing but fine sand laid over the place there is no fear of prisoners getting possession of stones, porcelain &c. But the place itself is not so good as the former one, for there are no trees or flowers to shade the spot and enable the unfortunate prisoners to inhale the oxygen and enjoy the variety of colours which the flowers represent. At midday the rays of the sun strike on the heads of the prisoners and often caused sunstrokes, so they are now permitted to exercise daily for thirty minutes in the afternoon. I have heard that trees were to be planted in these grounds also, which will, without doubt, be a great benefit to the prisoners.

When I first went there we were only permitted to squat down from the morning to the evening and could not move in the slightest degree, unless we had received a written certificate from the doctors that we were ill. But since the early part of May we were permitted to stretch out our feet a little—and since then we have been permitted to take exercise in our rooms. Thus at times all of those in our cell would agree, and pile our books and other articles in the centre of the room, and then walk round it for an hour, thus obtaining a little exercise.

† Mr. Oka, being deemed the principal, the sentence passed on him was of a more severe nature, viz imprisonment for one year and six months with a fine of 800 *yen*.

‡ This is explained by the fact of prisoners making their escape from the prisons by sawing the wood work with stone, porcelain &c. Such cases are not rare; and instances have also been known of prisoners who by means of a tooth extracted from their own jaws have managed to scratch their way out of prison.

The Construction of Public Gardens.

(Nichi Nichi Shimbun.)

The picturesque character of the scenery of Uyeno is such that the public park was formed there and opened with due ceremony by the Mikado in person, in presence of the Foreign Ministers and high native officials. Now, the capital is the place to which

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

natives and foreigners naturally resort, and for this reason public gardens are useful and even necessary. In proof of this there are the Bois de Boulogne and the Champs Elysés in Paris, Hyde park, the Regent's park and St. James' park in London, and the Central park in New York. And, besides these, every town of considerable size in Europe has its public park or gardens. Some people say they should like to see the same thing at Asakusa, Shiba, Mukojima, Somei, Takata, Oji, Gotemyama, &c., in order to ornament the capital of Japan and afford places of recreation and enjoyment. Yet if we take the circumstances of Tôkiô into serious consideration we are afraid that the laying out of public gardens may cause some distress among the people. Poverty is certainly increasing, there is a large number of unoccupied houses, and the whole place has become inactive and very different from what it was when still called Yedo. About one half of the population is suffering from want, and it may be asked what time they can afford for taking pleasure in the public gardens. We do not mean to plead that it is wrong to lay out public gardens, but we certainly think that this is hardly the right time to do it. Again, there are the Imperial gardens of Hamagoten and Fukiage, and others at Koishikawa, Awayama and Yotzuya, the gardens of the Department of Agricultural Industry and the botanical gardens at Koishikawa. Now if these gardens belonging to the Mikado and the Public Departments were opened to the public they will surely suffice. If any of the *Kwadzoku* desire to combine to form a Company and make a park, let them by all means do so. But we see no necessity why the Government should be in any haste to do it. Some say that it matters not if the gardens are made at the expense of the Government. But this is a sad mistake, for it is the people who pay the revenues out of which the expense must be defrayed.

Others say that that the expense of laying out the park at Uyeno is to be borne by the people of Tôkiô. If this really be so, no gardens ought to be laid out at present, for among the people in the capital there are many who work day and night and yet are unable to repair their own dilapidated dwellings, how much less can they afford any contributions towards public gardens! The taxes levied on the residents in Tôkiô are gradually increasing, and the desire of the various *Kucho* and *Kocho* is to decrease them, and to spend any surplus upon improving the schools, roads and drainage. But even though there should be enough spare money to lay out the gardens, it must not be forgotten that there is the cost of maintaining them, and this will involve an increase of the local taxation, in direct opposition to the wishes of the people. This being the case, if the private gardens of the Mikado and those belonging to the different Government departments were opened to the public, it would be quite sufficient for the present. Moreover, Asakusa and Shiba have of late fallen very much in character, and were they to be beautified, it would be encouraging people whose degradation lies at their own doors. We think, therefore, it would be well to wait until better times come and we have more money than just at present, otherwise great sorrow may fall on the people and they may be prevented from making their living. The gardens which were intended to be pleasant places would then become sources of lamentation and mourning.

The Adjourned Meeting of the *Chihokuan Kwaigi*.

(Osaka Nippo.)

As was previously rumoured, it has been announced that the *Chihokuan Kwaigi* will not meet this year in consequence of His Majesty's absence on his tour to the north, a notification to that effect having been issued by the *Daijokuan* on the 8th inst. We saw this notification with no slight joy, but at the same time with an equal amount of sorrow. We felt joyful to think that His Majesty is going to visit the most uncivilized provinces of his dominions, and will thus be able to see for himself the condition of his subjects there, whether they are prosperous or suffering, whether progressing or otherwise, and the people of those provinces will doubtless be full of joy to see His Majesty. Doubtless, too, this journey of His Majesty will be of much service to the country, and at this we rejoice. But what about the *Chihokuan Kwaigi?* It is true that the meeting of last year, being the first which had ever taken place in Japan, had but little of result.

We have however, always thought that as the provincial Governors gave more consideration to the object of the Assembly, they would be more prepared to play larger parts there, would have more important matters to discuss, and arrive at more effective decisions. A certain though perhaps small amount of good was done last year by the meeting of the Assembly, and we think it should again have been held this year. We do not mean to say that the Assembly should meet during the absence of the Mikado on a journey which will doubtless be of service to the nation. But as the tour will not occupy any considerable length of time, we think it may meet after his return from the North. The Assembly met during the hot season last year, and we see no reason why it should not meet in the same season this year. But, be it in summer or winter, it is far better the Assembly should meet in discomfort than not meet at all. Again, if there are regulations which force the Assembly to meet in the hot weather and not at a more acceptable season, we hope they will be abolished at once.

The Need for More Thoroughness.

(Choya Shimbun.)

There are many means by which the civilization of a country may be promoted, such as the wisdom of its people, its arts and its manufactures, foreign intercourse, good roads and commercial facilities. But there is one matter to which I do not find that the Japanese have yet paid sufficient attention, and that is, doing every thing in a substantial and thorough manner—not being satisfied with small profits which may immediately lie under men's noses, but pressing forward to secure more solid advantages.

The Indians in North America have plenty of fertile land, and were they to cultivate it they could easily keep their families from want. But they act in a manner which often renders starvation unavoidable. This sad result does not come from their being unable to work, but because they are diverted from suitable labour in order to secure some advantage lying immediately before them. Again, when we look at the Chinese, we find them in a much more advanced condition than the Indians, and shewing some disposition to save in anticipation of the future. But there is a great difference between them and the Europeans. The Chinese in constructing their buildings or making articles of daily use, do not attain to the durability characteristic of European work. Although there is much land lying waste in the country, they make but little effort to bring it under cultivation, and thus they remain much in the same state as they were thousands of years ago. But the Europeans are very different from this. They see the small profits which lie under their eyes, but they push on beyond these to more substantial advantages in the future. More of this feeling exists among the English than in any other race, and for this reason they stand foremost in the world.

Now the intercourse between Japan and other foreign countries seems to be on the increase, and signs of prosperity are gradually making their appearance, but the reason that we cannot boast of much real progress is that we are bent more upon making an impression by showy externals than rearing a lasting structure. I entreat the people therefore to show more earnestness of purpose, so that what they do may be of a more substantial character.

The Coreans at the Foreign Office.

("Nichi Nichi Shimbun," May 31, 1876.)

At ten o'clock yesterday morning the Corean Envoy accompanied by six officers proceeded to the Foreign Office. There was a large number of sightseers assembled about the outside of the Sakurada gate and both sides of the road were lined with policemen. The Envoy's *cortége* was much the same as that of the previous day (the van however, consisting of four officers of the Foreign Office). When they entered the gate of the Foreign Office the Envoy descended from his chair and the officers from their jinrikishas, and they proceeded straight to the reception room. (We do not yet know clearly what was the purport of their interview with the Foreign Minister.) At twenty minutes past eleven the Envoy's departure was announced, and the standard and spear bearers and the band immediately came in line from the place where they had been waiting together. The procession was arranged a second time in front of the entrance hall and one member of it struck up a song in a loud voice and the others joined in with different mouths but similar voices. Only three blasts of the bugle were sounded and these would appear to be the signal for the forming of the procession. While they were awaiting the coming forth of the Envoy they squatted on the gravel in front of the entrance hall and picked up the stones, and some of them rested their chins on their long bugles while others amused themselves by pretending to beat each other with their staves and flutes.

Shortly afterwards the Envoy, attended by two or three officers of the Foreign Office, came out to the threshold of the main hall and he was assisted on to his chair by four officers of his suite. Two strokes were immediately beaten on a gong and they then proceeded slowly to the Sakurada go mon to the accompaniment of a kind of music resembling that of the street sweetmeat-dealers.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

It is reported that a ticket has been given to each of the under officers of the mission in order to prevent them being lost during their excursions round Yedo. This is we think a very happy thought. Just suppose the case of one of these Coreans gone astray. Some of the bandsmen would certainly go round searching for him, beating their drums or gongs, and the children in the streets mistaking them for Corean sweetmeat dealers, would follow after them, and it is impossible to say what trouble might not be caused by children going astray through this attending upon strayed Coreans.

BRITISH CONSULAR TRADE REPORT FOR NAGASAKI FOR 1875.

BRITISH CONSULATE,
Nagasaki, 29th April, 1876.

SIR,—I have honour to furnish you with a Report upon the Trade and Shipping of this Port for the year 1875, together with the accompanying Returns :—

1.—Tables of the Imports from England and other Countries, and from the open ports of Japan.
2.—Tables of the Exports to England and other countries, and to the open ports of Japan.
3.—Table of the amount of Treasure Imported and Exported.
4.—Return of all Foreign Shipping entered and cleared.
5.—Return of Duties collected on Imports and Exports and Shipping.
6.—Return shewing the number of British residents and firms, together with the residents and firms of each foreign nationality.

On comparing these returns with those of the previous year it will be observed that the total trade of the port shews a decrease of $533,572. The total value of Imports and Exports being $3,684,393 against $4,217,965 in 1874.

By a glance at the following comparative Table it will be seen where the decrease has taken place :—

COMPARATIVE TABLE OF THE TRADE OF THE TWO YEARS, 1874 AND 1875.

ARTICLES WHICH SHEW A DECREASE.			Decrease
IMPORTS.	1874.	1875.	in 1875.
Cotton Manufactures	$386,382	$294,320	$92,062
Woollen Do.	125,240	62,089	63,151
Arms and Ammunition	14,094	Nil	14,094
Miscellaneous Eastern	988,216	664,127	314,040
EXPORTS.			
Tea	442,708	396,573	46,135
Tobacco	126,144	119,205	6,939
Copper	14,007	2,376	11,631
Wax	85,890	77,641	8,249
Dried Fish	413,270	223,950	189,320
Rice	37,209	17,091	20,118
Miscellaneous	508,106	353,717	154,389
Cotton Manufactures	19,347	10,205	9,142
Woollen Do.	127,440	14,256	113,184
Mixed Cotton & Wlen Do.	5,724	2,907	2,817
Total Decrease			$1,045,211

ARTICLES WHICH SHEW AN INCREASE.			Increase
IMPORTS.	1874.	1875.	in 1875.
Mixed Cotton & Woollen Manufactures	$49,408	$83,873	$34,465
Metals	82,924	98,961	16,037
Miscellaneous, Foreign	227,262	309,971	82,709
			$133,211
EXPORTS.			
Camphor	15,330	36,325	20,995
Coal	536,490	847,838	311,348
Miscellaneous Foreign	2,714	25,213	22,499
Miscellaneous Eastern	8,420	32,006	23,586
Total Increase			$511,639
Difference in favour of Decrease in 1875			$533,572

From the above Table a great decrease in Cotton and Woollen Goods is apparent, the Import of which has steadily declined since 1872, and this decrease is very inadequately counterbalanced by the slight increase noticeable in the importation of Mixed Cotton and Woollen Manufactures. It will be seen that no Arms or Ammunition were imported during last year, the demands for these in 1874 being due to the progress of the Formosan Expedition. In Miscellaneous Eastern, too, there is a large falling off which is attributable to the comparatively small quantity of Raw Cotton imported last year—13,973 piculs, against 38,792 piculs imported in 1874. However, a slight increase is perceptible in the importation of sugar and other articles.

The item of Cobalt deserves a word of remark. This article forms a new item in the Import Trade, and the recent demand for it is accounted for by the fact that foreign colours are becoming every day more extensively used in the manufacture of porcelain ware, to the exclusion of native paints.

The increase in Miscellaneous Foreign is explained by the large importation of Kerosene oil,—the figures in this item being $71,154 against $16,204 in 1874. There is also an increase in the amount of Tea Lead imported. The quantity imported in 1875 being more than three times as much as in 1874. On the other hand, the total value of Foreign Liquors imported during last year is little more than half the corresponding amount in 1874.

With regard to the Exports, it will be seen on reference to the Table in question that there is a considerable decrease in the value of most of the principal articles of Export. The quantities exported of Tobacco and Wax, respectively, remain much as before, but the items of Copper, Rice, and Dried Fish (China Exports) shew a startling decrease. With respect to Tea, although there is a decrease in the total value of Tea exported, this may be traced to a fall in the prices. In certain items which are included under the heading of Miscellaneous, such as Timber, Ginseng, Wheat, and Mushrooms, a large decrease is noticeable. The general decrease on the exports, however, is partly counterbalanced by the increase in Camphor, in which item there is a difference of $20,995 in favour of 1875, and in Coal there is a large excess,—164,140 tons exported in 1875 against 107,298 tons during the previous year.

IMPORTS.

The Import trade of this port has continued to shew very unsatisfactory results. The competition between the Mitsu-Bishi Company (native), and the Pacific Mail Company has kept freights very low for the great part of the year : this has enabled the native merchants to buy their goods in the larger markets, where it is presumed a better selection may be obtained, and to bring their purchase down to this part of the country at a nominial expense. Another cause of the dull state of affairs is to be traced to the fact that a number of the smaller Chinese merchants have taken to selling piece goods in very small quantities (of six or ten pieces at a time), to the country people. It is natural to infer that this course has materially interfered with the trade of native dealers. It has prevented them from buying except in small quantities.

EXPORTS.

The Export trade of the past twelve months may be considered on the whole to be tolerably satisfactory. Though the total values do not shew an increase ($2,159.303 in 1875, against $2,342.799 in 1874), the yield of some of the principal articles of produce has manifestly increased.

Tea.—This article, with the exception of Coal, is by far the most important item of export. A slight increase in quantity is perceptible. The quantity of superior and inferior tea exported in 1875 being 20,895 piculs against 19,029 piculs in the preceding year. To a great extent this increase may be attributed to 1,500 piculs of Hiogo teas being brought down to this Port to be packed and afterwards appearing in the Nagasaki Exports.

It is difficult to state with any certainty whether the production of teas has been increased in this part of the country, as much of it is sent direct from the producing districts to the other open ports of Japan. The quantity brought here only represents a small portion of the actual growth. I am inclined to believe, from information derived from native sources, that the quantity grown is steadily, though not rapidly, increasing. Japan Teas are now almost entirely sent to the United States and Canada, and the low prices the teas have realized in those countries have caused, what I have already remarked, the considerable falling off in the value comparing this year with the last.

Tobacco.—This Export shews a decrease of about 2,000 piculs, but the result to shippers, though not so good as anticipated in my last year's report, has been, I

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

understand, fairly remunerative. The deficiency above mentioned has been caused by the greater part of the 1875 and 1876 crop having been destroyed by the heavy typhoon which took place in August last year, and as a result the quantity exported this autumn has been extremely small. Tobacco has always to be kept about a year after it has been gathered before it is fit for export, and in consequence the leaf grown in 1874 is not offered to buyers till the autumn of 1875, and is looked on as the 1875-76 crop. The quality of the Tobacco is not quite equal to that of former years; the natives do not bestow sufficient care in bringing it to market. It is reported that the '75 crop which comes to the market in the autumn promises to be abundant.

The quantity of Satsuma Tobacco that was brought to this place last year amounted to about 4,000 piculs of all qualities, however, only about 500 to 600 piculs were sold to foreigners—the balance being used for home consumption. Nagasaki, I understand, has quite a reputation amongst the natives for its prepared Tobacco, and considerable quantities are sent yearly to all parts of the country. Satsuma Tobacco is almost entirely smoked by the upper classes, and the better qualities often sell as high as fifty cents per catty for the leaf before preparation, second qualities about 25 to 30 cents—the great bulk at 12 to 15 cents. That sold to foreigners usually only realizes about from 5 to 6 cents per catty; it is naturally much inferior to the leaf used by the natives.

Vegetable Wax.—In spite of the constantly falling value, large quantities of this article have been brought forward, resulting in an increased export of about 1,000 piculs compared with the previous year, though a decrease is perceptible in the total values. Notwithstanding the moderate cost of this article, shipments have been very unfortunate, the prices realized in England having been lower than has ever been the case before.

Camphor.—The quantity exported this year has reached 2,206 piculs, being nearly double the quantity shipped the previous year.

Coal.—The export of this article is assuming larger proportions every successive year. It amounted last year to 164,140 tons against 107,298 in 1874, shewing an excess of 56,842 tons,

Takashima Coal.—The out-put of coal from this mine during last year amounted to 124,930 tons against 79,384 tons in 1874, shewing a considerable increase To meet the requirements of the increased depth of the mine, new underground hauling machinery was erected last August. It is asserted that the mine is now capable of an out-put of over 600 tons per day, and the supply is calculated to maintain this for some years to come. The large deliveries of the Takashima Coal are proof of the good repute it enjoys among consumers. The screened coal is used almost exclusively among the French, American, Russian and German men-of-war visiting this Port. The British Government still obtains its supply from England and Australia, probably on account of contracts entered into for a long period when doubt was entertained as to the constant supply from this mine.

The small or dust Takashima Coal commands a better price than lump coal of the other ordinary native kinds. It is used by the Mitsu-Bishi Mail steamers, and likewise by the Pacific Mail and Occidental and Oriental steamship Companies for the supply of the steamers in Yokohama. The mine is still under the superintendence of English engineers. It gives employment to about 3,000 natives in the production of the coal, and to a fleet of junks—from sixty to eighty—to bring it from the island of Takashima into the harbour, where labour is again employed to a considerable extent for its discharge. Shipments and sales of Takashima Coal during 1875.

To Shanghai	25,046 tons.
„ Hongkong	12,932 „
„ Yokohama	2,237 „
„ Tientsin	4,094 „
„ Chefoo	919 „
„ Sales in Nagasaki	78,506 „
Total	123,734 tons.

Shipping.

It will be observed on refering to Table IV. that the aggregate foreign shipping entered at this Port has amounted to 296 ships of 276,415 tons, which is an excess over the previous year of 9 ships, of 15,599 tons.

Very little change is perceptible in the British. Though there is a decrease of 6 ships the tonnage has augmented by 8,460 tons, as 120 ships of 67,791 tons entered against 120 ships of 59,331 tons in 1874. There is a marked decrease in the German; seventeen ships of 5,150 tons entered in 1875 against 40 ships of 19,051 tons in 1874.

The American "General" shews an increase, on account of one or two steamers engaged exclusively in the coal trade, making rapid trips between this Port and Shanghai. Only three British ships of 1507 tons have cleared direct for London.

Table IV does not included the Native Mail steamers, belonging to the Mitsu Bishi Company, which have been plying between the open Ports and Shanghai during the year. 91 of them have entered, of 127,023 tons.

Exchange.

The Exchange for the year 1875 ruled as follows:—
For six month's sight drafts on London:—

	s. d.
January	4/2½
February	4/3 to 3½
March, April, May, June	4/3
July	4/2¾
August	4/2¼
September	4/2
October	4/2
November	4/2½
December	4/1½

It will be noted by the above rates that until the month of December the fluctuations for the year were not so great. Since then the rate has been gradually declining. It is not considered that these Exchanges can be fairly said to have had much influence on the business of the Port, as on refering to the middle of 1874 it will be found that rate was only 4s. 3d.

Low Exchanges are naturally apt to stimulate Exports, and depress Imports for a time, but I imagine it does not influence the Nagasa i business very much. The greater part of our Imports come from Shanghai and the other open ports of Japan, and are sent here at the values ruling at those ports.

Freights.

The active competition between two rival companies, the Mitsu-Bishi and the Pacific Mail,—brought freights down to a minimum, and it was only when the Japanese purchased the American steamers that freights began to revive. The consequence was that sailing vessels could find no remunerative employment. The following was the average of freights throughout the year per ton measurement.

Freight to Hiogo by Steamer	$1.00 @ $2.00
„ „ „ „ Sailing vessel	$2.25
„ „ Yokohama by Steamer	$1.50 „ $3.00
„ „ „ „ Sailing vessel	$2.25 „ $3.00
„ „ Shanghai „ Steamer	$2.00 „ $2.50
„ „ „ „ Sailing vessel	$0.60 „ $2.00
„ „ Hongkong „ Steamer	$7.00 „ $8.00
„ „ „ „ Sailing vessel	$5.00
„ „ London by Sailing vessel	£2. 5.0 @ £3.10.0
„ „ „ „ Steamer via Shanghai...	£3.10.0 „ £4.10.0
„ „ New York by Steamer via Shanghai.	£3.15.0 „ £4.15.0
„ „ „ by Sailing vessel via Shanghai.	£2. 5.0 „ £3.10.0

Rates to London and New York have varied considerably, commencing at the beginning of the year with the high rates, and keeping at the same till August; then dropping rapidly to the lower quotations.

General Remarks.

It will be observed from the remarks I have already made that the Trade of this Port during the past year has slightly decreased, and I am inclined to believe that no amelioration is likely to take place until the communication with the Interior has been improved. It has been justly observed that "the roads of a country are like "unto the veins of the man's body, just as the body comes

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

"out of order when the veins are deranged, so a country "without roads cannot be in a flourishing condition." Though this fact with regard to roads has been brought to the notice of the *Kenrei*, yet up to the present time nothing has been done in the matter. In justice to the Governor, however, I must say that he is quite alive to the necessity of having good roads, and he informed me a short time ago, that he hoped the road leading to the village of Tokitsu would be finished before the end of the year. When this road is completed it will open up a larger extent of the country and facilitate the produce of the surrounding fertile districts being brought down to this market. He likewise informed me that it was in contemplation to improve the road to Mogi, and that it would be commenced as soon as the other was finished. It is considered that an improved communication in this direction would be a great advantage to this place, as a great bulk of the produce coming from Higo and other neighbouring districts has to find its way to this Port in junks, which often get weather-bound at Cape Nomo, and are detained there for months together. This naturally enhances the cost of the produce before it finds its way to market.

The Mogi and Tokitsu roads would be of considerable importance, but after all may be regarded as only subsidiary in comparison with a good communication to Aba. That road is the main question for the future prosperity of of Nagasaki. It would be an expensive road, no doubt, to construct on account of a high hill which has to be passed in going from one valley to another, but otherwise the engineering difficulties, in the present day, might be easily surmounted. The distance is only about eight English miles. When once at Aba there are good roads which connect with all the principal towns on the way to Shimonoseki, and others leading to the Tea districts of Isahaya, Omura, Chikugo, Ureshino, and Bungo.

During a recent visit to this Port you availed yourself of the opportunity of inspecting the different means of communication in this part of the country, you are therefore aware of the importance attaching to a good road connecting this place with Aba, and if the Japanese Government could only be induced to regard the advantage to be derived from it in the same light as you did, the road would soon be made, and they would find that any expence they might incur in the first instance would soon be repaid If they would only take into consideration that the construction of roads is one of the first necessities for the prosperity of a country, it would tend much to their advantage.

The Nagasaki *Ken* consists of Nagasaki, Shimabara, Ómura, Hirado, Fukuye (Goto), and Idzuno hara (Tsushima). The Governor goes round on a tour of inspection once or twice a year, principally, I believe, to collect the revenue of his district, which is now paid in money instead of in kind as formerly. The population of the whole district is 668,974.—336,073 males, and 332,901 females.

The harvest has been a good one, the rice crop has yielded 20 per cent more then in 1874.

I have the honor to be, Sir,
Your most obedient humble Servant.
(Signed) MARCUS FLOWERS.

SIR HARRY S. PARKES, K.C.B.,
Her Majesty's Envoy Extraordinary.
&c., &c., &c.

It is stated that on the 28th ult. the Takasima Colliery turned out from one pit 735 tons of coal. Even in England we question much if with the same appliances and similar obstacles to encounter a larger out-put has been made in one day. It proves conclusively that with energy and proper management the coal mines of Japan may be converted into mines of wealth, and that the government should afford every facility, and spare no exertion in encouraging and fostering the mining interests of the country.—*Hiogo News.*

TODZTSUYA.

Below the crown of the hill on which our Old Umbrella Mender hath his habitation, there stands a gloomy tenement. A poetic licence which permits—in reasonable bounds—a touch of colour here and there to smooth away a harsh effect, is responsible for this statement. A rigid realism, done up in buckram however, and whose articles of faith require a spade to be a spade and nothing else to all eternity, will have it that the tenement aforesaid doth not stand, but lean. Yes, lean outrageously. So much, in truth, is it out of perpendicular, that were it not for a sturdy and unyielding clothesman's next door, there would be nothing left for it in all conscience but to give up pretending to be an upright building any longer, and to stretch its length upon the ground. And indeed it were better so perhaps, for in such case the poor fellow inside might have been something else, and, in addition, the world would have been spared the infliction of a lame and halting essay which, by the same token, if the world knew what was good for it, and would take a friend's advice, it would in any case leave unread.

To the assertion that this tenement is a gloomy one, may be added (out of compliment more especially to the muse in buckram) that it is likewise a dilapidated one, aye, and a dark, and a damp, and a dirty one, too, to boot. "This is but a sorry picture," methinks I hear some one exclaim, "in Heaven's name let us turn away from it." Softly, my friend in the fine linen. That the house is a miserable one is not disputed, but then there's a man inside, and if we passed him by without the time of day he might feel affronted, so just peep in through those wooden bars. Aye, there he is indeed, a fine broad-chested fellow, too, with a pleasing melancholy countenance. But, alas, how pale he is! His very lips are blanched, and his large and lustrous eyes surrounded by blue rings look all the larger by reason of the contrast. He is much attenuated, and yet he seems of goodly stature. Material for a man of war. His garment, open at the throat, and sleeves rolled back from wrist to elbow display a brawny neck and spreading shoulders, in keeping with a sinewy arm well fitted to wield a spear or wheel a double handed sword with good effect; and yet, for all his latent power, how mean his occupation. This handsome giant—for amongst his countrymen he would pass for a son of Anak—is engaged through all the weary year from dawn to dark in making strips of rattan fibre:—

"Alas that bread should be so dear, and flesh and blood so cheap!"

Drawing with hands of muscle a tiny thread of cane through a chink in a steel plate. Making raw material to be worked by dainty fingered girls and little children into pipe covers and tobacco pouches and such like trifles. It is a waste of human life. The result is out of all proportion to the means. As well employ a steam engine to fly a kite or keep an elephant for catching mice. What a monotonous existence is his! The space he works in is so small that he looks like a rook in a canary cage. The sliding door through which he sees the moving world outside, is always shut and serves to heighten the illusion. Perhaps he keeps it locked and bolted for fear he might be tempted to spread his wings some breezy morning and dash into the cheerful sunlight, and leave his prison house for ever. He never seems to intermit his work until the twilight darkens into night. His poor wan face would prove beyond a doubt, if need be, how diligent he is. No breezes blow across that marble forehead, no sun has stained with lightest sepia tint his sallow cheeks. Indeed, no ray of sunlight can find its way between the bars by reason of the overhanging rain-board. His life is indeed a joyless one, deprived of every thing which makes it worth the having, in obedience to the ever urgent necessity of providing for its continuance. To cease to labour with him is to cease to live. He most resembles the busy human heart, which in the performance of its functions brings nourishment to itself, whilst, to be enabled to nourish itself and so perform its functions, it must work unceasingly.

Law Report.

IN H. B. M.'s CONSULAR COURT.

Before H. S. WILKINSON, Esq., Vice-Consul.

Saturday, June 3, 1876.

CHARLES JOHNSON *vs.* J. F. GREEN, master of the British barque *Tamesa*.

This was a claim for advance made, in clothing and money, to the crew of the *Tamesa*, with the master's consent.

The parties to the suit both appeared personally.

Charles Johnson sworn: I live at No. 82, Yokohama, where I have my outfitter's shop. My claim against Captain Green is $200.48; up to that amount I have, with his consent, trusted his crew with clothing and money. I have got no documentary evidence to show that the captain had undertaken to be responsible for the crew's debts.

Captain Green admitted that he had stood guarantee for advances made by plaintiff to his crew as far as $10 for each A. B., $5 for each ordinary seaman and $3 for each boy.

His Honour observed that plaintiff, having no written guarantee, could only obtain what the master admitted, and after having asked defendant with regard to each man on plaintiff's list of debtors if he admitted the debt or not, he gave judgment in favour of plaintiff for $121.70 with $9 costs.

IN THE GERMAN CONSULAR COURT.

Before A. SCHAEFFER, Esq., Acting-Consul.

Tuesday, May 30th, 1876.

NICOLAUS STEINBRING *vs.* FRIEDERICH NÖLTING.

Plaintiff, who is the chief officer of the German barque *Johann Schmidt*, charged defendant, 2nd officer of the same ship, with having assaultied him on board on the 21st of April last while in the port of Takao. He had laid his complaint before the Gorman Vice-Consul at Takao, but that officer declared himself incompetent to try the case.

Both parties appeared personally.

Johann Friederich Nölting stated: I was born at Paderborn in the year 1840. I admit that I, on the 21st of April last, called plaintiff a knave and a liar, because he had several times robbed and slandered the captain. I flung a belaying pin at him, and he picked it up and struck me with it over the head. The captain parted us and left the ship afterwards, and I asked plaintiff to follow me to the cabin that we might talk the matter over, but plaintiff told me that he would stab me and I discovered an open knife lying on a seat behind him. I threw the knife into the sea and struck him with my fist in the face.

Heinrich Rohkar, master of the *Johann Schmidt*, warned to speak the truth, said: I was in my cabin when I heard a noise, and when I came on deck I saw that the two mates had hold of each other. I pacified them and went ashore, but as I saw from land that they again were fighting I returned on board and heard the two mates abuse each other. I called them into the cabin and tried to make peace, but the chief officer struck the table with his fist and said that he wanted to see the Consul, and I gave him permission to go ashore. The chief officer's face was smeared with blood.

This deposition was then read, and sworn to.

Heinrich Fröls: I am cook on board. I was not present at the commencement of the quarrel. When I came on deck I saw the second mate repeatedly strike plaintiff on the chest, and heard him say, "I shall kill you." I saw no knife. I saw defendant throw a belaying pin at plaintiff. I saw the chief officer bleeding in the face, but I don't know the cause, and a Malay sailor holding defendant, but again letting him loose. Defendant then went into his cabin, and returned on deck with a sword in his hand; he drew the sword, and held it up before the Malay.

Defendant observed that he had nothing in his hand when he struck plaintiff in the face. He seized the sword because the Malay sailor dodged his steps.

Arnold Schütte: I am 18 years of age, and ship's boy. In the afternoon the second mate was ordered to have the sails made fast; the chief officer said that he would give the order. The two mates then quarrelled; the second mate threw a belaying pin at the chief officer; then they commenced to fight, each with a belaying pin in his hand, and the chief officer hit the second mate repeatedly on the head. The captain parted them, and went ashore, and the second mate then wanted the chief officer to go with him into the cabin; but the chief officer refused; the second mate then threw the chief officer's knife overboard, collared him, and struck him repeatedly in the face. A sailor took the second mate away. The chief officer bled in the face from the blows of the second mate. I did not hear the chief officer threaten to stab the second mate.

Defendant observed with regard to this witness that he must consider him as partial to plaintiff, because plaintiff lent that witness last Saturday $2, and has of late treated him with marked indulgence.

Witness said that it was not on Saturday, but on Wednesday last, that the chief officer lent him the $2, and that he had not in any way been indulged by the chief officer with regard to the ship's work.

The two last witnesses were then sworn.

SENTENCE.

Defendant is convicted of insult to and assault on a superior officer and is sentenced to pay a fine of 100 marks, to be imprisoned r one month and to pay costs.

REUTER'S TELEGRAMS.

London, 16th May, 1876.

PASSED CANAL.—*Outwards*—"Sarpedon," "Glenroy," "Peiho."

Homewards—"Bewick," "Benventura," "Patroclus."

London, 14th May, 1876.

The conference between Prince Bismarck, Count Andrassy, and Prince Gortchakoff at Berlin, was pacific, owing to the identity of their views as to the Rising in Bulgaria.

London, 12th May, 1876.

PASSED CANAL.—*Outwards*—"Hankivang," "Tartar."

London, 12th May, 1876.

The Commons rejected by 334 to 226 the motion of censure for conferring the Title of Empress of India.

London, 11th May, 1876.

The Centennial has been opened. The Prince of Wales has returned.

London, (no date,) 1876.

The Commons have adopted a resolution stopping the Sunday Liquor Sale in Ireland. The Government are opposing. The Commons rejected the motion of Mr. Rylands regretting the increased national expenditure.

There has been a serious rising in Bulgaria. The Christians in Turkey are uneasy, and the Mahometans excited.

The Berlin conference terminated with success.

Accredited Russia Military occupation insurgent provinces scouted (?)

France and Italy adhered to the memorandum which based Andrassy's scheme, and required guarantees from the Porte that it would execute the proposed Reforms.

There are more rumours flying about the settlement at the present moment than we have had for months past, all apparently proceeding from the bare fact that matters in Peking are in a somewhat unsettled, if not critical, condition. But nothing specific is known, nor will anything of a tangible nature be forthcoming until official news arrives at the Consulates from the North. That there is something to be told is, we believe, beyond dispute; but what that something is, we must be content to wait for a day or two until the information comes.—*Shanghai Courier.*

We hear that the ancient feud between the French Municipality and the Ningpo Guild is being raked up again. It seems that the members of the latter body have communicated with the French Consul through the Tao-t'ai, offering to make good any damage that may have been caused during the riot in 1873 to foreign property; qualifying their proposal however with the requirement that the sum of ten thousand taels be paid for every Chinaman who lost his life on that occasion, of whom there were, we believe, eight. This proviso will possibly impede negotiations.—*Shanghai Courier.*

THE CONDITION OF EGYPT.

In our desire to point out to the Japanese the similarity between the dangers which beset them and those which have brought Egypt to financial embarrassment, we made a few comments last week upon Mr. CAVE'S Report on the financial condition of Egypt. In these we attempted to show in what respects the two countries resembled and differed from each other, though we might have added that a very proper pride in Japan will certainly operate to prevent her ever placing herself in the same position as the KHEDIVE has in respect of his foreign creditors. The feeling here is very strong against foreign loans, and it is a very creditable one to the country.—In order to supplement our remarks, we publish the following letter addressed in October 1874 to the London *Spectator*, and which it was our intention to have placed earlier before the public. It will be remarked that not only is the similarity between the condition and efforts of the two countries brought out more forcibly even than in Mr. CAVE'S Report, but the embarrassments which now beset Egypt are shewn to have been then hanging over it. These two papers cannot fail to be useful to the Japanese.

[TO THE EDITOR OF THE "SPECTATOR."]

SIR,—As most people acquainted with the good-natured, industrious, and frugal population of the Nile Valley cannot but feel a lively interest in their future welfare, and as that welfare must in great measure depend upon their actual condition, their difficulties and their hopes being known in Europe, I trust you will not consider the humble effort to diffuse such knowledge out of place, especially at a time when the visit of the Khedive to Europe and the approaching publication of Sir S. Baker's book are likely to provoke some discussion on Egyptian affairs. Nor are indications wanting that the Eastern question may shortly again come to the front among the great political problems of the day, in such a shape that England will have seriously to consider whether her interests and her duties in the East do not require her to undertake the government of Egypt.

The natural advantages of Egypt are known to all. A fertility which the incessant crops of many thousand years have been unable to exhaust, a climate which never deceives the hopes of the husbandman, equally free from the unseasonable frost and blights of northern regions and the devastating storms of the tropics, excellent water-carriage throughout the whole length and breadth of the land, an industrious, orderly, and easily contented people, a position on the high road of commerce between the East and West, frontiers protected by the desert from neighbours contemptible in numbers and in ignorance of the arts of civilized war. Her coast is indeed open to the attack of any strong maritime power, but this very dependence on the forbearance of the more powerful European nations might seem to be an advantage, since hopelessness of resistance takes away all reasonable excuse for expensive and useless armament; and no surer guarantee of independence could be found than the mutual jealousy of the Great Powers, a jealousy which would extend to any attempt on the part of the Porte to draw tighter the slight bonds of vassalage which unite Egypt to its dominions.

This fortunate land has been governed for half a century by a dynasty which has produced more able rulers than any other Eastern family of modern times. The present Khedive is, we are told, a man of exceptional enlightenment and sagacity, distinguished for humanity, and studious of the arts of peace,—a patron of learning and of popular education, anxious to encourage all trade—except that in slaves—and eager to develop the resources of his country.

Under these favourable circumstances, what is the condition of Egypt? We might reasonably expect the people to be happy and contented, the expenditure moderate, applied to useful objects, and easily met by taxes scarcely felt in the midst of growing prosperity. The reality is widely different. The fellaheen's condition is worse than that of the serfs of the tenth century, since not only are they taken away from their villages and compelled to work gratuitously for weeks together in the factories and on the farms of the Khedive, while exorbitant taxes are arbitrarily levied, in true Oriental style, in proportion to the wealth of which they give any indication by improvements in husbandry and comfort, and to their power of resisting the persuasive arguments of the stick, but they are also exposed to the better organised oppression of modern civilisation, to a rigid conscription, and a more scientific system of taxation. So great are their sufferings, that some villages have been wholly deserted by the inhabitants, yet they have little reason to envy the townspeople. I dare not, lest I should seem guilty of exaggeration, repeat what I have heard of the amount of taxes paid by the native inhabitants of Cairo. Yet the Government cannot pay its way, and is obliged to have recourse to loans, negotiated on minors' terms, and to forced contributions, and is even now deliberating whether it cannot obtain some uncleanly profit by opening a gambling establishment at Cairo.

Though the expenditure is so enormous, little is spent productively; works of public utility progress slowly or not at all. In short, the country, notwithstanding some outward advance towards Western civilisation, such as the adoption of black coats and [illegible] and [illegible] French architecture in the newer parts of Cairo, is said to be far less prosperous and contented than it was twenty years ago.

It would be unfair to lay the whole blame of the failures of his administration on the Viceroy personally. Ismail Pasha is probably neither the able, humane, and enlightened ruler described by his servants, and believed in by travellers who see Egypt from the luxurious deck of a Government steamer; nor is he the cunning, cruel, and sensual Oriental of whom a startling picture is occasionally drawn for the benefit of tourists at Cairo. As far as one who has no personal knowledge of him can judge, he is a man who, possessing an Asiatic's love of luxury and display with considerable activity of mind, has been greatly dazzled by Western civilisation,—the civilisation of the Boulevards and the Palais Royal. He has appreciated the advantages of trade sufficiently to endeavour by means of monopolies and forced labour to become the one great trader and planter in his dominions. He has mixed with the Sovereigns of the greater European States on a footing of almost equality, and has striven to rival their splendour and imitate their over-grown armaments. Hence his Government is neither an Oriental nor a European despotism, but more oppressive and costly than either.

An old fashioned Eastern despot would also have kept a harem of 300 women, but he would not have subsidised Italian singers and opera-dancers; he might have built more palaces than he could possibly live in, but he would not at the same time have pulled down the beautiful Arab houses of Cairo to make room for dusty, glaring stucco imitations of Paris streets, making the town pay heavily for what are not improvements. He would have thought it quite natural to extract large advances from a wealthy subject by threats of exile to the Soudan, but he would not have understood the art of floating ruinous loans. He might not have done much for the encouragement of trade and commerce, but neither would he have been fascinated by the schemes of speculative adventurers, or have wasted his money in buying worthless machinery, and distressed his people by forced labour in his factories.

I had meant to have said a few words about the slave trade in Egypt and the open import of slaves down the Nile, but I have already trespassed far too largely on your space.—I am, Sir, &c.,

—*October* 1874. B.

Shipping Intelligence.

ARRIVALS.

May 27, *Tagoshima Maru*, Japanese steamer, Thomson, 650, from Hakodate, May 25, General, to M. B. Co.

May 29, *Sunrise*, British steamer, Lawham, 1,687, from London, via Hongkong, May 29, General, to Jardine, Matheson & Co.

May 29, *Crown*, British steamer, Joy, 1,298, from San Francisco to Hongkong, Apr. 30, General, to Jardine, Matheson & Co.

May 29, *Cladius*, German schooner, Mierschien, 253, from Hamburg, Nov. 24, 1875, General, to Siemssen, Evers & Co.

May 29, *Oxfordshire*, British steamer, Jones, 1,228, from Nagasaki May 25, Coal and General, to Jardine, Matheson & Co.

May 30, H.M.S. *Vigilant*, Captain H. D. Ryder, 870, from Kobe, May 27, 2 Guns.

May 30 H.M.S. *Audacious*, Captain P. Colomb, 3,774, from Kobe, May 27, 14 Guns, bearing flag of V. Admiral Ryder.

May 30, *Chiji Maru*, Japanese steamer, Drummond, 840, from Hiogo, May 28, General, to M. B. Co.

June 1, *Hiroshima Maru*, Japanese steamer, Furber, 1,870, from Shanghai and ports, May 24, Mails and General, to M. B. Co.

DEPARTURES.

May 27, *Tamaura Maru*, Japanese steamer, Nye, 540 for Hakodate, General, despatched by M. B. Co.

May 28, *Wallace*, American barque, McCormack, 628, for San Francisco, General, despatched by Wilkin & Robinson.

May 29, *Amanda*, German schooner, Harms, 225, for Formosa, Ballast, despatched by Captain.

May 30, *Crown*, British steamer, Joy, 1,298, for Hongkong, General, despatched by Jardine, Matheson & Co.

May 30, *Bulgarnie*, British barque, Brown, 324, for Chefoo, Ballast, despatched by E. Knoblauch.

May 31, *Lord of the Isles*, British 3-masted schooner, Watt, 317, for Hongkong, General, despatched by E. Fischer & Co.

May 31, *Tibre*, French steamer, Girard, 1,600, for Hongkong, Mails and General, despatched by M. M. Co.

May 31, *Edmond Gressier*, French barque, Fauquet, 300, for Chefoo, Ballast, despatched by Captain.

May 31, *Gokai Maru*, Japanese steamer, Connor, 1,917, for Shanghai and ports, Mails and General, despatched by M. B. Co.

June 2, *Johann Schmidt*, German barque, Rohkar, 434, for Newchwang, in Ballast, despatched by Captain.

June 2, *Tokai Maru*, Japanese steamer, Ward, 530, for Hakodate, General, despatched by Mitsu Bishi Co.

June 2 *Chiji Maru*, Japanese steamer, Drummond, for Osaka and Kobe, Mails and General, despatched by M. B. Co.

June 3, *Meiji Maru*, Japanese steamer, Peters, for N. E. Coast, Government material despatched by Light-house Department.

CARGOES.

Tea.—An active business has been done during the week, settlements amounting to 4,800 piculs.

Prices have ruled in favor of buyers, but are yet not sufficiently low to meet the ideas of some of our principal operators. The quality of parcels offering continues unsatisfactory, and the average of most lots shown must be bought at really cheap figures if they are to realize a profit in New York. Prices close to-day as under, with an evidently downward inclination. Stocks in Yokohama are ample and likely to be further increased.

The Steamer *Oxfordshire*, for New York viâ Suez Canal, is reported to have obtained a full allotment for space allowed to Yokohama, and will have despatch viâ Kobe and Amoy on or about the 10th instant.

Good Common	$16.00	to	18 00

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. tf.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

August 1st, 1875. 26 alt.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 24.] YOKOHAMA, SATURDAY, JUNE 10, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Considerable stir has been made among the mercantile community, both native and foreign, by the issue of a notification from the Governor of Kanagawa warning the Japanese against taking the notes of the foreign banks established here, on the plea that there is no sufficient guarantee of their stability. The two banks here which have a note circulation, joined by the Comptoir d' Escompte de Paris, which has no such issue but which equally resented so unjustifiable an attack upon the credit of the foreign banks, immediately retorted with an announcement that from and after Monday next they would refuse to receive the notes of any of the Japanese banks. The circulation of these has been considerable, but so little has their stability ever been relied on that they have never been accepted as cash from their customers by the foreign banks unless they (the banks) had deposits representing the value of the notes. Among the Japanese themselves they have floated to a fair extent, but in default of the publication of any trustworthy accounts the banks which issue them have never secured the confidence of the foreign public. The subject is referred to more fully elsewhere.

We have heard another account of the meeting between Sir Harry Parkes and the Corean Ambassador on the review-ground at Tôkiô on the 6th inst, which is more creditable to the latter than that which we quoted from the *Chôya Shimbun*. The meeting was accidental, but it appears that the Ambassador took advantage of it to thank Sir Harry Parkes warmly for the kindness shewn by him to a ship-wrecked Corean who had been lodged and fed in the Hakodaté Consulate and the Legation for nearly six months, and who has now been given over to the Ambassador by the Japanese Government.

A remarkable incident has taken place in respect of the attitude of the native journals *vis-à-vis* of the Government. Two writers for the Sémô Zasshi—the paper reporting the the incident calls them the two editors—appeared at the *Genro-In* personally to present a memorial on the subject of the Press-laws. The paper is one which is said to be moderate in its style, but animated by a strong purpose to obtain some relaxation of the Press-laws. An article from it will be found among our first leaders to-day, and this is said to be one of three on the same subject, the writers of all being pledged to urge their point by all lawful means.

A new station has been opened on the Yedo and Yokohama Railway at Omori, nearly half way between Shinagawa and Kawasaki, which will be a convenience to visitors to the temples of Ikegami.

A notification was issued by the Prime Minister yesterday announcing the death of the infant daughter of the Mikado, and prohibiting all music, dancing and singing for the space of three days.

It is gratifying to see that the representations lately made to the Governor on the subject of draining the Old Swamp Concession have led to an announcement that the work is to be immediately undertaken.

Mr. Campbell of Islay was here not very long ago, as many of us pleasantly remember. He made a good speech at the St. Andrew's dinner, and sang some Gaelic songs there and elsewhere with remarkable effect. On his return home he published a nice chatty book called *Circular Notes*, in which there is an amusing *resumé* of his Japan experiences, and which is reviewed in the mail edition of the London *Times* of the 12th April. But Mr. Campbell conveys some impressions which require a little rectification. Among others, he says that the shrines of the Shogûns at Nikko 'the finest things of the kind in Japan,' as his reviewer truly says, are all for sale with the change in the old religion. This is quite a mistake. The shrines are intact and in an exquisite state of preservation, nor do we quite understand what could have been the source of Mr. Campbell's misapprehension on this subject, for he was a very intelligent traveller. Not quite so obscure is the story about the pass with which Mr. Campbell set out on his journey inland from the capital, and which is said to have been worded as follows:—

"Passport No. 561.—England, H. M. Horsford, J. F. Campbell.—This person everywhere look about. From Yokohama starts. Either Nakasendo or Tokaido travels, and Kioto to get, and lake Bive to, and Nava if wish to go, and from. English Minister to Foreign Office writes. Therefore give passport. Must pass when show this passport. Don't fight. Don't trouble.—10th of 12th month. Seal."

The probable explanation is that it was issued before the new regulations about travel in the interior were published. Certainly it but very slightly represents the form of passport at present in use, which is about as unentertaining a document as can well be imagined.

The wreck of the *Surprise* was successfully raised on the 8th instant, and was safely towed into Uraga harbour the next day.

We have to ask the indulgence of the readers of our Weekly issue for a serious blunder in an article in the last number entitled 'Old and New Questions.' The second sentence of the first new paragraph in the second column of p. 491, lines 20-23, should have been as follows:—

"But the reserve and moderation of Locke and the absence from his works of those concise dogmatic formulæ which convert men into dangerous fanatics, are the true sources of the wholesome and nourishing character of his philosophy."

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

From the "Japan Mail Daily Advertiser."

Monday, 5th.

From the *Hôchi Shimbun.*

The first resting place of H. M. the Mikado after leaving the capital was at Senji, where several members of the Royal Family were in waiting. The band of the Imperial Marines was in attendance and played while His Majesty partook of refreshments. The Imperial party left Senji about 2 p.m. and proceeded on their northern journey, being accompanied to the further end of the village by the Empress and her suite, the Ministers of State and others, who there took final leave of His Majesty and returned to Tokio.

The *Akebono Shimbun* say that when the Corean Ambassador went to the Imperial Palace to be presented to the Mikado, he left his band at home, and so, out of consideration and respect for His Majesty, spared him the infliction of listening to Corean music.

From the *Hôchi Shimbun.*

The Corean Ambassador has presented His Majesty the Mikado with eleven packages containing specimens of the various products and manufactures of Corea.

Tuesday, 6th.

The following notification has been issued by the Governor of Kanagawa, and is little more than a repetition of one to the same effect issued in April last. Doubtless the Governor has acted under instructions from the Central Government, which is obviously interested in seeing that nothing but its own paper money should circulate among its subjects. Such part of this paper money as is replaced by foreign notes must add to the tendency of the whole paper currency to fall below the price of gold, and this tendency will naturally be resisted as much possible. But the grounds advanced to the Japanese trading community for declining to take these notes, is in a high degree objectionable and ridiculous. The foreign banks which issue them are establishments of reputation, whose accounts are yearly placed before the world for public examination and criticism, and it may be urged that the principles of sound finance are at least as well understood by those who manage them as by the Japanese Government.

NOTIFICATION No. 132.

Bank-notes, issued by foreign banks in the trading ports, have hitherto been passed as of equal value with the current money of Japan. Now, none of these notes have been issued by the permission of our Government and the amount of the capital possessed by these banks is not known. If the foreign banks should happen to close their offices through bankruptcy there might be many unfortunate holders of them (foreign notes). In Notification No. 90 of April of this year it was promulgated that mercantile transactions might be settled for in the paper-money issued by the Government, the National Bank, the Second National Bank, and the money of friendly countries. But it is said that there are yet many persons who consider the notification as of no importance. As above said, foreign banks have no permission from our Government, and it is unknown how much capital they may possess or when they may close their offices. So, it is hereby again notified that much care must be exercised by those who receive bank notes.

3rd June 1876.

NOMURA-YASUSHI.

Gon-Rei of Kanagawa *Ken.*

Shortly after two o'clock last night the fire bells rang out an alarm and it was discovered that a fire had broken out at No. 51, Benten-dori, at a small sugar store. The native and foreign fire-engines were quickly on the spot, and though they rendered most efficient service, and there was plenty of water at hand, were powerless to arrest the progress of the flames, until, spreading eastwards down Benten-dori and southwards across Minami-naka, they had destroyed some eighty houses in their course. Sailors from the Japanese and foreign men-of-war in harbour promptly appeared on the scene of the conflagration and did excellent service in pulling down houses. The fire was got under about 5 o'clock this morning.

The first number of the *Ostasiatische Zeitung* reached us yesterday. Its prologue consists of a modest address to its readers, and it contains a number of paragraphs upon the events of last week, items from the native papers, and some good extracts from the home German papers. The last paragraph on p. 10 might well have been omitted. It cannot be too strongly or too often stated that the public press has nothing whatever to do with the private lives of individuals, unless in the form of past history, or when they are exposed by public processes of law. Nothing is more surely calculated to degrade the press than any such association; nothing more certain to alienate from it the assistance of men of honour and good standing, and the respect and support of those from whom alone such countenance is valuable.

The *Mainichi Shimbun* says:—

A rumour has been current for the last few days that a telegraphic despatch has arrived from China stating that one of the Foreign Representatives in that country had been assassinated.

The *Nichi Nichi Shimbun* says:—

His Majesty's progress toward the north has been more rapid since he left Senji on the afternoon of the 2nd instant. The roads have everywhere been repaired, and the people are greatly rejoiced to see their Soveriegn. The farmers in certain parts of the country are ambitious to exhibit their industry, and all not being able to put on new clothes, have bought new ribbons to bind up their sleeves. The men wear them of white, while the women prefer red. They assemble in the fields, two or three hundred in number, and work where they may be seen by His Majesty. The local officials along the route assemble to greet their Emperor and to carry out his wishes.

Further:—The Corean Embassy have brought their provisions of food and drink with them, consisting of seventy-five piculs of rice, red beans, *saké*, vinegar, soy, salt, red pepper, dried *daikon*, oil, charcoal and wood. They seem to like their rice boiled with red beans, and use a great deal of red pepper. For the first few days they accepted the hospitalities of the Japanese Government, but since then they have declined the supplies provided for them.

The *Akebono Shimbun* says that a newspaper called the *Kinji Hioron* is about to be published in Tôkiô.

On the 3rd inst., the Corean Embassy were entertained at Hamagoten with a dinner in European style, and on the 6th instant will visit the Agricultural Gardens.

Wednesday, 7th.

At the Cricket match on Saturday last, "England *versus* The World" only nine on each side mustered. A fine, penetrating rain had set in, but notwithstanding this play commenced at 1.45. "The World" having won the toss were represented at the wickets by Dodds and Fraser, the bowling for England being entrusted to Tillard and Pike who shortly gave way to Symonds and Kirkwood. Runs came rapidly, and wides were frequent owing to the very greasy state of the ball. Hamilton's score was well and freely put together, loose balls meeting the fate they merited, and Dodds played carefully for his 25. The innings terminated for the somewhat large score of 166, the last two wickets falling to the first 3 balls of the Honorary Secretary's second attempt with the leather.

The innings of "England" calls for little comment. The rain came down faster than before and rendered it almost impossible to hold a bat handle. The bowling of Dodds, Fraser and Milne was very good, but not so the batting, as the holders of the willow seeming quite out of their usual form, Kirkwood and Baxter alone arriving at double figures.

We hear a return match will be played next Saturday, and we should not be surprised to see "England" regain her lost laurels and demonstrate effectually the glorious uncertainty of her favorite national game. We append the score in full:

The *Choya Shimbun* says that Mr. Yuka has been punished with a fine of five *yen* for having published a poem in the *Kumamoto Shimbun* in which the words "A person drew two swords" appear, these words having been found to bear a covert reference to certain officials of the Kumamoto *ken*.

The extreme levity of the reflections upon the credit of the Foreign Banks made in the Gon Rei's notification referred to yesterday, has had an effect which he certainly as little hoped as expected to produce. The Chartered Mercantile, the Hongkong and Shanghai Banks, and the Comptoir d'Escompte have given public notice that they will not receive any notes issued by Japanese Banks on and after Monday the 12th inst. Nothing can be more natural than that such a notification as that of the Gon Rei should produce a disposition to make reprisals. But the question suggests itself whether any practical good arises from action of this kind, beyond the sturdy protest which it affords to the thoughtless imputations made upon the credit of the foreign banks. There is no reason why Japanese notes on Monday next should not be as good as they were on Monday last, while those who issue them have been in no sense concerned in the offence which has produced the retaliatory measure now referred to. Two results therefore follow, neither of which seems desirable in itself. In the first place, in so far as these Japanese notes were used as a medium of currency, they promoted the interests of a trade which will be *pro tanto* prejudiced by the exclusion of them from circulation. In the second place, the effect of the retaliation passes by the Gon Rei whose act suggested it, and falls upon a number of offenceless men who, had they been able, would doubtless have repudiated indignantly the reflections and the act of their official superior. M. Vouillemont's letter of yesterday evening, giving figures of which the Gon Rei had perhaps as little conception as he has of the extremely solid character of all sound European banking—(nothing of course is beyond the reach of possible accident: the conditions attached to human affairs forbid this)—would we think, have answered all the purpose. It exposes the extreme absurdity of the Gon Rei's reflections, and this might have been enough. There assuredly is not a Japanese merchant in Yokohama who would not feel more secure in placing in his safe a promise to pay a sum of money a year hence signed by one of these foreign Banks, than a similar promise signed by any Japanese Bank in existence—possibly even than the promise of his own Government.

The P. & O. steamer *Bombay* with English Mails to the 21st April, arrived in port at 10 o'clock last night. The M. M. steamer *Muzdah* also arrived at midnight. The P. & O. steamer *Thibet* with the next English Mails on board, left Singapore on the morning of the 28th ultimo.

The *Choya Shimbun* says:—

It was understood that the Minister of Finance was to accompany the Mikado on his progress to the north; but Mr. Okuma has pleaded illness to excuse himself from the discharge of this duty.

The Mikado has expressed a wish that the traffic along his intended route should be interfered with as little as possible. His Majesty only desires that while he is on the road, or when he has arrived at any stage of his journey, or is setting out again, the traffic should momentarily cease, but as soon as he has passed or has entered his temporary lodging, it shall be resumed as usual. Many of the country people take off their shoes and voluntarily prostrate themselves as he passes, in honour of the Sovereign, but this is less done in the towns. The people are everywhere delighted at his visit.

A religious service extending over three days and commencing on the 7th instant, is being held at Uyeno in memory of those who fell there during the Revolution.

The *Nichi Nichi Shimbun* says:—

At 3.30 p.m. on the 5th instant, the Mikado witnessed a parade of the troops stationed at Utsunomiya.

Thursday, 8th.

By the kind permission of Captain Colomb and the officers of H. M. S. *Audacious*, the band of that vessel played at the Bluff Gardens yesterday afternoon. That few people were present to enjoy the performance was entirely owing to the wretched state of the weather, as, had the day been fine, the well known excellence of the band would doubtless have attracted numerous visitors to the gardens.

From the *Choya Shimbun*.

The Corean Ambassadors were present at a review which was held at Sakurada, Tokio, on the 6th instant, and were greatly astonished at the evolutions and equipments of the troops. The Coreans were introduced to Sir Harry Parkes, who was on the ground, but did not evince any satisfaction at making the acquaintance of the British Minister.

Nine Loochooans personally presented a memorial to the *Sei In* on the 6th instant.

At the parade ground of Narashino the question of wearing socks inside the boots has been fully tested by some of the troops stationed there, the result being to prove the desirableness of the men wearing boots only, without socks.

From the same.

A Barley Exchange is shortly to be opened in Kakegawa cho, Tokio, which will be conducted on the same principle as the Rice Exchanges.

The editor of the *Sakai Shimbun* has been sentenced to two months imprisonment for an offence against the Libel laws, having lately published an article to the effect that the officials were dilatory and unpunctual in the discharge of their duties.

From the *Nichi Nichi*.

On the 30th ultimo a fire broke out Samegai, in Oshiu, which destroyed nearly half the town.

Messrs Trübner & Co. of London announce that they will shortly publish a work by Charles G. Leland, (Hans Breitmann) entitled "PIDGIN-ENGLISH SING-SONG." This is a collection of Ballads and Stories in the English dialect spoken by Chinese, and is accompanied by a Vocabulary and rules for speaking this curious dialect. This is the first work of the kind ever published, and it is believed that it will be found not only amusing but useful to any persons who intend to visit the coast of China.

Friday, 9th.

From the *Chôya Shimbun.*

As many as four thousand people daily visit the Sakai Exhibition, which is therefore considered a success, while the Nara Exhibition is comparatively neglected.

From the same.

The Corean Embassy intended visiting Mr. Miyamoto, *Daijo* of the *Gaimusho*, at his residence on the 7th instant, but were prevented doing so by the bad weather. The Coreans have expressed a desire to purchase Japanese agricultural implements.

From the *Hochi Shimbun.*

A number of pupils, from the various common schools in the *Tokio Fu*, have been selected to undergo competitive examination for admission to the Normal College. The examinations commenced yesterday and will continue for several days.

The *Echo* announces, on the authority of the *Hochi Shimbun*, that the infant daughter of the Mikado, who has been unwell for some time, is now so seriously indisposed as to inspire the gravest apprehensions.

Saturday, 10th.

The P. & O. Steamer *Sunda* arrived in port shortly before six o'clock this morning, being three days and ten hours in advance of her contract time. She has on board English Mails to the 28th April. The next English Mail is not due here for seventeen days.

We are informed that the Directors of the P. & O. S. N. Company have decided not to make any general average claim for the towage of the *Surat* into Lisbon, the expenses of which they were entitled to, and her cargo, in consequence, will be delivered without question.

The return match "England *vs.* The World" will be held at the Cricket Ground this afternoon, commencing at 1.15 sharp. The band of H. M. S. *Audacious* will be present and play during the afternoon.

From the *Hochi Shimbun.*

Mr. Miyamoto, *Daijo* of the *Gaimusho*, has been appointed a Commissioner to Corea.

From the same.

The Corean Embassy paid a visit to the *Kaigunsho* on the 8th instant, and afterward to Mr. Inouye, the *Genro-In Gaikuan* at his private residence.

From the same.

Messrs. Torii and Komatz, of the *Hioron Shimbun*, were convicted of further offences against the Press-laws which rendered them liable to three and one months' imprisonment respectively, but these sentences have been remitted as they are still in prison for previous (and presumably more serious) infractions of the law.

From the *Chôya Shimbun.*

It is rumoured that Mr. Sanjo, *Daijo Daijin*, will visit the island of Yezo, on the return of His Majesty the Mikado from the north.

From the *Osaka Nippo.*

A thief has contrived to steal a lot of old coins which had been placed on view in the Kiôto Exhibition.

Alarming news has been received from Canton, stating that on the morning of the 25th inst., a rising took place in the Hok Shan district, which is to the South-west of Canton City. The Hakkas there rose *en masse* and have captured several important towns. Simultaneously with this movement a rising of the Hakkas occurred in the Ko-ming district, a place immediately to the North of the one first named. Several important positions have also been seized, and the standard of rebellion may be considered to be raised in both of these districts. Though brigandage is necessarily an element in this rising, the main object is, it is stated, not so much the plunder as the overthrow of the government. A great number of men and women have been seized by the rebels. The Canton authorities are in a great state of alarm and have despatched several high officers to put down the rebellion.—*China Mail.*

THE GOVERNOR OF KANAGAWA AND THE FOREIGN BANKS.

IT is not easy to conceive a notification couched in more injudicious terms than that which has just been issued by the new Governor of Kanagawa, warning the Japanese against taking the notes of the Foreign Banks of issue which have branches here. It is specially injudicious for two reasons; the first, that it makes statements directly contradicted by facts; and the second, that it suggests the most damaging recrimination and has led to serious reprisals.

In respect of the first reason:—The Notification says that "the amount of capital possessed by these banks is not known." The answer is supplied by any one of the local directories, which give the capital of all the banks having branches here. More than this: the Hongkong papers regularly publish a statement of the note circulation and reserve fund of these banks, and their yearly or half-yearly statements of assets and liabilities are accessible to any one who will be at the pains to enquire for them. In a country where the inestimable advantage of publicity is practically unknown, and where, in consequence, a convenient veil can be drawn over almost everything, men are not habituated to the idea—indeed can hardly bring themselves to entertain it—that in other parts of the world publicity is the life and soul of associated enterprise, at once the source and evidence of strength, the condition and cause of healthy and vigorous existence. But so widely does the life of the West and that of the East differ, that some excuse may perhaps be urged for the ignorance which presumed that one was only the counterpart of the other, and, from this point of view, the Notification of Mr. Nomura-Yasushi is intelligible. It may not be agreeable to the Governor to have his indiscretions excused on the ground of his inexperience of the institutions with which he has brought himself somewhat violently into contact, and it is even possible that he has been compelled to issue a document which his own better sense repudiates as unsound. But when a man breaks his head against a post, it is a more cheerful and even complimentary explanation of the accident to presume that he did it by inadvertence or in the cause of discipline, than to suppose that he was actuated by any malevolence, or cherished any illusions regarding the relative hardness of the two substances.

In respect of the second reason for impugning the judiciousness of the Notification, the shot fired by the Governor has been returned by a shell from the banks, and while the gun from which the former was sent has recoiled and tumbled the artilleryman into the mire, the shell from the opposite side has burst amidst a rather thick knot of men, and, if we mistake not, has done considerable execution. The Governor could only warn his countrymen not to take the foreign bank notes, while the foreign banks have announced their intention to refuse from their customers any notes issued by the Japanese banks.

On the first blush it certainly seemed to us that the apparently purely retaliatory nature of this measure afforded serious ground for regarding it as excessive and perhaps unwarrantable. But there is good reason to believe that the objectionable Notification of the Governor was only seized upon as an opportunity for terminating a condition of affairs which had long been felt to be very unbearable. The notes now proscribed by the three banks—for it is observable that the Oriental Bank has not joined its *confrères*—have been a constant source of apprehension to the foreign merchants and bankers. Unless the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

institutions which issue them happen to have cash balances in the hands of the banks exceeding the value of notes paid in on any given day by the bank's customers, such notes are never regarded or acknowledged in the pass-books as cash, but simply as so much paper for collection. The native merchant pays the notes to the foreign merchant for goods bought, and takes away those goods in virtue of such payments. But if the latter keeps the notes until next morning, or pays them into his banker after the hour at which the native bank closes, he never can and, as a matter of fact, never does, feel certain that he will receive value for them next morning. There has been an airy arbitrariness about the time when these native banks cashed their notes (payable on demand) which finds its only parallel in the capricious appearance of a certain popular comic journal published not a thousand miles from Yokohama. If there was specie enough in the till or the vaults, the notes were paid; if not, they were not paid. The delay might not exceed twenty-four hours, or it might extend to four or five days. That depended upon other things, and this upon other things again. Now it may fairly be pleaded that this is not serious banking. The uncertainties of trade are quite bad enough without their being increased and complicated by questions touching the quality of the paper handed to the merchant in payment for his goods. Every such additional uncertainty operates in undermining that confidence which is the life of vigorous trade, and it is rather too much to expect that men who have the power and right to choose between putting to sea in a leaky vessel without rudder, chart or compasses, and one well found in every respect, will hesitate long in their choice.

In this view, there seems to be fair justification for a measure which would certainly not have approved itself to us as one of mere retaliation. It affords, too, a reply to one of the native papers which asks why these notes have hitherto been taken by the banks which now refuse them, and which attributes their recent action to a revengeful and therefore reprehensible origin. The truth is that, in cases of this kind, things go on from month to month, and even from year to year, because there is no overt act which affords a good occasion for taking action against them. First, the notes which ought to be cashed to-day are not cashed until to-morrow. People hear of this, complain, shrug their shoulders, and take the notes of the same bank—from the sheer necessities of the trade—on the very day after. A month later, two or three or four days elapse before a parcel of notes is cashed. Again the event is disclosed and discussed, and yet again the notes are taken. People all say it is very unsatisfactory, but what can they do? They must run the same risks as their neighbours; they must keep moving; the ground is unsafe and quakes under them, but they cannot stop and cannot go back—there is only one other alternative and this they accept. But, at last, something happens, as in this case, which demands decisive action, and, of course, it takes an offensive form, which is so far defensive as well that it puts an end to a danger which has been a very sword of Damocles hanging over the whole trade.

It will be observed that one of the objections made to the circulation of foreign bank-notes is that the banks issuing them have no permission from the Japanese Government to do so. This cannot be denied, but it admits of two answers which, separate or united, seem wholly unanswerable and amply sufficient. In the first place, these notes are issued primarily for the convenience of foreigners alone, and are in no sense forced upon the Japanese, who only take them because they have confidence in them. Nothing could be more unreasonable than for the Japanese to imagine that because we are here in the capacity of traders, we should or could be compelled to take a native paper currency in which we have no confidence. In like manner, it would be opposed to all reason and justice to forbid Japanese subjects to take foreign in preference to native notes, if they felt such a preference. As well might men be forbidden to lay solid foundations under their houses, or to guard their property with doors and locks.

In the second place, the existence of banks is one of the conditions of any trade which has risen above the most rudimentary form. We cannot do without them, and if we have them they must be of a solid character. That these foreign banks inspire ample confidence among ourselves is proved by the fact that we entrust our money to them, and accept without hesitation their promises to pay at very distant dates—as in the case of permanent deposits at interest. Should we do this with any Japanese bank? Most distinctly, not. If the Japanese think there is any semblance of injustice in the circulation of foreign notes in this country, the answer is, that there is no reason why, if their trade and finances are otherwise sound, this circulation should act to their prejudice; and it is certain that foreigners never would accept such banking as the Japanese could offer them. The case is a little like that of extra territoriality jurisdiction. It involves anomalies, and we should even go so far as to say injustices, in a certain sense. But these lie in the nature of the best provisional arrangements which can be made for mutual intercourse, pending the making of more perfect arrangements. If they may justly be termed, in some remote and perhaps sentimental sense, injustices, they exist to prevent other and far greater injustices, which else would be equally inevitable and fatal to all mutual intercourse. As we have already said in a shorter note on this question,* the act of the GOVERNOR is doubtless the result of orders from the FINANCE MINISTER, whose business it is to protect, by all legitimate means, the large floating currency of the country. It is natural, and, indeed, perfectly right, that Mr. OKUMA should be jealous of the intrusion of any paper which threatens to displace that of the Government. But his end will never be attained by casting suspicion upon the paper of the foreign banks. The Japanese merchants are shrewd judges, and if they have more confidence in foreign paper than in their own, they will take it in preference; nor is it wise to prevent each man placing his trade on the most solid foundations he can lay. The strength of every individual strong merchant in this country is so much additional strength to the country itself. A strong rope is only a twisting together of hempen threads. If each of these is rotten, instead of sound, what is the strength of the rope? Will any one pretend that a bank which would lose its credit for ever if it delayed only for one hour the cashing of any quantity of its notes which might be presented to it, is not better than that of one which cashes its notes with one or five days' delay as may happen best to suit its convenience?

As regards the effect of the collision between the native and foreign banks—for this is what the late action of the GOVERNOR resolves itself into—it is not very wise to predict, but a conjecture or two may be hazarded for what they are worth. In the first place, the native banks of issue will make a great struggle to maintain their position, and will

* Vide *Japan Mail Daily Advertiser* of the 6th instant.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

place as large a deposit as possible in the hands of the only bank which has not joined the other three, in order that the foreign merchants may be induced to accept such notes as before in payment for imports. So long as these notes are placed to their credit as cash, the foreign merchants will be forced to accept them, because every man who refuses to do so will lose his customers. On the other hand, money is extremely 'hard' at this moment, and though we are now in the quietest time of the year for imports, the banks may not be able to find specie enough to represent by anticipation the total issue of notes they desire to float. This will tend to increase the circulation of the foreign banks, and if financial affairs grow worse here, the Japanese will certainly feel more confidence in our notes than in their own and use them in preference. Lastly, if we are right in supposing that the native banks will increase their deposits with the Oriental Bank, the latter will find an increase in its accounts, because the foreign merchants will take the notes received from the native traders to the only bank which has not refused to receive them, and which has besides a deposit of specie as a guarantee that they will be paid. That the movement of the three banks will strengthen the position of the foreign merchants, and remove from the trade an element of great insecurity and anxiety, is unquestionable. But we do not see so clearly that it will do the banks themselves any good, and this is what the Directors will think most about.

BRITISH CONSULAR TRADE REPORTS FOR 1875—NAGASAKI AND HAKODATE.

THE Trade Report of Mr. FLOWERS published last week, and that of Mr. EUSDEN now placed before our readers, will inform them of the course of business during the year 1875 at Nagasaki and Hakodate respectively. As regards the former, the total trade shows a decrease of $533,572, attributable chiefly to a falling off in the import of cotton and woollen goods, arms, and the export of miscellaneous eastern produce, such as dried fish &c., and in which rice, copper, ginseng, wheat, mushrooms and timber are included. By far the most important and satisfactory item in the table of exports is Coal, which has increased from 79,384 tons in 1874 to 124,930 tons in 1875. The output from the Takashima mine is now 600 tons a day, the supply is calculated to maintain this for some years to come, and the coal meets with a ready market. The mine gives employment to about three thousand persons, exclusive of those who are engaged in the transport of the coal to Nagasaki or its discharge or shipment there. Is it not true that there are at least four more mines in the neighbourhood which might be worked with equal advantage to the country? Reports of a very solid character to this effect reach us from time to time, and considering the great value to Japan of this form of enterprise, it seems equally unintelligible and lamentable that more effort is not made in this direction. Japan is really in a position to lay half the East under tribute for coal. She could certainly entirely displace England and Australia, and with markets extending in every direction around her, could enrich herself by supplying her neighbours. Nor should any time be lost in this direction, for China is certainly on the move with the same end in view. We believe we are correct in saying that the mines in Formosa have been surveyed, and that machinery has been ordered out to work them under European superintendence. When the Chinese have once realized the advantage of mining enterprise, it is probable they will pursue it in good earnest, and it should be remembered that they possess an area of coal-bearing country second only in extent, if indeed second, to that of the United States. If they feel that European capital, skill and methods are required for the purpose of working this, they will engage them, and will soon wrench from Japan the advantage she possesses at present of being the first in the field. It should never be forgotten that the success of the effort we see being made here entirely depends upon the financial strength of the country. If this be preserved, we may be sanguine of success; if not, all the good intentions in the world will be of no avail.

It is satisfactory to see that the decrease in the export of Tobacco from Nagasaki has been caused by exceptional circumstances, and is likely to disappear from the records of this year. The article has found favour in Europe, and an increasing export of it should help to restore the balance which it is so important to see established between our exports and imports.

MR. FLOWERS insists strongly upon the necessity for improving the roads leading to the interior, and adds the gratifying information that the Governor appears quite alive to it.

Turning to Mr. EUSDEN's Report, an increase is observable in the trade of Hakodaté in 1875 over that of the previous year. But the happiness of Hakodaté is that of a country with no annals. All we learn is that the submarine cable between it and Awomori is broken, and that there is a school established at Sapporo, one section which at least—the girls'—ought to succeed if success depends upon the qualifications of the lady under whom they have been placed. But one cannot help feeling that Sapporo is somewhere up in the clouds, and human sympathies are expended before they reach so far. It would have been gratifying to learn that the efforts of the Kaitakushi Department are making some impression on the Island of Yezo. A vast sum of money has been spent there, and the reports of the surveyors show that they at least have done some good work. But one cannot but experience an inextinguishable desire to know what has, or is to, come of it all.

SPIRIT OF THE JAPANESE PRESS.

PAST AND PRESENT.

("Hôchi Shimbun," of May 31, 1876.)

Upon consideration of the first commencement of our relations with foreign lands, we find that since that time more than twenty years have elapsed. Now what was the actual nature of the stage of advancement to which Japan had attained twenty odd years ago? If we cast a backward glance over this period, there crowd across our vision, swarming like caterpillars, events, some of them worthy of laughter, others of grief, and others again of indignation. Two hundred years of profound peace had sapped the energies of the whole nation, and the policy of exclusion had become in their eyes a law as precious as gold or jewels, when some black vessels suddenly forced their way into the Shinagawa sea, and aroused us from our springtide dream of peace and tranquillity. The fishermen who angled for profits left us, but again returned, and with a cast of their net caught and entangled the minds of the officials of the Shôgunate, alarming them with a display of their power. Their specious baits deceived the latter, who were approached both by persuasion and by threats, and even the settlement of those Treaties, by which an inch was granted but ten feet taken, was quietly agreed to by us, in our ignorance of the hardships those Treaties might in after time entail upon us. Our sole object was merely to avoid present troubles. How could we foresee that the peach-blossoms of our tranquil state would fall scattered hither and thither leaving no fragrance behind, and that, when the springtime had passed and the summer had gone by, our former joys would eventually give place to present regrets; or that we should ever reach a day, like the present, when the autumn winds blow chill upon us!

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Upon reflection, how could our countrymen, at the date of the first arrival of the Americans, possibly have known how to deal with them diplomatically? Even had we at the time resented and refused the Treaties, this would not have arisen from our calculations of future advantage. Intimate relations with foreigners being the matter of all others most distasteful to the Japanese people, the only anxiety of the Shôgunate would have been the question whether the people would create disturbances or would remain quiet. How should the Shôgunate have felt the desire of extending, by means of those Treaties, its benefits down to the present day? For this reason, then, even though we may at the present time, when we look at the Treaties granted by the Shôgunate, feel anger thereat, how can we exclusively ascribe them to the fault of the Shôgunate. It was owing to an unavoidable tendency of affairs.

If, however, we consider how matters stood more than twenty years ago, and enquire into the state of progress then existing, and if we then make a comparison with the present time, we shall find that that period of over twenty years has certainly not merely passed by uselessly. For even though we cannot but feel regret that our wealth and possessions should have been driven forth beyond the seas, we must nevertheless feel pleased that we have acquired knowledge from foreigners, which we have developed amongst ourselves. Supposing that we had caused the spring breeze of former days to blow warm even up to the present moment, had preserved our peach blossoms and our happy dream, and had never at any time unfastened the lock on the entrance to our cavern, how could we at the present time be able to view the state of affairs we now behold? If we fix our attention on this, we must cease to chatter about the troubles that have arisen from our foreign relations, and consider for awhile the advantages accruing therefrom. When we reflect that we have, by means of the wealth and treasure of our land, acquired the knowledge and arts of foreigners, we ought not, even though the price be an exceedingly high one, to feel the slightest regret for this.

We will proceed, in the same spirit, to make some remarks upon the nature of the circumstances which led to the recent arrival of a Corean Embassy and the re-establishment of friendly relations with that country. Just consider what was the source of our ancient literature. It came originally from China. Thus, then, its real home was China, but still its introduction direct from China was a matter of much later date. In the first instance it must have been through the medium of Corea, a branch establishment as it were of China, that we received it, at second hand. There is, therefore, necessity for arguing the fact that one half of our literature in olden times was obtained from Corea, and at the present time, seeing that there are clear proofs of our literature having been imported from Corea, it is only necessary to give a glance at the evidence of her having, in olden time, rendered aid to that literature. The intercourse between Corea and ourselves was, however, all but wholly broken off after the expedition of the Toyotomi Taiko, and the single link connecting us with her was that still maintained by the merchants of Tsushima. But the Coreans looked upon the people of Tsushima solely with glances of hatred and suspicion, and their demonstrations of friendliness were of course far from approaching cordiality. Owing to these circumstances we had no means of ascertaining accurately the condition of the interior of the territory of Corea, or the extent to which her state of wealth and literature had advanced. But from the recent visit of our High Commissioners to that country, we have, at last, acquired a knowledge of the actual condition of her internal affairs, and that condition has raised in our mind some quite unexpected impressions.

Supposing that the old condition of our country had been maintained up till the present time, consider what would have been presented to our view on the occasion of the recent arrival of the Corean Embassy. Should we have seen those officials arrive on board a steamer, and, landing at Yokohama, at once proceed by rail to the Shimbashi Station? They would have braved the waves in a vessel of a single sail and so come to Nagasaki. Next, they would have come overland to Yedo. The persons appointed to look after them, again, would not only have been beings of a different stamp to the Coreans, but would on the contrary, as regards such matters as literature &c., have been actually inferior to them. At that period, even though they had ridiculed the Coreans, their laughter would merely have been excited by the difference apparent in their style of dress, and this would have been just the same as their laughter when they first saw the Americans. But still, when we now look at the Coreans and examine their condition, the ideas that spontaneously arise in our minds do not, it is very clear, come from similar considerations to those which caused us in former days to laugh when we saw the Americans.

We have obtained an article recently published in the *Gazette* newspaper treating of the relations between Japan and Corea. It says:—"At the present time the Japanese have dealt with the "Coreans in the same manner as that in which they themselves "were in former times treated by others (meaning, by foreigners). "Upon a consideration of the Treaty drawn up between "the two nations, it will be found that they have already rejected "the objectionable spirit of the East, and have adopted the usages "of the West. Japan is the forerunner of civilization in regard to "the East, &c." Now, although we cannot give full credit to this article, still there may not be wanting some reason for western people holding ideas of the above nature.

By the Treaty which we have now concluded with Corea, we have not only dried up the source that has for many years given rise to internal disturbances in Japan, but we have also the satisfaction of observing that our present mode of dealing with Corea is unlike that existing twenty years ago, and is similar to that adopted by the Americans towards us at the time in question. Thus, if we now judge the Coreans by the standard of their appearance to our eyes, we can easily conjecture the degree of advancement to which we have attained during the period of twenty years, and can also ascertain the extent of our advancement prior to the said twenty years. These reflections will assist us to forget the losses we have sustained for the past twenty years, and will afford us some slight degree of consolation.

The Condition of the Country.

(Akebono Shimbun.)

(A Precis.)

Be it the Amazon or the Mississippi, their sources are but minute springs in the mountains and hills, and it is the same with a country. Be it England, Russia, Prussia or France, the source of their power and wealth is their people. Thus if those little springs should cease to bring forth water, the rivers, however great they may be, would dry up, and similarly, if the people of a nation become poor that nation will inevitably fall into insignificance. Now, when we cast our eyes upon the present state of our capital, it is true that we see buildings of brick and stone which have been constructed in an elegant style, iron and stone bridges crossing the rivers and canals, and fine roads with beautiful avenues of trees on both sides, and that the people who come to the capital for the first time from the interior are dazzled with its beauty, and that never has such a capital existed in Japan before the present time. But when we examine into the condition of the people, what is it? Never have they been so poor since the Tokugawa dynasty assumed the Shôgunate as they are now, and it seems as though the springs cannot much longer yield water, and that the large river itself is about to dry up. Since the famous banking houses of Ono, Shimada, and Dairoku became bankrupt, many cases have occurred of the people being unable to regain what they had lent, or to obtain payment for what they had sold. Thus the merchants of the middle class are continually becoming bankrupt, and the stability of the larger ones becomes the object of suspicion by the people. Thus they can no longer carry on large transactions, and the people are not only decreasing in wealth, but the first class merchants of former days are falling into the second class, and thus, as before said, their power to carry out large transactions is crippled. Others are just able to keep their rice-pots filled by forming companies, and, as the public can see for themselves, the poorer classes are poorer than ever. Should such a condition of affairs last for some years to come, it is impossible to say what may not be the result.

Yedo was in a flourishing state during the Tokugawa rule, not because the people were more intelligent during those days, but because there were then two hundred and eighty *goshikis* of various *daimiôs* filled with their families and retainers, all of whom were consumers, and whose custom supported the purveyors of all kind of necessaries and luxuries. But when the Revolution broke out the *daimiôs* became poorer and began gradually to return to their provinces. Three years later the *Han* were abolished, and this not only made an organic change in the form of government, but it had no small connection with the fortunes of the gentry and the military class, then absolved from the necessity of performing military service. These men then took to mercantile business or to farming in their native provinces. But having failed in these forms of enterprise they migrated to the capital and sought for office under the Government. But the number of officials is necessarily limited, and as every *shidzoku* could not find official employment, there

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

were many unsuccessful applications, their money being meanwhile spent in the effort to obtain posts under the Government. Thus they were forced to take to some kind of business which they carried on in the houses of the *daimiôs*. So the *daimiôs* became landlords and their retainers merchants, and in this manner, too, those who were formerly consumers became purveyors. Now although these *shidzôku* understand very little about business, they work very hard to obtain a living, and this increases the competition which the old merchants have to encounter. Hence bankruptcies occur on both sides, and, to express the present condition of affairs in one phrase, we should say that the equilibrium between producers and consumers has been disturbed, and the former are largely in excess of the latter.

In addition to all this, when we look into the state of our foreign trade, we find our exports gradually decreasing, and this justifies us in saying that the sources of our prosperity seem to be drying up.

Tôkiô, our metropolis, being in this state, we must look for a moment at the condition of the provinces, and we find it to be as bad, if not worse, than that of the capital. All this arises from the paucity of consumers and the excess of purveyors, and the origin of all the poverty in the country is the same. Moreover, many of the farmers in the provinces are greatly irritated by the reform in the land-tax. They approve indeed of the tax, but as they have to change a system, which had become part and parcel of their whole nature, they are greatly annoyed. The province of Omi is supposed to contain more wealthy men than any province in Japan, yet the Omi farmers were forced this year to go to Ôsaka and Kiôto in order to get the means of meeting the taxes due from them. If this is the case in so wealthy a province, we can well imagine what is must be in others less prosperous. Moreover, gold is continually flowing away to foreign countries, and we cannot see how some great calamity can be averted from this country. We have therefore written these words in hopes that some learned men will point out the means by which such misfortune may be avoided.

The Law of Libel.

(Somô Zasshi.)

With what object has the Law of Libel been enacted? We are of opinion that it was with a view to protect the character of individuals. One of the Sages has said, "Reputation though unembodied, is often more precious than what men call property." These words seems to us true, for it is not seldom that men derive substantial happiness from their reputation.

Like other property, reputation is the result of industry and perseverance, and, for this reason, a man has just as much right to have his reputation protected as any other form of property. Thus we are persuaded that the Law of Libel is necessary. But the first clause of the law begins in this manner:—"Any statement whether intrinsically true or false" &c. Are these words in real accordance with the definition of libel? The word libel means a false statement derogatory to the reputation of some one. But when the words "whether a statement be intrinsically true or false" are used, it seems to us that our Law of Libel not only protects the good but the bad as well.

It is, of course, quite right that reputation should be guarded against injury from slanderous statement. But it is, on the other hand, also quite right that if a man has committed an evil deed he should bear a bad reputation; nor do we see, under these circumstances, how there can be any need to protect his name. To us it appears that the law is not called upon protect such honour.

This very Law of Libel provides that "if any one connives with a guilty man and alleges him to be innocent, he renders himself liable to punishment." The law thus ordains that men should not be partial and say that guilty men are innocent; and yet in another place it ordains that no statement must be made which injures the reputation of any one, even though such statement be true. Does not the law here show partiality towards the guilty, and must it not be regarded as oppressive if it prevents others from doing so? The words "whether a statement be intrinsically true or false" ought to be expunged; or, if that be impossible, then the words "he who connives with a guilty person and represents him as innocent" ought to be expunged, for these two expressions cannot justly co-exist in one law.

Are people prohibited from exposing the evil doings of men because it is the duty of the Government to do so, and in order that men should not occupy themselves with the misdeeds of their neighbours? Or is it because the Government desires to teach the people decorum, and thus prohibits the relation of what is indecorous, although imputed truly.

If the former, are all the officials in the service of the Government men of the hightest talent and virtue? If not, they may at times make mistakes and take innocent for guilty men. They may be acquainted with cases of dishonesty or they may not be thus acquainted, and may fail in dealing with them from feelings of partiality. Moreover, from ancient times downwards there have constantly been officials who by misusing their power and actins in an arbitrary way have become oppressors and thus the worst of evil doers. If it be said that the people have no concern in the acts of the Government, this is the same as saying that the officials have a right to act corruptly, and that the people have no right to mention or protest against it. This would be treating the people as slaves, nay worse, as fowls or beasts. If the people are prohibited from enquiring into the acts of the Government or making comments upon them, why should they be prohibited from making comments upon conduct which, though immoral, does not bring the actors within the reach of the law, such as indolence, habits of intoxication or other vices?

Or is it the latter? A wise man has said, "There are two sides to a man's conduct; one side he must make to conform with the regulations of the Government, the other he can please himself about." The former is represented by his public acts, which have a bearing upon society; the latter ends in himself. What are the actions which thus end in a man's self? They are the vices of indolence, intoxication and such like. These practices are wrong and reprehensible from a moral stand-point, and they might be prohibited by the Government. But why are they not prohibited? Because they do not affect others. Yet it would seem that, whether right or wrong from a moral stand-point, so long as statements are not false and relate to conduct which does not affect the public in general, it is not within the province of the Government to prevent their being made.

Laws can examine into and check the external actions of men, but they cannot examine into and control men's minds. They may terrify the public writers and prevent them from exposing the misdeeds of their fellow men, but they cannot change their feelings in respect of those misdeeds. And thus, although these laws may have produced some effect upon the editors and public writers, the effect is confined to them alone, while the injury which has been inflicted upon the morals of certain classes is something prodigious.

Morality is partly the effect of the fear of an impaired reputation, and partly fear of punishment by the state; and those who pursue virtue from any other motives than these are rare indeed.

No official can be punished for arbitrariness or immorality which terminates with himself, and many take good care not to give way to over indulgence from fear of losing their reputation. But these words (in the Libel-law) protect the reputations of such officials, however arbitrary or immoral they may be, and thus they can indulge themselves in these vices to their heart's content, so that these words have not only failed to promote the cause of morality and decorum among the people, but have become the foundation of increased degradation among the officials.

It is impossible therefore to understand why they have been incorporated into the Law of Libel.

The Shidzôku in business.

(Chôya Shimbun.)

A Shidzôku beginning with a capital of one *yen* can easily support his family, while another with ten *yen* will find more difficulty in doing so. Again, a man with a hundred *yen* finds more difficulty still, and one with a thousand finds the greatest trouble in making both ends meet. This may sound strange at first, but there is reason in it for all that.

Let us suppose that a man has only one *yen* with which to commence business. He becomes a vegetable dealer or something of that kind, and must work very hard in order to maintain himself and his family. Of course a man with ten *yen* ought to make a living more easily than he who has but one. But, unfortunately, he feels himself the proud possessor of ten *yen*, and thus thinks more about his capital than his industry. It is the same with all those who possess capital. Of course if a man who has a thousand *yen* could be got to work like him who has only a hundred, he would prosper more certainly. But the misfortune is that he comports himself as one who has ten thousand *yen*, and thinks to himself "I was once a warrior!" Thousands of such men have become merchants, but not one of them has prospered.

For this reason I advise all the *shidzôku* who are bent upon going into business to labour industriously, and to think of every thousand *yen* they may possess as of a hundred, and not *vice versâ*.*

* We may fairly draw attention to the shrewdness and knowledge of human nature shewn in these few words.—[Ed. J. W. M.]

THE IMPERIAL NAVAL COLLEGE.

A few centuries ago when England was 'merrie England,' before the earth was belted with wire or mankind had discovered the existence of public credit, the ways of a monarch who had resolved to create or improve a Navy were cast in rough and thorny places. With infinite pains and after repeated and distressing failures he had possibly succeeded in equipping a scanty fleet, which, if it escaped his enemies and was spared by tempests, fell perhaps a victim to the incapacity of its navigators. Or he may have resolved to learn the way to success by personal sacrifice and exertion and, like Peter the Great, have laid at Haarlem and Deptford the foundations of at least one source of the strength of a mighty empire. But we have changed all this. The Sovereign of to-day has other resources at his command. One touch of the magic wire which ends in Cornhill summons to his aid the accumulated treasures of the earth, and, at a nod from Rothschild, obsequious capitalists hasten to place their millions at his service. For him the ponderous steam-hammer rises and falls, the mighty rolling-mill revolves, the teeming brain of the inventor throbs, and Britannia, even, good-humouredly consents to lay aside her casque and trident and teach the bloodless lesson of her greatness on the element of which she is wont to claim the empire. Such, briefly, is the modern process by which a naval power is evolved. We purpose to show the steps Japan is taking in this direction, and the means by which under European direction she will, it is to be hoped, succeed in organising for herself an instrument at least of future freedom and independence, if not of conquest and glory.

Of the first attempt made by the Tokugawa Government to create a navy under European superintendence and direction we do not now propose to speak. There is every reason to believe that in the competent hands of the present Director of the Chinese Imperial Navy, Capt. Tracy, R.N., who recently visited us, it would, had the times permitted it, have achieved success. But the fall of the Shogûnate involved the close of the experiment, and Capt. Tracy retired from this country and transferred his services to the neighbouring empire. It was not until the year 1870 that Lieutenant Hawes, a retired officer of H. M. Royal Marine Light Infantry, was entrusted with the task of organising an Imperial Naval Service,—or some nucleus of such a service—out of the confused and chaotic material which then existed, and, nothing daunted by its difficulties, accepted the task. One vessel alone, the warship now known as the *Riojokan*, which belonged to the *Daimio* of Higo, was placed at his disposal, and this, too, encumbered with the condition that its crew and officers should be composed exclusively of *samurai* and men of that clan. Lieutenant Hawes did not fail to urge the grave objections which, he foresaw, must arise from this stipulation. He pointed out that the Government was creating a dangerous power in drilling and arming clans which might one day be brought to bear against each other or itself, but recognising the danger of abrupt measures he counselled the gradual substitution of men drawn from other clans as casualties occurred and opportunities offered. The labour of organisation was no slight work. The ship was indeed a man-of-war; it had cannon, rifles and a magazine; but its cannon and rifles were rusty, its main deck—of which the *samurai* required about two-thirds for their accommodation—was partitioned off with paper windows and matted after the manner of a Japanese apartment, while, on all sides, its occupants reclined or squatted on the mats and whiled away the leisure hours—and these were many—with interminable pipes for which the ever-present *tabi'ko-bon* furnished ample material. The *samurai* wore their two swords, nor could they be prevailed on to lay them aside. Worst of all, filth and disorder were everywhere, and the discipline "which should deracinate such savagery" was absolutely wanting. To cleanse this Augean sink was Lieutenant Hawes' first duty, and, one by one, such reforms as could best be effected were introduced. The decks were swept clear of their filth and lumber, hammocks replaced mats, a few seamen—placed at his service by the kindness of the British Admiral—taught the natives their craft and gave them an example of discipline, cleanliness and smartness, and, ultimately, the cumbersome and flowing native robes were exchanged for the convenient clothing of modern navies and, for the nonce, the two swords were stowed away in the lockers. And then the introduction of 'fresh blood' into the young navy was indeed carried out by wholesale process, a process which spared but little of the original ship's company. With the exception of a selected few the whole crew and their officers were discharged and their places filled with others—Satsuma, Chôshiu and Higo being the clans chiefly employed for the purpose—and the complement of the vessel was fixed at 275. Other vessels were added in course of time and partook in the newly introduced organisation, until at length, by the intelligence and influence of one officer—and he not a seaman, although of a profession somewhat akin to it—the foundation of the present Japanese naval force was successfully laid. Lieut. Hawes preserved his connexion with it until the year 1872, when the organisation of the Imperial Marine Light Infantry was committed to his charge. To his energy, patience and skill in combating the difficulties incidental to the position the Japanese are largely indebted for the hopeful condition of their Navy, and the sincerity and thoroughness of his work were warmly acknowledged by the English Naval Mission which succeeded him in the following year and of which we now propose to speak.

In August 1873 a party of British officers, petty officers and seamen, lent to the Government of Japan by the English Admiralty, arrived in Yedo and took charge of the Imperial Naval College, a spacious building erected in 1872. The party consisted of Captain Douglas, Director, who has since retired, Commander Jones, the present Director, Navigating-Lieutenant Baillie, Chief Engineers Sutton and Gissing and Engineer Harding, two gunners, two boatswains, three chief petty officers, three first-class petty officers and thirteen leading seamen, a small but most efficient *corps d'élite* of instructors, specially selected by the Admiralty with a view to the service they had undertaken. In the College at this time were 129 cadets, of ages ranging between 16 and 27, the greater number of whom had already passed some two years under preliminary instruction. An examination which was held with a view to discover their capacity and classify them afforded but little promise. In trigonometry and arithmetic their deficiency was painfully apparent. For a simple trigonometry paper eighty marks were allotted;—61 pupils failed to obtain a mark; 17 fell short of twenty, and 23 from various causes were not examined. Again in arithmetic, for which 100 marks were allowed, 4 of the pupils failed to obtain a mark, 1 obtained but two and 9 fell short of twenty. The progress of these pupils has been largely retarded by the insufficiency of their early training and their deficient knowledge of English in which instruction is conveyed. The Formosan expedition has also interfered with their studies. On that occasion 105 cadets were withdrawn from the College for temporary service afloat, and although they have since returned to resume their studies, some valuable months were necessarily lost to them.

The course of mathematical instruction now followed is thus divided. Monday is devoted to Navigation and Nautical Astronomy: Tuesday to Algebra; Wednesday to Plane and Spherical Trigonometry; on Thursday Navigation and Nautical Astronomy are repeated, and on Friday the weekly examinations take place. The cadets who are preparing for lieutenants' duties are divided into two watches, each of these being again subdivided. The 1st and 3rd classes are comprised in one watch; the 2nd and 4th in the other. The day's routine is as follows. At 7.25 a.m. during summer the watch "falls in" outside the College. One class is then sent to gunnery practise and one to seamanship, the other watch being meanwhile engaged at mathematics. At 10 o'clock the watches are exchanged, so that each shares alternately in theoretical and practical instruction. At noon the school is dismissed, but classes for English and Arithmetic meet in the afternoon, five hours weekly being devoted to the former and two to the latter. The hours of instruction are altered in winter to 9.30 a.m. to noon and from 1 to 3 p.m.

Two training ships have been attached to the college, the *Kenkon-kan* being assigned for harbour duty and the *Tsukubakan* for ocean cruising. The first of these,—formerly H. M. S. *Beagle* which lies in the lake in the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

mission grounds—has been rigged and fitted out by the cadets. They are here exercised in sail and spar drill before proceeding to the *Tsukuba* (formerly H. M. S. *Malacca*), a large corvette of 1,100 tons, carrying a complement of 245 men. We have already described her cruise to San Francisco and Honolulu,* and need only now add that 38 cadets from the College accompanied her and were largely benefited by the practical instruction they had the opportunity to obtain. Two batteries have been fitted up for gun drill within the grounds, one of these mounting six guns on truck carriages, the other five 7-inch muzzle-loading rifled guns of 7-tons weight. The guns are of the Armstrong pattern and are similar to those in use in the British service. In consequence of the nature of the ground some difficulty was experienced in constructing a battery of adequate solidity to carry the latter. A spot has, however, been selected which offers an admirable range to seaward, and here a stout battery has been built on a foundation of piles, concrete &c. The cadets now in the College, exclusive of the Engineer students, number 67, in addition to those who are afloat.

The students of the Engineer department number 32. Of these 12 students and 3 Assistant-Engineers pursue their studies at Yedo, while 15 students and 2 Assistant-Engineers undergo a course of instruction at the Branch Engineering College at Yokosuka. They are divided into two classes and attend alternate terms at Yedo and Yokosuka. The following is the *curriculum* of theoretical instruction. On Monday, Mathematics; Tuesday, Practical Instruction in the working of Engines and Boilers under steam in Yedo Bay and the use of the "Indicator"; Wednesday is devoted to hand-sketching from machinery, and Thursday to Mechanical Scale Drawing; on Friday Applied Mechanics are studied.

At Yokosuka the class visits the various departments of the Arsenal. Here the work in progress is examined and working sketches are made of the machinery. In the afternoon the work which has been examined is explained to the students by an English instructor. We should add that a complete model factory has recently been added to the College with a view to facilitate and supplement the course of study. It is supplied with a 12-horse power engine, pattern shop, foundry, blacksmiths' shop, and a fitting and erecting shop furnished with all the necessary appliances for constructing small engines, and promises to add largely to the resources of the Institution.

Nine of the most advanced pupils have been promoted to the rank of Assistant-Engineer and have been attached to ships in commission.

The duties of the Mission are not limited to the instruction of the cadets. They also comprise the superintendence of two training ships for seamen, the *Fujiyama Kan* and the *Asama Kan*, both stationed at Yokohama. In both of these seamanship and gunnery are taught. The European instructors are assisted by eight native seamen who have undergone a course of instruction at the College. In addition to the College cadets, some 600 seamen under European instruction and discipline are thus distributed:—

Kenkon Kan	80
Tsukuba Kan	150
Fujiyama Kan	200
Asama Kan, &c.	170
	600

In addition to these, 51 of the Marine Light Infantry and 17 of the Marine Artillery have passed through a course of gun-drill; 81 of the former, 43 of the latter and, 21 officers being still under instruction.

Attached to the College is the elementary or preparatory school, intended as a feeder to the larger institution and containing at present eighty pupils. Promotions are made from it to the College as room occurs, the vacancies created being filled by boys who enter after a successful competative examination. The school is under the charge of Mr. Milne, who is assisted by Mr. Chamberlain.

The cadets are, so far as we have been able to learn, drawn exclusively from the *samurai* class, although no restriction operates to prevent youths of a lower status from entering the College. *Suum cuique* would seem to be the acknowledged rule, and as yet neither merchant's nor farmer's son has shown a disposition to dispute the hereditary claim of the *samurai* to the profession of arms, although later on, as class distinctions are overborne or fade away, a new element may possibly present itself. The expenses of the institution are borne wholly by the Government without any payment in aid being made by the students, and a small allowance for pocket money is also provided. The clothing is a neat and serviceable blue uniform. A liberal dietary is provided of rice, fish, beef, pork or poultry, vegetables, tea with cow's milk and sugar; and, as a *bonne bouche*, the supreme delicacy of stewed eels is occasionally added. The dormitories are fairly spacious and, so far as our visit has enabled us to judge, the sanitary arrangements have been carefully studied. The health of the students is at present excellent. Cricket, rounders and football are occasionally played by the boys, and seem to grow in favour with them. Swimming and boating are also permitted in due season and within proper limits, and everything is done to develop the sound mind within the sound body. The hours of recreation, it will be observed, are extremely liberal and offer every facility for this.

We add elsewhere a synopsis of the College course.

It is gratifying to learn that the students exhibit a lively appreciation of the efforts made to fit them for the career they have chosen, and that their docility has won for them the highest commendation from their teachers. They are pronounced quick of apprehension, studious and desirous to please, quiet and respectful in their demeanour and steady in the pursuit of knowledge. Of their capacity to acquire it, indeed, there can be but little doubt. It is perhaps as yet premature to express any apprehension as to the power to *retain* their acquisitions, though the fear experienced may be not unnaturally due to our knowledge of the mercurial temperament of the nation. To this point we shall revert at greater length. To Captain Jones and the officers and men of the Mission, however, it must be a source of pride and pleasure to witness the quick response to their efforts, and the promise which their excellent organisation already affords of great future success. Upon them it may be said to hang. The plastic material in their hands may be moulded at their will and to their purpose, and we know little of their power and have widely misjudged its visible results if their country shall not have reason to feel gratified by their unqualified success, and Japan, in her turn, have not just reason to approve the *fiat* which committed her infant Navy to their charge.

The College for students preparing for the Marine Artillery service under the able direction of Capt. Brinkley, R. A. is also situated within the grounds of the Naval School. We defer until an early future issue our account of this College and of the service to which it is affiliated.

IMPERIAL NAVAL COLLEGE.

Examinations, College Course, &c.

I.—An Annual Examination will be held for the admission of cadets to the Naval College from the Elementary School, but no Cadets must be more than 16 years of age, at the time of Examination.

The subjects of Examination will be as follows.

	Marks.
To read English fairly and write from dictation in a legible hand.	200
Arithmetic as far as simple proportion, Vulgar & Decimal fractions.	200
Algebra as far as quadratic equations.	100
Geometry, Book 7 to Prop^{n} 32	100
Logarithms, use of the tables	100
Geography	100
Total	800

Four-tenths of the marks assigned must be obtained in each subject, 320 marks in the aggregate.

A Cadet who fails to pass the above examination may be given another trial, provided he is eligible with respect to age.

II.—The Course to be four years, viz. 3 years at the College as Cadet and 1 year in the sea-going training-ship as midshipman.

* *Japan Weekly Mail*, 22nd April 1876.

Digitized by Google UNIVERSITY OF CALIFORNIA

III.—Mathematical Course.

Algebra.—Fundamental operations; fractions; simple and quadratic equations; involution and evolution; indices and surds, progression; problems.

Geometry.—First 3 Books of Euclids' elements.

Trigonometry.—Definitions and fundamental formulæ; solution of plane and spherical triangles; analytical trigonometry; logarithms.

Practical Navigation & Nautical Astronomy.—Plane sailing; parallel sailing; traverse sailing; middle latitude sailing; Mercator's sailing, and great circle sailing; day's work; Mercator's chart; method of ascertaining the deviation of the compass; passage of bright stars over the meridian latitude by meridian altitude of the sun, moon, and stars; by altitude of pole star; by altitude near meridian, and by double altitude; longitude by sun and star chronometer; by lunar distance; error and rate of chronometer.

Variation of Compass.—By azimuth and amplitude.

Theoretical Navigation & Nautical Astronomy. Definitions and and principles; investigation of all formulæ; explanation of all corrections used; construction of tables.

Instruments.—Use of theodolite, level, azimuth compass, and marine barometer; construction and use of the sextant; artificial horizon; use of charts.

Note.—A selected class will be instructed in *Nautical Surveying.*

IV.—Seamanship Course.

6. *Instructions.*

1st Instruction.—Sea terms; parts of a ship; names of spars and sails; bends; hitches; knotting and splicing; names of standing and running rigging; placing standing rigging.

2nd Instruction. Worming; parcelling and serving; stropping block and passing seizings; reeving running rigging; making sword and paunch mats.

3rd Instruction. Tackles and method of fitting them; fitting rigging; rigging and raising shears; masting ships; staying masts; setting up rigging; gammoning bowsprit.

4th Instruction.—Placing lower cap; sending up tops and crosstrees; sending up and down masts and yards; in and out jib boom; compass; log and lead lines.

5th Instruction. Sail making; fitting sails; making up; bending; reefing and furling sails; management of boats.

6th Instruction.—Anchors and cables; mooring and unmooring; working cables; laying out anchors, &c.; rules of the road at sea; organization.

V.—Gunnery Course.

Practical Course.—Heavy and revolving gun drills; rifle and field exercises; truck gun drill; cutlass and pistol exercise; field gun drill and field battery musketry course, ammunition instruction; gunpowder fuzes; projectiles; magazines; manner of filling cartridges &c.; rockets; torpedo instruction.

Theoretical Course. Definitions; principles of the construction of guns; materials used &c.; breaking strain of iron, steel and copper; deflection how generated, and method of correction; elevation; depression and training of ports; use of spirit level; marking wood scales; rear face of cascabel, &c.; converging truck guns; making racers and converging plates; calculation of converging table; construction and adjustment of director.

BRITISH CONSULAR TRADE REPORT FOR HAKODATE FOR 1875.

British Consulate,
Hakodaté, 20th March, 1875.

Sir,—I have the honour to forward you, in duplicate, Returns of the Shipping and Trade of this Port for the year ending 31st December last, comprising:—

1.—Imports from England and other Countries, and Imports from open Ports in Japan.
2.—Exports to England and other Countries, and Exports to open Ports in Japan.
3.—Return of Treasure imported and exported.
4.—Return of Foreign Shipping.
5.—Return of Duties etc. collected.
6.—Return of British and Foreign Residents.

Shipping.

	Ships.	*Tonnage.*
1874	55	... 34,449
1875	39	... 12,394
Decrease	16	... 22,055

This decrease is owing to the P. M. S. ships having ceased to run northward; instead of which we have had four and five Mitsu Bishi steamers regularly every month.

Imports.

1875 ... $67,125	@ 4 6	£15,103 = @ 4	£13,425
1874 ... $61,025	...	£13,730 = ,,	£13,730
Increase $ 6,100	...	£11,373	£ 305 decrease.

Exports.

1875 ... $395,902	@ 4 6	£89,078 = @ 4	£79,180
1874 ... $315,765	...	£71,097 = ,,	£71,097
Increase $ 80,137	...	£17,981	£ 8,083

Now considering how dull and very unsatisfactory trade has been everywhere last year, it appears Hakodaté has done very well, there being an increase both in Imports and Exports.

The increase is more apparent when indicated in dollars than in sterling. But as the dollars in this Report have been reckoned at 4, there is a comparative table both at 4 and 4 6 with the result of 1874 at 4 6.

General Remarks.

Telegraphic communication with Tôkiô was opened at the commencement of 1875, but I regret to say that the cable broke down a month ago, so that we are now dependent on the Awomori steamer for telegrams from the South.

In connexion with the colonization of this Island, a boarding school has been opened at Sapporo for from 35 to 50 boys, and one for as many girls. The boys have native masters for mathematics, history, geography and Japanese studies and a foreigner for English, and it is said some of the boys are well advanced in mathematics and write English pretty fairly. Up to the beginning of last year the girls had studied arithmetic, history and geography exclusively in their own language. Since then they commenced to study these subjects in English under the superintendence of Miss Dennis, an English governess, and are said to have made considerable progress.

Both boys and girls have been brought up from Tôkiô and are entirely supported and educated at the expense of the Government, under the superintendence of a Japanese Director and a number of officials.

The buildings for both schools are new, and built half in Japanese and half in European style. They are large and commodious, consisting of class rooms, dining rooms, student's rooms, kitchens and servants' rooms, laundries, etc., and detached houses for the foreign teachers and for one or two Japanese teachers.

There are also tailors' departments connected with both, where clothes are made for the scholars. The boys dress entirely in foreign costume; the girls preserve their own native dress except with regard to shoes.

What the object of the Government is in establishing these schools in that out-of-the way place is unknown; but it is supposed, that when the education of both boys and girls is completed, they will be placed in charge of schools, which are to be started in different parts of the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Island. In the meantime however, while their own education is being proceeded with, they are getting acclimatized.

The trigonometrical survey of the Island has been carried on, and will be continued, under the direction of natives this year, the foreigners having completed their engagements.

I have the honour to be
Sir,
Your most obedient humble servant,
R. EUSDEN.

Sir HARRY S. PARKES, K.C.B.
Her Majesty's Envoy Extraordinary,
&c., &c., &c.

Correspondence.

SIGNS OF THE TIMES.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—I would not say that there is cause for fear of reaction in the present Government, but any one who takes note of the atmosphere he breathes will doubtless perceive that the conservatives are making themselves felt in a much more decided manner than was perceptible three years ago.

1.—Educationally. There seems to be diminution in the zeal for Western science, and methods, and educators. There is a stronger drawing towards old methods; more Chinese and Japanese schools after the old models are increasing. I am told, though it may not be correct, that the amount of instruction in English in the Imperial University is to be decreased, and the amount in Chinese and Japanese to be correspondingly increased.

2.—The reins are drawn more tightly on foreigners residing outside treaty limits. Restrictions which two years ago were a dead letter are revived; in such small things that can scarcely be mentioned, which seem too trifling to be set down in order, but which all go to make up one's judgment of the atmosphere he is daily breathing.

3.—The Press restrictions which seem in their harshness to be making martyrs who glory in their martyrdom. Of old the blood of the martyrs was the seed of the Church, and here this measure of repression may be the surest way of keeping alive the very spirit which it is the highest interest of the nation to let die. "Our adversary is our helper," was the aphorism of one who had a large experience of men, and of politics. It seems proving true in Japan. These men who are shut up for their loud talk must have a following, for as fast as one is hurried off to prison another is ready to take his place and to speak his mind without fear of the consequences, but rather seeming to enjoy the prospect of an early and lengthy sentence. Does it not seem as if the Government could better bear the detraction of such men than the odium which must follow a too harsh prosecution of them? Certainly a wiser restriction would be less rigorous.

These are points which I, with some about me, feel to be most worthy of note just now.

TOKIO.

[It may be remembered that we drew prominent attention to this subject in our issue of the 22nd April.—ED. *J.W.M.*]

Law Report.

IN H. B. M.'s CONSULAR COURT.
Before H. S. WILKINSON, Esq., Vice-Consul.
Saturday, June 3rd, 1876.

REGINA *ats* E. W. PEARCE *cs.* THOMAS DUCKER.

Charge: Assault.

E. W. Pearce, sworn: I am second steward of the S. S. *Sumatra*. Yesterday morning I was in the pantry, the cook, Ducker, came in and wanted to take out a silver dish with some meat in it. I told him not to take that dish up to the galley: he answered me that it was none of my business, threatened to smash my nose and struck me. He had hold of the hair of my head. The chief steward and the pantryman parted us.

To defendant; The silver is under my charge, and I am responsible for it.

Daniel Dunn, pantryman of the S. S. *Sumatra*, sworn: I was in the pantry yesterday morning between 9 and 10 when the cook came and took a silver dish and a tea urn. The second steward told him not to take the silver, but the cook asked if it had anything to do with him (the steward), and when the steward said: Yes, it had to do with him, because he had to look after the silver, and if the cook took it to the galley, he (the steward) would not

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

come for it, then the cook struck the steward so that his nose bled, and witness and the chief steward had to part them.

Wm. H. Lowder, chief steward of the S. S. *Sumatra*, sworn: The second steward is responsible for the silver.

Sentenced to pay a fine of $2 and $1.50 costs, or be imprisoned for three days.

Monday, June 5th 1876.

Thomas Pucker, chief cook, and Robert Bingham, second cook on board the S. S. *Sumatra*, was charged with being drunk and creating a disturbance on board.

Robert Lanham, captain of the S. S. *Sumatra*, sworn: Yesterday morning I heard a great deal of cursing, swearing, and horrible language proceeding from the galley. I told the chief officer to see the noise stopped, and shortly afterwards the chief cook, Thomas Ducker, came on the poop and told me he would to go ashore to see a doctor for a sore throat. I told him to leave the poop, but he would not go and I had him taken away by the chief officer. In the meantime the second cook was walking about the deck vociferating that he was the best man in the ship. Seeing that both the cooks were drunk I had them put in irons, and sent for the police to take them ashore. I don't believe anything was the matter with the chief cook's throat, as he was screaming lustily.

Wm. Good, chief officer of the S. S. *Sumatra*, sworn: Yesterday morning the two cooks, the prisoners, were cursing and swearing on board; the chief cook went on the poop and was ordered away by the captain, but would not leave. I had to take him away myself with the assistance of the third mate, and we had the cooks, who were both drunk, put in irons.

Robert Bingham, the second cook, stated that he had provocation because the third mate made a blow at him.

Captain Lanham stated that the conduct of the two cooks affected the discipline of the ship; he was leaving port to morrow, and he was desirous, before leaving, to discharge these two men.

His Honour observed that as prisoners had already been in jail for 24 hours he should let them off with paying costs, $1.50 each.

Thursday, June 8th, 1876.

Hugh Collett was charged with being drunk and incapable.

Police Constable Mansbridge, sworn: Last night about half past eleven, as I was patroling the settlement on duty, I met prisoner being carried by four or five Japanese on their shoulders. They told me he was drunk and had been fighting. He was sent to the police station.

Prisoner stated that he lived at No. 136. He was fined $1 and costs, or in default sentenced to be imprisoned for 48 hours.

Friday, June 9th, 1876.

William Long, seaman of H. M.'s gunboat *Dwarf*, was charged with being drunk and assaulting a Japanese policeman.

Police Constable Mansbridge, sworn: Last night about 11 o'clock prisoner was brought to the station charged with being drunk and striking a Japanese policeman.

A Japanese policeman stated: Last night about half past ten, as I was standing before No. 94, prisoner came up to me and asked me to show him the way to the Hatoba. I went along with him and he asked for my baton, and as I refused to give it to him he gave me two blows on the head with his fist, took my baton from me and threw me down in the street, upon which he ran away. I pursued him, and with the assistance of another policeman I caught him and brought him to the station.

Prisoner said he never asked the way to the Hatoba and never struck the witness.

Witness said that he did not understand English, but as prisoner came up to him and pulled him by the sleeve, and was a seaman, witness thought he wanted to go to the Hatoba.

Police-constable Mansbridge stated that prisoner was very violent in the police station, and wanted to fight, and that they had to put him in a cell.

A Japanese police sergeant deposed that he was in the police station last night when prisoner was brought in. Prisoner's clothes were dripping wet from the rain, so he was provided with other clothes; he was every violent in the station.

Prisoner said that he was not drunk last night. He was in company with three other seamen from the same ship, and outside the British Consulate he was, without having given any provocation at all, set upon by five Japanese policemen, who kicked his shins, poked him in the back with their batons, and drove him off to the police station. He could not say that his comrades saw that he was thus ill-treated.

Fined $1.50 and costs; in default of payment to be imprisoned for 3 days.

REUTER'S TELEGRAMS.

London, 26th May, 1876.

There is a panic on the stock exchange caused by anxiety in Eastern affairs. The Port rejects the Berlin memorandum, and fleets are assembling at Besika Bay.

London, 23rd May, 1876.

The views of the Berlin Conference have been rejected by England.

TELEGRAMS.

(Straits Times.)

London, 13th May.—In the House of Commons last evening, the resolution of Mr. Smyth, for the prohibition of the sale of intoxicating liquors in Ireland on Sundays, was, upon a division, adopted by 224 votes against 167. Government opposed the motion.

The Rev. Doctor Maclagan has refused the Bishopric of Calcutta.

Telegrams from Berlin are unanimous in affirming a pacific character to the conference now going on there, and the identity of views between Austria, Germany and Russia.

Vienna, 13th May.—A serious rising is reported in Bulgaria. The Christians in Turkey are becoming uneasy consequent upon the present excited state of the Muhammadan population.

Constantinople, 13th May.—Mehemet Rushdi has been appointed Grand Vizier in place of Nedim Pacha, and Hussein Pacha becomes Minister of War.

Simla, May 15th.—Information, dated Zanzibar 6th, states that the Resident has negotiated with the Sultan for the abolition of all slave routes. No Caravans to fit out for the purchase of slaves. No slave hunting in the interior of Africa. All slaves coming to the coast to be seized and confiscated; likewise all slave caravans. Slave dealers to be imprisoned.

Rangoon, May 14th.—The British escort reached a point two miles beyond Bhamo on the 4th, and expected to reach the Chinese frontier on the 9th. Latest news from Mr. Grosvenor's party is dated April 25th; they were then one march east of Yungchan, all well. The hill tribes are quiet and rains commenced. No opposition or difficulties expected.

(Via America.)

Paris, May 19th.—Of the recent riot affair at Salonica, in European Turkey, information has been received at the Foreign Legation in Paris that M. Lassessaro, the American Consular Agent, who happened to be at the railway station, only interfered to rescue a young Christian girl from the clutches of a band of Musselmen who were forcing her to the Mosque, when he was appealed to by her for assistance. M. Lassessaro conveyed the girl to the United States Consulate in his carriage. His house was surrounded by a furious crowd. He sent out persons commissioned to ascertain the girl's nationality, if possible. Herr Abbott, the German Consul, and Mr. Paul Moulin, the French Consul at Salonica, who are brothers-in-law, and both related by marriage to the American Consular Agent, hearing respectively that a young person of their nationality had been forcibly dragged to the Mosque, repaired to the building to protect her. When at the Mosque, both gentlemen were set upon by a Turkish mob and literally beaten to death with iron bars. The American Consulate was saved from destruction by the exertions of a military force, which was ordered on duty by the Governor, after the Italian Consul had informed him of the condition of affairs.

Athens, May 17th.—The Turks are reinforcing their positions on the Greek frontier. Greece will take similar action in that quarter. It is alleged that foreign emissaries are endeavoring to induce Christians on the frontier to revolt. Great agitation prevails in Crete.

London, May 16th.—6 A. M.—Dispatches say that the French squadron for Solonica musters 31 guns and 1,270 men, and the German squadron, 90 guns and 3,000 men.

London, May 16th.—6 A. M.—The House of Commons last night debated Ryland's Resolution that the House regrets that the progressive increase of expenditures commenced by the Government should lead to the increase of the income tax. Gathorne Hardy defended the in-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

crease of army estimates. When the tramp of men was heard in every country of Europe, it was necessary that England should keep her place among nations. The resolution was rejected, by 299 to 175.

Berlin, May 15th.—The Conference resolved to urge the combatants to agree to a two months' armistice, hoping the negotiations during the armistice would result in a settlement on the basis of Andrassy's note, with concessions by the insurgents from their present demands France and Italy approve the finding of the Conference. England postpones her answer.

A conference of the treaty powers of England, France, Italy, Germany, Austria and Russia is expected to be summoned to draw up an agreement for united approval.

London, May 15th.—In the House of Commons this evening, the Under Secretary of the Colonies said there was no intention to bombard towns on the coast of Dahomey, but that a blockade would be instituted, commencing July 1st.

London, May 15th.—The Duke of Edinburgh becomes Rear Admiral.

London, May 15th.—It is reported that four German iron-clads will proceed to Solonica next week.

London, May 15th.—A Constantinople despatch says that the uneasiness among the Austrian Population increases daily, as the threatening attitude of the Mohommetans increases. Foreigners are leaving the city numerously.

Salonica, May 15th.—It is officially announced that eighteen additional arrests have been made.

Belgrade May 14th.—The Servian frontier is completely lined by a cordon of Turkish troops, and free ingress or egress is impossible. There is great irritation in official circles here.

London, May 14th.—A Vienna dispatch says disturbances are feared in Syria, where the excitement is daily increasing. Two English men-of-war have arrived at Jaffa, three at Beyrout, and one English and one French man-of-war at Latakia.

London, May 14th.—Advices from Bagdad state that the plague is still raging, with increasing violence, there and at Muscat. Strict quarantine is maintained in all ports, to prevent its spread.

Paris, May 14th.—Intelligence received here from Salonica announces that the port has been blockaded. None of the inhabitants are allowed to leave town until the inquiry has terminated. Two French ironclads and two frigates have arrived at the Piræus on their way to Salonica. Fresh disturbances are still feared. The schools are closed, and work has been suspended. The bodies of the murdered Consuls are still unburied.

Constantinople, May 15th.—It is officially stated that the Bulgarian disturbances are expected to cease shortly. The insurgents have been defeated with great loss in several engagements, and many have given submission. Fifteen thousand soldiers are now concentrated near Phillippoli. Additional Russian, Italian and Greek men-of-war have arrived.

London, May 13th.—It is reported that the bodies of the murdered Consuls are unburied at Constantinople, as the excitement is so great that it would be dangerous to attempt a funeral until reinforcements arrive. A general panic prevails; the lower classes of Mahommedans are purchasing daggers and revolvers with money supplied by those hoping for the massacre and plunder of Christians. Travellers are leaving *en masse*, and the European residents are sending away their families.

Berlin, May 13th.—Everything points to a complete understanding having been arrived at by the representatives of Russia, Germany and Austria, in connection with the Turkish question. They are clearly animated by a pacific policy. The decisions arrived at have to-day been communicated to the English, French and Italian Ambassadors. One result of the Conference is that Turkey has been requested to grant the insurgents an extension of the armistice for the purpose of executing promised reforms and aiding further negotiations. The Powers also intend to reinforce the naval strength of Sontar for the greater protection of the Christians. Great credit is given to Prince Gortschakoff for the able manner in which he handled the Eastern question.

London, May 13th.—Later despatches from Athens say: A vessel arrived from Salonica brings the news that the American Consul was not in Salonica at the time of the murders. The Christians took his carriage, which chanced to be at the railway station, put the girl in it and drove her to his consulate. The Provincial Council and the mob met in the mosque. The Governor was present when the Consuls were murdered. He merely protested and treated the matter lightly. The Turks filed past the corpses and spat upon them, The body of the French Consul had 34 wounds.

London, May 13th.—The British fleet in the Mediterranean has been ordered to rendezvous immediately at Smyrna, in view of possible difficulties.

Naples, May 13th.—Two more Italian iron-clads, under Vice-Admiral Viny, have gone to Salonica.

Berlin, May 12th.—Count Von Arnim has appealed to the Imperial Disciplinary Court at Leipzig against the decree by which he was dismissed from the public service. In a letter to the *Vossische Zeitung*, he emphatically denies that he wrote the pamphlet upon his alleged authorship of which the charge of treason against him is based.

Havana, May 12th.—Advices from St. Thomas to May 7th have been received. Four hundred and fifty persons have been arrested in Barbadoes. The prisons are full, and, for that reason, no further arrests have been made. Many persons have taken refuge in vessels.

There has been great destruction of property; riots are feared, if the Government party show the same instability as heretofore.

The report that President Dominique, of Hayti, was assassinated, or died of his wounds after embarking, is untrue. He arrived at St. Thomas, April 21st, on board a French man-of-war.

Opening of the Philadelphia Exhibition.

Philadelphia, May 10th.—The International Exhibition was opened to day with imposing ceremonies. The city presented a remarkable appearance, and the event was one long to be remembered by those present. Chestnut street and all the main thoroughfares were profusely decorated with bunting, and Independence Hall was covered with transparencies, flags, etc. Immense throngs filled the streets from an early hour in the morning. The day having been made a legal holiday by the Legislature of this State, all places of business in the city were closed. Up to seven o'clock the clouds had been threatening, but by nine had entirely disappeared, and the day opened clear and sunny, becoming showery, however, in the afternoon. The grounds were in very good condition, in spite of the heavy rain of yesterday.

As early as Monday night there were said to be over a a million people in the city, including strangers, and the hotels were literally packed.

About 250,000 people gathered at Fairmount Park, all sorts of vehicles being pressed into the service of carrying passengers to the scene.

The gates were opened at 9 o'clock, and for hours thereafter crowds were pouring through them. At least 50,000 people had gathered by 11 o'clock. Every available spot in the neighbourhood of the Grand Stand in front of Memorial Hall was occupied.

The Foreign Commissioners and other distinguished visitors and guests were seated with but little confusion, their entrance being effected through the Main Exhibition Hall, which, with the Memorial Hall or Art Gallery and the Machinery Hall, were reserved for the invited guests and the exhibitors until the close of the ceremonies, when all restrictions were removed. The exercise took place in the open air upon the south terrace of Memorial Hall, fronting the Main Building, in full view of the general public.

At 10 o'clock the troops arrived at the grounds by different gates. Their clanging bands responded to each other as they marched through the Park, and the large hollow edifice echoed the sound of their drums.

The ceremonies opened promptly at 10.15. The orchestra, of 150 pieces under the direction of Theodore Thomas, assisted by Dudley Buck, played the national airs of all countries represented at the Exhibition.

At 10.30 the Emperor of Brazil and his suite arrived, and were escorted to their places by General J. R. Haw-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ley, President of the Centennial Commission. They were loudly cheered, and the orchestra played the Brazilian national hymn. The Emperor was in citizen's dress, and wore a decoration concealed under the lappel of his coat.

At 10.45, General Sheridan and wife appeared on the Grand Stand, and were greeted with applause, which he acknowledged.

Soon after, Hon. James G. Blaine appeared, and was heartily welcomed by the crowd.

Hon. John P. Jones and wife, and many other prominent people arrived at the Grand Stand, and were greeted with applause, when recognized.

Considerable amusement was caused by the sudden appearance of Fred Douglas in the crowd, and he was helped over the ropes by the officers and conducted to a seat on the platform. He was cheered.

The platform was by this time much crowded, and many guests were unprovided with seats.

The programme for the opening of the Exhibition was generally commended for its simplicity, and it was rapidly and closely followed up. The central figure was of course President Grant.

The scene was brilliant when the Foreign Commissioners were in their places, full of gold lace with collars and medals of Knighthood, the military officers of the United States and many Spanish Cadets standing near them, while in the distance were seen, drawn up in hollow squares, the military of New Jersey, Pennsylvania, New Hampshire and Massachusetts, and the marines and seaman of the Navy Yard, wearing white turbans and carrying cutlasses. Colored troops mingled with the white, marking the advance of public opinion in the hundred years.

At 10.48, the signal was given for the music to stop. At 10.55, President Grant, who had been escorted to the grounds by a division of troops, entered through Memorial Hall, escorted by governor Hartranft and General Hawley, who escorted him to his seat at the front of the platfrom. The President was received with loud and continued cheers. The orchestra then played "Hail to the Chief," during which time the President shook hands with the Emperor, Empress and guests. The President then took his seat. Governor Hartranft, Gen. Hawley and the Hon. D. J. Morrill occupied seats on his left, while Messrs. John Welch and Goshorn were on his right.

At 11.03, Wagner's grand "Centennial Inauguration March" was performed in fine style by the great orchestra, and the assemblage broke into applause on its conclusion.

The Right Rev. Bishop Simpson, of the M. E. Church, then offered a prayer, during which a majority of the vast assemblage stood with uncovered heads.

A hymn was then sung.

Mr. John Welch, President of the Centennial Board of Finance, then presented the Centennial Buildings to the United States Centennial Commission.

General Hawley arose and said that, as President of the Centenial Commission, he accepted the great trust conferred by the Board of Finance.

Then followed the rendering of the cantata by Sidney Lanier, of Georgia; music by Dudley Buck, of Connecticut; with orchestral and organ accompaniment.

At the close, the members of the choruses called for Buck, the composer of the music, who made his appearance and bowed his acknowledgement of the compliment.

General Hawley then, as Chairman of the Centennial Commission, formally presented the Exhibition to the President of the United States.

President Grant stepped forward, amid prolonged applause, and made the following address of acceptance and proclamation of the opening of the International Exhibition

My Countrymen: It has been thought appropriate upon this Centennial occasion, to bring together in Philadelphia for popular inspection specimens of our attainments in industry, the fine arts and literature, science and philosophy, as well as in the great business of agriculture and of commerce, that we may the more thoroughly appreciate the excellencies and deficiencies of our achievements, and also give emphatic expression to the earnest desire to cultivate the friendship of our fellow members of the great family of nations. The enlightened agricultural, commercial and manufacturing people of the world have been invited to send hither corresponding specimens of their industries, to exhibit on equal terms in friendly competition with our own. To this invitation they have generously responded. For so doing they have our hearty thanks. The beauty and utility of the contributions will this day be submitted to your inspection by the managers of this Exhibition. We are glad to know that a view of the specimens of the skill of all nations will afford to you unequalled pleasure, and yield to you a valuable practical knowledge of so many of the remarkable results of the wonderful skill existing in enlightened communities. One hundred years ago our country was new and but partially settled. Our necessities have compelled us chiefly to expend our means in felling the forests, subduing the prairies, building dwellings, factories, ships, docks, warehouses, roads, canals, machinery, etc. Most of our schools, libraries and asylums have been established within one hundred years. Burdened by these great principal works of necessity, which could not be delayed, we yet have done what this Exhibition will show in this direction, rivalling older and more advanced nations, in law, medicine and theology, in science, literature, philosophy and the fine arts. Whilst proud of what we have done, we regret that we have not done more. Our achievements have been great enough, however, to make it easy for our people to acknowledge superior merit wherever found.

Immediately after the closing of the address of the President, General Hawley waved his handkerchief, a flag was dropped at the place of the ceremony, and instantly the large colors were hoisted on the gables and towers of the whole series of edifices, every section having its symbol; Brazil, France, Portugal and Germany were in one group, and Great Britain, Italy, Spain and Austria in another. Artillery salutes pealed forth, chimes were rung, and Handel's "Hallelujah Chorus," with organ and orchestral accompaniment, was rendered.

The Foreign Commissioners passed into the Main Building, and took places opposite their respective sections.

The procession to the Main Building then began, President Grant gave his arm to the Empress of Brazil and leaned upon the arm of Director General Goshorn. These three led the way and were followed by the Emperor of Brazil and Mrs. Grant, and then by Col. Fred. Grant and M .S. Fish. They walked into the Main Building by the middle door, and then proceeded down the central aisle, passing the Commissioners of the different nations, in civil dress, who bowing, were saluted by the President. The military were in waiting at the exit door, with music and drums, and they cleared the way through the crowd to the opposite door of Machinery Hall. In the line, in the order following, were the Chief Justice of the United States, the President of the Senate, the Speaker of the House of Representatives, Gen. Joseph R. Hawley, President of the U. S. Centennial Commission; John Welch, President of the Centennial Board of Finance; Daniel Morrel, Chairman of the Executive Committee of the Commission; John L. Campbell, Secretary of the Commission; F. Frarey, Secretary of the Board of Finance; the Cabinet of the United States; the Supreme Court; the Diplomatic Corps; the Foreign Commissioners, who joined the line after the President passing them; the Centennial Commission, &c., &c.

The formal ceremonies of the day were then closed by a brief reception by President Grant in the Judge's Pavilion, at which foreign dignitaries and others were present. The reception was very fine, and proved the most enjoyable feature of the day.

After the reception, the crowds dispersed to view the contents of the various buildings.

By invitation, the Emperor of Brazil visited the Woman's Pavilion, and inspected the exhibition of women's work.

The various restaurants on the grounds were crowded all day.

The buildings are illuminated to-night, and crowds still linger in the avenues adjacent to the grounds.

To-night at least a million and a quarter people are spending the night within the city. To say that a million and a half had been here to-day, from first to last, would

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

be within bounds. In numbers, in magnitude, in completeness, the opening has been a great success. The rejoicing is universal. To-night illuminations in the principal streets have attracted large crowds. Bands were playing patriotic airs, and were followed by the younger and nimbler portion of the population, while thousands of spectators in the streets were surging back and forth, completely blocking them and making locomotion extremely difficult. The crowd in Chestnut street, of course, was the largest, and held complete possession of the sidewalks until a late hour, compelling those who had legitimate business to seek the middle of the street. Much crowding and jamming took place but the people were very orderly and good humoured and bore all meekly. The hotels are the focus of great attraction, especially the Continental. The old Independence Hall is the central point of interest. Its decorations were sufficient to attract an admiring crowd. Flags and bunting were displayed lavishly, and on the top of the Hall were figures representing the Sciences, the Arts, and Columbia. The doors were also decorated, and over the main entrance were the arms of the city. During the entire evening crowds of Calathumpians and parties attired in masquerade costumes, gathered in front of the hall, paying salutes. The old steeple in which is situated the new bell of Henry Siebert, of California, was decorated in a becoming manner.

Philadelphia, May 10th.—The Empress of Brazil set the machinery in motion in the Woman's Pavilion in the presence of a large crowd. She pulled a gold cord and tassel and the engine started.

The American pictures in Memorial Hall make a fine display; no less than seven walls each 100 feet long, are hung with American pictures. The British Art Exhibition, however, carries off the palm, and will probably head the list when the final award comes to be made. The collection is large and contains over 400 pictures; the water colors are scarcely inferior to the oils.

Wagner's "Centennial March" has taken greatly with the people who have heard it at the rehearsal and all the opening ceremonies, but some critics think it is not equal to the famous "Kaiser March," or the "Huldegrings." Some disappointment has been expressed that the illustrious composer had incorporated no well known American air in the "March."

The grandest musical feature at the opening was the "Hallelujah Chorus." All rose during its performance, and the artillery thundered forth from the adjoining hills, bells rang out, steam whistles blew, and the World's Fair was opened.

There is a strong probability that the Exhibition will be open on Sundays.

It is officially intimated that 110,000 people entered the Centennial grounds to-day.

Despatches from various places throughout the country show that the day was observed as a Centennial holiday.

Philadelphia was grandly illuminated to-night. Great crowds of people rendered the streets nearly impassable, President Grant was serenaded.

Out of doors much of the walking had to be done in the mud. Many fences had not been removed, and on every hand was seen a lack of completeness. The restaurants were inadequate; everything was eaten before a fourth of the demand was met.

The procession after the speeches were over was considerably delayed by the attempt of Dom Pedro, who along with President Grant, led the procession, to stop and discuss the various exhibits. The Russian and Austrian exhibits had not yet arrived.

Machinery Hall building is occupied. There are 8,000 machines in position, seventy-five per cent. being American, and the next largest being British.

The Department of Admission at the Centennial grounds estimated the receipts yesterday at $50,000.

Philadelphia, May 11th.—The attendance at the Exhibition to-day is estimated at from 25,000 to 30,000 up to 1 o'clock. Many of the distinguished guests who were at the opening yesterday are visiting the Exhibition to-day. Several Foreign Ministers, including those of England and Chili, are now on the grounds, and there are many Congressmen, Army and Navy officers, and nearly all the State Governors and other dignitaries who attended yesterday.

The weather to-day is clear. All the buildings are open, the machinery is in motion, and the display in the main building is very handsome.

Philadelphia, May 11th.—Sir Edward Thornton, British Minister at Washington, gave a banquet to-night at the Hall of the St. George's Society. One hundred and seventy-five guests were present, among them President Grant, Vice-President Ferry, Dom Pedro, members of the Cabinet, Foreign Commissioners, and the Diplomatic Corps. Sir Edward sat at the head of the table. At his right sat President Grant, and on his left the Emperor.

Paris, May 10th.—Correspondence of the *Universelle* says that the foreign Governments have forwarded the following account of the origin of the disturbance at Salonica to their legations in Paris: The American Consul was at the railway station, when his attention was attracted by the cries of a Christian girl. She was surrounded by a score of Mussulmen who wanted to take her forcibly to the mosque. The Consul took the girl under his protection while he was seeking for information as to her nationality. The German and French Consuls were separately informed that a woman belonging to their respective nations had been dragged into the mosque. They consequently repaired to the mosque, where they were beaten to death.

London, May 10th.—It is stated that Austria has recommended giving subsidies to Herzegovinian refugees in Dalmatia.

The President of the Cambridge University Boat Club has officially declined the invitation of the United Association of American Colleges to participate in the Centennial regatta, in consequence of inability to organize a representative crew.

The race for the Chester Cup run to-day at Chester, was won by *Tam O'Shanter*, with *Freeman* second and *Grey Palmer* third.

London, May 10th.—A special despatch from Odessa to the *Times* represents that the Salonica outrage was premeditated. All the Consuls except the British had warned the government and the Porte that a massacre was intended. The same despatch says that a feeling of insecurity prevails among the Christians in Turkey. A plot was discovered in Constantinople last week, of which Dervish Pasha, the Minister of War, was at the head. He persuaded the Sultan that an attack on his palace was meditated. The Governor of Rodisto had also armed the Mahommedans of that place, but received orders to disarm them on the news of the Salonica outrage.

Constantinople, May 10th.—Fifty persons who took part in the riot at Salonica have been arrested.

London, May 9th.—A dispatch from Constantinople asserts that the Bulgarian rioters have fled to the mountains, and that cordons of troops have been established to prevent the movement from spreading. Advices received at Paris, however, represent that postal and telegraphic communication between Constantinople and Sohia has been interrupted by the insurrection.

The Porte is greatly alarmed, and is sending forward all its disposable forces by rail and night trains on the Adrianople Railway. The movement has been long preconcerted by the Servian agitators. At first it was considered unimportant, but it has spread rapidly, and the number of the insurgents is variously estimated at from 1,000 to 10,000.

The Porte has informed the foreign Ambassadors that it has resolved to raise the duties on imports 20 per cent.

London, May 9th.—A telegram from Berlin states that the German corvette "Medusa" has been ordered to leave Messina for Salonica without delay. Russian and Austrian men-of-war have been ordered to Salonica. In consequence of an urgent despatch from the Chancellor of the French Consulate at Salonica, an additional French man-of-war has gone to Syria, where she awaits instructions. The British Consul has ordered a man-of-war from the Piræus to come to Salonica immediately.

London, May 9th.—A Paris correspondent learns that the American Consul, fearing that the mob would succeed in forcing his house, sent the girl to the German Con-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

sulate. The mob in the mosque compelled the German Consul to sign an order for her delivery, and then murdered him.

London, May 9th.—A correspondent at Berlin says: It is generally thought here that the Salonica affair will prove fatal to Turkey. The interference of the European Powers for the benefit of the Christians is now considered unavoidable, as it is evident that the Porte is powerless to protect them against the outbreaks of the fanatics.

London, May 9th.—The Porte has sent by telegraph the following account of the disturbances in Salonica, to the Ottoman Ambassador at London:

The convert to Mahomedanism arrived at Salonica by railway. Mahomedans proceeded to conduct her, according to custom, to the residence of the Governor-General, when about 150 persons whom the Consul of the United States had assembled rushed at the convert, tore off her veil and mantle, and carried her by force to the house of a Christian. The excited Mussulmans proceeded to the Governor's residence and insisted that the convert should be brought thither. The Governor, hearing that the French and German Consuls had entered the mosque which was invaded by the crowd, went there to induce the Consuls to withdraw and to calm the people, but all his efforts were useless. The populace wrenched the bars from the grating, fell upon the Consuls and struck them down, in spite of the desperate efforts of the Governor to shield them with his own person. The troops ultimately dispersed the people. The Governor of Salonica telegraphs that order has been restored and that the guilty parties have been arrested.

Paris, May 9th.—*Le Pays* announces that the French ironclad frigates and despatch vessels have sailed for Salonica.

Rome, May 9th.—The Minister of Marine has ordered two Italian men-of-war to go to Salonica immediately.

New York, May 8th.—A *Herald* Rome dispatch says: His Holiness is very feeble in body. He has to be supported by two prelates of the Church, and on the occasion of Vatican receptions, alleges bodily weakness as an excuse for not going round to bless trinkets and other articles which are presented to him.

New York, May 4th.—The *Herald's* cable dispatch says: "Divers have recovered another sum of gold from the wreck of the *Schiller*, making an aggregate of $290,000 saved out of the $300,000 shipped on the vessel."

SKATING-RINKS.

(The Saturday Review.)

Old people who lived before the age of steam find it difficult to become accustomed to the startling rapidity with which a new fashion, whether in dress or amusement, now travels, not only from London into the country, but to Madras and Melbourne. At the beginning of the century the shape of a bonnet was almost forgotten in Paris before it had reached Dublin or York, while in Devonshire short waists were only becoming general when long ones had again become the rage. Now, what with railways and cheap literature, the daughter of an Orkney farmer is only a few months later in discarding her petticoats, and injuring her health by tight lacing, than the Lady Gwendoline in Grosvenor Square; while the doctor at Penzance is just as early in the field with his spelling bee as his brother practitioner in Brook Street. The latest London madness has infected the country at once, even so far north as Aberdeen: and soon no provincial town will be without its rink, nor any one so poor, so stiff, or so unhappy, that he may not glide smoothly through at least a part of his sublunary existence. Should skating, instead of remaining a mere pastime like dancing or lawn-tennis, take its place as a substitute for walking, the appearance of our streets will become much more animated and amusing than it is at present. No longer will City men crouch in rows on the knifeboard of an omnibus, their brows wrinkled with care, their cheeks flabby from want of proper exercise. They will be spinning along the concrete at the rate of fifteen miles an hour, their eyes bright, their cheeks rosy, able to despise the fickle turn of Fortune's wheel whilst their own revolves without impediment. Regent Street will be a shopping rink, Kensington Gardens a baby rink, Columbia Market a costermonger's rink. Part of the Channel tunnel will be reserved for skaters, and by the aid of sails and artificial wind they will be able to cross from Dover to Calais as quickly as passengers by the *Castalia*, and with even less fear of sea-sickness. Perhaps Mr. Ruskin may allow tourists to approach Windermere on wheels, provided they are not driven by steam nor heralded by too loud a whistle. Whether there are to be rinks in his Arcadia, as well as dancing-schools, we have not yet heard. Fashionable physicians, no longer able to keep a carriage because all their patients are free from the complaints produced by idleness, will wheel about disconsolately, while a surgeon will be stationed at the corner of every street to attend to the casualties caused by the collisions of careless skaters. There will also be a policeman to decide upon the amount of damages to be paid for a broken nose, a lost tooth, or a general concussion of the brain and spine. The Tram and Cab Companies had better pause before they invest much money in building stables which may have to be turned into skating-rinks like those near Oxford Circus.

It is easy to understand that the skating-rink should be full of fascination for the young and vigorous; that they should delight to rush swiftly through the fresh air. There seems to be a natural craving for rapid motion, especially in children; and who does not know the exhilaration of a drive in a light dog-cart with a fast-trotting horse? A healthy girl will waltz herself out of breath round the schoolroom table: and as young women ought to be just as fond of exercise as their brothers, it is not surprising that they eagerly seize the opportunity afforded by skating-rinks to obtain the healthful glow which comes from vivid motion and the active play of all the muscles. Many girls, it is true, skate not because they care for exercise, or for one form of exercise more than another, but because at present it is accounted the proper thing to do. The rich, the idle, and the ignorant, who form so large a part of what is called society, are ever seeking some new method whereby they can rid themselves of their useless mornings and objectless afternoons. Skating-rinks have been a most valuable addition to the ways by which time, that bugbear of the empty-headed, can be supplied with wings. And within their walls we find all the well-known types with which every one is already so familiar in the ball room. We see the same weary, hard-worked chaperons, the same crushing crowd of unmarried women. There is an equal amount of husband-hunting, rather less courtesy of manner, if that were possible, the same struggle to reach a higher rung on the social ladder, more time in which to concoct scandal, and more opportunity of circulating it. But in one point the skating-rink can claim a great advantage over the ball-room. Partners are by no means a necessity. A plain girl, therefore, does not find herself at the same disadvantage as at a dance. She need not wait beside her chaperon for partners who may never come, nor has she the mortification of contrasting the empty blank of her own card with the well filled list of her pretty neighbour. In the rink she can buckle wings to her feet and pursue eldest sons as swiftly as her fairer sisters. She can exercise equally far-sighted calculation, and manage to fall as picturesquely and as helplessly when the heir to twenty thousand a year passes her by in a lonely corner. If she has small feet she can have her skates put on in public, or invent a dozen excuses for requiring a strap tightened or loosened by the men she meets. If these devices fail, it is easy to pretend a preference for skating alone or with those of her own sex, or else to set up as a good-natured coach to the inexperienced. Should a girl, however plain, become more than commonly accomplished on the wheels, she may be able to attract and retain as much attention as if she were good-looking, which is, no doubt, a great consolation. Married men, too, find the rink a not unpleasing place of amusement, independently of the exercise. There are plenty of pretty girls who want instruction, many helpless little hands held out to be steadied, fair damsels to be rescued from an ignominious position on the floor, and to be condoled with on skinned elbows or sprained ankles.

Indeed there is a great deal more freedom and intimacy in the rink than would be possible in a drawing-room, or than a wise mother ought to allow. How any refined lady can like to see her daughter exhibiting her paces in a crowed skating-rink is a mystery to those old-fashioned people who cling to the exploded idea that a girl's chief charm is modesty and purity of mind. An involuntary wish to rescue a pair of happy country maidens from the polluted atmosphere seizes one as they glide down the long, narrow slip of concrete hand in hand. It is their first season, and they are friends as well as sisters. Their short life has hitherto been spent in the schoolroom, the garden, visiting the village poor, or scampering along green lanes on a shaggy pony. They have looked forward to being presented as to a religious ceremony, and to their first ball as though it must decide their whole future life. Their adoring mother has kept them as long as she could in a well-guarded Eden of her own manufacture, from which the tree of knowledge was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

conspicuously absent. They know as little as possible about any world but their own, a world of family love, tenderness, and faith in each other. But their mother never thinks of resisting the call of custom and fashion, and from this atmosphere they pass without preparation to the London marriage market. Emancipated from the drudgery of the schoolroom, they revel in the liberty which they taste for the first time. New dresses are a boundless pleasure, the Opera a realization of fairy-land, and skating an endless delight—a pastime only too brief, an exercise to be taken without measure. But one of them looks at her watch; they have been hours on the wheels, and where in the poor mother? Does she not tire of sitting under a tree, even with *Daniel Deronda*? They beg her to come home; they protest they have had enough, as if that were possible; they are sure she is tired, which indeed she is; but no, she smiles lovingly while she bids them enjoy themselves as long as possible, and with pretty mendacity asseverates that she is not in the least fatigued. The younger daughter, with an innocent but highly unfashionable ardour of gratitude, will perhaps kiss her mother, and calls her a dear, delightful, unselfish old darling, and slide away for another turn. As she waves her hand by way of good-bye she hears the good-natured remark, "How can girls think to take men in by such ridiculous exhibitions of mock amiability? Lord Wilcacres, for whose benefit this demonstration was evidently got up, is too old to be caught by such well-worn tricks." Our pretty skater has tasted of the forbidden but bitter fruit: the angry blood rushes to her very finger-tips, and she can hardly keep the tears out of her eyes. Her pleasure is spoilt for the day, and she almost persuades herself she is an impostor. But one season's blighting influence will thicken her skin: her blushes will not be so ready to protest against injustice, and her belief in girlish innocence will be much the same as that of her detractor. She will be able in the giddiest maze to remember which of the Guardsmen present are eligible, and will be intimately acquainted with all the unsavoury scandal of *Vanity Fair*. She will watch with interest and amusement, instead of disapprobation, the doings of women of many seasons, and listen with well bred composure to the questionable stories told her by fast married men. If she does not marry, she may, alas! follow in the footsteps of a painted and powdered girl who stands sipping her coffee at a small table alone. Her dress is painfully scanty on her body and uselessly voluminous on the floor. She is bored to death, and waiting to catch some one with whom she can amuse herself by flirting outrageously. Presently she espies a distinguished looking youth like a Peri at the gate. He is leaning against the low paling trying to see the skaters, and has beside him a beautiful collie dog. The girl, without a moment's hesitation, skates towards them as if by chance, stoops over and pats the dog, saying in a meaning tone, and with a glance at the handsome stranger, "Poor Bow-wow! Is he here all alone? I would bring him in if I could." So by means of the dog she manages an introduction and it is not her fault if the oddly made acquaintance does not ripen into a very warm and satisfactory flirtation. This is no hypothetical case. Such things do occur, and others of the same kind, and no wonder if girls who are kept in order at home think Prince's a glorious land of liberty and enjoyment. They drag their wretched parents from place to place till exhausted nature fails, and then start for the rink with a French maid as duenna. Still more unpleasant to the unsophisticated looker-on are the children who appear in French costumes and air their spindle legs and monkey tricks in public. There are always silly people ready to praise their rude speeches as if they were witty, and applaud their precocious imitations of the insolent or toadying manner of their elders. Such children make any one unaccustomed to them shudder at the thought that some day they may be wives and mothers in their turn. Fortunately there seems to be an interval in their lives when they are too old to come as children, and are not admitted because they have not yet been presented at Court; so that a place of improvement may be provided for them, for aught one can tell.

In amusing contrast to the aristocratic skating club is a rink where no annual subscription is required, no presentation at Court, no member's ticket, only a small payment at the door. Such places are springing up in all directions. They are the cause of much distress to the proprietors of dancing rooms, but it is difficult to understand how they expected to evade the necessity of obtaining licences. Evening is the time to see such an establishment at its best, or worst. The room blazes with gas, but ventilators have been left out of the design. A smell of music-hall cigars, stale sandwiches, and cherry brandy pervades the air. The heat is suffocating, the glare blinding, the smell unsavoury. A combination of the barrel organ and piano, uniting the more repulsive features of both instruments, and conspicuously labelled "For Sale," does duty for a band, and does not violate the provisions of 25 George II. cap 36. The whirr of wheels is like the sound of machinery out of gear, and the sight of figures gliding round and round makes the spectator giddy. But the skaters, who are apparently mostly of the shop-keeping class, seem to enjoy themselves. They are as silent as automatons, and busily occupied in keeping their heads from contact with the floor. Shop-boys are not as a class remarkable for personal charms. Their beauty is not of the type approved by artists; but no one who has not seen a second-class skating-rink knows of what contortions the human body is capable. Arms and legs fly about like the sails of a windmill, or like the figures in a magic-lantern. In the middle of the room and at the corners difficult feats are performed with ingenuity if not with grace, and one or two men secure the admiration of less skilful skaters by assuming the character of animated teapots. The young women may be seen, some clinging at the borders of the throng, where they eat sponge cake and drink lemonade at the expense of their respective young men, others showing a strong resolve to take the worth of their extra money out of the floor. Healthy as skating may be in the open air, it may be doubted whether these close and reeking rinks are more wholesome than the dancing pavilions which they seem destined to supersede, and whether there are not already too many of such establishments in London.

THE GERMAN COINAGE.*

(The Nation.)

Prof. Jevons in his recent work on 'Money,' remarks that so much discussion has been recently devoted to paper money and the numerous kindred forms of credit as to produce an impression that the specie basis itself—that is, the coinage—is a point of perfect rest. This is peculiarly true of the United States, where for fifty years past gold coin in circulation and silver coin larger than half-dollars have been so rare as, when seen, rather to excite curiosity. Specie with us meant at the best, a means of foreign remittance and an index, sometimes acting very violently, of the condition of the banks. But if we consider that in the last five years silver has fallen relatively to gold about fifteen per cent., or the full amount of the premium on gold as compared with our paper, the problem in this regard has evidently become serious. The Bank of France holds some 350 millions of specie against less than 700 millions of notes. Yet the greatest obstacle to positive resumption seems to lie in the difficulties of the double standard. It is better to have a paper money alone which is practically on a par with gold, than to make that paper redeemable equally in gold or silver, with the result that the former would infallibly be drained off, leaving silver alone as the actual basis, at least for the time, and thus creating a considerable depreciation in the paper resting upon it. The German Empire seems to have successfully encountered a corresponding difficulty by its establishment of the single gold standard, and that, too, in time to escape the consequences of the heaviest fall in silver; so far, its finances are in better condition than those of France. But in other respects the reverse of this is true. The world has seen with surprise that, notwithstanding the payment of the war indemnity, Germany has seemed to become steadily poorer and more depressed, while France has exhibited unusual prosperity, and the Bank of France, by having the courage to accumulate an enormous mass of specie, has brought its convertible paper to par, and left indeed no obvious reason, except that above mentioned, why actual redemption should not take place.

This state of things has nettled the Germans not a little, and the book under review was written to show that it cannot be charged to the operations of the coinage law. Two accusations are especially deprecated by Dr. Bamberger: first, that a valuable opportunity was lost for promoting an international money, by adopting a coinage readily interchangeable with francs, already in such extensive use; and second, that after the accumulation of a large quantity of gold by the mint, the new coin was paid out at such a time and in such a manner as to lead to its export in large quantities, causing some mirth among foreigners and a good deal of internal dissatisfaction. While, however, we appreciate the general soundness of the analysis of the operation and effects of money and the exchanges, we are obliged to confess that upon the two particular points in question the answers do not appear to be conclusive. As we understand it, the true idea of inter-

* 'Reichs Gold [Studies upon the Standard and the Exchanges]. By Ludwig Bamberger.' Leipzig: F. A. Brockhaus; New York: Westermann. 1876.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

national money is that each nation should make its coins—that is, the portion of them which is represented by the universal standard gold—of such size, weight, and fineness as to be simple multiples of each other, and readily interchangeable in large or small sums with the least trouble of calculation, and without any international legal-tender quality. Dr. Bamberger says that people would be liable to loss by foreign depreciated or worn coin intruding into their domestic circulation. But, first, any state allowing its own coin to be depreciated would be simply thrown out of gear and find that its coin would only circulate at home, where it was legal tender: secondly, worn coin would seek its own home for the the same reason; and lastly, if any nation suspended specie payments and resorted to paper, its demonetized gold flowing to other countries, would simply make money more abundant there, without any disturbance of the standard. In fact, it would be the highest compliment to the legal-tender coinage of one country that its company was sought for by all the best coins of other nations. Dr. Bamberger says that monetary conventions inconsistent with national freedom are necessary for a common money, and urges the bad effects of the convention of 1857 between Prussia and Austria, in consequence of which, through the increase of paper money in Austria, the silver of the latter flowed in to depreciate the double currency of Prussia; and, again, of the convention of 1865 between the Latin countries, in consequence of which, through the depreciated paper of Italy, the silver of the latter flowed in to disturb the currency of France: after the suspension in France, too, her silver caused similar inconveniences in Belgium and Switzerland. But these, as remarked, are objections against the double standard. As regards gold coin, no convention seems to be required. On the other hand, nations which have the single standard provide themselves with silver token coins for change, by making them legal tender for small amounts only, and limiting the amount of the total production. Through the medium of the gold coins these tokens would be brought into simple arithmetical relations with those of other countries; but if those countries, through misconduct or misfortune, are compelled to export their coin, the silver would take the form of simple bullion, and could not depreciate the tokens whose artificial value it could not share. We quote one sentence from Dr. Bamberger which, though it does not appear to furnish any sound argument against international circulation, does set forth with amusing *naïveté* the reason of the German distaste for it: "What irony, for example, would lie in a common coinage which at Paris should be stamped with the motto, 'God protect France' that is, God will give us back by-and-by Metz and Strassburg; and at Berlin, with the motto, 'God with us' that is, God will help us to defeat your purposes." We consider as unrefuted the charge that Germany, by preserving a fractional difference in her gold coin, did adhere to the traditional policy of isolation, in preference to promoting the comfort, the convenience, and the friendly intercourse of mankind.

As to the second point, Dr. Bamberger maintains that the export of coin depends upon the state of the exchanges; that these were adverse to Germany from causes antecedent to the war, which even the indemnity did not overcome; and that the new coinage furnished merely the natural and proper means of meeting indebtedness. He sets forth very clearly both the general principles governing the exchanges and the peculiar circumstances acting between Germany and France; but we think he does not sufficiently appreciate the fact that the power which has control of the currency can, by contraction or expansion, powerfully and almost immediately affect the exchanges, and that the German Government, by paying out its new gold coin while the exchanges with the existing currency were nearly at the exporting point, merely caused the former to glide over the old money and leave the country. Had they, with a sharp eye on the exchanges, withdrawn the old coin and notes in just sufficient proportion as they paid out the gold, they might at least have escaped the disadvantage and discredit of its loss.

We take leave of this interesting treatise with the remark that a translation of it would surpass in value most of our original literature on kindred subjects.

ARRIVALS.

June 3 *Banner*, American schooner, Lennard, 33, from Okotzsk, May 2, Ballast, Captain.

June 5, *Forward Ho*, British ship, E. Wade, 942, from London, Jan 28, General, to L. Knifller & Co.

June 5, *Lorne*, British steamer, M. J Butcher, 1,034, from London March 30, General, to Jardine, Matheson & Co.

June 6, *Atalante*, French frigate, Captain Caillet, 3,387, 12 guns, from Kobe, June 2.

June 6, *La Clocheterie*, French gun-boat, Captain Reinnier, 2,000, from Kobe, June 2.

June 6 *Armanella*, British barque, Popham, 915, from Cardiff, Dec. 1, Coal, to P. & O. Co.

June 6, *Mathilde*, German barque, Dau, 220, from Takao, May 14, Sugar, to Chinese.

June 6, *Monte Rosa*, American ship, Carter, 1,337, from Newport Dec 5, Coal, to M M. Co.

June 6, *Bombay*, British steamer, Smith, 1,325, from Hongkong, May 31, Mails and General, to P. & O. Co.

June 6, *Meazaleh*, French steamer, Pasqualini, 1,008, from Hongkong, May 31, Mails and General, to M M. Co.

June 6, *Nagoya Maru*, Japanese steamer, Young, 1,914, from Shanghai and ports, May 31, Mails and General, to M. B. Co.

June 7, *Oceanic*, British steamer, Parsell, 3,707, from Hongkong, May 31, Mails and General, to O & O. Co

June 7, *Belgic*, British steamer, Metcalfe, 2,652, from San Francisco, May 15, Mails and General, to O. & O. Co.

June 10, *Scinde*, British steamer, Lee, from Hongkong June 4, Mails and General, to P. & O. Co,

DEPARTURES.

June 5, *Iesa*, German barque, Sasky, 460, for Shinagawa, Ballast.

June 5, *Tennessee*, American frigate, Captain Low, 3,800, for Kobe.

June, 5, *Semida Maru*, Japanese steamer, Gorlach, 690, for Osaka, General, despatched by M. B. S. S. Co.

June 6, *Sumatra*, British steamer, Lunham, 1,759, for Kobe, General, despatched by Jardine, Matheson & Co.

June 7, *Orissa*, British steamer, Reeves, 1,685, for Hongkong, Mails and General, despatched by P & O. Co.

June 7, *Tonnesa*, British barque, Green, 712, for Kobe, General, despatched by Wilkin & Robison.

June 7, *Hiroshima Maru*, Japanese steamer, Furber, 1,870, for Shanghai and ports, Mails and General despatched by M. B. Co.

June 9, *Belgic*, British steamer, Metcalfe, 2,652, for Hongkong, Mails and General, despatched by O. & O. Co.

June 10, *Oceanic* British steamer, Parsell, 3,707, for San Francisco, Mails and General, despatched by O. & O. Co.

PASSENGERS.

Per *Meazaleh*, from Hongkong.—Messrs. Besson, S. P. Lescasse, Bailey, Besnard and Kato.

Per *Bombay*, from Hongkong.—Mr. Green.

Per Steamship *Nagoya Maru* from Shanghai and ports.—Mr. and Mrs Eusden, Messrs C. S. Norris, T. F. Burr, H. A. Messenger, Captain Trotter, Shimura, Awery, Dr. Hill, French, J. Hunt, Ostmann, M. Joseph and 22 Japanese in the cabin; 3 Europeans and 248 Japanese in the steerage. For San Francisco: Mr. and Mrs. F. Peil and child, Mr and Mrs. C. F. Allen. For Liverpool: Mr. R. McKenzie.

Per Steamship *Oceanic* from Hongkong—Baron Von Drasche-Wortenberg, Dr. Karl Korbl, Messrs. T. Schmilzen, M. Espantoza, and W. Dolan.

Per Steamship *Hiroshima Maru* for Shanghai and ports—Revd. J. W. Lambuth, Revd. W. B. Cooper, Mrs Nelson and 3 children, Messrs. Bryner, Raflin, Mingard, and 1 Chinese, 24 Japanese in the cabin. Steerage: 4 Foreigners, 5 Chinese, and 556 Japanese.

Per Steamship *Belgic*, from San Francisco.—For Yokohama: Messrs H. A. Cruwell, E Ebell Alex. Phillipins, John Middleton, John Heard, M. Scott, Mrs. R Allen, Miss Ann Nash. For Hongkong: Master and Miss Brenner, and 63 Chinese in the steerage.

Per Steamship *Scinde* from Hongkong.—Messrs. Brown, M'Carthy, Haskin Putts, Haines, and Jackson. Two Chinese on deck.

Per Steamship *Oceanic* for San Francisco.—From Hongkong to San Francisco: Mr. Dolan, Capt. Carr, Mr. Espantoso. From Yokohama to Liverpool: Messrs. Joseph Tayler, F. Yound, Captain R. Saunders, Marquis of Kildare, Captain H. McCalmont. From Yokohama to New York: Messrs. A. Van Casteel, H. De la Camp, L. M. Cohen, F. W. Humphrey, Captain H. Fulton, G. W. Skinner, G. H. Howell, Captain T. Burr, Mrs. Saunders, and six in steerage. From Yokohama to San Francisco: Messrs. J. H. Posthlewaite, G. H Posthlewaite, Revd. H M. Field, and Miss Field. From Shanghai to Liverpool: R. Mackenzie. For New York: C F. R. Allen, Mr. and Mrs. Peil and child. For San Francisco: 1 Chinese in the steerage.

CARGO.

Per Steamship *Orissa* for Hongkong.—

REPORTS.

The *Mathilde* reports, that a few days before leaving Takao, a severe typhoon passed over that port, doing much damage to the shipping. The *Traviata* and *Fyen* were driven ashore and became total wrecks, the crew saved. The British barque *Yarra* escaped by cutting away her masts. At Taiwanfoo, the *Auguste Reimers* went on shore, and about 90 Chinese junks were lost.

The *Lorne* reports: strong N. E. winds with thick, rainy weather up to the coast of Japan, afterwards southerly winds and fine weather.

The *Forwards Ho* left London January 21st, had head winds down channel. Pilot left off the Start February 1st, afterwards winds moderate into the N.E. trades which were very light. Crossed the equator February 20th in 25°44 West. S E. trades light passed Tristan d'Achunna on 27th February and passed meridian of the Cape, March 16th in 41°70 South, ran the easting down in 48° and had strong winds and a heavy sea, hauled to the northward to get better weather, lost some bulwark, and washed every thing out of deck house. Came round Tasmania, were off S. W. Cape April 12th, passed Caledonias April 28th, and had light winds in the Pacific—with rainy weather up to the Japan coast. 135 days from London.

The *Belgic* reports, left San Francisco noon May 16, with fresh N.W. gale and high sea. Had strong W.N.W. winds to the 23 May, 27 May to 31, strong Westerly winds and high sea, June 1, to 6 mod. to high W. and Southerly winds. June 7 foggy, at 6 a.m. sighted land, thick rainy weather. At 8 a.m. hove to; at 0.40 p.m. passed Mila Head; 3.5 p m passed Segami Light; 4.10 p.m passed Kanonsaki; 5 30 p m. arrived and made fast to buoy at Yokohama May 17th at 9 p.m. passed a large steamer bound East 300 miles off San Francisco, supposed to be the *Colorado*.

Camlets Asstd.	56—58 yds.	31 in		18.50	to	19.00
Lastings, Japan	22—30 yds.	32 in.		13.00	to	14.50
Plain Mousseline de Laine	—30 yds.	30 in.		0.18	to	0.20
Figured Mousseline de Laine	30 yds.	30 in.		0.25	to	0.28
Multicolored „	30 yds.	30 in.		0.32	to	0.35
Cloth, all wool plain or fancy	48 in.	to 52 in.		0.80	to	1.20
Presidents	54 in.	to 56 in.		0.60	to	0.70
Pilots	54 in.	to 56 in.		0.40	to	0.45
Union	54 in.	to 56 in.		0.40	to	0.65
Blankets, scarlet & green 7 to 8 lbs.			per lb.	0.40	to	0.41

Sugar.—*Formosa* kinds have advanced within the last few days in consequence of the news of the late destructive gale at Formosa, and sales of 21,000 piculs are reported, since the 3rd instant, at $2.90 to $3.05. Only one cargo has arrived during the week but stocks are still very large.

There have been but few transactions in *China Sugars*, prices remaining unchanged and stocks small.

Sugar:—Formosa in bag	per picul			2.90	to	3.00
in Basket	„			2.85	to	2.95
China No. 1 Ping fah	„			7.45

Daitong	„			2.60	to	2.90
Japan Rice	„					
Kerosene Oil	per case			2.30	to	2.40

Kerosene Oil.—The market for this article is quiet, and quotations nominal.

EXPORTS.

Silk.—Since the 27th ultimo, advices reporting reduced crops in Europe as well as in China, created a very active enquiry. Old stocks, however, being very small, and arrivals chiefly consisting of inferior Hamatsuki held at a considerable advance on former rates, settlements have been limited to 70 bales of Oshiu sorts, 40 of Hanks and 10 of filature silks. The prices paid for the latter are reported to have ranged from $580 to $610.

The advance in prices is estimated so far at from $10 to $20. There are no Hanks left in the market and the stock is now reduced to about 80 bales of other sorts.

Reports on the crop of this country continue to be satisfactory and musters of new Hanks are expected shortly.

	At Exchange 4/8 in London.	*At Exchange 5.10 at 6 m.s. in Lyons.*
Hanks.—None.		
Oshiu.—Best	—	—
„ Good	$500 to $520	18s. 3d. to 19s. 0d. frs. 51 53

„ No. 3 & 4	$428 to 440	15s. 7d. to 16s. 3d. frs. 43 45

Tea.—Business has continued steady during the closing week, prices still ruling in favor of buyers especially for lower grades. Finest and Choice are in small supply and decidedly firmer than other descriptions.

Settlements for the week amount to 5,000 piculs, being considerably exceeded by arrivals, and stocks in port are about 1,400 piculs.

Good Common	$16.00	to	20.00
Medium	21.00	to	23.00
Good Medium	24.00	to	27.00
Fine	$29.00	to	33.00
Finest	35.00	to	39.00
Choice	Nominal.		

The s s. *Oxfordshire*, for New York viâ Kobe and Amoy, has filled up the amount of freight apportioned to Yokohama at £4.10, and is advertised to sail on the 15th instant.

EXCHANGE AND BULLION.

Exchange.—There has been a fairly large business doing during the past week, both in Bank Bills and Private Paper, rates remaining throughout pretty steady at 4/0½ for Credits, until just at the close of the American mail yesterday, when a sudden decline of about one per cent took place.

Rates close as follows:—

Sterling—Bank 6 months' sight	3s.	11½	d.
„ Bank Bills on demand	3s.	11	d.
„ Private 6 months' sight	4s.	0	d.
On Paris—Bank 6 months' sight	5.00

ORIENTAL BANK

CORPORATION.

Incorporated by Royal Charter.

Capital, ... **£1,500,000**
Reserved Funds, ... **£ 500,000**

Twenty-fifth Annual Report

OF THE

COURT OF DIRECTORS

TO THE PROPRIETORS.

THE general statement of affairs and Balance Sheet for 1875, herewith submitted by the Directors for the information of their co-proprietors, shew that the net profit of the Corporation for that period including £6,000 18s. 5d. brought forward from the last account, has been £174,069 17s. 4d., after defraying current expenses and providing for all bad and doubtful debts.

The Dividend of 6 per cent., paid in November last, for the half-year ended 30th June, absorbed £90,000 of the profits, leaving £84,069 17s. 4d. to be dealt with, out of which the Directors now declare a Dividend of 5 per cent. for the half-year ended 31st December, which will take £75,000, and leave £9,069 17s. 4d. to be carried to the credit of the next years's account.

This Dividend, which is equal to £1 5s. per Share, will be payable, free of Income Tax, on the 1st of May next.

The result of the operations of the past year shews a diminished profit on those of previous years, and is chiefly caused by a steady decline in Eastern exchages, by the provision which had to be made for the fall in the value of Indian Government Rupee paper, and by the generally depressed state of commercial and monetary affairs during the period in question.

The Directors have the melancholy duty to report the death on the 8th of December last, of their much respected Chief Manager, Mr. CHARLES J. F. STUART, thereby severing a connection with the Corporation, which had existed for a period of over thirty-two years. While formally announcing this loss, the Directors are conscious their strong feelings of respect and esteem for Mr. STUART, and sympathy with his family, will be shared by many of their fellow proprietors to whom he was personally known and endeared.

The Directors have appointed as Successor to Mr. STUART, Mr. PATRICK CAMPBELL, who has been in the service of the Corporation since 1847, and who has for the last fifteen years filled the office of Sub-Manager, in which he has enjoyed their fullest confidence as well as that of his lamented predecessor.

Mr. DUNCAN JAMES KAY, Mr. WILLIAM WALKINSHAW, and Major-General HENRY PELHAM BURN, are the Directors who retire by rotation. These gentlemen are eligible, and offer themselves for re-election, which the Court have much pleasure in recommending to the Proprietors.

The Meeting will also have to appoint two Gentlemen as Auditors for the present year.

GEORGE ARBUTHNOT,
Chairman.

Threadneedle Street,

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 25.] YOKOHAMA, SATURDAY, JUNE 17, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its efflux.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 14th instant, at No. 156, Bluff, the wife of THOMAS JACKSON, Esq., of the Hongkong and Shanghai Banking Corporation, of a son.

DEATH.

On the 16th instant, at the General Hospital, KARL KRITSCH, assistant clerk at H. I. G. M.'s Consulate.

Notes of the Week.

The denial inserted by General Williams in the *London and China Express* of the rumour circulated in the same journal that he was raising money in London for the Japanese Government on bonds, and had already disposed of several millions worth, has not fully satisfied the mind of the public. We have authority for stating that the rumour is entirely without foundation, and the Government is sensible of the fact that any attempt to raise money by such means would be highly prejudicial to its credit, and to that reputation for good faith towards its European creditors which it is determined to uphold.

At the time of General Williams's departure for Europe from Japan, another rumour found some credit and excited some comment here, viz, that the Government intended to take a direct part in trading operations, and had determined upon establishing a depôt in London with this end in view. We have the best authority for saying that this rumour has no other real foundation than the fact that two officials accompanied General Williams for the purpose of inspecting the markets abroad, and making such suggestions to the Government as might conduce to the expansion of the foreign trade. Of course any practical steps taken in this direction are highly desirable, and it will not be denied that governments may take such steps with advantage to the cause they desire to advance. But reports from Europe sent by officials despatched for this purpose, and probably influenced in their views by a man as profoundly ignorant of economical science as General Williams unquestionably is, could hardly embody more than vague impressions distorted by unsound theories. The self-interest and common sense of the European merchants engaged in the Japan trade will do all, and far more than all, that any such officials might succeed in doing even if they were very sagacious men. The way to increase the foreign trade is to remove all Government interference with its free course on this side, and to cheapen the price at which all commodities can be laid down on the coast, by improving and increasing the means of communication with the interior. It is *roads* which the country requires, —not protective tariffs, or official reports, or suggestions from General or even from Dr. Williams.

The decision in the case of Jardine Matheson & Co., v. Jones is one which will commend itself to most men of extended commercial experience, and, we think, to all who consider it undesirable that an agent of a ship who enjoys the full confidence of the owners should be undermined in his position by the too independent action of the Captain. The Captain must of course have a certain discretion left in his hands, but he should act with the most entire loyalty and frankness towards his agents, a course which the defendant did not, in our opinion, pursue. It was quite open for him to tell his agents that as they could not procure a cargo for him, and he could get one for himself, he felt bound by his duty to his owners to do so. In that case any agent of standing and good sense would have given him the permission and made some suitable arrangement about the commission. Thus the whole question would be discussed, and, however arranged, would be arranged in such a manner as to avoid subsequent misunderstanding and especially litigation. It may also be remarked that it is an extremely narrow view of an agent's duty or the necessity for his services, to suppose that these are restricted to obtaining a cargo for a ship. Grave emergencies may, and often do, arise when the captain of a vessel requires advice or assistance of one kind or another, and when his owners would desire him to go for these to their own well-known and trusted agents. Weighty reasons ought to be shewn for removing his vessel from their hands, and setting aside their experience as agents as well as their local knowledge. Captain Jones's position was, we shall admit, a difficult one. He could only get a cargo in one quarter, and was debarred from this because the intending shippers would not ship through the plaintiffs, and demanded that the full commission on the freight should go to them. But this was eminently a case for a very full and frank explanation of his position to his agents, who certainly would, in some way or another, have made an arrangement, in respect of the commission, consonant with reason and natural justice. He failed, however, in this respect, and it was held that his agents were entitled to the full commission on the freight.

The following extract from a letter from Tientsin shows the manœuvres resorted to by the Chinese to prevent foreigners from travelling by the foreign-owned lines of steamers on the China Coast.

Tientsin Correspondent of the North-China Herald.

The trial of one of the commanders of Russell & Company's steamers, for assault on a Chinese tide-waiter, although in itself unimportant, will lead to the *exposé* of a very bad custom at this port.

The captain of the steamer stated to the U. S. Consul, Mr. Sheppard, that hearing a noise, he made inquiries of his compradore, and was told the Chinese Customs' officer was attempting to "squeeze" some Chinese passengers who wished to come on board and take tickets for Shanghai. He confessed at the Court-room, that under extreme provocation he shook his fist in the man's face, and gave him a slight kick. Of course he had no right to do this, and the U. S. Consul fined him $5, and the costs of Court.

It appears from the evidence, and this is the important point, that a guild exists whether with or without the connivance of the Chinese officials of the province it is, of course, difficult to say —for the purpose of intimidating passengers intending to travel

Digitized by Google
UNIVERSITY OF CALIFORNIA

either by the steamers of Jardine, Matheson & Co., or of Russell & Company.

In this case, a Chinese employed by the Imperial Maritime Customs, demanded, it was said, some two thousand *cash* before he would allow the passengers to come on board.

A private circular has been sent to the Chinese inns in the city, and to the Chinese passenger-brokers, stating that every comfort and convenience will be furnished by the Chinese steamers, and no "squeezes"; while by the English and American boats they are badly treated, badly fed, and ill-used in every way.

If this was a case of private competition, it would not be so serious, but when the offender wears the livery of the Customs, it becomes a matter for Consular interference, and merchants would do well to agitate the subject.

May 26th.

We expressed some very justifiable doubt in our daily issue upon the truth of a telegram published in one of the evening papers announcing the deposition of the Sultan of Turkey and the accession of his nephew. There is, however, good ground for believing the report to be true. Upon the probable consequences of this grave event it is simply idle to speculate. It would be as easy to write pages of common place embodying the little which people know, as it would be difficult to say anything true which is also new on this serious question. The improbable is the only thing certain in such matters.

We are happy to announce that our Amateur Dramatic Corps, after a long interval of rest, intend giving the last performance of the season on Monday the 26th instant. The pieces represented will be the vaudeville "A Blighted Being" by Mr. Tom Taylor and the capital farce of "Lending a Hand" by Mr. Gilbert a'Beckett.

A translation of the first part of an important notification from the Prime Minister will be found elsewhere, having for its object the placing upon a sounder basis the foreign mercantile steam-shipping service of this country. The second part of the translation will be published in our next issue.

From the "Japan Mail Daily Advertiser."

Monday, 12th.

The public must be warned against accepting as true the news published on Saturday evening that the Sultan has been deposed. The circumstance that a telegram to that effect had reached Tôkiô was known to us on Thursday evening last, and we may add that it was supplemented with the information that the nephew of the Sultan—not his son—had been proclaimed in his place. But there were grounds for withholding the information until it should be confirmed by subsequent advices, and the non-arrival of these makes it extremely doubtful whether the first telegram can be entirely relied on. We shall not take upon ourselves to deny the announcement in an unqualified manner, but it cannot be accepted unconditionally.

Many other rumours regarding European politics have been floating about during the past two days, but they have apparently been circulated to impose upon the credulity of the public. That the affairs of Turkey are in a highly critical state is patent enough, and this has caused a panic on the London Stock Exchange.

The return Cricket match "England *versus* The World" was held on Saturday last. The band of the *Audacious* played during the afternoon, and a fair number of spectators, including several ladies, were present. "England" began play at 1.45, but wickets fell fast, Kirkwood and Col. Dickens alone making any stand. The former played steadily for 23, and the latter put together 15 in a style which showed that practice alone was needed to greatly increase the score. All the wickets taken fell to Dodds, who was bowling remarkably well, and "England" finally succumbed after making a total of 70. "The World" then took their place at the wickets, and again Hamilton, in a very free style, punished the bowling, and scored 37 runs, being steadily supported by Milne for 13. The hopes of "England" were raised when the last wicket but one fell for 69, leaving the last two at the wickets but one to make to tie, but the representatives of "The World" proved themselves well equal to the occasion, and quickly ran the score up to a total of 85. "England" then went to the wickets, Kirkwood and Baxter alone securing double figures. Their second innings was concluded for the small score of 57, leaving "The World" 42 to make to tie. This they did with the loss of four wickets, Hamilton again proving himself the backbone of his side with a score of 28, not out. It is but fair to add that two men on whom "England" greatly relied, Symons and Greaves, were unavoidably absent.

The *Chôya Shimbun* says that large numbers of students from Satsuma, Tosa and Kishiu have lately assembled in Nagasaki and the neighbourhood and consulted together, but does not state what the nature of the consultation was.

From the *Hôchi Shimbun*:

The Coreans generally take a siesta of couple of hours in the middle of the day, and seldom retire to bed before midnight. They had their photographs taken on the 9th inst.

Tuesday, 13th.

His Majesty the Mikado reached Utsunomiya about four o'clock on the afternoon of the 5th instant. The whole town was gaily decorated and the line of route crowded with people eager to catch a glimpse of their Sovereign. The *Kenrei* was waiting to receive His Majesty at the halting place, and had to give answer to numerous enquiries which His Majesty made about the *Ken* under his charge. He further received, from the hands of the Emperor, a sum of money to be expended in religious services, in commemoration of those who fell in an action at this place during the Revolutionary war. His Majesty also contributed a small sum of money towards keeping in order the tombs of Gamo and Takayama, two celebrated scholars, who died and were buried at Utsunomiya nearly a century ago. Later in the evening His Majesty reviewed the troops forming the garrison of this town.

Leaving Utsunomiya early on the morning of the 6th instant, the Imperial party journeyed towards Nikkô, stopping at Ôsawa for the mid-day meal and then proceeding through Imaichi to Shichiri-mura. At this latter place carriages had to be abandoned, the road beyond not admitting of their use, and the journey was continued on horseback until the temple of Manguanji at Nikkô was reached, where the Imperial party stopped for the night. On the morning of the 7th instant His Majesty visited many of the temples and other places of note, and was shown, in the temple of Tôshôgu, several relics of the deified Iyéyasu. The inclemency of the weather necessitated a postponement of His Majesty's intended visit, this day, to Chiusenji, but the Emperor set out in a norimon the next morning (8th instant) as far as Umagaishi, where he left the norimon and

Digitized by Google Original from the UNIVERSITY OF CALIFORNIA

completed the rest of the trip on foot, stopping at the temple of Fudô on the way, and arriving at Chiusenji about two o'clock in the afternoon. A deer, which had been caught alive in the neighbourhood, was shown to the Mikado, who humanely purchased the animal from its captor for 15 yen, and then set it free.

His Majesty visited the Temple, Lake, falls of Kagon and other notable places in the neighbourhood, and returned in the evening to Manguanji.

At 7 a.m., on the 9th instant, the Mikado left Nikkô to returned to Utsunomiya. At Ôsawa His Majesty received the news of the death of the infant princess Mumé no Miya, and despatched one of his suite to Tôkiô with messages of condolence for the Empress. In consequence of this bad news the Imperial party will probably remain quiet at Utsunomiya for a few days.

From the *Hôchi Shimbun*.

The Corean Embassy were entertained by Mr. Sô, formerly *daimiô* of Tsushima on the 10th inst.; and again on the 11th inst., by Mr. Moriyama, *Gon Daijô* of the *Gu'aimusho*, at the residence of Mr. Godai of Satsuma. On the 12th inst. they were to accompany the Minister of War to Takebashi and inspect the Artillery depot there, and afterwards visit the Arsenal at Koishikawa and *Kangiô riô* at Akabané. In the evening they were to dine with Mr. Itô, the Minister of Public Works. The 13th will be observed by the Embassy as a day of retirement, when they will not stir out of their residence. They are expected to leave the capital about the 18th inst. and previous to their departure will be entertained at an official dinner at Hamagoten. It is uncertain, as yet, whether they will embark at Shinagawa or Yokohama on board the steamer which is to convey them back to Corea.

From the same.

The name or title of the late infant Princess, Mumé no Miya, has, since her death, been changed to Yoshi no Mikoto.

From the same.

The rag and paper pickers of the capital are ordered to have the baskets, used in their calling, made in such a way that the gatherings of rubbish which are deposited therein may be easily visible, or readily examined if necessary. They are further forbidden to hide their faces, as hitherto customary, in a cotton kerchief. The men who follow this employment do not enjoy the best of reputations for honesty, and the above regulations are made with a view to assist the police in suppressing robbery and pilfering, and to aid them in detecting old offenders.

Wednesday, 14th.

We hear that the hull of the *Surprise*, after being floated from where it lay outside the entrance to Uraga, was safely conveyed into that harbour, but the condition of the vessel's bottom is not yet ascertained, although it is feared that the port bilge will be found to be stove in.

The 1st class Canoe Race, which was held last Saturday, has been declared to be informal, and will, therefore, take place again on Saturday, the 17th instant, at 4 p.m. A race for 2nd class Canoes will be held this afternoon at 4 o'clock.

From the *Kôfu Shimbun*.

Great success has attended the rearing of the silk-worms this year in the Kai province.

From the *Saikai Shimbun*.

A lengthy drought has prevailed in the neighbourhood of Nagasaki, and the farmers fear that it will prove fatal to the young rice which has just been transplanted.

From the *Akebôno Shimbun*.

Yoshiko no Mikoto, (the Imperial Princess) who died a few days ago, will be buried on the 16th instant in the temple grounds of Toshimaôka, Tôkiô.

It is proposed to issue bonds to the *Kuadzoku* and *Shidzoku* for the amount of their pensions. They are to have the option of selling these bonds or keeping them and drawing the interest. It is said that 60000 forms are now being manufactured at the paper mill at Ogi for the purpose of giving effect to this measure.

Mr. Makoshi, the Editor of the *Sômô Zasshi*, was summoned to the Saibansho to-day to be examined on a charge of having transgressed the Press-laws.

From the *Chôya Shimbun*.

Tenders are about to be called for the construction of two Exhibition buildings of an area of 600 *tsubos* each. Other buildings will be attached to them, and the total area will be 1,300 *tsubos*. The buildings are not to be roofed with tiles.

Mr. Narushima, the former editor of the *Chôya Shimbun*, was released from prison on the 11th instant, on the termination of his sentence.

It is rumoured that the real object of the Mikado's journey northward was not to examine into the state of his dominions, but to afford a pretext for not assembling the provincial officials, who, it was feared, might give the Government some trouble this year.

From the *Chôya Shimbun*.

It is again rumoured that the *Kuadzoku* have been granted the privilege of attending the deliberations of the *Genro-In*, for the reason that the growth of the idea of popular rights threatens to foster the conviction that a useless nobility may be dispensed with, and that inferences of this nature may even extend to the Imperial Family. Thus it is important to show the people that the nobles have duties and responsibilities.

Mr. Inouye Kaoru, who was one of the Envoys of Corea, will leave about the 25th inst. for Europe, on some business for the Government.

From the *Nichi Nichi*.

Some three hundred law students have been selected, out of about one thousand applicants, to undergo an examination for admission to the Law College, an institution lately established by the *Shihôsho*, or Department of Justice.

From the same.

The *Kunaisho* (Department of Imperial Household) will present various articles of Japanese manufacture to the Corean Embassy, prior to their departure from this country.

From the *Hôchi Shimbun*.

Mr. Sanjo, the Prime Minister, visited the *Tôkiô Fu* yesterday.

From the same.

Mr. Nagakura, editor of the *Kokai Shimpô*, was sentenced on the 12th instant to two months imprisonment for an infraction of the Press-laws.

Thursday, 15th.

We have to announce that the Spring Meeting of the Swiss Rifle Association will take place at the Rifle Range on Saturday next, the 17th instant. On this occasion the various events will be competed for only by members and those who are specially introduced by them, there being no all-comers' prizes. The band of the French Ironclad *Atalante*, by kind permission of Admiral Véron, will be in attendance.

The M. M. steamer *Tibre*, with French mails to the 7th May on board, left Hongkong yesterday, the 14th instant, at 10. A.M.

From the *Chôya Shimbun*.

The new Supreme Court house at Tôkiô is to be a two-storied building in foreign style, and the construction of it will cost upwards of 30,000 *yen*.

From the *Hôchi Shimbun*.

Mr. Sanjô, the Prime Minister, and Mr. Hayashi, Acting Minister of the Home Department, visited the Normal College yesterday, where they for some time witnessed the examination of those pupils who are competing for admission into that establishment.

From the same.

A certain Mr. Yamada, residing in the province of Mutzu, lately read an article in the *Hiogon Shimbun* on the people's rights, which greatly pleased him. Learning that the author of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

it, Mr. Komatsu, had been committed to prison for writing the article in question, he sent him 5 *yen* wherewith to purchase something more appetising than the ordinary prison fare.

From the same.

His Majesty the Mikado is expected to extend his northern tour as far as Hakodaté.

From the same.

His Majesty the Mikado has presented the following articles to the King of Corea. A sword; six pieces of lacquer ware; one roll each of red and white silk; 12 pieces each of Yetchigo linen and silk; 15 pieces of Nara linen; 12 pieces of silk from the province of Kai; 2 pieces of Satsuma porcelain, and 1 piece of brocade.

From the same.

Mr. Ogi, *Sanji* of the Miôtô *ken*, will shortly arrive at Tôkiô on urgent and important business.

Friday, 16*th*.

To-day all Government Offices will be closed as a mark of respect to the memory of the late Imperial Princess Yoshiko no Mikoto.

The Mikado remained quietly at Utsunomiya on the 10th instant, when many officials of Tochigi *ken* paid their respects to His Majesty. The Imperial party left Utsunomiya at 7 o'clock on the morning of 11th inst., stopped for a short time at Shirakawa and Uji-iye and other places, and, about 4 p.m., arrived at Sakuyama where they remained for the night. Leaving this place early on the morning of the 12th instant, the Imperial party journeyed on towards Ashino, stopping for rest or refreshment at Otawara and Koebori, and crossing during the day, Nasunoga Hara, the largest plain in Japan and of which dreadful tales are told of travellers lost in storms or through the agency of evil spirits. His Majesty's destination was reached about 4 p.m., and, as the roads were very bad in places, part of the journey had to be made on horseback.

The Iris flowers at the village of Horikiri, beyond Mukô-jima, Tôkiô, are now in full bloom and attract a great many sightseers.

From the *Hôchi Shimbun*.

The abdicated King of Corea has sent, through the Envoy, to a celebrated firm of Japanese engravers in Tôkiô, a piece of Corean marble which he wishes to have made into a seal.

From the *Mainichi Shimbun*.

A series of wrestling matches will take place in Yokohama, commencing on the 20th instant.

From the same.

The origin of the late fire which destroyed so many houses in Benten dori and the vicinity, has, on enquiry, been found out. It appears that the occupant of the house in which the fire broke out had been to the theatre with a party of friends, and returning home rather late desired a cup of tea by way of refreshment for himself and guests There was no hot water ready wherewith to make the tea, and the party were too impatient to be content with the ordinary unassisted charcoal fire as a means of boiling water for the purpose, so thought to hasten proceedings by deluging the glowing charcoal with kerosene oil. The result was other than expected. The party were disappointed of tea that night, but their host's house and some eighty others were burnt to the ground.

From the *Chôya Shimbun*.

An assemblage of *Kucho* and *Kocho* of the Tôkiô *Fu* took place yesterday at the Chief Police station of the capital.

From the same.

On the 14th instant, the Corean Embassy visited the *Kaisei Gakko* and also the Public Library at Ishima. They were to pay a visit to the *Genrô In* yesterday.

From the same.

A new theatre will be opened at Shiba, Tôkiô, on the 17th instant.

From the *Nichi Nichi Shimbun*.

Mr. Kuramoto, the editor of the *Kokai Shimpô*, who is at present undergoing imprisonment for an offence against the Press-laws, has been further fined the sum of one *yen* and a half for going out on pleasure, whilst he was under the charge of the *Kocho* of the ward in which resided pending his trial, and for not making his due appearance when summoned to the *Saibansho*.

The following was published as an extra by the *Japan Gazette* yesterday morning :—

THE DERBY :

Mineral Colt 1
Forerunner 2
Julius Cæsar 3

Saturday, 17*th*.

The Imperial party left Ashino at 7 o'clock on the morning of the 13th instant, and proceeded through Yorii-mura to Sakai-miojin on the borders of the Tochigi and Fukushima *Kens*, and where the *Kenrei* of the former district took leave of His Majesty. About noon the populous town of Shirakawa was reached, where numbers of his loyal subjects had assembled to welcome the Mikado, amongst them being a goodly muster of scholars of both sexes from the public schools. The boys were all dressed in foreign style, but the girls retained their native costume. After partaking of refreshment, His Majesty set out in a *norimon* to visit the site of the castle of the former *Daimiô* of this place, which is now entirely given up to cultivation. Some 1,500 horses, which had been collected from this and neighbouring districts, were submitted to His Majesty's inspection. The lower class of people carefully gathered up the earth which had been pressed by the foot of their Sovereign, superstitiously believing that it would be efficacious in curing some of the ills which flesh is heir to. It is not so very long ago that a superstition of this sort was prevalent amongst the ignorant in Europe.

A troupe of Japanese Acrobats, who have lately appeared at the Chinese Theatre, will give a performance, under foreign direction, at the Gaiety Theatre this evening. From what we hear of their skill in acrobatic feats, on the slack-rope, etc., we imagine the entertainment will be well worth seeing, and as the price of admission is moderate one.

From the *Chôya Shimbun*.

The Corean Embassy visited the *Genrô-In* yesterday morning, and afterwards proceeded to Hamagoten to witness the game of *dakiu*, in which the Prime Minister, the Minister for Foreign Affairs and others took part. Some of the readers of a collection of Japanese notes, which were published in the *Japan Weekly Mail* last year, under the name of "Fu So Mimi Bukuro," may remember that this game, which answers to that known by foreigners as polo, was therein described.

From the same.

The priests of the East Shinshu Sect of Buddhists have become zealous for the propagation of their religion and a thorough acquisition of its tenets. They have, accordingly, selected two of the most promising of their novices, who are to be sent first to England to study Sanscrit, and subsequently, when sufficiently advanced in that language, proceed to India, and there make themselves thoroughly conversant with the doctrines of the sect as taught in the home of Buddha. A number of novices are also to be sent to China to pursue their studies there.

From the *Hôchi Shimbun*.

The Loochooan officials, at present visiting Tôkiô, have requested permission of the *Naimusho* to attend the discussions at the *Genrô-In*. They have also requested permission to return home.

From the same.

A teacher of fencing recently applied to the authorities to know, if, in face of the prohibition of wearing swords, he could continue his calling, and received a reply in the affirmative.

From the *Hôchi Shimbun* :

The Tôkiô Saibansho recently applied to the *Shihôshô* for instructions how to treat offenders against the Press-laws, who were unable to pay the fines inflicted on them, and in reply were ordered to deal with such defaulters as bankrupts.

THE MIKADO AT NIKKÔ.

IF the sepulchre of Nikkô, wherein, two centuries and a half ago, Japan's greatest, perhaps only great, statesman was quietly in-urned, could have opened its ponderous jaws last week, and the shade of IYEYASU have risen to greet his Imperial Master, what interest might not have attached to their colloquy! He would have learned that a vast change has come over the country he once ruled with so much vigour and sagacity—a change which has enormously extended and complicated the problem with which, in its simpler form, he dealt so wisely; that the feudal system has vanished; that the Mikadoate has been restored to its old position, perhaps even to its old force, in the polity of the Empire; that the great territorial nobles have been dispossessed of their fiefs, their retainers and their pomp, and are now dependants upon the treasury of the MIKADO; that a haughty and independent gentry has been reduced to comparative poverty, and is seeking to mitigate its lot by a humiliating resort to trade; that "the girded sword"—the soul of the *samurai*—has disappeared; that the Ministers of ten distant countries are residing in the capital, while hundreds of subjects or citizens of those countries are resident in the foreign settlements dotted about the coast; that vast and strange vessels are actively plying or idly reposing in Japanese waters; that a new architecture and a new garb have transformed the appearance of the capital and its inhabitants; that a new language from the remotest West, vigorous, comprehensive, plastic and equally adapted for colloquial use and the highest purposes of the orator, the poet and the philosopher, is displacing the venerated Chinese, and bringing with it a train of thoughts, of knowledge, of new principles and varied enchantments as unknown to and undreamed of by him as the history of the country from which it has sprung and the race whose genius it reflects. Had he pursued his enquiries he would have heard that the minds of the people he once governed are full of doctrines, imported from the West, as new to him as the strange events and facts thus narrated; that the masses of the people, so submissive and easily governed in his day, were beginning to regard themselves in some other light than as hewers of wood and drawers of water to those above them; that there floated among them in some subtle form, almost incapable of analysis and irreducible to scientific expression, ideas which seemed calculated to invert the whole constitution of society, to place the master in the place of the servant, and the servant in the place of the master; that those who had hitherto been content to obey, and held their manhood so cheap as to be grateful for the mercy which left bare life to them, were beginning to talk of rights and liberties, and made their slavery, their wants, their new-born fierce desires and even demands ring in the ears of their masters so as to leave them no peace; that a class of men imbued strongly with these ideas had sprung up, and had proved themselves willing to brave and glory in imprisonment, and chains, and even torture and death, if need were, to assert, to diffuse, to animate and give effect to them.

It is conceiveable that so able a ruler as IYEYAS would have demanded to know how far these strange doctrines harmonized with the general body of views which were beginning to influence the people, especially the rising minds and the more intelligent of the generation now passing away; whether among the nations whose teaching the Japanese were now accepting so readily, there were any instances of the successful application of these doctrines, and of a solid constitution of society as their result. And if we could imagine his spirit transported in a moment to Europe, and rendered capable of a kind of divine intelligence and apprehension of the true meaning and vast force of that wonderful life he would there see around him on all sides,—a life so manifestly higher than that of the people he once governed—he would spring with the intuition of real genius to the conclusion that the only chance which existed of the lower form of life surviving the inevitable contact with the higher form, would lie in the assimilation into the one of the principles which transfused, animated and accounted for the other. He would demand to know what these principles were, and how they could be applied to the people of this country. The Genius of Europe would reply; Liberty and Christianity; the former permits to every man the freest development of his whole nature, of his special idiosyncracy, and of those powers without the full play of which a nation becomes a mere race of dwarfs; while the other teaches him to subordinate this liberty to the wants and welfare of his fellow-creatures, and to regard his duty to man and his duty to his Ruler as part of his duty to GOD. Let creeds and churches come and establish themselves when they will, or if they will—all this is as nothing—the nation will work them out for itself. Give these two great principles free play, and trust to them to work out the salvation of the nation. Either will be dangerous without the other. If they create some heat at first—which they will in all probability do—they are principles of tried and proved beneficence. In some form or another the nation is absorbing the first of them with great rapidity, and this fact is beginning to declare itself in the most unmistakeable manner through the Press. The rulers of this country are doing to the nation what their gardeners do with their trees, cutting and tying each shoot as it appears in order to give the tree a prescribed form, size and direction. The result of this will be a garden of stunted deformities. Throw away these knives and cords and foolish traditions of a past which cannot survive long, and of forms which have neither strength, nor beauty, nor utility to recommend them. Let the trees grow as they will. The rain and the dew and the earth will nourish them, the sun will give them life and vigour, and, by and by, we may see a noble forest through which, as through the avenue to the stately tomb of the Great Vassal of his ancestors, the MIKADO may march, surrounded and protected by the intelligent loyalty of a strong, a grateful, an obedient and a free people.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday 4th June, 1876.

Passengers, Parcels, &c.	$7,188.84
Merchandise, &c.	$ 478.75
Total.	$7,667.59

Miles Open 18.

Corresponding week last year.

Passengers, Parcels, &c.	$7,941.51
Merchandise, &c	$ 499.71
	$8,441.22

KOBE AND OSAKA STATION.

Statement of Passenger Traffic for the week ending 4th June, 1876.

Passengers.....17,561.	Amount...Yen		4,097.240
Luggage, Parcels, ...	„		200.106
Goods,.....	„		160.382
Total.....Yen			4,457.728
Corresponding period last year.....Yen			5,168.404
